SIGNAL CORPS PROPERTY.

The following signal equipment has been issued to the Signal Corps:

4 heliographs.	42 canvas kits.	1 telescope holder.
7 binoculars.	15 lanterns.	1 telephone switchboard.
9 telescopes.	5 telegraph keys.	
52 signal flags.	5 sounders.	

MEDICAL PROPERTY.

The following described property has been issued to the Sanitary Corps, and is divided among the several detachments of the Corps on duty with the various organizations:

7 medical and surgical military field chests and contents.	1 pair scales and weights, Army No. 1.	132 sheets.
7 field operating tables.	1 pair U. S. Army prescription scales.	126 pillowcases.
5 orderly pouches (State pattern).	5 spatulas.	256 towels.
6 orderly pouches (U. S. pattern).	2 evaporating dishes, porcelain.	48 napkins.
88 McCarthy belts (hospital corps pouches) and contents.	4 graduates.	50 straw ticks.
40 litters.	2 alcohol lamps.	24 flannel night shirts.
40 litter slings.	1 alcohol lamp, large size.	6 surgeon's gowns.
1 combination sterilizer, portable.	2 razors.	6 tables.
1 steelenamed sterilizer.	1 razor hone and strop.	6 patent folding chairs.
1 sterilizer, copper.	1 eye spud.	6 steamer chairs.
1 minor operating table.	1 Kelly operating cushion.	1 refrigerator.
2 general operating cases.	1 rubber air-cushion.	4 commodes and vessels.
1 operating table, steel enameled.	1 bandage roller.	74 folding chairs.
1 stand and alcohol lamp for sterilizer.	2 glass needle cases.	22 folding tables.
6 steel enameled trays.	4 glass dressing containers.	2 lanterns, 8 x 12, with reflectors.
3 steel enameled pus basins.	1 chest for instruments.	24 lanterns.
1 steel enameled irrigating stand.	2 hypodermic syringes.	1 hand garden sprinkler.
2 steel enameled dressing tables.	1 Esmarch chloroform inhaler.	6 brooms.
2 steel enameled pails.	1 ether inhaler.	3 rakes.
6 steel enameled basins, large size.	6 assorted surgical scissors.	3 shovels.
2 basin stands with basin and pitcher.	1 bandage shear.	1 tool chest and contents.
1 hot-water boiler, copper.	1 stomach tube.	1 oil stove.
1 pair of rubber operating gloves.	1 rectal speculum.	1 piece linoleum (22 yds).
1 Faradic battery.	1 atomizer.	60 large agate cuspidors.
6 hæmostatic forceps.	1 probang.	2 galvanized-iron ash barrels.
1 urine analysis set.	1 rectal tube.	1 water cooler.
2 hot-water bags.	3 pair crutches.	72 table knives.
2 fountain syringes.	2 enameled urinals.	72 table forks.
1 phonendoscope.	3 enameled bed pans.	72 teaspoons.
1 aspirator.	6 dental forceps.	72 tablespoons.
3 clinical thermometers.	6 ice caps.	24 pepper and salt boxes.
3 bath thermometers.	6 Magic atomizers.	24 large plates.
2 house thermometers.	1 tongue depressor.	48 agate plates.
4 mortars and pill pestles.	1 nasal speculum.	72 soup plates.
1 ointment slab.	1 ear speculum.	10 iron pots.
	2 thumb forceps.	2 large forks.
	3 enameled washstands, complete, with basin and pitchers.	2 large spoons.
		24 galvanized-iron buckets.
	60 beds.	48 white enameled basins.
	60 mattresses.	12 white enameled dippers.
	90 blankets.	24 enameled cups.
	60 feather pillows.	24 enameled saucers.
		1 typewriter.
		1 capillary bath.
		2 wire baskets.
		1 letter press.

In addition to the articles enumerated above, there is also a supply of medicines, antiseptics, disinfectants, hospital stores, appliances, dressings, etc., in the possession of the Corps.

Major General, Commanding Division, N. G. C.,
President Uniform Board, N. G. C.

OFFICE OF THE
UNIFORM BOARD, NATIONAL GUARD OF CALIFORNIA.
SACRAMENTO, CAL., December 3, 1904.

*To the Adjutant General, State of California,
Sacramento, Cal.*

SIR: In compliance with instructions from your office of November 28, 1904, I have the honor to submit the following report of transactions of the Uniform Board, N. G. C., during the period between October 30, 1903, and June 30, 1904:

The Uniform Board appointed under G. O. 14, A. G. O., October 30, 1903, consisting of the Adjutant General, Colonel Thos. Wilhelm. and Lieutenant Colonel Fred J. H. Rickon, held its first meeting at the office of the Adjutant General, Sacramento, Cal., November 6, 1903.

Proposals were invited November 16, 1903, for furnishing and delivering at Sacramento, Cal., 3,740 dress coats, viz: 100 Signal Corps. 240 Cavalry, 300 Artillery, 2,820 Infantry, 180 Headquarters and Band, 100 Sanitary Corps; also for 3,340 dress caps, all new regulation. These proposals were opened in the presence of bidders on December 19.

1903. Contract was awarded to the lowest bidder, the Pettibone Bros. Manufacturing Company of Cincinnati, Ohio, for dress coats at \$5.98½ each. Contract provided that deliveries commence about one month after acceptance of bid and be delivered in lots of 600 or more per week. Contract for dress caps was awarded to the lowest bidder, B. Pasquale & Co., San Francisco, Cal., at \$1.24½ each.

Proposals were also invited on March 6, 1904, for hat and collar ornaments, chevrons, and stripes, for the various organizations of the National Guard, and bids opened in the presence of bidders on April 4, 1904. Bids for cap and collar ornaments were not considered, owing to misunderstanding about style. Contract for cap ornaments and for chevrons and stripes was awarded to the Pettibone Bros. Manufacturing Company, they being the lowest bidder. Deliveries to be completed within five weeks after receipt of order.

Proposals were again invited for cap and collar ornaments, but only one bid was received, viz: Pettibone Bros. Manufacturing Company. John M. Litchfield & Co. notified the Board that they would stand by their previous bid, but the Pettibone Bros. Manufacturing Company being the lowest bidder, award was made to them.

Mr. G. A. Snow was employed to inspect uniforms, caps, etc., under the several contracts, at compensation of \$5 per day.

The coats offered under contract of the Pettibone Bros. Manufacturing Company having been inspected and found not up to standard, were rejected and company notified accordingly. Upon request they were given until July 15, 1904, to complete their entire contract.

The following is a statement of expenditures incurred during the period covered by this report:

"The Call" (San Francisco) advertising. Allowed January 11, 1904	\$13 20
James McClatchy ("The Bee"), advertising. Allowed January 11, 1904.....	10 60
Lieutenant Colonel Fred. J. H. Rickon, traveling expenses. Allowed April 4, 1904.....	6 10
Lieutenant Colonel Fred. J. H. Rickon, 7 meetings, per diem allowance. Allowed April 4, 1904.....	35 00
James H. Roche, services as clerk to Uniform Board, from November 1, 1903, to February 29, 1904. Allowed April 4, 1904.....	37 00
B. Pasquale & Co., 3,271 dress caps, at \$1.24½ each. Allowed May 9, 1904.....	4,072 39
Total	\$4,174 29

Order having been placed with J. M. Litchfield & Co. for 376 dress caps at \$1.33 each, prior to June 30, 1903, the sum of \$500 was allowed to them (May 9, 1904) from funds of fiscal year 1903.

The following is a statement of outstanding indebtedness to June 30, 1904:

G. A. Snow, services as inspector on the caps and coats furnished under contract of Pettibone Bros. Manufacturing Co., 16 days, at \$5 per day.....	\$80 00
Rubber stamp, for marking garments.....	65
Pettibone Bros. Manufacturing Co., for cap and collar ornaments and chevrons and stripes.....	2,460 23
James H. Roche, for services as clerk to Uniform Board, from February 29, 1904, to June 30, 1904.....	40 00
Lieutenant Colonel Fred. J. H. Rickon, per diem allowance, 6 meetings, at \$5.....	30 00
Pettibone Bros. Manufacturing Co., 3,599 dress coats, at \$5.98½ each	21,540 02
Total	\$24,150 90

Very respectfully,

(Signed:) FRED. J. H. RICKON,

Lieut. Col. and Div. Q. M., N. G. C.,

Recorder.

ANNUAL REPORT.

STATE OF CALIFORNIA, ADJUTANT GENERAL'S OFFICE,
SACRAMENTO, June 30, 1905.

To His Excellency, GEORGE C. PARDEE,

Governor and Commander-in-Chief.

SIR: I have the honor to present herewith the annual report of this department for the fiscal year ended June 30, 1905, in accordance with Section 1923, Political Code.

ENROLLED MILITIA.

The number of persons in the State subject to military duty, as shown by the returns of the Commanding Generals of the two brigades, for the year 1905 (required by Section 1902, Political Code), is 263,187; an increase over the preceding year of 5,824.

NATIONAL GUARD.

During the period of time covered by this report, the following changes in organizations have taken place:

COMPANIES DISBANDED.

Name.	Location.	Date.	Reason.
Company I, Second Infantry.	Grass Valley.	August 29, 1904.	Inefficiency caused by prevailing spirit of indifference of enlisted men.

NEW COMPANIES ORGANIZED.

Name.	Location.	Date.
Company I, Second Infantry.....	Vacaville	December 7, 1904
Company H, Seventh Infantry.....	Long Beach.....	December 21, 1904
Company L, Seventh Infantry.....	Santa Ana.....	December 19, 1904

In order to conform to the requirements of an Act of the Legislature, approved March 18, 1905, the Division Headquarters have been abolished, and the number of brigades reduced from three to two, necessitating a change in the assignment of organizations formerly composing the Third Brigade.

The present organization consists of two companies of signal corps, four troops of cavalry, four companies of coast artillery, forty-six

companies of infantry, organized into two brigades; and, in addition, one independent company of veteran reserves.

The First Brigade, commanded by Brigadier General Robert Wankowski, and with headquarters at Los Angeles, consists of the First Company, Signal Corps; Troops C and D, Cavalry; and the Sixth and Seventh Regiments of Infantry.

The Second Brigade, commanded by Brigadier General John A. Koster, with headquarters at San Francisco, is composed of the Second Company, Signal Corps; Troops A and B, Cavalry; the First Battalion of Coast Artillery, and the First, Second, and Fifth Regiments of Infantry.

For a detailed statement of the organized strength of the National Guard, see Appendix "E."

Every effort is being made to bring the force now maintained to the highest degree of efficiency, and whenever an organization is found to be unable to continue in the service and maintain the proper standard, such organization will be disbanded.

To insure a better personnel and a higher degree of efficiency among the officers of the Guard, special attention has been given to the matter of the examination of candidates for commission, and a closer scrutiny and a more rigid examination of officers enjoined upon examining boards.

On November 2, 1904, the revised Infantry Drill Regulations, U. S. Army, approved by the Secretary of War, June 23, 1904, were adopted for the government of the National Guard. Between January 1 and March 1, 1905, all field and company officers, adjutants of regiments and battalions, the assistant adjutants general of the division and brigades, the division and brigade inspectors, and aids-de-camp to the division and brigade commanders, were required to pass a rigid examination in these new Infantry Drill Regulations.

As an incentive to increased effort on the part of organizations, this department has had two handsome trophies (one for each brigade) manufactured, the same to be awarded to the company receiving the highest marking for general efficiency, embracing target practice, discipline, military courtesy, drill, appearance, etc., and to be permanently retained by the companies winning them three times.

While the general condition of the Guard is good, it is not as satisfactory as it should be. Much has been accomplished during the last year to promote its discipline and efficiency, but there is still room for considerable improvement. The officers and men, as a rule, show much interest in their work and lend their best efforts to upbuilding the Guard, but under the conditions necessarily brought about in meeting the requirements of the "Dick" Militia Law, many difficulties are met with. Exacting requirements for the care and safe keeping of

arms and equipments are necessary. Individual enlistment and examination of recruits are necessary. In fact, extreme care must be exercised by the enlisting officer, as well as the examining surgeon, in the physical examination of applicants for enlistment, under the rigid requirements now prescribed by the War Department for the National Guard, in order that it may conform to the provisions of Section 7 of the "Dick" Militia Law. The adoption of the prescribed system of examination for enlistment and re-enlistment will result in an improvement of the personnel of the National Guard and will exempt the militia from further physical examination before being mustered into the service of the United States, which would greatly expedite matters in case of emergency.

Company commanders are faced with the necessity of keeping accurate records and of making frequent returns and reports. The additional property issued to companies, in order that they may be uniformed, armed and equipped the same as the regular army, has added much to the responsibilities of company commanders. Organizations find that they can no longer lay dormant part of the year, and by industriously drilling for a few weeks prior to an inspection or an encampment, be able to make a satisfactory showing. Frequent drills and schools of instruction are necessary throughout the year.

NAVAL MILITIA.

This branch of the State troops consists, as at date of last report, of seven divisions, organized into a battalion, commanded by Captain George W. Bauer, with headquarters at San Francisco.

During the past year there has been a decided and gratifying improvement in the discipline and efficiency of the Naval Militia.

ARMS AND EQUIPMENTS.

During the past year no change has been made in the armament and equipment of the infantry, cavalry, and artillery. There have, however, been issued to each company of infantry 10 additional U. S. magazine rifles and pertaining equipments, making a total issue of 60 to each company; and the following number of U. S. magazine carbines and equipments to the cavalry: Troop A, 10; Troop B, 10; Troop C, 20; and Troop D, 20.

Two complete regimental hospital outfits, such as are in use in the U. S. Army, have been purchased with State funds from the War Department, and issued to the detachments of the Hospital Corps attached to the Second and Sixth Regiments of Infantry, and signal equipment sufficient to equip the two companies composing the Signal Corps has been drawn from the U. S. Government, under the State's allotment, and is in the hands of those organizations.

The First Battalion of Coast Artillery has been supplied with one Gatling gun, caliber .30, latest model, complete.

The arms and equipment issued to the Guard are the same as furnished to the U. S. Army, and generally sufficient to meet present needs.

The Naval Militia is armed with the U. S. magazine rifle, caliber .30 (recently issued to replace the Lee magazine rifle, caliber .45), and Colt's revolver, caliber .38. The equipment of the men is similar to that of the U. S. Navy. There are also in the possession of the Naval Militia the following equipment: The U. S. S. "Marion" and one steam launch, stationed at San Francisco; the U. S. S. "Pinta," stationed at San Diego; one steam launch, located at San Pedro; nine small boats and equipments, in addition to those constituting a part of the equipment of the "Marion" and "Pinta"; three 3-inch breech-loading rifles; two Colt's automatic guns, caliber .30; one Gatling gun (Accles), complete; five 1-pounder Hotchkiss rapid-fire guns; two 1-pounder Hotchkiss heavy guns, Mark II, complete; and one 3-inch Fletcher Navy field gun, complete.

Requisitions have recently been made upon the Navy Department for the following equipment: Three 1-pounder Hotchkiss heavy guns, Mark II, complete, with field carriages, limbers, drag ropes, accessories and spare parts; one 28-foot cutter, and one 30-foot cutter.

Since the last report of this department, the U. S. S. "Marion" has been docked at the Navy Yard, Mare Island, when her sea-valves were overhauled and a few other repairs made. This has somewhat improved the condition of the "Marion"; but that ship, like the "Pinta," is old and of obsolete type and unsuitable as a training ship for the Naval Militia. Application has recently been made to the Navy Department for the loan to the State of the U. S. S. "Petrel."

It may be well to state here that every effort has been made by requisition upon the War and Navy Departments, as well as by purchase with State funds from the U. S. Government and various publishing houses, to obtain all of the standard military books and publications, and to place them in the hands of the National Guard and Naval Militia, in order that the officers and enlisted men may not lack as to the proper means of information as to their duties.

UNIFORMS.

During the year the entire Guard has been supplied with campaign hats, canvas leggings, dark-blue flannel shirts, kersey trousers, and field uniform (khaki) trousers, and the Cavalry and Signal Corps with overalls and stable frocks, of U. S. Government issue, sufficiently for present needs.

As it has been impossible thus far to secure the uniform dress coat

and cap by requisition upon the War Department, it has been found necessary by the Uniform Board to purchase these articles by contract in lots sufficient to equip the Guard.

For further information upon this subject, reference is made to the Report of the Uniform Board, submitted herewith, marked Appendix "H."

MANEUVERS—1904.

A series of field exercises was held by the troops of this State jointly with the troops of the regular establishment, at Atascadero, San Luis Obispo County, California, from August 13 to 26, 1904, inclusive, the camp established being under the command of Major General Arthur MacArthur, U. S. A., commanding Pacific Division. The following organizations of the National Guard of this State participated in these maneuvers:

Signal Corps, First Brigade.
Signal Corps, Second Brigade.
Troops A, B, C, and D, Cavalry.
Headquarters, Band, and Batteries A, B, C, and D, First Battalion of Artillery.
Headquarters, Band, and Companies A, B, C, D, E, F, G, and H, First Infantry.
Headquarters, Band, and Companies A, B, C, D, E, F, G, and H, Second Infantry.
Headquarters, Band, and Companies A, B, C, D, E, F, G, H, and I, Fifth Infantry.
Headquarters, Band, and Companies A, B, C, D, E, F, G, H, and I, Sixth Infantry.
Headquarters, Band, and Companies A, B, C, D, E, F, G, I, J, K, and M, Seventh Infantry.

In addition to the above, the following officers of the National Guard of California were ordered to report to the commanding officer of the camp for assignment to duty and were detailed to various staff positions, performing, in most instances, efficient service:

Division Staff.

Colonel Charles J. Evans, Assistant Adjutant General.
Lieutenant Colonel T. Waln-Morgan Draper, Engineer Officer.
Lieutenant Colonel John A. Koster, Division Inspector.
Lieutenant Colonel Charles L. Hewes, Signal Officer.

First Brigade Staff.

Lieutenant Colonel A. W. Bradbury, Assistant Adjutant General.
Lieutenant Colonel W. G. Schreiber, retired, Acting Brigade Inspector.
Major James H. Campbell, Inspector of Rifle Practice.

Second Brigade Staff.

Lieutenant Colonel G. F. Hanson, Surgeon.
Major J. H. Hendy, Engineer Officer.
Captain Philip L. Bush, Aid-de-Camp.

Third Brigade Staff.

Lieutenant Colonel A. J. Pedlar, Surgeon.
Major W. W. Phillips, Commissary.
Major Frank Z. Pirkey, Inspector of Rifle Practice.

The different organizations of the State troops entrained for maneuver grounds on August 12th, arriving at different times during the following day. The detraining of the troops at Atascadero station was accomplished with dispatch and, in most instances, without confusion, which speaks well for officers and men who have had but little experience in such work. The wagon transportation furnished by the Chief Quartermaster of the provisional division for conveying the baggage and equipment of the various organizations from the railroad to the camp was ample, and within a few hours after arrival at the station the troops were settled in camp.

Beginning with August 14th, exercises were held each day up to the 26th, with the exception of one or two days near the end of the encampment. The Adjutant General was present during the entire period of the maneuvers and witnessed the execution of each day's problem. The troops, Regulars and National Guard, were organized into a provisional division of two brigades, under the command of Major General MacArthur. The First Brigade was commanded by Colonel Alfred C. Markley, U. S. A., and consisted of the following organizations:

Provisional Regiment, U. S. Infantry.

Band, and Companies B, D, F, and M, 28th U. S. Infantry.

Companies I, K, L, and M, 10th U. S. Infantry.

Companies A, C, D, and K, 13th U. S. Infantry.

Headquarters, Band, and Companies A, B, C, D, E, F, G, H, and I, Sixth Infantry, N. G. C.

Headquarters, Band, and Companies A, B, C, D, E, F, G, I, K, and M, Seventh Infantry, N. G. C.

Headquarters, Band, and Batteries A, B, C, and D, First Battalion of Artillery, N. G. C.

The Second Brigade was under the command of Colonel Henry C. Ward, U. S. A., and was composed of the following troops:

Headquarters, Band, and Companies A, B, C, D, E, F, G, H, I, K, L, and M, 15th U. S. Infantry.

Headquarters, Band, and Companies A, B, C, D, E, F, G, and H, First Infantry, N. G. C.

Headquarters, Band, and Companies A, B, C, D, E, F, G, and H, Second Infantry, N. G. C.

Headquarters, Band, and Companies A, B, C, D, E, F, G, H, and I, Fifth Infantry, N. G. C.

The signal corps and cavalry organizations of the National Guard were made a part of the Divisional Signal Corps and Cavalry, composed of the following organizations:

Divisional Signal Corps.

Company C, U. S. Signal Corps.

Signal Corps, First Brigade, N. G. C.

Signal Corps, Second Brigade, N. G. C.

Divisional Cavalry.

Troops I, K, L, and M, 9th Cavalry, U. S. A.
Troops A, B, C, and D, Cavalry, N. G. C.

From the list of problems following some idea of the character and scope of the exercises may be obtained:

August 15, Monday: Battle exercises.

Forenoon: Evolutions of the regiment.

Afternoon: Evolutions of the brigade.

August 16, Tuesday: Advance guard and rear guard.

August 17, Wednesday: Attack and defense of a convoy.

August 18, Thursday: Attack and defense of outposts.

August 19, Friday: Reconnaissance in force.

August 20, Saturday: March and deployment of a division.

August 21, Sunday: Divine service for all troops.

Division review.

Band concerts.

August 22, Monday: Attack and defense of an entrenched position. Bivouac, outposts, and night scouting.

August 23, Tuesday: Passage of a defile.

While it is, perhaps, the consensus of opinion that the problems in the beginning were somewhat severe on raw troops, occurring as they did each day without a period of rest between and oftentimes beginning very early in the morning and lasting until late in the afternoon, yet I think it will be conceded by all that these exercises were productive of much benefit to every one concerned and especially to the Organized Militia of this State. Certainly the value of such a camp can not be compared with that of the so-called "camps of instruction" of former years. In conversation with officers of the regular establishment the latter have admitted that the holding of problems every day is too severe on troops of the Organized Militia, it being recognized that the State troops are composed mainly of men who follow sedentary pursuits or at least are employed indoors to a great extent during the year, and, therefore, are not in condition to stand a severe strain similar to that imposed upon them at the beginning of the late maneuvers. It is believed that by setting aside one day for problems and a portion only of the next day for instruction in battalion drill, regimental evolutions, etc., and continuing in this manner throughout the encampment, the most good will be accomplished. While it is greatly to be desired that all organizations that are designated to participate in field exercises have thorough preliminary instruction, yet this is rarely the case with State troops, for the reason that many of the regiments and even battalions are so widely scattered as to preclude the possibility of having exercises beyond those pertaining to the "school of the company," and for this reason alone I am of the opinion that the greater portion of the first three or four days of the maneuver period should be devoted to

close order drills and other preliminary instruction. I also believe that when maneuvers are held jointly with troops of the regular establishment, or when officers of the Army are detailed as umpires in connection with field exercises to be held by State troops, it would be of inestimable benefit to both officers and enlisted men of the Organized Militia to have an officer of the Regular Army permanently detailed with each battalion and one with each regimental headquarters, for the purpose of giving instruction and advice in the methods of "doing things" in the regular service. While it is known that the object of the law permitting the holding of joint maneuvers is to give to both regular and militia troops practical instruction in field exercises and in what may be termed the higher branches of the profession, yet the personnel of the Organized Militia changes so materially during a year's time and the regimental units are so rarely brought together, that, in my opinion, the best results of these maneuvers can not be obtained without first giving some attention to close order drills, thus permitting both officers and enlisted men to become familiar with movements of troops in larger bodies than those to which they usually are accustomed.

The ground selected for the encampment was well suited for the purpose, being in a narrow valley adjacent to a small stream, known as Atascadero Creek. From this stream good water was obtained for drinking and bathing purposes. Shower baths were arranged for the use of officers and were ample, but enlisted men often found it difficult to obtain sufficient water for bathing. While the camp itself was well supplied with water for drinking, cooking, etc., yet the supply provided at different points on the maneuver grounds for the use of the troops during the progress of problems was entirely inadequate. No blame therefor can be attached to those having this matter in charge, but is attributable to the fact that sufficient pumping machinery, etc., was not obtainable in the short time allotted in which to prepare the grounds for the use to which they were put.

The tract used for the exercises is, in the main, well adapted for the purpose. The terrain affords a great variety of ground, which, for maneuver purposes, is to be desired, yet a tract a little less rugged would perhaps be more suitable.

While the health of the troops was exceptionally good, yet the intense heat prevailing at that season of the year during the daytime was the cause of considerable exhaustion and even suffering at times among the troops, both Regulars and Militia, and for this reason I am of the opinion that in the future the exercises should be held earlier in the year, say during the month of May, if they are to take place in the same locality. Much attention was given to the sanitary features of the camp, wise regulations pertaining thereto being made and enforced.

The plan of requiring the attendance of all officers at the "assembly tent" in the evening, for the purpose of listening to the reports and comments of the umpires upon the problems of the day, is to be highly commended. In this way all concerned received an intelligent idea of the scope of the problem, that which it was hoped would be demonstrated and that which was actually accomplished, besides having such mistakes as were made pointed out in a friendly and considerate manner.

The entraining of the troops at the end of the encampment was accomplished in a manner highly complimentary to the officers and men of the State troops and also to those officers of the Regular Army who had the matter in charge.

Generally speaking, the railway accommodations furnished were satisfactory, yet in one or two instances were very inferior, Company C, Second Infantry, being required to make the journey from Atascadero to Oakland and from the latter point to Colfax in a car unprovided with water or toilet. Repeated efforts were made to effect a change of cars for this company, but without success.

In concluding these remarks upon the maneuvers, I wish to make special mention of the very courteous treatment of the officers of the National Guard of California by Major General MacArthur and his officers.

Attention is respectfully invited to the accompanying reports of the several commanding officers of the State organizations relative to the part taken by their organizations in the exercises at this encampment.

CRUISE OF THE NAVAL MILITIA.

The officers and men of the Third Division and the U. S. S. "Pinta" Detachment of the Engineer Division, Naval Militia of California, to the number of thirty-nine, were given a practice cruise, under the supervision of officers of the U. S. Navy, from March 13 to 27, 1905. The cruise proved of much practical benefit to the officers and men who participated, and, in the main, they were highly commended by Rear Admiral C. F. Goodrich, U. S. N., the Commander-in-Chief, and other officers of the Pacific Squadron, for their strict attention to duty while on board ship.

The thanks of this Department are due to the following officers of the Pacific Squadron for their deep interest in and painstaking instruction of the officers and men of the Naval Militia: Rear Admiral C. F. Goodrich, Commander-in-Chief; Captain E. K. Moore, commanding U. S. Flagship "Chicago"; Commander Lucien Young, commanding U. S. S. "Bennington"; Commander J. E. Roller, commanding U. S. S. "Wyoming"; Lieutenant Commander T. W. Ryan, Executive Officer, U. S. S. "Wyoming"; Lieutenant Commander F. W. Bartlett, Fleet

Engineer; Lieutenant Frank H. Schofield, Commanding U. S. T. B. D. "Perry"; and Lieutenant J. P. Morton, Engineer Officer, U. S. S. "Wyoming."

Reference is made to the reports of Commander Roscoe Howard and of the commanding officers of Naval Militia organizations participating. (See Appendix "J.")

INSPECTIONS.

The annual State inspection and muster of the National Guard for 1905 was made in conjunction with the inspection ordered by the War Department, by Colonel Thomas Wilhelm, Assistant Inspector General, N. G. C. (Major, U. S. A., retired, on duty with the Organized Militia of California), between February 3 and April 24.

Colonel Wilhelm's report, which will soon be published in orders from this office, shows the Guard, with the exception of a few companies, to be in a healthy condition.

Owing to the insufficiency of the appropriation for "traveling expenses and per diem of officers on detail duty," it was found impossible to hold an inspection of the Naval Militia during 1904. It is contemplated, however, holding an inspection of this branch of the State service early in 1906.

SMALL ARMS PRACTICE.

Small arms practice has been held under "Special Course C, Small Arms Firing Regulations for the Use of the Organized Militia or National Guard."

According to the report for the season of 1904, forty-one out of fifty-seven organizations held practice with the following results:

Average strength present and absent, commissioned and enlisted, for the entire period of firing.....	3,176
Total number classified.....	3,176
Per cent of average strength qualified.....	73.02
Marksmen	282
First class men.....	141
Second class men.....	74
Third class men.....	322
Fourth class men.....	2,357
Total firing, rifle and carbine.....	819
Total firing, pistol.....	93

Much interest is being taken in the subject of target practice, and since the close of the season of 1904 many organizations previously without the necessary facilities have been able to secure suitable ranges: so that before the close of the season of 1905, most, if not all, of the organizations will have qualified and with satisfactory results.

The work upon the range should be supplemented, and, in the case

of recruits, preceded by aiming and sighting drills and gallery practice. This preliminary work upon the part of organizations will hereafter be insisted upon.

A great impetus will no doubt be given to small-arms practice by the proposed participation of a team from this State in the National Rifle Match, to be held at Sea Girt, New Jersey, beginning August 24, 1905.

It is the purpose of this Department to do everything possible to encourage qualifications in marksmanship, which, it is believed, is the attainment of a good soldier. To insure the best results, it is believed there should be a specific annual allowance of ammunition by the Federal Government to each member of the National Guard, of at least one half of the allowance for each man in the Regular Army for target practice.

LEGISLATION ENACTED.

Much important legislation was enacted at the thirty-sixth session of the State Legislature in the interest of the National Guard. A complete and much needed revision of the existing State military laws was effected, in conformity with the "Dick" Militia Law, and based upon the report of a board of officers appointed October 30, 1903, to consider proposed amendments to the State military laws. In addition, a new and salutary law was passed "providing for the punishment of persons and associations conniving against and attempting to injure the National Guard of California and members thereof."

A set of rules and regulations conforming to the new laws and existing conditions will shortly be compiled.

ARMORIES.

This is a subject of great importance to the State at large, as well as to the National Guard, and I desire to call special attention to the necessity of providing our military organizations with suitable armories for the care and safekeeping of the United States and State property issued to them, as well as for the drill and instruction of their members. Until suitable buildings are provided, either by the State or the local authorities of the cities or towns where companies are located, the officers responsible for such property must labor under very great disadvantages, and the discipline and drill of their commands materially suffer. Every military company should own its own armory, as is the case in many communities in other States, and the influence from every authorized agency, the State, city, or town, should be exerted to arouse sufficient patriotism to make that possible.

The Secretary of War, in his report for the year 1904, presents the

following suggestions relative to the subject of armories for the organized militia:

The duty imposed upon the Governors of the States and Territories by Section 1661, Revised Statutes, as amended, and by the Militia Act of January 21, 1903, of accounting for public property issued under authority thereof, presented immediately the question of providing adequate facilities for the storage and protection of such property.

Diligent inquiry has developed the fact that, while in the larger cities of the more populous States there are buildings excellently adapted to the purposes for which they are designed and used, there is in general a lamentable lack of proper armory accommodations in the smaller cities and villages.

This is an evil which can be remedied only by liberal appropriations by the States and Territories, or by private contributions. The Department is encouraged to hope that the State and local authorities are awakening to the importance of this subject; and it is known that in many instances where armory facilities have been found palpably deficient, temporary accommodations have already been provided, with the ultimate object of supplanting these makeshifts by substantial structures owned by the State or by the bodies corporate of the organizations themselves. In mitigation of any blame that may be attached to the militia organizations, it is to be remarked that the most convenient and in every respect the most suitable armories are those owned by such organizations, constructed from funds raised by private subscription and practically without State aid.

Experience has demonstrated that there is no element more effective in promoting the organization of National Guard companies and in sustaining the interest of their members, thus contributing to their efficiency as component parts of the National Guard, than the providing of attractive and suitable buildings for their accommodation and the safe storage of their supplies and equipments.

EMERGENCY FUND.

I can not too earnestly request Your Excellency to strongly recommend to the Legislature the importance of providing an emergency fund, to be used only when the military forces of this State or any part thereof are called into service, such a fund to be drawn upon only by order of the Governor. The necessity for such a fund is apparent when it is taken into consideration that in the event of a call for the services of the State troops no funds are available, from which to pay for transportation, subsistence, and other supplies necessary for the maintenance of such troops while performing the service required; and, as a consequence, this Department would be obliged to enter into contracts for the furnishing of supplies upon terms disadvantageous to the State, as contractors know that under the present system they would be compelled to wait many months before their claims could be settled. In addition, the officers and men called into service on such occasions are not paid until the Legislature meets and makes provision for such payment, which often entails a hardship on those who perform the required service. This was notably so in connection with the service performed by certain organizations of the State troops during the outbreak of prisoners from Folsom Prison in July, 1903. Many of those serving in the field at that time lost the positions held by them

in civil life prior to entering upon such service, and besides were compelled to wait nearly two years for the small amount of pay due them for the duty performed. The setting aside of a fund to be used in such instances as that above cited would save the State considerable expense in the end and would prevent injustice being done to those who volunteer their services to the State in the time of her need, besides serving as an inducement to enlistment in the National Guard because of the certainty of immediate pay for active service.

EXTRA PAY OF CALIFORNIA U. S. VOLUNTEERS.

In accordance with the provisions of an Act of Congress, approved April 27, 1904, extending the time within which Governors of States may file claims for reimbursement for expenses incurred by them in raising troops for the war with Spain, the Governor of California is authorized to present a claim to the United States Treasury Department for the pay, at State rate, of the members of California regiments which volunteered for service in the late war with Spain, from the date of enrollment to the date of muster-in to the United States service, or rejection by the medical examiner or mustering officer, but who failed to file vouchers in time for presentation with the claim made by the Governor just prior to January 1, 1902. A circular fully covering this subject was issued on February 28, 1905, and the necessary blanks have been sent out to company commanders for distribution, and to individuals entitled to pay, upon application. It is estimated that there are still 1,500 officers and men entitled to this pay, and every possible effort is being made to reach all of them, though widely scattered.

COLORS OF CALIFORNIA U. S. VOLUNTEERS.

On February 22, 1905, the war-worn flags of the First California United States Volunteers—the Stars and Stripes and the regimental colors so gallantly carried by the regiment throughout the Spanish-American War and the Philippine Insurrection—were presented to the State for preservation and safe-keeping. The transfer of the colors to the State was made the occasion of special exercises, held in the Assembly Chamber of the State Capitol.

The preservation of our State battle flags should appeal to the patriotism of every citizen, and it is hoped that the time is fast approaching when the standards of all the regimental organizations that served during the War of the Rebellion and the Spanish-American War of 1898 will be represented in the collection of flags in the State Capitol, instead of being permitted to remain in the hands of private individuals and societies. Some special provision should be made by

the Legislature for the care of the flags already possessed. It is suggested that instead of occupying the present cramped quarters in the Adjutant General's office they be placed in a suitable depository in the rotunda of the Capitol, where they can be viewed by the public at all times and each flag can be displayed by itself with a distinct and suitable inscription detailing its history.

CALIFORNIA INDIAN WAR RECORDS.

During the past two years this Department has received numerous requests for certificates and other evidences of service in the wars and expeditions against the hostile Indians in this State during the early fifties; and it has been a source of humiliation and regret to be compelled to invariably deny requests for certificates of service and in nearly every instance to be forced to state the impossibility of furnishing any information whatever, the supplying of which would afford the applicants in most instances the data essential for the securing of a pension.

It is understood that this lamentable incompleteness of the California Indian War records on file in the Adjutant General's office is due to the fact that a number of years ago permission was given by Senate Concurrent Resolution No. 3, approved March 3, 1885, to one Captain John Mullan (now of Washington, D. C.), as agent and attorney for the State in the matter of the collection of certain Indian War claims against the United States, to obtain from the Adjutant General of this State all the "original vouchers, certificates, and papers of every kind and nature relating to the claims of this State against the United States," "growing out of past Indian hostilities."

As the object for which these various papers were taken from this office has been accomplished, it is believed, it is recommended that the necessary steps be taken to insure their early return to this office.

OFFICE BUSINESS.

There has been a steady increase in the work of this office during the past year, which will continue to increase under the operation of the "Dick" Militia Law and other congressional enactments.

The correspondence with this Department is necessarily large and of a varied nature. Requests for certified statements of military service during the early Indian Wars in this State, the Civil and Spanish-American Wars, which necessitate a careful search of the records, are daily received from all parts of the United States and often from other countries. The discharge or other evidence of honorable service is often lost or destroyed, in such cases the widow or dependent children,

father or mother, failing to find any proof of the soldier's service, communicate with this office for a certified record of the service performed. If the service claimed is of record, which is usually so in the case of the service of troops from this State in the Civil and Spanish-American Wars, a certificate thereof is furnished the applicant without charge. As we get farther away from these epochs in our history, the war correspondence relatively increases.

The correspondence and record work of the National Guard of this State has more than doubled since the adoption of the "Dick" Militia Law.

It is absolutely necessary to keep accurate and complete records of all officers and men of the National Guard and Naval Militia, and these records require constant attention owing to frequent changes occasioned by resignation, retirement, discharge, appointment, and enlistment. Due in large part to the lack of sufficient clerical help, the records previous to the Spanish-American War were carelessly and inaccurately kept, and upon the advent of the present administration found to be in a chaotic condition. The matter of correcting and completing the records of the National Guard and the Naval Militia, as far back as considered practicable, is receiving the special attention of this Department, and the entire time of one clerk devoted to this most important work. The records are gradually being transferred to the card system, which presents many advantages over the book records, formerly in use. It is the desire of this Department to eventually undertake the task of placing in improved record form the uncopied muster rolls of the 5,587 California U. S. Volunteers in the late war with Spain. This work should be undertaken before the muster rolls become so mutilated with constant handling that it will be difficult to make a copy of them.

The following will give some idea of the volume of merely routine work performed in this office during the time covered by this report:

Communications received.....	6,283
Communications written.....	5,100
General orders issued.....	19
Special orders and circulars issued.....	12
Resignations accepted in special orders.....	49
Commissions issued.....	300
Certificates of re-election issued.....	32
Certificates of service issued.....	75
Exempt certificates issued.....	40
Honorary membership certificates issued.....	15
Service medals issued.....	32
Target practice medals and bars issued.....	1,061

The above does not include the receiving and filing of monthly, quarterly, and semi-annual reports and returns from companies and

commands, and the preparing and forwarding of the following annual reports and returns to the War and Navy Departments:

1. Annual Return of Ordnance and Ordnance Stores.
2. Annual Return of Quartermaster's Supplies.
3. Annual Return of Medical Property.
4. Annual Return of Signal Corps Property.
5. Annual Return of the Organized Militia.
6. Annual Return of Officers and Men of the Naval Militia.
7. Annual Return of Stores—Naval Militia.
8. Report of Drills, Target Practice, and Field Instruction.
9. Report of Small-Arms Firing.

The work required in connection with the property accounts with the War and Navy Departments, and more particularly with the officers of the National Guard and Naval Militia, is one of the principal causes for the increased duties falling upon this office. Since the enactment of the "Dick" Militia Law, the number of articles of property issued to each organization and to be accounted for by its commanding officer is many more times that which was issued prior to 1903. Many officers are not familiar with the methods of accountability required, and considerable time and work are necessary to instruct them in such duties.

The proper handling of this large volume of work was simply impossible with the clerical force formerly allowed this Department, though kept on duty several hours longer each day than that of other departments. The condition of affairs is now being greatly improved by reason of the increase in the clerical force of two clerks and a stenographer, allowed this department by the last Legislature.

RECOMMENDATIONS.

I have the honor to renew the first, second, third, sixth, and eighth recommendations contained in my report for 1903-1904.

In addition, I would respectfully submit the following:

That Your Excellency recommend a material increase in the appropriation for target practice at the hands of the next Legislature, and that an appropriation be made for the construction of ranges for target practice at different places throughout the State. Instead of being increased, the appropriation for target practice suffered a reduction of \$2,000 at the hands of the last Legislature.

The cost of ammunition and target supplies and the expense of constructing ranges have increased since the adoption of the U. S. magazine rifle, caliber .30. With the Springfield rifle, caliber .45, a 200-yard range was sufficient, but for the Krag-Jorgensen, 200, 300, 500, 600, 800, and 1000-yard ranges are required, and the different military organizations are unable to bear the expense of building these ranges out of their regular quarterly allowances.

Target practice, which forms a most important, if not the most important, part of a soldier's education, should be encouraged to the fullest extent; but unless the State is more liberal with her appropriation in this regard, the requirements of the Federal Government can not be met and the State will not be able to fully qualify under the "Dick" Law and receive all the benefits accruing thereunder, besides maintaining her proper position among the states.

APPENDICES.

The following papers are submitted for your information and made appendices to this report:

Appendix "A"—Statement of appropriations and expenditures for military purposes for the fifty-sixth fiscal year.

Appendix "B"—Statements of accounts with United States Government.

Appendix "C"—Statement of money received and disbursed by the Adjutant General.

Appendix "D"—Account of arms, accouterments, ammunition, and military property belonging to the State, or issued to the State by the United States, showing to what organizations issued.

Appendix "E"—Statement of enrolled militia.

Appendix "F"—Statement of organized strength of the National Guard and Naval Militia in detail.

Appendix "G"—Statement of dates of organization of regiments, companies, troops, and Naval Militia.

Appendix "H"—Report of the Surgeon General.

Appendix "I"—Report of the Uniform Board.

Appendix "J"—Reports of commanding officers of State organizations participating in joint maneuvers, 1904.

Appendix "K"—Reports of Commander Roscoe Howard and of commanding officers of Naval Militia divisions participating in cruise, 1905.

Appendix "L"—List of Adjutants General.

CONCLUSION.

In conclusion, I wish to commend the officers and men of the National Guard and the Naval Militia of California for their fidelity to duty and their earnest efforts to raise the standard of efficiency.

My thanks are due Your Excellency for your deep interest in and most thoughtful consideration of all matters submitted by this Department.

I would also express my grateful appreciation to Colonel Thomas Wilhelm, Assistant Inspector General, for his most valuable services to the National Guard of California, and to Colonel A. W. Bradbury, my assistant, and to the clerical force and attachés, for their earnest and faithful work.

Very respectfully,

J. B. LAUCK,
Adjutant General.

APPENDIX "A."

STATEMENT OF APPROPRIATIONS AND EXPENDITURES FOR
MILITARY PURPOSES FOR THE FIFTY-SIXTH FISCAL YEAR.

Salary of Adjutant General.

To appropriation	\$3,000 00	
By J. B. Lauck		\$3,000 00
	\$3,000 00	\$3,000 00

Salary of Assistant Adjutant General.

To appropriation	\$2,400 00	
By N. S. Bangham		\$340 00
By A. W. Bradbury		1,966 65
By unexpended balance		93 35
	\$2,400 00	\$2,400 00

Salary of Clerk, Adjutant General's Office.

To appropriation	\$1,600 00	
By Howard S. McIntire		\$1,142 15
By unexpended balance		457 85
	\$1,600 00	\$1,600 00

Salary of Additional Clerk, Adjutant General's Office.

To appropriation	\$1,200 00	
By G. E. S. Barnes		\$56 65
By Jacob Alexander		800 01
By unexpended balance		343 34
	\$1,200 00	\$1,200 00

State Armorer and Porter.

To appropriation	\$900 00	
By Joseph Bauquier		\$642 50
By unexpended balance		257 50
	\$900 00	\$900 00

Postage, Expressage, Telegraphing, and Telephoning.

To appropriation	\$500 00	
By General J. B. Lauck, postage		\$181 07
By Colonel A. W. Bradbury, postage		20 00
By Wells, Fargo & Co., expressage		95 97
By Western Union Telegraph Co., telegraphing		12 47
By Postal Telegraph Cable Co., telegraphing		65 34
By Sunset Telephone and Telegraph Co., telephoning		125 15
	\$500 00	\$500 00

FIFTY-SIXTH FISCAL YEAR—Continued.

Care of State Armory, Cleaning and Transportation of Arms, Traveling and Contingent Expenses of the Adjutant General.

To unexpended balance from fifty-fifth fiscal year.....	\$47 74	
To appropriation	2,500 00	
By Howard S. McIntire, freight charges, etc.		\$54 95
By John M. Milliken, clerical services		636 68
By Jacob Alexander, clerical services		22 00
By Alice Coughlin, stenographic services		175 00
By Joseph Bauquier, services and expenses		18 75
By G. W. Calvert, labor in State Arsenal		44 00
By E. Dieterle, labor in State Arsenal		32 00
By Colonel A. W. Bradbury, freight charges		4 71
By General J. B. Lauck, traveling expenses		1,153 85
By F. M. Jones, repairs to typewriter		1 50
By Remington Typewriter Co., 1 typewriter and repairs		110 05
By Fites Bros., repairs to typewriter		4 00
By E. F. Frazer, lumber for State Arsenal		13 00
By Consumers' Mutual Supply Co., ice		8 40
By W. F. Purnell, dictionary and other supplies		25 30
By H. E. Sleeper, rubber stamps		23 75
By Ing & Allee Co., supplies for State Arsenal		4 00
By John Breuner Co., labor		3 50
By Thomson-Diggs Co., supplies for State Arsenal		12 88
By Geo. H. Fuller Desk Co., office desk and supplies		98 40
By Southern Pacific Co., freight transportation		39 84
By Suter-Hevener Mill Manufacturing Co., screens		12 75
By Hawk, Hawley & Carley Co., rent of storage room		37 50
By A. J. Wilson, hack hire for funeral of late Colonel N. S. Bangham		8 00
By H. S. Crocker Co., stationery		2 00
By unexpended balance		93
	\$2,547 74	\$2,547 74

Allowance, Brigade Headquarters.

To appropriation	\$1,500 00	
By commanding officer, First Brigade		\$562 50
By commanding officer, Second Brigade		562 50
By commanding officer, Third Brigade		375 00
	\$1,500 00	\$1,500 00

Allowance, Regimental Headquarters and Bands.

To unexpended balance from fifty-fifth fiscal year.....	\$348 00	
To appropriation	7,044 00	
By commanding officer, First Battalion of Artillery		\$708 00
By commanding officer, First Infantry		996 00
By commanding officer, Second Infantry		1,054 60
By commanding officer, Fifth Infantry		1,068 00
By commanding officer, Sixth Infantry		1,068 00
By commanding officer, Seventh Infantry		1,223 20
By commanding officer, Naval Militia		924 00
By unexpended balance		350 20
	\$7,392 00	\$7,392 00

FIFTY-SIXTH FISCAL YEAR—Continued.

Armory Rents and Other Expenses.

To unexpended balance from fifty-fifth fiscal year	\$3,852 36	
To appropriation	87,000 00	
<i>Quarterly Allowance—</i>		
By two Signal Corps		\$2,631 00
By four Troops of Cavalry		9,600 00
By First Battalion of Artillery (4 batteries)		4,800 00
By First Infantry (8 companies)		9,600 00
By Second Infantry (9 companies; 2 companies for three quarters and a fraction only)		10,277 40
By Fifth Infantry (9 companies)		10,800 00
By Sixth Infantry (9 companies)		10,800 00
By Seventh Infantry (12 companies, 2 companies for two quarters and a fraction only)		13,273 33
By Naval Militia (7 divisions)		8,400 00
By Hospital Corps (5 detachments)		1,500 00
<i>Miscellaneous—</i>		
By Colonel Thos. Wilhelm, preparing report of inspection		61 00
By Brigadier General J. B. Lauck, dues to Interstate National Guard Association for 1904		14 00
By Colonel Geo. Filmer, expenses of escort for funeral of late Lieutenant Colonel A. P. Hodges, February 12, 1905		94 50
By Lieutenant Colonel W. G. Schreiber, indebtedness of Company H, Seventh Infantry, at time of muster-out		611 32
By Major P. F. Simonds, money advanced in re muster-out of Company I, Second Infantry		941 90
By Hawk, Hawley & Carly Co., rent of storeroom 6½ months, at \$25 per month		162 50
By J. S. Easterbrooks, drayage on clothing and equipments		200 00
By Brigadier General J. B. Lauck, purchase of military books		1,147 54
By Colonel D. D. Crowley, rent and other expenses of Surgeon General's office		369 85
By Remington Typewriter Co., 1 typewriter (\$120 less discount, and old machine exchanged, \$42)		78 00
By Southern Pacific Co., freight charges on equipments to and from various organizations		224 85
By H. W. Rivett, washing 535 pieces of khaki clothing		66 87
By Albert F. Kleinsorge, lettering commissions		47 50
By Paul Neumann, typewriting for board of officers on revision of military laws		263 10
By H. E. Sleeper, rubber stamps, etc.		21 00

SIGNAL CORPS PROPERTY.

The following signal equipment is issued to the two companies of Signal Corps:

48 zines, crowfoot.	2 switchboards, 20-line 'phone.	54 jars, battery.
14 telephones, assorted.	4½ miles wire, 7 strand, insulated.	4 relays, telegraph, ohm.
10 lanterns, acetylene.	48 coppers, battery.	12 climbers and straps, pairs.
10 telegraph keys.	4 hand saws.	60 discs, cipher.
13 telescope holders.	12 heliographs, complete.	15 lanterns.
50 lbs. wire, office, No. 18.	12 telescopes.	8 miles wire, G. I., No. 14, B. B.
2 miles wire, copper, No. 12.	260 insulators, hard rubber.	15 clamps, splicing.
10 miles wire, silicon bronze, No. 22.	4 reels, pay-out, and frames.	13 screwdrivers, assorted.
12 compasses, magnetic, with leather cases.	64 signal flags.	200 lances, wood.
6 shovels, spoon, L. H., dirt.	3 vises and straps, complete, telegraph.	27 pliers, cutting, 8-inch.
6 hammers.	6 diggers, postholes.	24 belts, tool.
2 handles, with tools.	2 braces for bits.	4 relays, telegraph, pocket.
4 reels, take-up.	760 lbs. wire, bare copper, No. 12.	2 boards, switch-line telegraph.
8 testing sets, magneto.	1,000 brackets, insulator, oak.	2 reels, combined pay-out and take-up.
3 batteries, dry.	100 ft. rope, telegraph div.	4-volt ammeters, with cases.
1,200 insulators, glass, pony.	6 bars, tamping.	1 telescope switchboard.
5 pulleys and clamps, double, sets.	61 canvas kits.	
10 sounders.		
12 binoculars.		

In addition to the foregoing, the following Signal Corps property is in the State Arsenal:

Serviceable.

1,000 brackets, insulated oak.	2 compasses, bridge sight, with leather cases.
15 cipher discs.	2 compasses, magnetic, with leather cases.
2 field glasses, Avizard, with case and straps.	1 fieldglass, Voightlander, with case and strap.
2 hatchets.	2 handles, with tools.
40 insulators, hard rubber, assorted.	1,600 insulators, glass, pony.
100 lances, wood.	2 lanterns, acetylene.
2 screwdrivers.	2 saws, hand.
10 miles wire, silicon, bronze, No. 22.	
4 miles B. B. galvanized iron, No. 12.	
2 telescopes and straps, brass.	

Unserviceable.

4 heliographs.	2 lanterns.	3 sounding boards.
5 lamps, acetylene.	15 cipher discs.	10 dry batteries.
2 connectors.	5 battery jars.	2 pliers.
2 climbers, pairs.	2 belts and straps.	12 canvas kits.
17 signal flags.	1 lot insulated wire.	

MEDICAL PROPERTY.

The following property has been issued to the several detachments of the Hospital Corps on duty with the various organizations, and to the Surgeon General:

6 atomizers, hand.	3 chests, commode.	1 bone drill, handle for.
2 basins, wash, hand, rubber folding.	3 chests, medical and surgical, detached service.	39 chairs, common, folding.
3 basins, stands for.	24 basins, wash, hand, agate ware.	3 chests, sterilizer, regimental.
4 bags, rubber, ice, for head.	34 basins, wash, hand, enamel ware.	3 chests, mess, small.
6 brooms.	46 blankets, gray.	3 chests, acetylene outfit.
9 bougies, flexible.	1 battery, Faradic.	34 basins, wash, hand, tin.
2 bistouries, straight, sharp.	40 buckets, fire, galvanized iron.	7 basins for sponges.
3 chests, surgical, regimental.		6 bags, rubber, hot water.

MEDICAL PROPERTY—Continued.

- 4 bedpans, agate ware.
- 5 bandage winders.
- 2 bistouries, probe, pointed, curved.
- 8 chairs, reclining, folding.
- 3 chests, medical, regimental.
- 3 chests, food.
- 6 chests, folding field furniture.
- 10 cases emergency.
- 3 canvas bedding and clothing reserve.
- 3 close stools.
- 4 cushions, surgical, Kelly.
- 1 chamber, agate ware.
- 6 crutches.
- 1 cushion, rubber, small.
- 1 case, supping.
- 46 catheters, flexible.
- 4 chests, field, medical.
- 3 surgical dressings, in wooden packing box.
- 1 egg beater.
- 2 force pumps, hand.
- 1 funnel.
- 30 first-aid packets.
- 2 forceps, dressing.
- 57 forceps, hæmostatic.
- 12 forceps, artery.
- 1 grater, small.
- 7 hatchets.
- 1 irrigator, enamel.
- 1 kettle, farina.
- 1 knife, butcher
- 2 knives, amputating.
- 2 ladles.
- 2 lanterns, brass.
- 69 litter slings.
- 4 pkgs. ligatures, catgut.
- 36 mattress covers.
- 5 mortars and pestles.
- 2 needles, aneurism.
- 97 pillow-cases, cotton.
- 5 pails, enamel.
- 10 pans, frying.
- 7 pans, roasting.
- 62 plates, agate ware, tin, or enamel ware, dinner.
- 10 cases, field operating, small.
- 160 lbs. calcium carbide.
- 14 cups, spit, enamel ware, and paper.
- 3 candlesticks, enamel ware.
- 1 cleaver.
- 149 cups, agate ware, enamel ware, or tin.
- 3 cases, amputating.
- 1 case, eye.
- 3 catheters, recurrent, steel.
- 2 cutting pliers, fixed bandages.
- 1 elevator and scoop.
- 2 forks, flesh.
- 12 finger cots, rubber tissue.
- 1 forceps, needle.
- 10 forceps, bullet, Cross.
- 6 forceps, Pear's, curved.
- 7 gowns, operating.
- 2 grooved directors.
- 4 inhalers, chloroform.
- 2 jars, covered, large.
- 1 kettle, tea.
- 2 knives, chopping.
- 1 lamp, stand.
- 2 lamps, spirit, tin.
- 2 lanterns, large.
- 1 lavage tube, rectal.
- 3 pkgs. ligatures, silk.
- 65 mattresses, common.
- 48 needles, surgical, Hagedorn's.
- 1 ophthalmoscope.
- 9 pitchers, agate ware.
- 1 pancake turner.
- 1 pad, Kelly, operating.
- 5 pepper boxes.
- 34 plates, soup, agate ware, tin, or enamel ware.
- 6 cases canvas bedding, tent unit.
- 65 cots, spring, folding, and bedsteads.
- 37 cuspidors, agate ware.
- 6 candlesticks, metal folding.
- 2 corkscrews.
- 1 cup, feeding.
- 1 case, aspirating.
- 1 case urinalysis.
- 2 catlins.
- 3 desks, field.
- 20 dippers, agate ware, tin, and enamel ware.
- 38 forks, table, common.
- 3 filters, Maignon.
- 2 forceps, bone, Liston's.
- 1 forceps, dissecting, mousetooth.
- 15 forceps, tooth extracting.
- 5 graduates, glass.
- 1 hone.
- 2 inhalers, ether.
- 1 jar, covered, small.
- 2 knives, bread.
- 48 knives, table, common.
- 1 piece linoleum.
- 40 lanterns.
- 37 litters.
- 1 lavage tube, stomach.
- 6 ligatures, silkworm gut.
- 4 mills, coffee.
- 8 needles, hypodermic.
- 90 pillows, feather.
- 9 pitchers, enamel.
- 1 pan, dust.
- 224 first-aid packets.
- 9 pipettes, graduated.
- 13 pots, coffee, agate ware or tin.
- 2 phonendoscopes.
- 2 pots, tea, agate ware.
- 2 doz. pins, safety.
- 4 pus basins.
- 1 retractor, large.
- 1 piece rubber sheeting.
- 5 sterilizers.
- 1 skimmer.
- 21 spoons, table, common.
- 2 squeezers, lemon, wooden.
- 3 syringes, Davidson.
- 3 scissors, assorted, silver.
- 1 speculum, hose.
- 1 syringe, aspirating.
- 2 saws, amputating.
- 2 tables, large, folding, field.
- 2 tables, operating.
- 500 gms. twine.
- 6 thermometers.
- 2 tongue depressors.
- 1 typewriter.
- 1 trochar and canula.
- 1 urethrotome.
- 7 pots, miscellaneous.
- 1 probang.
- 73 pouches, Hospital Corps, N. G. C.
- 3 refrigerators.
- 1 rolling pin.
- 140 sheets, cotton.
- 37 saucers, agate ware, tin, or enamel.
- 4 spatulas.
- 37 spoons, tea, common.
- 2 stoves, coal oil.
- 8 syringes, penis, glass.
- 9 scissors, assorted, plain.
- 1 speculum, rectal.
- 9 syringes, hypodermic.
- 12 sounds, steel.
- 67 towels, hand.
- 11 tables, operating, field, folding.
- 1 tonsillitome.
- 1 tools, chest of.
- 2 tourniquets and bandages.
- 2 trephines.
- 1 urinal, porcelain.
- 1 water-cooler.
- 1 pot, iron, large.
- 4 probes, silver.
- 12 pouches, orderly, U. S. A.
- 2 retractors, small.
- 2 razors.
- 14 shirts, night.
- 3 scales, miscellaneous.
- 2 spoons, basting, agate ware, or tin.
- 4 spoons, wooden.
- 6 strainers, wire.
- 3 syringes, rubber, fountain.
- 1 set speculum, ear.
- 1 set splints, Days.
- 12 scalpels.
- 25 tables, bedside, folding.
- 3 tables for instruments.
- 1 table, operating, Columbus.
- 15 trays for instruments.
- 1 thermo-cautery, Paqueline.
- 4 trays for instruments.
- 7 trusses, single, elastic.
- 1 washboard.
- 1 wagon, spring.

In addition to the above and foregoing articles, there is also a supply of medicines, antiseptics, disinfectants, etc., in the possession of the Hospital Corps.

NOTE: Each division has a large amount of furniture, etc.

In addition to the property enumerated above, the following described articles are charged to the State by the Navy Department, and are in use by one or more of the divisions:

1 steam cutter, 36-foot, and equipment, attached to the U. S. S. "Marion."
 1 compass, 7½-inch (U. S. S. "Marion").

For Hotchkiss Rapid-Fire Guns, 1-pounders.

- 4 deck circles (U. S. S. "Marion").
- 3 chests drill cartridges (U. S. S. "Marion").
- 7 cage stands (U. S. S. "Marion").
- 3 cage stand circles (U. S. S. "Marion").
- 3 carriages (recoil mount), (U. S. S. "Marion").
- 1 hydraulic top carriage (U. S. S. "Marion").
- 5 chests (U. S. S. "Marion").
- 4 shovels (U. S. S. "Marion").

For 3-inch Navy Gun.

- 2 shell boxes (Third and Fourth Divisions).
- 2 shrapnel boxes (Third and Fourth Divisions).
- 2 Bristol sponges and rammers (Third and Fourth Divisions).
- 2 Bristol sponge caps (Third and Fourth Divisions).
- 1 Sponge bucket (Third and Fourth Divisions).

In addition to the foregoing, the following property is loaned to the State by the Navy Department for the use of the Naval Militia:

- U. S. S. "Marion" and equipment, at San Francisco.
- U. S. S. "Pinta" and equipment, at San Diego.
- 1 steam launch and equipment, at San Pedro.
- 2 flagstuffs.
- 1 yoke.
- 1 breaker and stand.
- 1 set boat spars.
- 12 secondary spars (boats).
- 2 boat hooks.
- 5 suits boat sails.
- 1 set spars.
- 1 D. E. machine, pattern "C," complete.
- 1 supply box.
- 1 wire box.
- 1 set boat fittings.
- 1 box spindles and pins.
- 12 exercise torpedoes, pattern "D," empty.
- 4 blocks.
- 2 awning stanchions.
- 3 sets leak stoppers.

The following medical property has been issued to the Naval Militia:

- | | | |
|----------------------------|------------------|-----------------------------|
| 21 haversacks. | 22 tourniquets. | 1 table for sick bay. |
| 3 Wills' naval stretchers. | 28 brassards. | 8 sheets. |
| 3 moss pads. | 2 pillows. | 12 towels. |
| 6 pillowcases. | 2 spreads. | 1 slop pail. |
| 1 pitcher. | 1 basin. | Also a supply of medicines, |
| 1 cuspidor. | 5 marking flags. | surgical dressings, etc. |

No stores have been received from the U. S. Navy Department and charged to the State's allotment under the appropriation "for arming and equipping the Naval Militia," during the fiscal year ending June 30, 1905. The balance to the credit of the State on this account, as per letter from the Assistant Secretary of the Navy, dated April 27, 1905, was \$24,296.56.

APPENDIX "H."

REPORT OF THE SURGEON GENERAL.

OFFICE OF SURGEON GENERAL, N. G. C.,
OAKLAND, CAL., July 15, 1905.

*To the Adjutant General of California,
Sacramento, Cal.*

SIR: I have the honor to submit the following as my annual report on the condition and equipment of the Hospital Corps, N. G. C., as required by Paragraph 16, General Orders No. 5, Adjutant General's Office, 1900:

Personnel.—The various detachments of the Hospital Corps, though not all recruited up to their full quota, still have a very fair numerical strength. Many of the commissioned and noncommissioned officers are veterans of the Spanish-American War and practically experienced by reason of service in the Philippine Islands.

Last year's encampment at Atascadero brought to light a number of defects in the performance of duty by privates of the Hospital Corps, most of which seemed to be due to lack of thorough drilling.

Though the encampment did much to correct these defects and give the men a practical knowledge of the duties required of them, a great deal of drilling and instruction in first aid to the wounded will be required to bring the Corps up to a satisfactory standard.

Such instruction is being regularly given by the various detachment commanders, and it has given me great pleasure to note their diligent efforts along this line.

Equipment.—The medical equipment of the Hospital Corps is limited to four out of the six detachments, these four being those on duty with the Second, Fifth, and Sixth Regiments and First Battalion Coast Artillery, the first three mentioned having complete regimental field hospitals such as are in use in the United States Army, and the fourth a miscellaneous outfit sufficient for service in the field.

The detachments on duty with the First and Seventh Regiments have practically no equipment whatever, such as they had having been taken up by my representative at Camp Atascadero last year, it being considered useless.

It is greatly to be desired that each detachment be equipped with a complete regimental field hospital as soon as practicable, thereby enhancing their efficiency in the field and stimulating their interest in the Corps, as I feel sure that they would take pride in caring for and learning the uses of the various contents of these outfits.

The members of the various detachments of the Hospital Corps, being so few in number, are unable to have the social advantages enjoyed by larger organizations of the Guard, which help in a large degree to keep

the men interested therein, and therefore must rely on themselves and their equipment to sustain such interest.

Inventories of the medical equipment of each detachment of the Hospital Corps and of property on hand in my storerooms, herewith.

Very respectfully,

(Signed:) D. D. CROWLEY,
Colonel and Surgeon General, N. G. C.

APPENDIX "I."

REPORT OF THE UNIFORM BOARD.

OFFICE OF THE UNIFORM BOARD, NATIONAL GUARD OF CALIFORNIA,
SACRAMENTO, CAL., September 7, 1905.

*To the Adjutant General of California,
Sacramento, Cal.*

SIR: I have the honor to submit the following report of transactions of the Uniform Board, N. G. C., during the fiscal year ending June 30, 1905:

The Uniform Board appointed under G. O. 14, A. G. O., October 30, 1903, consisting of the Adjutant General, Colonel Thomas Wilhelm, and Lieutenant Colonel Fred. J. H. Rickon, met at the office of the recorder in San Francisco, Cal., December 27, 1904.

On January 19, 1905, the recorder was directed by the president of the board to place order for 200 dress caps, assorted sizes, with B. Pasquale Company, which was done.

The following is a statement of expenditures incurred during the period covered by this report:

G. A. Snow, services as inspector of the caps and coats furnished under contract of The Pettibone Bros. Manufacturing Co., 16 days, at \$5 per day.	
Allowed July 2, 1904	\$80 00
Rubber stamp, for marking garments. Allowed July 2, 1904	65
The Pettibone Bros. Manufacturing Co., for cap and collar ornaments and chevrons and stripes. Allowed September 21, 1904	2,460 23
James H. Roche, for services as clerk to Uniform Board, from February 29, 1904, to August 31, 1904	60 00
Lieutenant Colonel Fred. J. H. Rickon, per diem allowance, 9 meetings at \$5. Allowed September 21, 1904	45 00
T. A. Nerney, for packing and shipping cap and collar ornaments, chevrons, and stripes. Allowed September 2, 1904	12 50
J. B. Haffin, for services in inspecting coats on contract of The Pettibone Bros. Manufacturing Co., 38½ days, at \$5 per day. Allowed September 29, 1904	193 75
The Pettibone Bros. Manufacturing Co., 3,599 dress coats, at \$5.98½ each. Allowed September 29, 1904	21,540 02
Thos. Nerney, for services in packing and shipping coats. Allowed September 29, 1904	95 05
The Pettibone Bros. Manufacturing Co., for materials of uniform purchased by the late Col. N. S. Bangham. Allowed December 27, 1904	10 25
The Pettibone Bros. Manufacturing Co., for extra chevrons and stripes for musicians for Artillery Battalion. Allowed February 11, 1905	15 00
The Pettibone Bros. Manufacturing Co., for 51 dress coats (balance under their contract), at \$5.98½ = \$305.24, less \$60, being cost of inspection of coats rejected by the Board. Allowed March 3, 1905	245 24
B. Pasquale Company, 200 dress caps, at \$1.29½ each	259 00
Total	\$25,016 69

The following is a statement of outstanding indebtedness to June 30, 1905:

James H. Roche, for services as clerk to Uniform Board from August 31, 1904, to June 30, 1905, 10 months, at \$10.....	\$100 00
Lieutenant Colonel Fred. J. H. Rickon, per diem allowance, 4 meetings at \$5.....	20 00
Total	\$120 00

Lieutenant Colonel Fred. J. H. Rickon, N. G. C., retired, was detailed as a member of the Uniform Board per S. O. No. 4, A. G. O., April 17, 1905, said detail to date from April 1, 1905.

Very respectfully,

(Signed) FRED. J. H. RICKON,
Lieutenant Colonel, N. G. C., Retired,
Recorder.

APPENDIX "J."

REPORTS OF COMMANDING OFFICERS OF STATE ORGANIZATIONS PARTICIPATING IN JOINT MANEUVERS, 1904.

HEADQUARTERS FIRST BATTALION OF ARTILLERY, N. G. C.
SAN FRANCISCO, March 13, 1905.

*To the Adjutant General of California,
Sacramento, Cal.*

SIR: In accordance with directions from your office, I have the honor to report as follows relative to the operations of this command at Camp Atascadero, August, 1904:

Date, and Matters of Interest in Connection with Entraining of Troops.—Instructions were received to forward all camp equipage, etc., so as to be loaded on the cars during August 12th. This was promptly complied with, under the supervision of Lieutenant C. F. Knerr, acting quartermaster, and the same loaded before 3 P. M. on that day.

The command was instructed to be ready to be entrained at the Southern Pacific depot, Third and Townsend streets, at 10 P. M. The battalion left its armory at 9:10 P. M., and reported at the depot at 9:50 P. M. On account of the delay in moving the train of the Fifth Infantry, N. G. C., this command was delayed until 10:30 P. M., at which time the train proceeded to the camp.

The entraining was done promptly and without confusion, and while sleeping cars were not provided, the men were rendered as comfortable as the circumstances permitted. The following telegram was sent in accordance with instructions:

To Adjutant General, Provisional Division, Camp Atascadero:

First Artillery—12 officers, 157 men, 5 horses. Signal Corps—1 officer, 22 men, 1 horse. Troop A—2 officers, 27 men, 30 horses. 2 baggage cars. Left at 10:30 P. M. Arrive 10 A. M.

BUSH, Major.

The Signal Corps and Troop A, Second Brigade, had been ordered to report to me and proceed on my train.

The command reached Asuncion August 13th at 7:30 A. M. Breakfast was prepared on the train at 5 A. M., from the travel ration carried by the men. Hot coffee was made; to enable this to be done, small alcohol stoves were furnished to and carried by each squad. The train was held at Asuncion until 9:30 A. M., to enable the organizations which had preceded it to detrain, and reached Atascadero a few moments thereafter, promptly detraining, loading camp equipage, etc., and accompanied by the wagon train marched to the camp, where the command arrived at 12:15 P. M. Lunch was at once prepared, and tents pitched; the commanding officer reporting to Colonel A. C. Markley, U. S. A., commanding First Provisional Brigade (to which the battalion was attached), with his field returns, at 1:30 P. M.

Incidents en Route.—None of any moment.

Number and Designation of Organizations.—Field, staff, noncommissioned staff, band and four batteries, serving as infantry.

Number of Officers and Men.—Field and staff, 4; noncommissioned staff, 4; band, 15; Battery A—3 officers, 37 enlisted men; Battery B—3 officers, 37 enlisted men; Battery C—1 officer, 33 enlisted men; Battery D—2 officers, 31 enlisted men. Total, 13 officers, 157 enlisted men—and 5 horses.

Part Taken by Command in Maneuvers and Problems.—The command took part in the following maneuvers and problems, copies of the report of the umpires being attached hereto and made part hereof:

August 16—Problem No. 1: Advance and rear guard.

August 17—Problem No. 2: Attack and defense of convoy.

August 18—Problem No. 3: Outposts. Hospital drill. Entrenchments at Pine Ridge.

August 20—Problem No. 5: March and deployment of a division.

August 22—Problem No. 6: Attack and defense of an entrenched position.

August 23—Problem No. 8: Passage of a defile.

(Problems Nos. 4, 7, and 9 being omitted.)

The command also took part in the following reviews:

August 14—First Provisional Brigade, by Colonel A. C. Markley, U. S. A.

August 19—First Provisional Brigade, by Colonel A. C. Markley, U. S. A.

August 21—The Provisional Division, by Major General Arthur MacArthur, U. S. A.

August 25—The Provisional Division, by Governor George C. Pardee.

Number on Sick Report.—An average of about six per day, minor complaints and generally for a few hours. It was observed that although the duties were more arduous than at State camps, the number of men reporting for treatment was less and the general health better.

Number in Hospital.—Three, for more than one day.

Proceeding to Home Station—Matters of Interest Relative Thereto.—On August 26th, pursuant to orders, the camp was struck, baggage loaded on the wagons, and the battalion at 12:50 P. M. left the camp and proceeded with its wagon train to Atascadero, where it was entrained. Colonel A. C. Markley, U. S. A., commanding the First Provisional Brigade, and staff, visited the command just prior to leaving, addressed

the men and accompanied the command until it passed out of the precincts of the camp.

The command arrived at Atascadero at 1:45 P. M., loaded all of its baggage, horses, etc., on the cars and entrained at 2:37 P. M., the train departing from the station at 2:47 P. M., three quarters of an hour ahead of the scheduled time; the chief quartermaster having stated that the command could leave as soon as its baggage was loaded.

We were scheduled to arrive in San Francisco at 10:30 P. M., but on account of the engine drawing the train of the First Infantry becoming disabled after leaving San Luis Obispo, we did not arrive at Salinas until 9 P. M., where it was necessary to hold that train for some time on account of detraining the Salinas troop. I requested the train dispatcher to permit my train to proceed without delay, as Troop A, with their horses, was on my train, and by so doing would enable us to reach San Francisco before midnight and at the same time would not delay the train of the First Infantry, as it had to be held for the above purpose. This was refused, and consequently the command did not reach San Francisco until 2:30 A. M., and dismissed at its armory at 3:30 A. M., entailing additional expense.

Opinion Relative to the Value of Maneuvers—The Best Time to Hold Same.—The value of these maneuvers can not be overestimated. The system of instruction makes it possible to so educate, not only the officer, but the enlisted men as well, in everything connected with the proper care and handling of the men and the ability of the men to a large extent to care for themselves. This was evidenced, if only in one instance, through the orders issued and the care taken by the inspectors for the proper policing of the camp, sinks, latrines, and camp sanitation, which undoubtedly impressed itself on the men and would have the most advantageous effects if called into active service.

The eagerness of the Army officers, with whom we were associated, to afford all information desired, and the assistance and instruction rendered by them, were of great value, and it was noticeable that the men readily availed themselves of their chances for observation when visiting or associating with the regular troops.

Relative to the time for holding these maneuvers, it is somewhat difficult to specify, on account of the different locations of the several organizations. For the troops in the vicinity of San Francisco, I presume the best time would be from May to and including July, and in localities where the heat is not so intense as at Atascadero when we were there (at times over 100°). But no matter at what time in the future it should be decided to hold these maneuvers, it is absolutely necessary that sufficient time should be given in announcing the date so that the men can arrange for their absence from business. On account of the delay in announcing this encampment it looked at one time as if hardly thirty per cent of this command could make the necessary arrangements; but the matter having been strenuously taken up by the several commercial bodies and the newspapers here, men were enabled to obtain leave of absence who at first were doubtful of their ability to do so.

Other Opinions and Suggestions.—As it would appear that these joint maneuvers will only be held biennially, the State camps, if any,

held during the interval, should be so conducted as to be a school for instruction in such duties and movements as may be called for at the joint camps. To carry this out fully, regular officers should be invited to act as instructors, particularly those who may have taken part in such exercises or who may have acted as umpires therein; and decidedly better results would be obtained if these camps could be held in conjunction with regular troops. I noticed at Atascadero that considerable information was obtained by both officers and men in observing military duties as performed by the regular troops.

The State camps as heretofore conducted, under the provisions of Section 2022 of the Political Code, should be a thing of the past. The camps so contemplated in the provisions of the Act of January 21, 1903, should be rigidly enforced and the organizations availing themselves of the privileges thereof, required strictly to conform thereto. This would bring the several organizations of the Guard into the larger camps with a clearer understanding and knowledge as to what will be required of them.

In addition thereto, I beg to reiterate what I have heretofore said in one of my former reports: that prior to the joint maneuvers a regular officer be assigned to the several bodies to suggest and act as instructor in such duties and to act as an adviser during the maneuvers. This would greatly facilitate the work to be performed and save considerable time, which at the most is necessarily limited.

Good marching shoes should be issued to the men. It was observable at Atascadero that the inability of many of them to perform the duties required was due to improper foot gear.

Men should not be taken to the joint maneuvers, unless a specified term of service has been complied with and proper preliminary instruction imparted at the home station prior thereto.

This battalion having been organized as coast artillery, acted as infantry during the maneuvers, and while it has been afforded some instruction at the emplacements at the Presidio, still it has been somewhat limited and availed of so far as the conditions would permit. While it necessarily at its home station will be called upon to act as infantry, still in addition thereto (if it is to maintain its distinction as such) a course of instruction should be provided and required of it as will make it conform to the contemplation of its organization (under General Orders No. 3, series of 1901, Adjutant General's Office) and as would make it available in case of necessity, and the proper instruments, appliances, and instruction furnished to that end.

Respectfully yours,

(Signed:) H. P. BUSH,
Major, Commanding.

HEADQUARTERS FIRST REGIMENT OF INFANTRY, N. G. C.,
No. 21 Page Street,
SAN FRANCISCO, CAL., June 2, 1905.

*To the Adjutant General of California,
Sacramento, Cal.*

SIR: Pursuant to your letter of the 27th of December, 1904, requesting a report of the operations of the First Infantry, N. G. C., in connection with the late maneuvers at Camp Atascadero, I have the honor to report:

The Headquarters, Field, Staff, Detachment of Sanitary Corps, and Companies A, B, C, D, E, F, G, and H, of this regiment, aggregating 35 officers and 301 enlisted men, entrained for Atascadero Station, San Luis Obispo County, Cal., at the railroad depot of the Southern Pacific Company, at Third and Townsend streets, San Francisco, Cal., on August 12, 1904, at 8:37 P. M. All of the preliminary arrangements, such as train equipment and time schedules, for the transportation of this command, its baggage and equipage, were had, made, and done by or through the office of the Chief Quartermaster of the Department of California.

The wagon transportation was performed under an existing contract with the Depot Quartermaster.

A detail of two men from each company reported to the Regimental Quartermaster at 9 A. M., August 12, 1904, to assist in loading the wagons and entraining the baggage. The freight and baggage were loaded on cars in accordance with instructions, so that the tentage and hospital supplies would be the first property unloaded, and company property was so segregated in the cars that there was no confusion at the detraining point.

The train equipment for this command consisted of one engine, one baggage car for personal baggage, one baggage car for camp outfit, one box car for horses, one first-class car for use of officers, and nine coaches for the various companies and noncommissioned staff and detachment of Sanitary Corps. This train was scheduled to leave the depot at Third and Townsend streets, San Francisco, at 8:30 P. M., August 12, 1904.

The command reached the depot at 8:25 P. M. of that date and immediately entrained. Each company was assigned to a car, according to regimental formation, from front to rear. The train left the depot at 8:37 P. M., August 12, 1904, traveling by the coast line of the Southern Pacific Company.

Arrived at Salinas, en route, at 12:45 A. M., August 13, 1904, where stop was made to attach coach and two box cars bearing the officers, men, horses, and equipage of Troop C, Cavalry, N. G. C., to the train bearing this command.

This combined train left Salinas at 1:15 A. M., August 13, 1904. The train was scheduled to arrive at Atascadero at 8:30 A. M., August 13, 1904, but reached that station at 5:15 A. M. on the last named date.

Upon reaching Atascadero, Major Williamson, U. S. A., representing the Chief Quartermaster of the maneuver camp, met the train with sufficient supply of wagon transportation to convey all of the equipage

of this command to the camp, about one and a half miles from the station. The wagon train, bearing the complete camp outfit, was loaded within sixty minutes after detraining, and arrived at camp with the regiment at 7:20 A. M.

The company property was deposited at the head of each company street, and camp was pitched without delay.

The several companies were provided with refreshments en route and sufficient rations for two meals after arrival in camp.

On arriving in camp this regiment was brigaded in the Second Provisional Brigade with Fifteenth Infantry, U. S. A., Second Infantry, N. G. C., and Fifth Infantry, N. G. C. The regiment participated in the following exercises and field maneuvers:

August 14, 1904—Brigade review, Colonel H. I. Seymour, Second Infantry, N. G. C., commanding.

August 15—"Evolutions of the regiment and of the brigade in battle exercises." The morning exercise was a drill in frontal attack in extended order, by the regiment commanded by its colonel. The afternoon exercise was a deployment and turning movement by the brigade in extended order. The regiment was commanded by Lieutenant Colonel J. F. Connolly.

August 16—The regiment composed one half of "Blue" infantry in third exercise, Problem No. 1—"Advance guard." The regimental commander commanded the advance guard. The exercise was conducted with great spirit on both sides. The officers and men were anxious to do their best in this first exercise, and they acquitted themselves creditably. On the conclusion of the exercise the advantage was with the "Blues."

In the afternoon between 5 and 7 o'clock, the second battalion, commanded by Major George Filmer, had practical instruction in bridge building and entrenching, and in constructing barbed wire entanglements and abatis.

August 17—Problem No. 2, "Attack and defense of a convoy." The colonel of the regiment was commander of the main body guarding the wagon train. The regiment was part of the main body, and was commanded by Lieutenant Colonel J. F. Connolly. This exercise developed into an advance guard action, the train was parked, and the main body furnished supports to the advance guard.

Between 5 P. M. and 7 P. M. the first battalion, commanded by Major T. J. McCreagh, received practical instruction in constructing trenches, rifle pits, and emplacements for artillery.

August 18—"Attack and defense of outposts." The regiment was commanded by Major Filmer, and formed part of the "Brown" force, which established a camp and strong outposts, and defended against attacking "Blues."

August 19—Brigade review; Colonel H. I. Seymour, Second Infantry, N. G. C., commanding.

August 20—"March and deployment of a division." The regiment, commanded by its colonel, formed part of the Second Brigade. The exercise consisted of the advance and deployment of a central division against an inferior force (outlined), the object being to crush it. The day was exceedingly warm, and the exercise took nine hours' time. In the course of the exercise it was required that the Second Brigade cover a distance of four miles in as short time as possible. The brigade

marched the distance in the hottest part of the day in fifty-one minutes. A number of men from all organizations dropped from the ranks through distress, and a number fainted. This regiment held itself together during the fatiguing march in a commendable manner.

August 21—Division review by General MacArthur at Asuncion.

August 22—"Attack and defense of an entrenched position." The regiment, commanded by Major T. J. McCreagh, constituted part of the defending force ("Blue"). The exercise was only interesting in determining the strategy of the "Brown" force in advancing on the "Blue" position, which was well-nigh impregnable except, possibly, to a Japanese army.

August 23—Company B furnished a detail for exercise in bridge building. Regimental parade in the evening.

August 24—"Passage of a defile." The regiment was part of the "Blue" force; it was assigned as part of the advance guard, and was commanded by its colonel, who was also commander of the advance guard. All the troops in camp took part in this exercise, which proved to be about the most successful of the encampment. The officers and men, after their two weeks of instruction and training, conducted themselves like veterans and proved that the camp was a success. The chief umpire's comments on the conduct of the troops on this last exercise are complimentary, and, at the same time, deserved.

August 25—Review of the division by Hon. George C. Pardee, Governor of California. This exercise was, in all respects, executed with promptness and precision, and demonstrated that a short period of drill and discipline makes a guardsman a precise and well set-up soldier.

The general health of the command was excellent. The sick report for two weeks was: Sick in hospital, 13; sick in quarters, 38; total, 51. There were no serious cases, nearly all being the result of fatigue. I attached to my camp report of the Atascadero camp, dated September, 1904, and sent to the Adjutant General's Office, Sacramento, Cal., a report by Major and Surgeon, Theodore Rethers, assigned to First Infantry, N. G. C., upon the health of the command, the healthfulness of the campsite, and the sanitation of the camp, with suggestions for improved health conditions.

On August 26th camp was struck; the "general" being sounded at 9:40 A. M. Baggage and freight were loaded on wagons and transported to Atascadero Station, where the regiment entrained for its home station. Departed from Atascadero at 1:30 P. M., August 26th. Cars containing Troop C, Cavalry, N. G. C., and horses and equipment, were attached to train. Shortly after leaving Atascadero and near San Lucas, the locomotive hauling the train developed a "hot box," which caused frequent delays and slow running, the total delays amounting to several hours. Arrived at Salinas 8 P. M. Troop C, Cavalry, N. G. C., detrained. At this point the railroad company furnished a fresh engine. Departed from Salinas at 8:45 P. M., and arrived at depot at Third and Townsend streets, San Francisco, Cal., without further incident, at 1:13 A. M., August 27, 1904. Arrived at armory, Page and Gough streets, at 3 A. M., where the regiment was dismissed.

The value of the maneuver encampment to the officers and men was very great; it can not be overestimated. The introduction of the guardsmen to the rules and theories of minor and grand tactics was necessarily highly instructive. It broadened their intelligence and taught many,

if not all, that the efficiency of a soldier depends almost entirely on his previous instruction. It illustrated to the officers, more than any other series of peaceful exercises could, the great importance of preliminary instruction in the details of field work and in sighting and firing. Every officer who attended the encampment must understand the necessity of study and of special reading of military topics in addition to his drill regulations. Such encampments will compel officers and enlisted men alike to acquire some professional knowledge of the art of war and to increase such knowledge as their service continues.

I can not think of anything that will promote the efficiency of the National Guard so much as a continuation of maneuver encampments of the character held at Atascadero.

Suggestions.—I believe August to be the best month for encampments.

The Henry ranch is not large enough for encampments of the size held last August, and, besides, the water supply does not seem to be sufficient.

I think that larger and better grounds for combined maneuvers can be found in the northern counties of the State.

I further suggest that the enlisted men of the National Guard should be granted the privilege of purchasing shoes from the U. S. Quartermaster Department for use in camp, and, in fact, for all military purposes.

Also, the State should add to the army pay of enlisted men sufficient to pay enlisted men \$2 per day while in camp.

Mounted officers should be allowed by the State \$1 per day in cash toward horse hire in camp.

Very respectfully,

(Signed:) THOS. F. O'NEILL,

N. G. C., Retired,

(Late Colonel, First Regiment of Infantry, N. G. C.)

HEADQUARTERS

SECOND REGIMENT OF INFANTRY, THIRD BRIGADE, N. G. C.,
SACRAMENTO, CAL., January 30, 1905.

*To the Adjutant General of California,
Sacramento, Cal.*

SIR: Replying to your communication of December 27, 1904, requesting certain detailed information relative to the participation of the Second Regiment of Infantry in the joint maneuvers at Camp Atascadero, Cal., I have the honor to submit the following report:

Dates, and Matters of Interest in Connection with the Entraining of Troops.—Pursuant to orders from superior headquarters, Companies A, B, C, D, E, F, G, and H assembled at their home stations on August 12th, fully equipped for field service. Company I, of Grass Valley, though still in the service, was not ordered to report for several well-known and sufficient reasons.

The regiment, accompanied by Troop B, Cavalry, was conveyed by special train, in two sections, from Sacramento, the first section leaving the depot at 8:35 P. M. of August 12th. The regiment was assembled

preparatory to departure as follows: Company C, of Nevada City, and Company H, of Placerville, were transported on regular trains to Sacramento, arriving in the afternoon of August 12th. That portion of the Field and Staff located in this city, together with the regimental band and Companies E and G, assembled at the depot just prior to departure. A special train was run from Chico, conveying Company A of that town, and picking up Company D, of Marysville, and Company F, of Woodland, en route. Company B, of Colusa, traveled on regular train from home station to Davisville. At Davisville the special trains were consolidated with those from Sacramento, and proceeded in two sections from that point to destination.

There were no incidents of importance occurring en route to Camp Atascadero. Prior to departure several of the cars furnished by the Southern Pacific Company for the transportation of the regiment I found to be unfit for use, being supplied with the old, backless wooden seats and lacking in provision for water. In one instance a car was totally without toilet conveniences. Upon application to Mr. R. J. Laws, at that time Superintendent of the Sacramento Division, these matters were remedied, and the cars furnished the command were entirely satisfactory. The run from Sacramento to Atascadero was made on schedule time and the men stood the journey well.

Dates, and Matters of Interest in Connection with the Detraining of Troops.—The arrangements of the Quartermaster's Department, U. S. Army, for detraining troops, horses, and baggage were, in my judgment, most excellent, considering all of the circumstances. The officers of the Second Infantry met their suggestions in every possible way, and the entire regiment, including its baggage and camp equipage, was detrained, the quartermaster's wagons loaded, and the march taken to camp in an incredibly short space of time.

I regret to report the accident that befell Major Preston F. Simonds of this regiment about this time, who was thrown from his horse and suffered a compound fracture of the collar bone.

Number and Designation of Organizations.—The number of companies in the regiment was eight, designated and located as follows: Company A, Chico; Company B, Colusa; Company C, Nevada City; Company D, Marysville; Company E, Sacramento; Company F, Woodland; Company G, Sacramento; and Company H, Placerville. In addition there were a regimental band and sanitary corps detachment, both located at Sacramento.

Number of Officers and Men.

	Officers.	Enlisted Men.
Field, Staff, and Noncommissioned Staff.....	11	5
Band	18
Company A.....	2	43
Company B.....	3	29
Company C.....	3	41
Company D.....	3	30
Company E.....	3	26
Company F.....	3	32
Company G.....	2	30
Company H.....	1	35
Sanitary Corps Detachment.....	2	6
Total strength.....	33	295

Number on Sick Report.—Average daily sick report, 2 officers, 12 enlisted men. Number in hospital, none.

Proceeding to Home Station—Matters of Interest Relative Thereto.—The regiment, under orders from the Division Commander of the camp, proceeded to its home station on August 26th. Reveille was sounded at 3:30 A. M. By 8 A. M., camp had been struck and properly policed, the baggage and equipment loaded, and the command marched to railroad station and entrained, proceeding by special train, in two sections, in the same manner in which the journey to camp was made. The trains arrived at Sacramento at 11:45 P. M. of August 26th, without notable accident. Companies E and G were marched to their armories and dismissed. Company C, of Nevada City, Company D, of Marysville, and Company A, of Chico, proceeded by local train to their home stations that night. Company F, of Woodland, and Company B, of Colusa, were also transported to their home stations, on special train, that night. Company H rendezvoused in the armory at Sacramento and proceeded to its home station by local train on the morning of August 27th.

Relative to the journey home, I have serious objections to offer as to the quality of the equipment furnished by the railroad company for the transportation of the troops of my command. Nearly one half of the cars were unfit for the men to ride in, containing, as previously noted, low-backed wooden seats, and not being supplied with water for drinking. These cars were totally unfit for men to travel in for so long a journey, and I would respectfully suggest that when provision is again made for the transportation of the National Guard, or any part of it, to and from an encampment, it be provided in the contract with the railroad company that such cars are not to be furnished under any circumstances.

Part Taken by Command in Maneuvers—Problems, with Fullest Possible Report Thereof.—The regiment was made a part of the Second Brigade, commanded by Colonel Henry C. Ward, Fifteenth Infantry, U. S. Army, and participated in the maneuvers at Camp Atascadero as follows:

Sunday, August 14—Brigade review, by Colonel Henry C. Ward, Fifteenth Infantry, U. S. Army.

Monday, August 15—Brigade field exercises, Colonel Henry C. Ward, Fifteenth Infantry, U. S. Army, commanding brigade.

Tuesday, August 16—Problem No. 1, "Advance guard and rear guard." The regiment acted as advance guard, main body imaginary, with "Brown" forces; one battalion acting as the advance guard, the other as the support. When the action was developed, the regiment, in conjunction with the other commands making up the "Brown" forces, was deployed in battle formation and took part in the general attack.

Wednesday, August 17—Problem No. 2, "Attack and defense of a convoy." Regiment was part of "Brown" forces. One battalion was attached to and made part of raiding forces and acted in support of the artillery composing that force. The other battalion acted as rear guard to the main body in the march from Hepburn Well, on the Eagle Ranch road. Acted in support of and in conjunction with a

battery of the "Brown" forces placed on the left of the line during the entire engagement.

Thursday, August 18—Formed part of the "Blue" forces in Problem No. 3, "Attack and defense of outposts." Regiment formed the outpost of the "Blue" forces, entrenched their position, and held same against the attack of the "Brown" forces.

Friday, August 19—Brigade review, by Colonel Henry C. Ward, Fifteenth Infantry, U. S. Army.

Saturday, August 20—Attached to the "Brown" forces in Problem No. 5, "March and deployment of a division," forming part of the main body during the entire movement.

Sunday, August 21—Division review at Asuncion Station, forming part of the Second Brigade.

Monday, August 22—Formed part of the "Brown" forces in Problem No. 6, "Attack and defense of an entrenched position." Regiment acted as advance guard to main column and participated in the general attack on the entrenched position after the same had been developed.

Tuesday, August 23—Regimental parade and camp duty.

Wednesday, August 24—Formed part of "Brown" forces in Problem No. 8, "Passage of a defile," acting with main body and taking part with that body in main attack.

Thursday, August 25—Review by Governor George C. Pardee.

Information Relative to Maneuvers—Best Time to Hold Same.—I believe that maneuvers conducted on the lines of those at Camp Atascadero are of incalculable benefit to the National Guard, affording to both officers and men an opportunity of learning the duties of a soldier that can be gained in no other way. After a long experience in the National Guard, I can well say that the encampment at Atascadero was by all means the most satisfactory that I ever attended. The only criticism that, in my judgment, could be made is that in the endeavor to give the National Guard as much experience as possible, the physical capacities of the Guardsmen were in some measure overtaxed.

I would also suggest that the Legislature make provision for the pay of the men over and above that allowed by the U. S. Army. They should receive at least \$2 per diem. When it is taken into consideration that many of the men, in fact most of them, attend these encampments at some considerable financial sacrifice, and, in addition, give up to the service of the Government and the State their annual summer vacations, it appears to me that the least the State can do is to see that they are remunerated in some measure for so doing.

It is a difficult thing to suggest the best time for holding maneuvers. For my regiment, the month of September would probably be the best time. August is the height of the harvest season, and many of the companies in my command are composed in large part of men engaged in agricultural pursuits.

Very respectfully,

(Signed:) H. I. SEYMOUR,
Colonel, Commanding Second Infantry.

HEADQUARTERS FIFTH REGIMENT OF INFANTRY, N. G. C.,
SAN FRANCISCO, CAL., January 15, 1905.

*To the Adjutant General of California,
Sacramento, Cal.*

SIR: I have the honor to forward the following report in accordance with your letter of December 27, 1904—received direct:

In compliance with General Orders No. 8, Adjutant General's Office, dated July 7, 1904, General Orders No. 4, Division, N. G. C., dated July 12, 1904, and General Orders No. 29, Headquarters Department of California, U. S. A., dated July 12, 1904, I issued an order directing the several companies of this regiment to leave their home stations on the afternoon of August 12, 1904, and rendezvous in San Francisco, to arrive not later than 8 P. M. of that day. The company commanders were ordered to report with their commands to the regimental adjutant at Southern Pacific depot, Third and Townsend streets, San Francisco, at 9 P. M., to entrain and proceed to Atascadero Station, San Luis Obispo County. All of the companies arrived and reported on time and were immediately placed in regimental formation.

Before entraining I directed a field officer, together with the adjutant and quartermaster, to inspect the railroad train provided for our travel. The train was in good condition, clean and well lighted, and with plenty of water.

Under direction of the adjutant and quartermaster the several companies were assigned to and entered their respective cars fifteen minutes before the time scheduled for the regiment to leave San Francisco. A delay on the part of the railroad company prevented our train from leaving for fully three-quarters of an hour thereafter.

The run to Atascadero (228 miles) was made in slow time, without incident, arriving at about 8 A. M. August 13th; time consumed in trip about ten hours. A stop was made at San Miguel, about 20 miles this side of Atascadero, where hot coffee, which had been arranged for by the commissary, was served to the command.

The detraining was carried out under my direction; a detail from each company reporting to the regimental quartermaster, under whose direction the escort wagons furnished by the Quartermaster's Department, U. S. A., were loaded with the regimental and company equipage. The regiment then took up its march for the camp, followed by its wagon train.

The following are the designations and organizations comprising the command: Field and Staff, Noncommissioned Staff, Detachment Sanitary Corps, and Companies A, B, C, D, E, F, G, H, I. The following was the strength: 39 officers and 378 men.

The entire command, or a part thereof, engaged in the following maneuvers and problems:

Tuesday, August 16—Problem No. 1 (first exercise), "Advance and rear guard," Major Poulter with first battalion (Companies A, F, and G), as part of "Brown" force, under command of Major Lassiter, Fifteenth U. S. Infantry. This was a rear guard action.

Tuesday, August 16—Problem No. 1 (second exercise), Major Smith with second battalion (Companies B, D, and I) as part of "Brown"

force, under command of Lieutenant Colonel Forbes, Second California Organized Militia. This was an advance guard action.

Tuesday, August 16—Problem No. 1 (third exercise), Major Haven with third battalion (Companies C, E, and H), as part of "Blue" force, under command of Colonel O'Neil, First California Organized Militia. This was an advance guard action.

Wednesday, August 17—Problem No. 2, "Attack and defense of a convoy." I was ordered to report with my regiment to Colonel Markley, Thirteenth U. S. Infantry, commanding "Blue" force. My command was made part of main body, under direct command of Colonel O'Neil, First California Organized Militia.

Thursday, August 18—Problem No. 3, "Outposts," first exercise (attack and defense). Lieutenant Colonel Juilliard ordered to command of "Brown" force, and directed to send a reconnoitering force to develop the location of outposts, ascertain strength of "Blue" force, and, in his discretion, attack.

Thursday, August 18—Problem No. 3, "Outposts," second exercise (attack and defense). I was ordered to command the "Brown" force and directed to await, if unmolested, at the mouth of Atascadero Gorge (No. 64 on the map) further orders from superior commander. I was to take regular measures of security as for a like force camped in a hostile country. I had under my command the Fifth California Infantry, Organized Militia; First California Infantry, Organized Militia; field artillery (2 platoons), First Battery, U. S. A.; Signal Corps Detachment; Hospital Corps Detachment. This action was attack of outpost.

Saturday, August 20—Problem No. 5, "March and deployment of a division." The entire regiment was engaged in this problem. The exercise was to exhibit the deployment of a division massed on two parallel roads into a line, and later, the deployment of the division to the flank when marching on two parallel roads. This exercise lasted over nine hours.

Monday, August 22—Problem No. 6, "Attack and defense of an entrenched position." The entire regiment as part of "Brown" force ordered to report to Lieutenant Colonel Pitcher, Twenty-eighth U. S. Infantry, commanding "Brown" force. Captain J. A. Margo, Fifth Infantry, ordered to report to Colonel Pitcher, as aid. The "Brown" force was used for the attack.

Tuesday, August 23—Problem No. 8, "Passage of a defile." The entire regiment took part in this exercise as part of "Blue" force which was used in the attack. The "Blue" force was under command of Colonel Markley, Thirteenth U. S. Infantry. This completed the list of problems presented for exemplification.

Number on sick report, 171; number in hospitals, 10.

On Friday, August 26th, in compliance with General Orders No. 8, Headquarters Provisional Division, U. S. A., preparation was made to proceed to home stations. Tents were lowered and all regimental and company equipage and property were packed and loaded on escort wagons furnished by the Quartermaster's Department, U. S. A. The ground on which the regiment camped was thoroughly policed by details from all companies. The regiment, followed by its wagon train, then took up its march for Atascadero Station, where it entrained and

was ready to start for home stations two minutes before time scheduled to depart. Before entraining I had the train inspected and found it to be in good condition. The run home was made in very slow time; a long delay occurred at San José, owing to confusion and mistake of orders of the Southern Pacific Company regarding transportation of Company I to Livermore, and Company H to Napa. Both companies were to have changed at that point, but in consequence of the mistake Company H had to be brought on to San Francisco. Nothing of note occurred other than related.

As to the value of the maneuvers I can but express my opinion that the National Guard of California as a whole was benefited to a certain extent, although possibly not as much as the regulars. The work was systematic and progressive, but not as instructive as I think it could have been made for the National Guard. Of course, some officers profited much more than others by coming in contact with officers of the regular establishment, either by being directly under their command, or by working side by side. It is a well-known fact that the regiments of the National Guard have no opportunity of assembly for drill and instruction, other than at the State camps, generally held *once* a year, and to this can be attributed the absence of training and fitting for an encampment of the kind held. The regular establishment had been working hard drilling and perfecting themselves for from six to eight weeks prior to the encampment, getting the men in perfect condition for a *maneuver camp*, where the work *must* be necessarily *hard*. To take the National Guard of California, composed mostly of men following sedentary occupations, without any opportunity for the hardening process, or without any chance for the regimental commander to get his command together by having the first few days at least devoted to getting the men accustomed to their new surroundings, both as to food and work, is in my opinion an error of judgment.

It came under my personal observation that the want of proper foot gear annoyed the enlisted men and was a very serious drawback to the comfort and welfare of the men. The United States troops are well provided for in this respect and suffered but little in comparison with our men.

As to the best time of the year to hold camps of this kind, I believe that if the men were informed at the *first* of the year that there would be a camp and the *time* of holding same be specified, the men could and would arrange their vacations or leaves of absence from business accordingly, no difference what month might be selected. This regiment has had very successful camps in the months of May, June, July, and August.

Very respectfully,

(Signed:) J. F. HAYES,
Colonel, Fifth Infantry, N. G. C.

HEADQUARTERS SIXTH REGIMENT OF INFANTRY, N. G. C.,
MODESTO, CAL., January 31, 1905.

*To the Adjutant General of California,
Sacramento, Cal.*

SIR: In compliance with your letter dated December 27, 1904, requiring a report of the operations of the Sixth Infantry Regiment, N. G. C., at Camp Atascadero, in August, 1904, I have the honor to submit the following:

Much of the subject-matter in this report has already been submitted in my report to the commanding officer of the Provisional Division, at Camp Atascadero, and in my annual report to the Adjutant General, State of California, dated September 16, 1904.

The entraining of the troops was performed in a satisfactory manner by officers detailed from these headquarters to assist the acting quartermaster at the different points on railroad where the several companies of this regiment are located. The time schedule prepared by the Santa Fé Company was followed and the companies left home stations, as a rule, on time.

The baggage and camp equipage cars, as estimated by the Division Quartermaster, were found to be inadequate to transport the necessary baggage, camp equipage, and horses, and more cars were added at Stockton and Tracy.

The arrangement of transporting this regiment over two roads, viz: the Santa Fé and the Southern Pacific, was, in my opinion, bad, and resulted in keeping Company D and Headquarters, of Modesto, at Tracy, the point where the regiment was consolidated, from 11 P. M., August 12th, until 4:45 A. M., Saturday August 13th.

No incidents of importance occurred en route. Atascadero Station was reached at 5:30 P. M., August 13th. The regiment was detrained in three and one-half minutes, formed and marched to camp, a detail of ten men from each company being left at the station to load the camp equipage on the wagons which were waiting to receive same. The arrangements by the Quartermaster's Department were perfect in every detail, and the detraining of troops and the conveying of baggage from station to camp were performed in a most creditable manner, quickly, and without confusion.

The number and designation of organizations were as follows: Headquarters, Band, Detachment Sanitary Corps, and nine companies, viz: A, B, C, D, E, F, G, H, and I, located at Stockton, Modesto, Merced, Fresno, Hanford, Visalia, and Bakersfield.

Number of officers and men: Sixth Infantry, 37 officers, 309 enlisted men; Detachment Sanitary Corps, 3 officers, 9 enlisted men; total, 40 officers and 318 enlisted men.

This command took part in the following problems, either as a whole or in part:

Problem No. 1—First exercise, "Advance guard and read guard." "Blue" force under command of Colonel R. K. Whitmore, Sixth Regiment commanded by Lieutenant Colonel George W. Stewart.

Problem No. 2—"Attack and defense of a convoy." The entire regiment took part in this problem as advance guard, commanded by

Colonel R. K. Whitmore, with "Blue" force commanded by Colonel Markley, Thirteenth U. S. Infantry.

Problem No. 3—Second exercise, "Attack and defense." The third battalion, commanded by Major P. M. Norboe, took part in this exercise with "Blue" force commanded by Lieutenant Colonel Stewart, Sixth Infantry.

Problem No. 3—Third exercise, "Attack and defense." The first and second battalions, commanded by Majors Edward Jones and D. W. Morris, took part in this exercise with "Blue" force commanded by Major Brown, Artillery Corps, U. S. Army.

Problem No. 4 was omitted.

Problem No. 5—"March and deployment of a division." The entire regiment, commanded by Colonel Whitmore, took part in this problem, with "Blue" force as First Brigade commanded by Colonel Markley, Thirteenth U. S. Infantry.

Problem No. 6—"Attack and defense of an entrenched position." The entire regiment, commanded by Lieutenant Colonel Stewart, took part in this problem, with "Brown" force commanded by Lieutenant Colonel Pitcher, Twenty-eighth U. S. Infantry. The Commanding Officer, Sixth Infantry, was detailed on this occasion as a spectator with the "Blue" force, under command of Major Chubb, Fifteenth U. S. Infantry.

Problem No. 7 was omitted.

Problem No. 8—"Passage of a defile." The entire regiment, commanded by Colonel Whitmore, took part in this problem, as reserve, with "Brown" force, commanded by Colonel Ward, Fifteenth U. S. Infantry.

Problem No. 9 was omitted.

The work performed in the various problems by this command is very clearly stated in the chief umpire's report, found in the "Report of the joint encampment for field instructions." To give this work in detail would simply be to go over the ground already covered in said report, and would make this report very lengthy. I think my command acquitted themselves in a very creditable manner, considering the fact that the work involved in the problems was entirely new to all the officers and to most of the enlisted men.

The total number sick during the entire period covered by the encampment was 5 commissioned officers, 24 noncommissioned officers, and 68 privates. None of the sickness was of a serious nature, and in many cases was probably due more to over-exertion and fatigue than to anything else. All of these men were not in hospital. One death occurred in this regiment during the encampment, Private Florance T. Huff, of Company I, located at Hanford, probably due to organic heart disease.

In the matter of entraining and proceeding to home stations, the same excellent management by the Quartermaster's Department, U. S. A., prevailed. Entrainment was accomplished quickly and train departed on time. The car equipment and service of the Southern Pacific Railroad from Atascadero to San Francisco was very poor. A full report of this matter was given in my annual report to the Adjutant General, State of California, dated September 16, 1904.

As to an opinion in regard to the value of the maneuvers from a

military standpoint, I think more was learned of the conditions of actual warfare by the officers and men of the Guard, during the two weeks of the encampment, than at all of the State camps which I have attended since 1887, and I have been to all of them. The knowledge gained was that the soldier must be a picked man and in perfect physical condition, able to endure all the hardships incident to long marches in all kinds of weather, know how to shoot, how to conserve his strength, what kind and how much food to eat, the absolute necessity of correct fire discipline, and above all that it is not necessary for the enlisted man to know the plans of the commanding general.

The knowledge gained by the officers will be manifested hereafter in many ways toward the betterment of the Guard, especially in the important matter of having the companies well grounded in the drill regulations—the primer, as it were, of military knowledge.

As to the proper time to hold maneuvers, of course much depends upon the place. My opinion, as stated heretofore, is that Atascadero is too hot and dry during the month of August, but that it would be an ideal place earlier in the year, or later. I am very much in accord with the opinion of the chief umpire, Major Duval, that the place for holding maneuvers should be changed frequently, for the reasons set forth by him.

In regard to other opinions and suggestions, permit me to say, that while the value of the maneuvers held was great, I question the expediency of holding them yearly. A maneuver camp every second year alternated with a State camp would be better calculated to hold the Guard, as I earnestly think that such an encampment as the one at Atascadero each year, with nothing but the fatiguing work attached thereto for the enlisted man to look forward to, would result in whole companies going to pieces and being mustered out. It is vitally necessary for us to look upon the subject, not only from the officer's standpoint, but also from that of the enlisted man, whose service is purely voluntary, with no remuneration whatever, except the small pay received from the Government, which to the average enlisted man in the organized militia is next to nothing.

While believing that I appreciate the value of the maneuvers as much as any officer, I realize that it will not do to lose sight of the practical side of the question, and am firmly convinced that to give the Guardsman nothing but the work and fare of the regular soldier each year hereafter would result in disaster.

As to opinions on necessary legislation for the benefit of the Guard, I have already covered that ground in my report dated September 16, 1904.

Respectfully submitted.

(Signed:) R. K. WHITMORE,
Colonel, Commanding Sixth Infantry, N. G. C.

HEADQUARTERS SEVENTH REGIMENT OF INFANTRY, N. G. C.,
SANTA ANA, CAL., January 31, 1905.

*To the Adjutant General of California,
Sacramento, Cal.*

SIR: In compliance with your letter of December 28, 1904, I have the honor to make the following report of operations of the Seventh Regiment of Infantry in connection with the maneuvers at Camp Atascadero during August of last year:

In compliance with General Orders No. 8, series of 1904, and General Orders No. 4, Headquarters Division, series of 1904, together with detailed instructions from Division Headquarters, the various elements of my command assembled at their home stations on August 12th, and proceeded to Los Angeles over the Santa Fé Railroad, as follows: Headquarters, Santa Ana, 5 P. M.; Band, Pomona, 4:25 P. M.; Company B, San Diego, 1:45 P. M.; Company D, Pomona, 4:25 P. M.; Company E, Anaheim, 5:20 P. M.; Company G, Redlands, 3:17 P. M.; Company I, Pasadena, 5:18 P. M.; Company K, San Bernardino, 3:38 P. M.; Company M, Riverside, 4 P. M. The above were joined at Los Angeles by Companies A, C, and F, and a detachment of Sanitary Corps.

The cars in which organizations arrived in Los Angeles over the Santa Fé Railway were transferred to the Southern Pacific Railroad, and the entire equipment was assembled into a train of two sections, which also included Troop D and the Signal Corps of the First Brigade. The entraining was executed in an orderly and prompt manner, but, owing to the delay in making up the train, it was forty-five minutes late in leaving Los Angeles for Atascadero, which occurred at 8:45 P. M.

The discipline and conduct of the troops were excellent during the trip to Atascadero, where they arrived at 7:30 A. M., August 13th. Troops were disembarked and equipment quickly transferred from the train to wagons, which were in readiness, and, conducted by a staff officer detailed for the purpose, proceeded to the camp grounds reserved for the regiment, which place was reached about 10 A. M. The remainder of the day was occupied in preparation of camp. The regiment was attached to the First Brigade, Provisional Division, commanded by Colonel A. C. Markley, for duty during maneuvers.

Sunday, August 14—Regiment participated in divine services and review. The companies were assigned to battalions for duty during the maneuvers, as follows: First battalion: Companies A, C, F, and I; second battalion: Companies B, E, and K; third battalion: Companies L, G, and M.

Monday, August 15—Evolutions of the regiment in battle exercises.

Tuesday, August 16—First battalion (Major Truman Cole commanding) participated in first exercise of Problem No. 1, "Rear guard." Second battalion (Captain John M. Smith commanding) took part in third exercise, "Advance guard." Third battalion (Captain H. E. Mitchell commanding) took part in second exercise, "Advance guard." At 5 P. M., first battalion reported to engineer officer for instructions.

Wednesday, August 17—The regiment as an organization took part in an "Attack and defense of a convoy." The regiment was assigned to the position of left flank guard of the convoy, the defensive force of

which was under command of Colonel A. C. Markley. (For details, see report to commanding officer of convoy, hereto attached.) At 5 P. M., the second battalion reported to Captain C. H. McKinstry, Engineer Officer, for instructions. Major O. P. Sloat qualified on this date and was assigned to command the second battalion.

Thursday, August 18—The regiment as an organization participated in an "Attack and defense of outposts," the defense of the outposts being under command of the undersigned. (For details, see report to chief umpire, hereto attached.) At 5 P. M., the third battalion reported to Captain C. H. McKinstry for instructions.

Friday, August 19—Regiment participated in brigade review.

Saturday, August 20—The regiment as an organization participated in the problem, "March and deployment of a division." This being the most severe test of physical endurance in which the regiment engaged during the maneuvers, I am glad to say that but few of the men failed to reach the firing line in the final stages of the problem.

Sunday, August 21—The regiment participated in division review at Asuncion.

Monday, August 22—The regiment, under command of Major Truman Cole, took part in the attack of an entrenched position, the attacking force being commanded by Lieutenant Colonel Pitcher, Twenty-eighth U. S. Infantry.

Tuesday, August 23—The regiment participated in the problem, "Passage of a defile," being assigned to the command of Colonel Ward in the defense of the defile at Needle Gorge.

Wednesday, August 24—Regiment participated in review.

Thursday, August 25—Regiment participated in division review tendered to Governor Pardee.

Friday, August 26—Broke camp and entrained for home stations, leaving Atascadero about 10:30 A. M., and reaching Los Angeles at about 1 A. M., August 27th. Troops remained in cars until morning, when Companies A, C, and F marched to their armory, and the other companies took the first train from Los Angeles for their various home stations.

Forty-four officers and 425 enlisted men reported for duty with the regiment.

It is my opinion that the maneuvers were of great value to my command, the officers and men receiving much greater practical benefit than could possibly be secured from separate encampments apart from the regular army.

August is the most satisfactory time for this regiment to engage in such maneuvers.

Very respectfully,

(Signed:) S. H. FINLEY,
Colonel, Seventh Infantry, N. G. C.

CAMP ATASCADERO, CAL., August 18, 1904.

To MAJOR WILLIAM P. DUVALL,

Chief Umpire, Provisional Division.

SIR: In compliance with Paragraph 50, Provisional Instructions for Maneuvers, I have the honor to report as follows:

The various elements assigned to me for the first exercise, Problem No. 3, met at Long Valley at 7:35 A. M., this date, and were immediately assigned to their various positions, which were slightly different from those outlined in General Orders No. 1, attached, as the safety of the camp seemed to require it. These changes were made on verbal orders and explained to the chief umpire of the "Blue" force.

The disposition of the force was as follows: Outpost, under command of Captain H. E. Mitchell, consisted of three companies of the Seventh California Organized Militia. These were stationed along the ridge north of Long Valley at 200-yard intervals, as supports to the outpost. From these supports sentinels, with 50-yard intervals, were sent forward 150 yards in advance. Two sentinel posts of two men each were stationed in valley 400 yards in advance of first section of the support, to guard the main valley. A detached post of four men was placed on east of Graves Creek Cañon. On Bald Peak on the west flank of the supports was stationed a platoon of the Twenty-fourth Battery, U. S. Field Artillery, under command of First Lieutenant M. L. Landers, supported by one company of First Battalion of Artillery, California Organized Militia, acting as infantry.

The main body camped in Long Valley at the base of a knoll of about 75 feet elevation, partly hidden from view in all directions by the knoll and trees. The second platoon of artillery, of two pieces, took up a position on a commanding knoll 300 yards east of the camp, this position being one from which the ridge to the northeast and southwest, as well as the entrances to Long Valley from the north, south and east, could be swept with artillery fire. This battery was supported by one company of First Battalion of California Artillery acting as infantry. A line of sentinels was stationed extending from east flank of the outpost sentinels along the east side of Graves Creek to Needle Gorge and along the ridge southwest of Long Valley to a point about 200 yards farther west than the artillery on Bald Peak.

Cavalry scouts of "Browns" were sighted at 9:20, and the artillery of the support opened fire at company of infantry, or dismounted cavalry, in valley to north, at 9:28, at a range of 1,000 yards.

At 9:35 sentinels were driven in and also detached post east of Graves Creek.

At 9:40 supports deployed as skirmishers on their line, which had been selected as the line of resistance, and entrenched.

At 9:45 support fired on line of skirmishers of enemy consisting of two or three companies attempting to pass through valley at right of flank by passing along creek bottom. Ten volleys were fired at these troops. At this time the main body was deployed and a portion sent forward, except one company left to protect camp from possible left rear flank attack, to reinforce the firing line, and took positions at 9:55 in creek on right flank where the attack was being pressed. The companies making the attack were then ruled out and firing ceased at 10.

At 10:20 a company of "Browns" attempted to move around our right flank through the creek, but were subjected to severe volley firing from both front and flank, range 1,000 yards.

Firing by squads continued at intervals as parties of the enemy exposed themselves.

The two companies of First Artillery, California Organized Militia, when deployed reinforced firing line on right of battery, Company D was sent to rear at 9:55; eight men from Company M, and at 11:14 four men from advance guard were also retired.

Recall at 11:32.

For information as to action of field artillery and Signal Corps, see reports attached. The Hospital Corps present for duty, but not called on.

Very respectfully,

(Signed:) S. H. FINLEY,
Colonel, Seventh Infantry, California Organized Militia.

CAMP ATASCADERO, CAL., August 17, 1904.

To COLONEL A. C. MARKLEY, *Thirteenth Infantry, U. S. A.,*
Commanding "Blue" Convoy.

SIR: As commander of the left flank guard of the "Blue" convoy, I have the honor to submit the following report:

In accordance with your verbal order I took the formation of the left flank guard and commenced the march at Henry Fork at 8 A. M.

Elements of the Guard: Left guard, under the command of Major Truman Cole, with Companies F and C as advance party, and Companies A, I, and B as support. The reserve, under command of Captain Mitchell, with Companies D, G, M, and K. At Bartoll Springs the advance party was sent along the road, northeasterly, until the point came in touch with the road, at 21, with the advance party along the north side of the hills, we moved southeast. The support marched along the south slope of the woods, keeping in touch with the advance party by connecting files from the hills, and made a junction with the advance party at Myers' Springs.

The reserve marched over 35, in a direct line for Shale Rock Springs, keeping in touch with both the support and advance guard, and a point sent out from the reserve came in contact with the scouts of the enemy on the road at Myers' Springs. At Shale Rock Springs the reserve deployed in line of skirmishers west of this road and drove the "Brown" scouts out of this field and then occupied the ridge between Shale Rock Springs and Eagle Ranch road at 11 A. M. This position was held until the close of the action, at which time one attack from cavalry, mounted, and two from the same cavalry, dismounted, were made and repulsed, these attacks coming from the direction of the Eagle Ranch road.

During the time of my occupation of the last position, the high peak west of the road and west of my position was occupied by the "Blue" artillery and infantry of the advance guard.

Very respectfully,

(Signed:) S. H. FINLEY,
Colonel, Seventh Infantry, N. G. C.

CAMP ATASCADERO, CAL., August 25, 1904.

To the Adjutant General, Provisional Division.

SIR: In compliance with circular letter of the 22d inst., I have the honor to report that on August 12th the various units of my command left their home stations as follows: Headquarters, Santa Ana, at 5 P. M.; Company B, San Diego, at 1:45 P. M.; Band and Company D, Pomona, at 4:23 P. M.; Company E, Anaheim, at 5:20 P. M.; Company G, Redlands, at 3:17 P. M.; Company I, Pasadena, at 5:18 P. M.; Company K, San Bernardino, at 3:38 P. M.; Company M, Riverside, at 4 P. M.

The above companies reached Los Angeles at various times from 5:40 to 6:10 P. M., of the same date, over the Santa Fé Railroad, and their cars were immediately transferred to the Southern Pacific Railroad. A special train of two sections was made up at Los Angeles by the latter company. This train, bearing the above-mentioned companies in addition to A, C, and F, and the Sanitary Corps detachment of my regiment, Troop D, Cavalry, and Signal Corps detachment, of Los Angeles, reached Atascadero without mishap or delay at about 7 A. M., August 13th. The service rendered and equipment furnished by the two railroad companies were very satisfactory.

Administration.—Each company maintained a separate mess, prepared by from one to three cooks. The noncommissioned staff and band messes together.

An inspection by the regimental commander, officer of the day, and surgeon was arranged for at 8 A. M. each day. This was interfered with at times by field exercises, which required the attention of these officers.

During the opening days of the encampment much difficulty was experienced in getting the men to give their tents and equipment proper attention. Cooks were very careless in cleaning kitchen equipment and surroundings, and in protecting food. However, as soon as they came to realize what was required, great improvement was made in these matters, and during the latter days of the encampment conditions were all that could be expected.

Discipline.—The discipline has been remarkably good. During fourteen years' service, the writer has never participated in an assemblage of troops where good order even approached that of the present encampment. No serious breaches of discipline occurred. Only two men were detained in the guard house and these for only a few hours, for neglecting to report participation in exercises.

I attribute this condition, as well as the excellent health of the command, to the fact that the maneuver ground is isolated and removed from saloons and other resorts to take the attention of the men away from the real work of the encampment.

Subsistence.—The regular ration was not found to be sufficient for troops such as the National Guard, drawn from various occupations (principally with indoor work) and thrown into camp with vigorous open-air exercises. This change for a time requires a more liberal ration than would be necessary after they become accustomed to the new work, when the regular ration would suffice. The quality of the provisions furnished was excellent.

Hygiene.—The health of the officers and men of the regiment has been all that could be desired. Only three men went to the division hospital, and very few sick in quarters. Sanitary conditions good.

Suggestions.—1. National Guard organizations not having, as a rule, an opportunity for drills in larger units than companies, some opportunity should be given for close-order drills by battalions and regiments. To the want of this is due most of the lack of control of organizations by officers in the early stages of the maneuvers.

2. Problems should be worked out on alternate days, the interim being devoted to close-order drills, discussion of last exercises, and preparation for one to come. This would enable officers to get more benefit from problems and avoid much complaint from men on account of severe work. Troops have not been overworked. The only complaint coming from my command was, on the 20th: when the most severe exercises chanced to come on an excessively hot day.

3. Maneuver ground was too wooded and broken for variety of exercises.

4. Enlisted men, and especially noncommissioned officers, should be informed as to the object of various exercises prior to their execution, so as to enable them to get the greatest benefit from the instruction. I understand that the object of secrecy is to prevent opposing forces from securing plans of other force. This might be overcome by placing troops in two different camps on maneuver ground.

5. August is the most suitable month for this regiment to go into camp.

Very respectfully,

(Signed:) S. H. FINLEY,
Colonel, Seventh Infantry, N. G. C.

LOS ANGELES, CAL., January 25, 1905.

*To the Adjutant General of California,
Sacramento, Cal.*

SIR: In compliance with instructions from the Commander-in-Chief, contained in communication from the Adjutant General's Office, dated December 28, 1904, I have the honor to submit the following report of the operations of the Signal Corps, First Brigade, N. G. C., in connection with the late maneuvers at Camp Atascadero, Cal., held in August, 1904.

1. In compliance with General Orders No. 8, Adjutant General's Office, dated July 7, 1904, and instructions from Brigade Headquarters, I reported with my command to Colonel S. H. Finley, Seventh Regiment of Infantry, N. G. C., at the Arcade Depot, Los Angeles, Cal., at 7 P. M., August 12, 1904, who ordered me to entrain command in designated coach of the first section of military train for Camp Atascadero, Cal., which left the station at 8 P. M., sharp. This order was complied with. The night was passed by the men quietly and comfortably. Guards were posted at each end of the car, men not being allowed to leave the

same. Coffee was ordered by telegram and obtained at San Luis Obispo at 6:05 A. M.

2. The first section of military train arrived at Atascadero Station at 7 A. M., Saturday, August 13, 1904. I received orders from Colonel Finley to detrain my command and proceed to camp. Wagons were furnished by the Quartermaster's Department, U. S. A., for the baggage. The detraining was prompt and orderly. First Lieutenant W. A. Kent, Signal Corps, U. S. A., met the command at the station and conducted us to the camp ground, where I reported to Captain Carl F. Hartman, U. S. Army, and in accordance with orders from him camp was made about 150 feet north of the county road and 200 feet east of Atascadero Creek, as shown on military map.

3. Nothing worthy of note occurred en route. The men were in good spirits, orderly and sober.

4. The Signal Corps, First Brigade, N. G. C., present for duty at Camp Atascadero, consisted of 2 officers and 24 enlisted men.

5. The above command took part in all the different problems, but not alone, as the detachments assigned to the commanding officers on the different days always consisted of part regulars. The different companies of the Signal Corps were organized into a battalion, designated as the Division Signal Corps, Captain Carl F. Hartman, U. S. A., commanding, and First Lieutenant Wm. Goodale, adjutant. Camp routine as per General Orders No. 2, Headquarters Provisional Division. The problems in which my command operated were as follows:

August 14th and 15th were devoted to camp duty, signal drill with field buzzer, flags, heliograph, and lamps at night.

August 16, Problem No. 1, first exercise.—In compliance with General Orders No. 2, Headquarters Division Signal Corps, Camp Atascadero, Cal., I reported to Colonel R. K. Whitmore, Sixth Regiment of Infantry, N. G. C., commanding the "Blue" forces, at 6:25 A. M., with ten enlisted men, two field buzzers, four flags, and one motor cycle, operated by Sergeant H. O. Waterman, Signal Corps, First Brigade, N. G. C. The detachment accompanied the command to a point on the county road 350 yards southeast of point 21, as per military map, where a rear guard was formed. In compliance with orders communication was opened between the support of the rear guard and commanding officer at head of main body, by means of field buzzers, using the barbed wire fence running along the southerly line of the Von Schroeder ranch and grounding by driving nails into roots of trees, which makes a very serviceable return circuit. Communication was maintained between Major Jones, commanding the rear guard, and the commanding officer. As the column retreated along the county road the signal men opened stations where necessary, using buzzer wire after leaving fence. As the retreat was very rapid and the men exposed to a heavy fire, telegraphic communication was broken at times. Messages were then transmitted by means of flags and motor cycle, the latter being of great value. The "Blue" forces retreated in a westerly direction, with their left resting on the county road. When reaching Atascadero Creek the maneuver ended, recall being sounded at 12:05 P. M. Detachment returned to camp.

August 17, Problem No. 2.—In compliance with General Orders No. 3, Headquarters Division Signal Corps, Camp Atascadero, Cal., I reported

to Captain Hartman, U. S. A., at 6 A. M., who ordered me to report with my detachment at Hepburn Well at 7:45. I did so, and received orders to take two buzzers, two miles of wire, and three mounted men and find Captain Jones, who was in command of a squad of signalmen about a mile northwest of Hepburn Well; obtained from him one heliograph and two flags. I was then to proceed to point 42, having one man construct line to 43, where he would find the commanding officer of "Brown" forces. With the other men I was to extend line to hill near old school house and report to Captain Cornish, Ninth U. S. Cavalry, commanding "Brown" forces there; thus putting him in communication with point 43. At 10:20 the line was cut by enemy's artillery, which was immediately repaired and communication reopened. At 11:21 point 43 informed me that they would have to retire. The line was then cut and destroyed by the "Blue" forces and could not be repaired, as they had possession of the intervening country. Recall sounded at 1:15 P. M., and Captain Cornish ordered the detachment to camp. This part of the "Brown" force was not in action and were cut off from the main body after 11:30.

August 18, Problem No. 3, first exercise.—In compliance with General Orders No. 1. Headquarters "Blue" forces, I reported to Colonel S. H. Finley at 6:25 A. M., with fifteen men, two heliographs, and four flags. The detachment accompanied the command to Long Valley, where outposts were formed. One platoon of artillery being stationed on Hill "H," and two platoons on small hill west of Corral No. 2, I was ordered to open telegraphic communication with Hill "H," and flag communication with four surrounding high points. From three of these points valuable information regarding the approach of "Brown" forces was obtained and transmitted to the commanding officer. The signal work in this problem was satisfactory. At 11:45 A. M., recall was sounded and the detachment returned to camp.

August 19, Problem No. 4.—This problem was omitted, on account of intense heat. The Signal Corps spent the day in recovering wire.

August 20, Problem No. 5.—In compliance with orders from Major G. O. Squier, Signal Officer Provisional Division, I reported with twenty men, one lance truck, one reel wagon, six buzzers, four heliographs, and sixteen flags to him at 7:50 A. M., at point 7, and received orders to report to Colonel Ward, commanding the Second Brigade. By his orders a line of insulated wire was constructed from point 7 to railroad cut west of Asuncion Station, which was his headquarters, and communication opened to point 7, General MacArthur's headquarters. Over this line orders were received for the Second Brigade to deploy and advance to point 11, where it was to assemble and advance in close column along county road. A line of insulated wire was constructed from point 7 along county road to point 11, line from railroad cut being abandoned. Communication was now established and maintained between point 7 and the advancing column, stations being opened along the line of march at point 11, point 12 (Henry's Forks), point 13, point 14, point 15, a point between 17 and 18, point 18, point 20, and a point midway between 20 and 21, where Colonel Ward was notified that the Division commander would leave for point 42 via the route of the First Brigade, which had preceded in close column by way of Graves Creek road, Corral No. 2, points 53, 54, 45. Bartoli Springs, point

44, to point 42. Communication by both telegraph and telephone was maintained from points 21 and 22, by way of point 7 (where the two lines were connected), to point 42; thus keeping the two brigades and General MacArthur constantly in communication with each other. When the commanding officer had reached point 42, orders were received to deploy the Second Brigade and advance to Myers' ranch. The signal men advanced with the skirmish line, keeping communication open with point 42. Upon reaching a point just east of Myers' ranch, recall was sounded at 3:06 P. M., and the detachment returned to camp. At several points along the line of march General MacArthur telephoned in person to Colonel Ward, and the service was reported perfect.

August 21—The Division Signal Corps and wagon train took part in the Division review, held at Asuncion Station at 3 P. M., under command of Captain W. W. Lovett.

August 22, Problem No. 6.—In compliance with Special Orders No. 8, Headquarters Provisional Division, and instructions from Captain C. F. Hartman, Signal Officer "Blue" forces, I reported with fifteen men, seven buzzers, two heliographs, and eight flags to Major Chubb, commanding "Blue" forces, at Pine Mountain, at 6:20 A. M., and in accordance with his orders opened six telegraph stations (on two circuits), connecting the buzzers in parallel—one at his headquarters on knoll south of Pine Mountain, with two buzzers; first circuit running from headquarters to points designated in this problem as 6 and 7, thence to top of Pine Mountain; second circuit from headquarters to point 1, thence to Hill "E." Point 8 was in communication by flag with point 7; point 9 was so near, stationed at top of Pine Mountain, that orders were transmitted by messenger. The service was perfect on all lines during the problem. A heliograph station was opened on Pine Mountain to communicate with Corporal Aitken and Private Miles of the First Brigade Signal Corps, who were sent out with a heliograph at 6:30 A. M. to reconnoiter in the vicinity of Hill "F," with orders to report the movements of the enemy. At 8:55 A. M., Corporal Aitken signaled to Pine Mountain that the main body of the "Brown" forces was advancing by the county road, and a smaller column by the railroad. This information was valuable, as it informed us in which direction the main attack would take place. These men escaped capture by hiding in the brush, and finally reported to me at Pine Mountain. Recall was sounded at 1:10 P. M., and the detachment returned to camp.

August 22, Problem No. 7.—This problem was omitted, on account of rain, ground being considered too wet for temporary camp.

August 23, Problem No. 8.—In compliance with General Orders No. 1, First Brigade, Provisional Division, Camp Atascadero, Cal., I left camp at 6:50 A. M. with fifteen men, six buzzers, flags, heliograph, and wire, and reported to Colonel Markley, commanding "Blue" forces, at Asuncion, at 7:40 A. M. By his orders sent two buzzers and four men to Lieutenant Colonel Pratt, Fifteenth Infantry, U. S. A., with orders to keep his column in communication with Henry's ranch house. With the rest of the detachment I left Asuncion with the support of the advance guard at 8:30 A. M. On arriving at Henry's ranch house, we opened communication with Hill "H" and Lieutenant Colonel Pratt's advancing column. I immediately connected the artillery on Hill "W" with Henry's ranch house; thus opening communication by wire with

all three points and headquarters. The main body advanced along the Graves Creek road to Long Valley, the line being extended on the march and communication maintained with all points throughout the maneuver. As Colonel Markley refused to supply horses for the signal men, and the wire was broken by cavalry several times, the service was slower than should have been, as the men were obliged to patrol the lines on foot. Notwithstanding this fact, the service was good. Recall was sounded at 11:30 A. M., and the detachment returned to camp.

August 24, Problem No. 9.—This problem was omitted.

6. During the whole period of encampment there was not an officer or man of my command on sick report or in the hospital.

7. In compliance with General Orders No. 8, Headquarters Provisional Division, my command was in readiness for transportation to Atascadero Station at 9 A. M., Friday, August 26, 1904. Leaving camp at 9:20 A. M., we proceeded to the station, where I received orders to pack baggage and entrain command, which was done promptly. The train left Atascadero at 11:55 A. M. The return trip was made without incident worthy of note, coffee being obtained at Santa Barbara. Arriving at home station at 11:40 P. M., command returned to the armory. The baggage was returned the day following by a detail for that purpose, wagons being furnished by the Quartermaster's Department.

8. In my opinion the combined maneuvers of regular troops and organized militia are of inestimable value to both, but especially to the latter. In the Signal Corps practical experience is imperative, and I believe that these maneuver camps should be a part of each year's training. The Signal Corps next year will be in a position to make a much better showing and derive more benefit from the experience. The men are anxious to go again, and those who did not go last year feel that they have lost a great deal; hence, the organization will have a very large attendance in the future.

I think that in July the weather would be cooler and the men could get away better. It is very necessary that the exact date should be fixed early in the year, say in February, so the enlisted men could fix the date of their vacations to conform thereto.

9. I would suggest that as it is not the desire of the Government in holding these maneuvers to do away with the State encampments, where company and regimental drills are the chief features, it would be a good arrangement and of great value to the organized militia if a State encampment of a week's duration could be held just preceding the combined maneuver camp. In that way the officers and men would have a chance to become hardened and drilled. Much more efficient work could then be expected of them; they would not suffer from fatigue and would be better posted in the preliminary drills and requirements: the time of vacation would be three weeks altogether, and if the date was fixed early enough, a large attendance could and would be obtained.

I would further suggest that at least sixty per cent of the Signal Corps should be mounted, as their work was very much hampered by not having the necessary transportation. The motor cycle, one of which I had in my command, was most useful, and I think each corps should be supplied with at least two.

Very respectfully,

(Signed:) WILLIAM WATSON LOVETT.

Captain, Signal Corps, First Brigade, N. G. C.

SAN FRANCISCO, CAL., June 10, 1905.

*To the Adjutant General of California,
Sacramento, Cal.*

SIR: I have the honor to submit the following report covering participation of the Second Brigade Signal Corps, N. G. C., Captain Emmet R. Jones commanding, in the joint maneuvers at Camp Atascadero, San Luis Obispo County, Cal., August 13 to 26, 1904, inclusive.

In compliance with General Orders No. 8, Adjutant General's Office, July 7, 1904, the necessary preparations were made to go into camp, those reporting for duty being 1 captain, 2 sergeants, 3 corporals, 1 cook, 1 musician, and 14 privates; total, 22.

These men were assembled at the armory, No. 815 Ellis street, San Francisco, at 8 P. M., August 12, 1904, and at 9 P. M. marched with the four batteries of heavy artillery to Third and Townsend street depot, arriving at 9:30 P. M., were promptly entrained at 9:45 P. M., and train left depot at 10:30 P. M. (The hours given above are approximate.)

Complying with instructions from the Assistant Adjutant General, Headquarters Division, I reported to Major H. P. Bush on entraining, and constituted a part of his command while entrained.

Having received instructions from the Chief Signal Officer, Headquarters Division, to supply myself with a horse, I did so; and following instructions of the Quartermaster, First Battalion of Artillery, to whom I had been ordered to report for transportation, had same, together with the horses of four staff officers, at Second and King streets, ready to entrain, at 6:30 P. M., August 12th; but through a delay on the part of Troop A, Cavalry, the entraining of horses was not completed until 8:30 P. M. Neither Troop A, Cavalry, nor the First Battalion of Artillery had an officer present, the horses of the former being intrusted to a sergeant, and those of the latter to a civilian employé. For five horses I was assigned one half of a small stock car, which was ample. The floor of this car had been well covered with cinders and straw, insuring good footing.

All camp equipage and personal effects were put aboard train during the afternoon of the 12th, men being detailed for the purpose. No signal equipment was taken to camp.

One ordinary upholstered day coach was assigned to members of Signal Corps, giving all ample room, and trip was made without incident worthy of note, both men and horses standing the trying journey well. Travel rations had been provided for the men; horses were without food or water till they reached camp (about seventeen hours).

Train arrived at Atascadero Station at 9:30 A. M., August 13th. Men and horses were detrained at once and camp equipage was transferred without delay to a wagon supplied by the Quartermaster's Department, U. S. A., and at 10 A. M., having secured the necessary permission from the quartermaster in charge of wagon transportation, we proceeded to that part of Camp Atascadero assigned to the Division Signal Corps, being escorted thence by a signal officer. Arrived at 11 A. M., after a march of about two and one half miles; road, for the most part, being extremely dusty, weather very hot. Reported on arrival to Captain Carl F. Hartman, U. S. A., commanding Division Signal Corps, and

proceeded to make camp. It was not necessary to delay this work to prepare for noon meal, as arrangements had been made by Company C, Signal Corps, U. S. A., to serve both militia companies at this time.

Division Signal Corps camp was located on the east side of Atascadero Creek and just north of the Paso Robles-San Luis Obispo county road, the company streets running parallel with the road, and the officers' row at right angles thereto and facing down the streets and toward the creek. From north to south the companies were located as follows: Company C, U. S. A.; Signal Corps, First Brigade, N. G. C.; Signal Corps, Second Brigade, N. G. C.; automobiles, wire wagons, battery wagons, lance trucks, etc., on extreme right, forming a line parallel with company streets. Latrines were dug along the bank of Atascadero Creek.

Each company had its own mess; militia officers were invited to participate in the mess of the regular officers, which they gladly did. Adding to the regular issue of rations such fruit and vegetables as could be purchased with the allowance authorized by the Adjutant General, of ten cents per day per man, gave results which seemed entirely satisfactory. The regular ration contained sufficient fresh meat for two meals, also ice and fresh bread. Water was supplied through pipes, and the supply seemed ample. Within two minutes' walk from camp were shower baths for men and officers.

Signal Work.—Previous to the arrival of the militia, the Regular Signal Corps had established a telephone system throughout camp, connecting all the various departments and headquarters with Division Headquarters and with Atascadero and Asuncion stations, also telegraphic communication with the Western Union lines. With these the militia had nothing to do, our work being confined entirely to the establishment of communication during the working out of the various problems. As this work was entirely new to my men, the bulk of the expert work fell upon the men from Company C, U. S. A. This having been foreseen by Captain Hartman, he, in making up the details for each problem, arranged to have a large percentage of regulars in each detail; and the good results obtained proved the wisdom of this arrangement.

The members of the Signal Corps, Second Brigade, although constantly engaged in the various maneuvers, were not always under my observation, they being frequently assigned to details in command of other officers or noncommissioned officers. However, from personal observation and the reports of other officers under whom they served, I can truthfully say that they worked faithfully and with an earnestness which is deserving of much credit. Although at the beginning the work of construction was entirely new to them, they learned rapidly, and at the termination of the maneuvers were quite proficient. In visual signaling they excelled the regulars, but in telegraphy were very poor. The hot, dry climate was very hard on those going from this locality, which made the work especially trying for my men, most of whom came from offices and other indoor situations.

I participated in six problems—in two as assistant to Captain Hartman, and in four as commanding officer of the detachment of signal men.

Signal Equipment.—The field buzzer (combination telegraph and telephone) was used almost entirely for purposes of communication in the field. In a few instances visual signaling with the ordinary heliographs and flags was made use of, but in almost every case stations so established were discovered by the enemy, thus disclosing our position. The buzzer lines, on the other hand, were frequently run to within a few yards of the enemy and the operator concealed in the brush or a tree where he could observe and report the enemy's movements and strength without detection. For short distances of say two to four miles the wire used was very small bare copper, run from hand reels, about one-half mile to the reel; this wire was usually run out by a mounted man, was allowed to remain on the ground, except over roads, and could be laid as fast as the horse could travel. Barbed wire fences were frequently used for short distances where they were not grounded by being fastened to growing trees; in one instance a fence was successfully used for a distance of five miles. For long distances a heavy insulated wire was used (No. 14, I believe) and was run from wire wagons improvised from artillery trucks or caissons by Captain Hartman. Besides the tool box, which composed the driver's seat, and the reel, there was sufficient room on each wagon for five miles of heavy wire. A brake was attached to the reel to regulate its speed. Each wagon was drawn by two mules. A line could easily be run from one of these wagons as fast as foot troops could move. They were also used in recovering wire, a crank being adjusted to turn the reel. When finally completed, as planned by Captain Hartman, these wagons will be equipped with brakes, and reels will be geared to one of the wheels, so as to take up the wire automatically.

In addition to wire wagons there were lance trucks, battery wagons, and two automobiles, one of the latter having been specially constructed for signal work, it being an unusually strong machine equipped with tool boxes, etc., and was run over the country regardless of roads, with no apparent ill effects.

During the maneuvers in Oregon, earlier in the season, signal men experienced much difficulty in securing good grounds until Lieutenant Goodale, U. S. A., discovered that excellent grounds could be secured by driving a nail into the base of a growing tree. This method was used exclusively at Camp Atascadero, with perfect success, although the conditions could not have been more unfavorable, the ground being extremely dry and in places rocky.

The night problems were dispensed with, so we had no opportunity to test the new regulation acetylene signal lanterns, except in practice about camp. These lanterns are made to attach to the heliograph tripods, and are very compact and quite powerful. The flash is regulated by a key similar to that on a telegraph instrument.

Sick.—1 man, August 16 to 19, inclusive; 1 man, August 16 and 17; 1 man, August 21 to 23, inclusive. No serious cases.

Two men were relieved from duty and returned to their homes—one August 22 and one August 24. The return of both was requested by their employers.

Returning to Home Station.—Broke camp at 9 A. M., August 26th, and packed camp equipage. Company messed with Company C,

U. S. A., at 11:30 A. M. Transportation arrived at 12:15 P. M.; loaded equipment and left camp at 12:30 P. M.; arrived at Atascadero Station at 1 P. M.; entraining of 19 men, 4 horses (3 belonging to staff officers) and baggage completed at 1:50 P. M. Train left Atascadero Station at 2:50 P. M., and arrived at Third and Townsend streets station at 1:50 A. M., August 27th. Company was marched to armory and dismissed without delay; horses were detrained by owners. The delay en route was caused by the breaking down of the engine of the train preceding us. While entrained, the men of the Signal Corps, Second Brigade, constituted a part of Major H. P. Bush's command. The cars furnished the men for the return were very inferior. This, together with the frequent stops, made rest out of the question. Travel rations were provided for the trip.

Opinions.—The maneuvers were most valuable, particularly to the men who attended, but also in a general way to the entire company. I believe that only actual service could have given them better training. The work was hard, especially with the excessive heat, but men who can not stand such work have no place in the National Guard.

The time would have been satisfactory had ample notice been given. The dates of vacations are arranged in April and May in most of the large business houses in this city, and when once set it is hard to change them.

In addition to the equipment recently furnished, each Signal Corps should be supplied with buzzer outfits sufficient to enable the men to become proficient in the use of these instruments. They are invaluable.

More attention should be given to signal work generally and less to infantry and cavalry drill, the latter being absolutely useless in practice. In other words, the Signal Corps should be trained as such and not as a mixture of mounted and foot troops, with only time sufficient to get a smattering of each.

Respectfully submitted.

(Signed:) EMMET R. JONES,

Major, N. G. C., Retired,
Formerly Captain, Commanding Signal Corps,
Second Brigade, N. G. C.

ARMORY TROOP A, CAVALRY, SECOND BRIGADE, N. G. C.,
SAN FRANCISCO, CAL., January 17, 1905.

*To the Adjutant General of California,
Sacramento, Cal.*

SIR: In accordance with communication from the Adjutant General's office, I have the honor to report the operations of my command in connection with late maneuvers at Camp Atascadero, Cal., held in August, 1904.

Troop A departed from the armory, Friday, August 12, 1904, arriving at the Southern Pacific depot at Third and Townsend streets in time to embark on the train leaving at 10 P. M. The saddles and horse equipments having previously been sent to the depot, the men

then secured their individual equipments and carried them in the coaches.

The horses of the command were entrained during the afternoon. This command was entrained, under the direction of the commanding officer of the First Battalion Artillery, with the First Battalion Artillery and Signal Corps.

The train arrived at Atascadero at 9:15 A. M. Saturday, August 13, 1904.

The detraining of this command was under the direction of Captain Nance, Ninth U. S. Cavalry, and was escorted to camp by Lieutenant Camp, Ninth U. S. Cavalry.

Although the command consisted of but two commissioned officers and twenty-eight enlisted men, it was discovered that the one coach allowed Troop A was too small, inasmuch as the entire packed saddles, bridles, and equipments were taken into the coach (there being no other available space), consequently the men were more or less cramped during the trip.

I reported my command for duty to Colonel Godwin, commanding the Provisional Cavalry, and to Colonel S. P. Jocelyn, Chief of Staff, Provisional Division:

Saturday, August 13—Establishing camp.

Sunday, August 14—Squadron review.

Monday, August 15—Squadron drill and extended order.

Tuesday, August 16—Problem No. 1, "Advance and read guard." Troop A operated with Troop K, Ninth U. S. Cavalry, Captain Jansen in command.

Wednesday, August 17—Problem No. 2, "Attack and defense of a convoy."

Thursday, August 18—"Attack and defense." The troop operated independently along Atascadero Creek, performing scouting duty and reconnoitering the ground south of Corral Hill. Our scouts discovered the enemy and information was conveyed to Lieutenant Colonel Stewart, commanding the "Blue" forces, one hour and a half after leaving the main body.

Friday, August 19—Reconnoissance in force.

Saturday, August 20—"March and deployment of a division."

Sunday, August 21—Division review at Atascadero.

Monday, August 22—"Attack and defense of an entrenched position." Troop supported a detachment of the Fifth U. S. Field Battery.

Tuesday, August 23—"Passage of a defile." Captain Nance commanding squadron of cavalry, organized militia, and supported field battery commanded by Captain Langdon.

Wednesday, August 24—Review to Governor of California, and payment of troops.

Thursday, August 25—Broke camp at 1 P. M. Train departed from Atascadero at 3 P. M. Arrived at home station next morning.

Number on sick report, 9; number in hospital, 6.

Guard mount was performed every afternoon in conjunction with the troops of the Ninth U. S. Cavalry.

The discipline of the troop during the entire encampment was excellent; all of the above duties were performed by the men cheerfully and with spirit. Colonel Godwin and Captain Nance, of the Ninth

U. S. Cavalry, under whose immediate command we were placed, found them to be gentlemen, officers and soldiers of the highest type.

The value of the maneuvers can not be measured; they are invaluable to the nation and to both officers and men of the army and militia. No nation can learn too much of military science, as there will be wars as long as the world exists.

The best time for maneuvers, in my opinion, would be in the early spring, or late autumn, in order to avoid the excessive summer heat, as the same is exhausting to troops and unfits them for field service. The men become careless, give no attention to learning, and are eager to hear recall sounded in order to return to camp and seek shady places.

I would suggest that as elementary drills are the basis of efficiency, the first days of camp should be devoted thereto under the supervision of army officers, as many officers of the militia interpret parts of the Drill Regulations differently from the Army officers; light marches, and commence with small problems covering small area of territory in order to properly exemplify the field work and accustom field officers to the handling of troops, gradually advancing to larger problems. In this manner, I believe, the best of results would be obtained, more so than from one year of drills in the armories. My opinion is, and always has been, that a captain or field officer never can get the best of results out of armory drills.

Very respectfully,

(Signed:) CHAS. JANSEN,

Captain, Commanding Troop A, Cavalry, N. G. C.

ARMORY TROOP B, CAVALRY, THIRD BRIGADE, N. G. C.,
SACRAMENTO, CAL., January 24, 1905.

*To the Adjutant General of California,
Sacramento, Cal.*

SIR: In reply to your communication of December 28, 1904, I have the honor to submit the following report of operations of this command at Camp Atascadero, Cal., August 12 to 26, 1904.

This command entrained on August 12th, at 8:15 P. M. The cars provided by the Southern Pacific Railroad Company were first-class; officers being supplied with a chair car. Horses were loaded at 6 P. M. This command also loaded the mounts of the field and staff, Second Infantry.

Arrived at Atascadero at 10 A. M. August 13th, and here we received our first lesson. The systematic manner in which the arriving troops were detrained, camp equipage loaded on wagons, and march to camp started with so little confusion was certainly a good lesson, not only to our quartermaster department, but to every officer and enlisted man as well.

One incident en route that should, in my opinion, call for correction was the shameless abuse the cars received at the hands of the troops. On arrival at camp they were in a most shocking condition.

Three officers and thirty enlisted men of this command were taken to joint maneuvers.

Problem No. 1, first exercise, "Advance guard and read guard." In this exercise the troop was divided—one platoon reporting to Colonel Whitmore, Sixth Infantry, and were used as orderlies. The other platoon reported to Major Jones, Sixth Infantry. We received no definite instructions, and were assigned no part in problem that is worthy of mention.

Problem No. 2, "Attack and defense of a convoy." We were under the immediate command of Captain Nance, Ninth Regiment of Cavalry, U. S. A., who was placed in command of the California Organized Cavalry on its arrival at Camp Atascadero. This command acted as advance and rear guard for the cavalry in this problem. A great amount of hard riding was done in an effort to get in touch with the wagon train, consisting of one hundred wagons, and attempt their capture, but we were unable to do so. Troops A, C, and D, Cavalry, advanced through a ravine in an effort to locate train. This command, acting as rear guard, was attacked by a battalion of infantry. Reported immediately to commanding officer and received instructions to hold off "Blue" forces as long as possible and then retreat. We fired a number of volleys from good cover at advancing forces, but as they could not see us it did not stop their advance. We were captured, but if an umpire had been with us he would certainly have ruled differently. During the day we were in several skirmishes and in several tight places. Recall was sounded shortly after our capture.

Problem No. 3, third exercise, "Outpost attack and defense." This troop was the only cavalry of the "Blue" forces. Major Brown, Artillery Corps, U. S. A., commanding. We departed from camp one hour before main body to take possession of Postoffice Hill, there to await the arrival of one company of infantry, then to scout all roads from point 42, Eagle ranch road, to 43, and to protect left flank of rear guard. After being relieved by infantry company, we took position as ordered, but the troop being small in numbers and the territory to be scouted being large, considerable trouble was experienced by skirmishers in keeping in touch with one another. We were attacked by a troop of U. S. Cavalry and compelled to retreat to hills on east of Eagle ranch road between points 42 and 43. Took best position possible, sent report to commanding officer, and asked for reinforcements. "Blue" cavalry was under fire and in plain view for a considerable time. They dismounted and charged. As they arrived at foot of hill the infantry sent for arrived and poured in a flank fire. The attacking forces were all ruled out. Recall was sounded shortly afterwards.

Problem No. 5, "March and deployment of a division." There was very little for the cavalry to do in this maneuver. They deployed as skirmishers at greatly extended intervals, representing a cavalry screen, with orders to fire on the approaching columns and offer resistance sufficient to compel them to deploy. After accomplishing this, we retreated to the hills east of Eagle ranch road, where artillery had been stationed, and supported them. It was close to 3 P. M. before infantry arrived. After a short engagement, recall was sounded. We left camp at 4 A. M. and arrived back at 4 P. M.

Problem No. 6, "Attack and defense of an entrenched position." In this exercise Troop B was used as advance guard for the Provisional

Regiment, U. S. Army. The country through which we marched was the worst of any encountered during the camp. The chaparral was so dense that the men had often to dismount and break a passageway through to permit them to proceed. On arriving at the last chain of hills in front of the entrenched position to be assaulted, we halted and the infantry advanced and proceeded to the attack. We kept up a continuous fire over heads of the infantry until they charged, when we ceased firing. I estimated the distance at 1,750 yards; three officers of the Provisional Regiment agreed such to be about the range. Umpire in his report said it was 800 yards—quite a difference.

Problem No. 8, "Passage of a defile." In this maneuver we acted as escort to a platoon of artillery. We received instructions to make a rapid march and prevent the occupation of a certain advantageous point by the enemy. It was thought that this could not be accomplished, as it was necessary to make a wide detour to get to the appointed place. After one of the quickest rides of the week—five miles in twenty minutes—we arrived at "Q" with plenty of time to spare. Our duties here consisted of supporting the battery. The remainder of the cavalry arrived shortly afterwards by another route, and Captain Nance assumed command. After a wild ride down the sides of several very steep hills and a short skirmish with the enemy, recall was sounded.

The average number on sick report was 2.33. One enlisted man was unable to ride after the first day, on account of a fistula; he was used for dismounted work, but carried on sick report. The others were but slight sicknesses, and very soon reported for duty. We did not have any in hospital.

We broke camp at 4 A. M., August 26th, and had all our horses and camp equipage loaded by 7:30 A. M.

The cars provided for our transportation home were the worst I have ever seen, but were as good as deserved, considering the condition of the ones used going down. Train left at about 8:30 A. M. We were supplied with better cars at San José, and arrived home at 11 P. M., after a very tiresome ride. Horses were immediately unloaded and returned to owners or placed in stables until next day.

I believe the maneuvers were of the greatest value to both officers and enlisted men. The experience was such as the National Guard had never had before, though an attempt was made at the Division camp held at Santa Cruz in 1900, but very poorly executed. It has done away with the "squads right" and "squads left" of armory drill and showed that the extended order must be studied by officers and the enlisted men instructed in this most important part of the tactics.

The effect this camp has had on the National Guard remains to be seen. Whether the companies would turn out as strong at a future maneuver as at the last, under similar conditions, can hardly be stated; time alone will tell.

I believe July or the fore part of August the best time to hold encampments if held in Northern California, but if held south May or June is preferable.

I believe the four troops of cavalry should be organized into a permanent squadron, and that an allowance should be made for the maintenance of headquarters. If such was the case, the major commanding

could give his whole attention to his duties, and the ranking captain could stay with his troop, which, I think, he would much prefer to do.

The cavalry has been brought together but once previous to this camp, and if like maneuvers are to be held, a National Guard officer should be in command, as in other branches of the service, and not be compelled to call on outside parties.

I would suggest that company commanders be instructed to see that the cars used by them should be better taken care of, and policed before leaving them.

I think the men should be paid by the State \$2 per day while at camps of this character.

As far as my observations went, I believe the troops were thoroughly equipped. I know the cavalry were as well supplied as the Regulars and no complaint could possibly be made or fault found in this matter.

Very respectfully,

(Signed:) S. W. KAY,

Captain, Commanding Troop B, Cavalry,
Third Brigade, N. G. C.

ARMORY TROOP C, CAVALRY, N. G. C.,
SALINAS CITY, CAL., January 16, 1905.

*To the Adjutant General of California,
Sacramento, Cal.*

SIR: In compliance with Special Orders No. 8, Headquarters Division, dated San Francisco, July 22, 1904, Troop C prepared to leave Salinas for Atascadero, on August 4th, and the commanding officer issued the following Troop order:

TROOP ORDER, {
No. 3. }

In compliance with Special Orders No. 8, Division Headquarters, N. G. C., dated July 22, 1904, Troop C will assemble at the armory, Friday, August 12, to proceed by rail to the Henry ranch, hour to be set later.

Equipment.—Carbine, web belt, saber, saber attachment, revolver, spurs, saddle complete, saddle blanket, carbine scabbard, saddlebags, link strap, bridle, halter, watering bridle, blanket, shelter-tent half, shelter-tent poles, pins and guy ropes, ponchos, horse cover, currycomb, horse brush, nose bags, canteen, haversack, meat can, knife, fork, spoon, tin cup. Equipment will be worn in the manner prescribed in Paragraph 289, Cavalry Drill Regulations.

Clothing.—Khaki blouse and trousers, campaign hat, overcoat, blue shirt, leggings, shoes (russet or tan preferable), socks, drawers, undershirt, and towels. Blue blouse and extra shoes, socks, drawers, undershirts, towels and bed sacks will be packed in troop boxes.

Belts should be worn with trousers, as suspenders will not be permitted over shirts.

Enlisted men will not be permitted to transport trunks, chests, etc.

As this is the first time the National Guard is to participate with the Regular Army, the commanding officer expects each member to do his duties in a military way and cheerfully and quickly do all the duties assigned to him, so that he will be a credit to himself and the National Guard in general. Strict military discipline will be enforced at all times. Members are cautioned not to write on or otherwise deface tents and to keep the arms and equipments in the best condition. Noncommissioned officers are held responsible for the condition of arms and equipments in their tents and cleanliness in and around them at all times.

All clothing to be packed Wednesday evening.

Second Lieutenant F. M. Vierra will see that all members are furnished horses, same to be loaded after 6 p. m., Friday, August 12.

(Signed:) CHARLES J. FULLE,
Captain Commanding.

The railroad company furnished on August 12th one coach and two stock cars. The baggage was loaded in one end of stock cars in the afternoon of August 12th, and at 6 p. m. the horses were loaded; twenty head being turned loose in one car and twelve head tied in car with baggage, which was accomplished in forty minutes. Saddles were placed in coach. The troop assembled at the armory at 11 p. m., and marched to the depot fully armed and awaited train with First California Infantry, which arrived at about 12:40. I reported to Colonel Thomas F. O'Neil, after which I rejoined troop in its car. Train left Salinas about 1:10 a. m., August 13th, arriving at Atascadero about 5 a. m.

The horses were unloaded on platform and tied to fence until baggage was unloaded from car and loaded on wagon. Lieutenant Cox, Ninth U. S. Cavalry, at this time informed me he had been detailed to conduct the troop to its camp. Horses were saddled and troop marched to camp ground designated by Lieutenant Cox. Lieutenant Colonel Godwin, Ninth U. S. Cavalry, was on the grounds and informed me that he had been placed in command of the Division Cavalry, and I reported to him for duty. I received from him instructions how camp should be arranged, and these instructions were carried out.

The strength of Troop C was two officers, thirty enlisted men, and 1 civilian cook.

The following duties were performed by the troop during the encampment:

August 14—Squadron review, Captain Nance, Ninth U. S. Cavalry, commanding.

August 15—A. M.: Squadron drill in close order and troop drill in extended order. P. M.: Extended order, squadron drill.

August 16—Troop acted as advance guard in exercise 2, Problem No. 1. Troop operated on left flank until just before recall, when it was ordered to cross to right flank and oppose the "Brown" cavalry. During the operation on right flank two prisoners were taken from "Brown" cavalry.

August 17—Troop was part of raiding force to attack a convoy, being under command of Captain Nance. This exercise was very severe on green horses, as the squadron was a flying column, making attacks on different points at very rapid gaits over rough country.

August 18—Troop took part in attack on outpost, Exercise 1, Problem No. 3. At the start troop was under command of Captain Christian, Ninth U. S. Cavalry, as support to advance guard. At reaching Henry ranch house troop was sent to right of Graves Creek to operate to right of Hill "H," and develop any outpost, if there.

August 19—Regimental review.

August 20—Outlining enemy for attack by division. Troop was under command of Lieutenant Colonel Godwin, Ninth U. S. Cavalry.

August 21—Division review.

August 22—Troop acted as right flank guard for column attacking entrenched position. This was again a severe exercise on the horses, as troop had to march over a number of rough and steep mountains to accomplish the duty which it was detailed to do. At the conclusion of this exercise, a charge by platoons in column of fours across an open flat to reach a sheltered position for horses at foot of mountain was

made, after which troop dismounted to fight on foot, and reached position on top of mountain when recall was sounded. This exercise was the most instructive, in my opinion, for cavalry.

August 23—At this exercise troop was part of force passing through defile. Troop was under command of Captain Nance, Ninth U. S. Cavalry, with Troops A and D, N. G. C., and did considerable work in a flank movement against the force opposing the march of the column. This was also very instructive.

August 24—No exercise.

August 25—A. M.: Review before Governor of California. At 7:30 P. M. troop was called out with Troop D, N. G. C., as provost guard at Templeton, returning at about 12 M.

August 26—Troop broke camp at 10:45, marched to depot and after cars were furnished loaded stock and baggage in cars in very short time in same manner as on trip to camp, except that saddles were also loaded in stock car. Left Atascadero about 1 P. M. During the trip home the engine got a hot box and train was considerably delayed. At San Lucas train carrying Troop A and Artillery caught up with our section and both sections being connected, the run was made with no other accidents. Train arrived at Salinas at 8:30 P. M., instead of 5 P. M. Horses were unloaded and taken to troop barn and fed hay. Baggage was unloaded and horses returned to owners on August 27th.

During the whole encampment there were only four men on sick report. One man had a felon on his right thumb, while the other three had a slight attack of dysentery, which in each case only lasted one day. There were no men in hospital at any time. The general health of troop was excellent.

The maneuvers were certainly very beneficial to this troop, both officers and men. The best time to hold the same would be in the month of June, as far as this troop is concerned.

The men stood the exercises well and at all times were orderly and obeyed orders promptly. At no time during all the exercises did any man of this troop fall out of ranks. The horses stood the work well and there was no case of sickness among them at any time.

I deem it my duty at this time to mention that Second Lieutenant F. M. Vierra and all the noncommissioned officers showed a great interest in the work and did the duties assigned to them exceptionally well.

Very respectfully,

(Signed:) CHARLES J. FULLE,
Captain Commanding.

ARMORY TROOP D, CAVALRY (UNATTACHED),
FIRST BRIGADE, N. G. C.,
LOS ANGELES, CAL., January 12, 1905.

*To the Adjutant General of California,
Sacramento, Cal.*

SIR: In reply to your directions of December 28, 1904, I submit the following report of the operations of Troop D in connection with the late maneuvers at Camp Atascadero in August, 1904.

Troop D entrained at Los Angeles on August 12, 1904. We loaded our horses in stock cars, from twenty to twenty-two in a car. We had no stalls built in the cars as on previous occasions, but loaded them in head and tail. The cars were properly prepared and sanded and ready for us at the cattle chutes early in the afternoon. The fore part of the day was taken up in gathering in the horses, and it was necessary that they should be well watered and fed immediately prior to taking the train, and this could not be done until the last moment. This water and feeding we did at the stock yards. A number of horses belonging to the staff and officers of the Seventh Regiment were sent to the stock yards and, under the control of no one, were simply left there tied to the fence. In many instances we knew nothing about them, but took our chances and loaded them all on the train. We then had a switch engine take our cars over to the railroad yards, where they were attached to a regular train while we ate our supper at restaurants. The troop was on duty the entire day.

We arrived at Atascadero Station early the following morning. The facilities there for detrainning the horses were very good, being a long platform on a level with the car doors, which is much better than the cattle chutes. We carried with the stock cars a baggage car, in which was placed the horse equipment and horse guard. We detrained rapidly, and as soon as the horses were put on the picket line the men unloaded our baggage and loaded it into quartermaster wagons and we started at once for camp.

There was no particular incident, either in the loading or unloading, except that all of the men were kept busy all of the time, which enabled us to finish our work very rapidly. I think the proper method of carrying rations on a trip of that kind is to have each man carry his own and have the coffee made on the train. We were able to do this on the return trip. It avoided the confusion of a thousand men rushing for a coffee house at the same moment.

There were three officers and twenty-four men in the troop.

As to the part taken by the command in the maneuvers and problems, would say that we were arduously engaged all the time. Being a part of the Ninth U. S. Cavalry, we participated with them in all exercises. On account of the small body of cavalry perhaps, and perhaps on account of the terrain, our only occupation was that of reconnoissance, security and information and mounted infantry. In our first engagement we acted as the advance party in an advance guard, meeting with a like formation composed of regulars. This was the nearest to an independent command which the commander of the troop had during the maneuvers. Although we were commended by the umpire, Captain Fassett, I was able to see after a few days' experience how we could have accomplished much more had this opportunity been given us later in the exercises.

The troop in order to be efficient should have at least fifty men.

I found our amalgamation with the regulars very beneficial. We were able by means of object lessons every hour in the day to improve rapidly. The men were on their mettle and very keen to observe the actions of the regulars in every detail and imitated them at once, and the association with the regular officers was very beneficial to our officers. I think, however, the California cavalry should be consolidated into one squadron with a commander. The only thing we lacked was

unity. Four captains with separate ideas as to the small matters not provided for by tactics or orders sometimes make for a lack of unity in drill and action, and some officer should make it his business to prepare himself to handle the squadron. As it is, the captains feel themselves passably able to handle their companies, but no one has made the squadron work a sufficient study to be able to take charge of the squadron. This we noticed more especially in our last squadron encampment prior to this, where one of our captains was assigned to command. There need be no unity of administration, but there should be some one chargeable with the knowledge of handling the squadron in the field.

One matter of great solicitude at Atascadero was the probability of not being able to water our horses when away from camp, the lack of water making it necessary to fill the horses with water before starting, if possible, which is not always an easy matter to accomplish on a cold morning.

We were frequently assigned as escort to flying artillery, and in that work we seemed to be able to render more service than in any other position aside from securing information of the enemy. As has doubtless been brought to the attention of the department, the cavalry operated under very great difficulties in this encampment, because of the nature of the country, it being thoroughly unsuited to cavalry maneuvers, but afforded an excellent opportunity for individual development on the part of troopers and noncommissioned officers.

We had no men on sick report, and but one horse disabled, the horse being loaned to an infantry officer and not properly cared for by the orderly. I attribute the good health of the men to the strenuous exercise, excellent food, and abstention from liquor. I noticed that in some of the other organizations where liquor was very freely used the men very soon played out on a hard day's trip.

In regard to food, I do not think ten cents a day in addition to the ration is sufficient. It would be all right if we were in camp for a month or so, so that we could adjust ourselves to the Government ration. The Government ration is not sufficient for a two weeks' encampment. We had to add considerably more than ten cents a day to our ration. I believe the secret of successful experience in these encampments is to see that the men are exceptionally well fed.

As I said, I think our amalgamation with the regulars was productive of the greatest amount of good possible during our encampment, and if I might be permitted to suggest, I think it would be the very best practice possible to have each regiment composed partly of regulars and partly of militia.

We broke encampment on August 26th without any incidents worthy of mention, and entrained for the home station. In returning we carried our saddles and baggage and camp equipment in the empty half of our stock cars. This we found better than the method pursued in going to camp, as it gave us more complete command of our entire force. We arrived in Los Angeles at 12 o'clock at night, and by previous arrangement between myself and the yardmaster, our stock cars and day coach were at once switched to the stock yards, where we unloaded our stock, fed and watered them, and went into camp for the remainder of the night.

As I understand the situation, our tour of duty in connection with

this encampment terminated at midnight on the 26th. We were necessarily on duty the next day. We proceeded early on the morning of the 27th with our breakfast and the care of our stock, had trucks from the city come to the stock yards, load all our baggage, camp equipment, etc., and marched to the armory, where, after putting away our horse equipment, we took care of our entire camp equipment, storing it away, and dismissed the troop. This last day's work was not included in the camp allowance and I forwarded a separate parade report for the day. I asked for horse hire from State special appropriation for this day, but as this was not allowed we paid the men out of our company funds. In this connection I desire to suggest that it is necessary that cavalry should be on duty one day prior and one day subsequent to camp, in procuring and taking care of their horses.

My opinion as to the value of the maneuvers is that, so far as the troop was concerned, the experience was attended with the maximum amount of benefit.

I believe the time of the year was perhaps the best that could be selected with this exception, neither the first nor the last of the month should be included, as men in mercantile life are very busy the first and last of each month and employers are loth to part with their services.

I would suggest that an allowance be made for a greater number of men and horses; that the squadron have a permanent commander for field maneuvers only; that the squadron be unattached to any brigade, but report direct to State headquarters. The orders and arrangements which interest infantry have no bearing on cavalry and all our orders, as a matter of fact, are prepared solely for cavalry by State headquarters.

There should be a day or two set aside at the termination of the field maneuvers for rifle practice with ball cartridges.

State troops, while in camp, should always be placed in a regiment with and under the command of a colonel of the regular army.

The allowance should be fifteen cents a day per man in addition to the Government ration, instead of ten cents.

The pay of officers should commence ten days prior to the going to camp and terminate ten days after returning. Almost all officers devote practically this entire time to the work, and there is no reason why they should not be paid for it. The expense of maintaining the position of an officer in the cavalry would in that manner be partially covered.

The men should receive \$2 a day while on duty.

Men should not be required to travel over night in day coaches. A hardship inflicted on a man in a temporary action of this kind does not tend to harden him, but, on the contrary, lessens his ability, energy and efficiency for the short period of encampment. Hardships should be incurred only when some benefit will be derived therefrom, and avoided in other cases.

An experienced veterinarian, at a proper salary, should be employed to accompany the squadron whenever assembled. The Regular Army veterinarian is usually busy with his own troops, and horses on an occasion of this kind need special care.

Very respectfully,

(Signed:) J. D. FREDERICKS,
Captain, Commanding Troop D, Cavalry,
First Brigade, N. G. C.

APPENDIX "K."

REPORTS OF COMMANDER ROSCOE HOWARD AND OF COMMANDING OFFICERS OF NAVAL MILITIA ORGANIZATIONS PARTICIPATING IN CRUISE, 1905.

U. S. S. "PINTA" (4TH RATE),
SAN DIEGO, CAL., April 3, 1905.

SIR: I have the honor to inform you that, pursuant to the invitation of Rear Admiral C. F. Goodrich, U. S. N., Commander-in-Chief U. S. Pacific Squadron, and the permission of my commanding officers, I reported for duty on board U. S. Flagship "Chicago" in San Diego harbor with thirty-nine officers and men of the Naval Militia of California, March 13, 1905; each man, according to my previous orders, being supplied with the following:

Engineer Division: Hammock, clothes bag, blankets, working suit of dungarees, blue uniform complete, two changes of underclothes, toilet articles, pan, cup, knife, fork, spoon, and overcoat or pea jacket.

Members of the Third Division were similarly equipped with the exception of the dungarees, in place of which each man had two working suits of white, including white hat.

Acting under the direction of the Commander-in-Chief, the following-named officers and men were eventually assigned by me to the vessels of the fleet as described below, there being a slight change in the original assignment; each officer being instructed to report to the commanding officer of the vessel to which he was assigned for duty, who billeted the men according to the plan outlined by the Commander-in-Chief, viz: That each man be given a duplicate number with some competent member of the crew for instruction; that he be assigned a position at all drills and stations with his duplicate number, and, that he perform all duties. In this manner each Naval Militiaman received practical instruction in naval duties as though he belonged to the regular navy.

This plan was adhered to on the flagship, and the duties of each man were changed each day so that regardless of rate they were given an opportunity to become familiar with all the different duties on board. On the "Wyoming" the men were assigned to one rate and kept it during the entire cruise; the same method was pursued on the "Perry" during the passage to San Diego.

U. S. F. S. "Chicago."

Commander Roscoe Howard, N. M. C.

M. Ray Costerisan, Acting Chief Engineer, N. M. C.

Lieutenant (Junior Grade) A. H. Woodbine, Engineer Division, N. M. C.

Chief Yeoman E. S. Richards, Engineer Division, N. M. C.

Chief Electrician J. B. Witte, Engineer Division, N. M. C.

Machinist 1st Class H. Birge, Engineer Division, N. M. C.

Oiler A. C. Bisby, Engineer Division, N. M. C.

Oiler G. W. Ebersolde, Engineer Division, N. M. C.

Fireman F. P. Wilson, Engineer Division, N. M. C.

Fireman W. R. Saunders, Engineer Division, N. M. C.

Fireman R. Cameron, Engineer Division, N. M. C.

Mess Cook, J. Johnson, Engineer Division, N. M. C.

U. S. S. "Bennington."

Lieutenant Frank L. Sargent, Commanding Third Division, N. M. C.

Q. M. 1st Class John Parrish, Third Division, N. M. C.

Q. M. 2d Class A. Nelson, Third Division, N. M. C.

Coxswain H. A. Thomas, Third Division, N. M. C.
 Seaman W. Fisher, Third Division, N. M. C.
 Seaman F. LaFortune, Third Division, N. M. C.
 Seaman E. Starr, Third Division, N. M. C.
 Seaman L. Schultz, Third Division, N. M. C.
 Seaman D. Commandish, Third Division, N. M. C.
 Seaman F. Ryan, Third Division, N. M. C.
 Seaman S. Grove, Third Division, N. M. C.
 Seaman C. Hughes, Third Division, N. M. C.
 Oiler E. L. Brown, Third Division, N. M. C.

U. S. S. "Wyoming."

Ensign H. R. Mannell, Engineer Division, N. M. C.
 Yeoman 1st Class F. Gunn, Engineer Division, N. M. C.
 Electrician 1st Class P. V. Butler, Engineer Division, N. M. C.
 Carpenter's Mate J. M. Klassen, Engineer Division, N. M. C.
 Plumber Scott Johnson, Engineer Division, N. M. C.
 Oiler H. E. Aerick, Engineer Division, N. M. C.
 Oiler E. A. Conklin, Engineer Division, N. M. C.
 Fireman D. M. Pruden, Engineer Division, N. M. C.
 Fireman J. L. Armstrong, Engineer Division, N. M. C.
 Fireman F. B. Seay, Engineer Division, N. M. C.
 Mess Cook H. Bargemann, Engineer Division, N. M. C.

U. S. S. "Perry."

Chief Machinist Geo. E. Link, Engineer Division, N. M. C.
 Machinist 1st Class F. Stephenson, Engineer Division, N. M. C.
 Fireman B. G. Meyers, Engineer Division, N. M. C.
 Fireman L. A. Bickel, Engineer Division, N. M. C.

After two days' delay on account of bad weather, on March 15, 1905, at 4 P. M., the squadron, consisting of the following ships with the Naval Militia on board, weighed anchor in San Diego Bay for Magdalena Bay for target practice: flagship "Chicago," Rear Admiral C. F. Goodrich, U. S. N., Commander-in-Chief Pacific Squadron, E. K. Moore, U. S. N., commanding; monitor "Wyoming," Commander John E. Roller, U. S. N.; cruiser "Bennington," Commander Lucien Young, U. S. N.; torpedo boat destroyer "Perry," commander, Lieutenant F. H. Schofield, U. S. N.

Commander Roscoe Howard at his request was assigned for duty as assistant navigator with Lieutenant Commander A. S. Halstead, U. S. N., the navigator of U. S. F. S. "Chicago." Each day, morning and afternoon, sights were taken for longitude (summer lines of position always being found) and latitude at noon, and the compass corrected by time azimuths at least twice; when practicable star sights for latitude and longitude were taken in the evening and morning watches. The navigator's duties at general quarters and all drills were also followed.

Lieutenant Sargent, commanding Third Division, was assigned to the U. S. S. "Bennington," and to duty as assistant to the navigator, the routine being similar to that on the flagship; in addition, he followed the duties of the executive officer when practicable.

M. Ray Costerisan, Acting Chief Engineer N. M. C., was assigned to the general engineering duties on the flagship. Owing to an unfortunate bilious attack this efficient acting officer was unable to perform much in the line of duty.

Lieutenant (Junior Grade) A. H. Woodbine, commanding U. S. S. "Pinta" detachment of the Engineer Division, N. M. C., was assigned to duty on the flagship and stood regular watch and performed the duties of his position.

Ensign H. R. Mannell, Engineer Division, N. M. C., was assigned to duty on U. S. S. "Wyoming," and stood watch and performed his duties as engineer.

On the passage to Magdalena Bay, each morning Admiral Goodrich handled the fleet in various squadron movements, and the signaling was very instructive and interesting.

The squadron arrived at the entrance to Magdalena Bay at 11 A. M., March 18, 1905. When inside and before the anchorage was reached the drill of "man overboard" was practiced. The squadron then being in natural order or column, each ship stopped and backed, lowered a life boat and started for the buoy representing the man. The "Bennington" was the first to arrive at the buoy.

The anchorage was made between 12 and 1 o'clock.

While at Magdalena Bay the Naval Militiamen stood watch in port routine and were drilled in various drills; much shore leave was granted to all. By March 25th, the date of our return, the "Wyoming," "Perry," and "Bennington" had fired at the targets.

On that date at 1 P. M. all Naval Militiamen were transferred to the "Perry" and started for San Diego, where they anchored March 27th at 9:30 A. M.

On the return voyage the Engineer Division stood watch in the engine-room and had actual charge of the engines and boilers.

The commanding officer of the "Perry" paid little attention to N. M. C. ratings, and at times the Third Division was given duty passing coal in the fire-room and bunkers.

All the day watches were given to Commander Howard and Lieutenant Sargent, and they had charge of the deck while the regular officers turned in.

I enclose with this letter a copy of a commendatory letter from Admiral Goodrich, and reports from Lieutenant Sargent and Lieutenant (Junior Grade) Woodbine, together with rosters and watch billets.

Lieutenant Sargent's report shows that members of the Third Division were drilled in first aid to the wounded; collision drill; man overboard; general quarters, with special instruction as to handling of main and secondary batteries (in addition, practice at Morris tube was given them); knots and splices; boat pulling and boat sailing; steering by compass at wheel.

Lieutenant (Junior Grade) Woodbine's report shows that members of the Engineer Division stood their regular engine-room watches and were drilled at general quarters, abandon ship, and collision drills.

Many commendatory remarks were made to me concerning the willingness and deportment and ability of the Naval Militia members by the officers of the various ships.

So far as I could learn, all of the members of the Naval Militia were much pleased with the whole cruise, considering the instruction received and the treatment accorded them by the regular officers and crews.

Personally I can state that I received more benefit from this cruise than from any other that I have participated in, toward training me in the practice of naval affairs.

Very respectfully,

(Signed:) ROSCOE HOWARD,

Commander, N. M. C.

*To the Commanding Officer, N. M. C.,
San Francisco, Cal.*

ENGINEER DIVISION, U. S. S. "PINTA," N. M. C.,
LOS ANGELES, CAL., March 29, 1905.

SIR: I have the honor to report that acting on telegraphic instructions from Captain George W. Bauer, commanding Naval Militia of California, under date of March 4, 1905, the U. S. S. "Pinta" detachment of the Engineer Division, N. M. C., under command of Lieutenant (Junior Grade) A. H. Woodbine, left Los Angeles Sunday morning, March 12, 1905, and proceeded by rail to San Diego, arriving there at noon and reported to Commander Roscoe Howard, N. M. C.

The detachment consisted of three officers and twenty-three men, a roster of which accompanies this report.

Each man was equipped with hammock, clothes bag, blankets, working suit of dungarees, blue uniform complete, necessary mess gear, two changes of underclothes, toilet articles, and overcoat. After being assigned quarters aboard the U. S. S. "Pinta" for the night the men were dismissed until 7 o'clock next morning.

At 8 o'clock Monday morning the men were mustered and assigned to the following ships of the squadron, namely: Lieutenant Costerisan and nine men to the flagship "Chicago"; Lieutenant (Junior Grade) Woodbine and ten men to the "Wyoming"; Ensign Mannell and four men to the "Perry."

At 9:30 A. M. the officers and men were aboard their respective ships. Lieutenant (Junior Grade) Woodbine was transferred to the flagship and Ensign Mannell to the "Wyoming." In that order they remained until Saturday, March 25th, when all hands were transferred to the "Perry," to be returned to San Diego.

Accompanying this report will be found a list of the different men and their duties on each of the ships while they were aboard.

On Wednesday evening, at 4 o'clock, the squadron sailed for Magdalena Bay, arriving there the following Saturday between 12 and 1 o'clock.

While in port the men were instructed in all the rudiments of their respective duties. The men also stood watches while in port.

On the flagship the duties of the men were changed every day, so that regardless of rate they were given an opportunity to become familiar with all the different duties aboard.

On the "Wyoming" the men were assigned to one rate and kept it during the entire trip; the same method was carried out on the "Perry." The men were detailed with some competent member of the regular crew of the different ships and made familiar with the routine and the ship, this man being in a large measure responsible for the conduct and action of the man detailed with him for instruction. The men of this detachment messed with the regular crew, and in every way acted as part of the permanent ship company.

The treatment accorded officers and men was highly satisfactory, in fact, nothing was left undone to make the most of the opportunity to learn all the different duties aboard the ship in the time allowed.

During the cruise, in addition to engineering duties, the men had drills in general quarters, abandoning ship, and collision drill.

On Saturday, March 25th, all hands were transferred to the "Perry," and at 1 o'clock started on the return trip to San Diego, arriving there at 9:30 o'clock Monday morning, March 27, 1905. Took noon train for Los Angeles, arriving there at 6 o'clock that evening, all well, and loud in their praise of the trip and the treatment accorded, together with the large fund of knowledge gained.

Respectfully submitted.

(Signed:) A. H. WOODBINE,
Lieutenant (Junior Grade) N. M. C., Commanding U. S. S.
"Pinta" Detachment Engineer Division, N. M. C.

To COMMANDER ROSCOE HOWARD, N. M. C.,
San Diego, Cal.

SAN DIEGO, CAL., March 31, 1905.

SIR: I have the honor to report that on the morning of the 13th instant I, with twelve petty officers and men from my command, reported on board the U. S. S. "Bennington," for a cruise in squadron to Magdalena Bay.

The petty officers and men were assigned to stations for duty, and during the progress of the cruise became and were a part of the ship's company.

Some of them were on the speed cone detail, others on the lookout, others at the life buoy, one in the engine-room as oiler, and all had special instructions in the following: First aid to the wounded; collision drill; fire drill; man overboard; general quarters, with special instruction as to the handling of the main and secondary batteries; knots and splices; boat pulling and boat sailing.

On the return trip from Magdalena Bay on board the U. S. S. "Perry," all, or nearly all, of the men were given actual experience at the wheel, steering by ship's compass. They were also detailed on the "Perry" as coal-passers in the fire-room.

We reached San Diego on the return trip on the 27th instant.

This completes my third cruise in the ships of the Navy since I was commissioned an officer of this division, and it is with much pride and pleasure that I state that, in my opinion, this cruise was by far the most instructive, enjoyable, and in every way successful of them all.

Lieutenant Commander Leonard, executive officer of the U. S. S. "Bennington," spoke very highly of all the petty officers and men of my command, and seemed to take actual delight in seeing that they were carefully and accurately instructed. He stated to me that all of my men "would make good sailors."

Very respectfully,

(Signed:) FRANK L. SARGENT.

To COMMANDER ROSCOE HOWARD, N. M. C.,
San Diego, Cal.

FLAGSHIP "CHICAGO," MAGDALENA BAY, MEXICO, March 21, 1905.

To ROSCOE HOWARD, *Commander N. M. C.,*
U. S. S. "Chicago."

SIR: The U. S. S. "Perry" will sail for Puget Sound on the completion of her target practice, probably on Saturday, March 25th, with orders to touch at San Diego, Cal., en route.

The officers and men of the Naval Reserve at present with this squadron will take passage on that vessel for the latter port, and orders to the respective commanding officers directing the necessary transfers have been issued. The detail on the U. S. S. "Wyoming" will, on her departure for Panama, be transferred temporarily to the flagship "Chicago," as the "Perry" will probably be on the target range at that time.

Although the final reports on the subject have not yet reached me, I take pleasure in informing you that, so far as I can judge from my present information, the conduct of the officers and men of the Naval Reserve under your command has been exemplary.

Very respectfully,

(Signed:) C. F. GOODRICH,
 Rear Admiral U. S. Navy, Commander-in-Chief,
 Pacific Squadron.

ENGINEER DIVISION, U. S. S. "PINTA," N. M. C.,
 LOS ANGELES, CAL.

Duties and Watches of Men Detailed to U. S. S. "Wyoming."

Chief Carpenter's Mate J. M. Klassen, 7 to 5 each day.

Plumber and Fitter Scott Johnson, regular day watch Monday, 13th, Tuesday, 14th, and Wednesday, 15th. Detailed as oiler on 12 to 4 watch Thursday, 16th, Friday, 17th, Saturday, 18th; 8 to 12 watch from Saturday p. m. to Monday noon.

Frank Gunn, Yeoman 1st Class, detailed as ship's writer, owing to absence of regular ship's writer on board.

Oiler E. R. Conklin, 8 to 12 watch from Monday, 13th, to Saturday, 18th; 4 to 8 watch from Saturday, 18th, to Monday, 25th.

Oiler H. E. Aerick, 12 to 4 watch from Monday, 13th, to Saturday, 18th; 8 to 12 watch from Saturday, 18th, to Monday, 25th.

Fireman F. B. Seay, 12 to 4 watch from Monday, 13th, to Saturday, 18th; 8 to 12 watch from Saturday, 18th, to Monday, 25th.

Fireman D. M. Pruden, 12 to 4 watch from Monday, 13th, to Saturday, 18th; 8 to 12 watch from Saturday, 18th, to Monday, 25th.

Fireman J. L. Armstrong, 4 to 8 watch from Monday, 13th, to Saturday, 18th; 12 to 4 watch from Saturday, 18th, to Monday, 25th.

Fireman H. Bargeman, 4 to 8 watch from Monday, 13th, to Saturday, 18th; 12 to 4 watch from Saturday, 18th, to Monday, 25th.

Oiler, H. E. Aerick.

Fireman, D. M. Pruden.

Fireman, J. L. Armstrong.

Fireman, F. B. Seay.

Mess cook, H. Bargeman.

Ensign, H. R. Mannell.

ENGINEER DIVISION, U. S. S. "PINTA," N. M. C.,
 LOS ANGELES, CAL.

Duties and Watches of Men Detailed to U. S. S. "Perry."

Chief Machinist's Mate G. E. Link, 4 to 8 watch Monday, 13th, Tuesday, 14th, Wednesday, 15th, Thursday, 16th, Friday, 17th, Saturday, 18th; 12 to 4 watch from Saturday, 18th, to Monday, 25th; 8 to 12 watch from Monday, 25th, to midnight, March 26th.

Machinist Mate 1st Class Fay Stephenson, 8 to 12 watch from Monday, 13th, to Wednesday, 22d; 4 to 8 watch from Wednesday, 22d, to Saturday, 25th; 12 to 4 watch from Saturday, 25th, to Monday, 27th.

Oiler B. G. Meyers, 12 to 4 watch from Monday, 13th, to Wednesday, 15th; 8 to 12 watch from Wednesday, 15th, to Saturday, 18th; 4 to 8 watch from Saturday, 25th, to Monday, 27th.

Fireman L. A. Bickel, 8 to 12 watch from Monday, 13th, to Wednesday, 22d; 4 to 8 watch from Wednesday, 22d, to Saturday, 25th; 12 to 4 watch from Saturday, 25th, to Monday, 27th.

Duties and Watches of Men on U. S. S. "Perry" on Return Trip from Magdalena Bay, Saturday, March 25, to Monday, March 27, 1905.

Yeomen E. S. Richards and F. Gunn.

12 to 4 watch: Oilers H. E. Aerick and G. W. Ebersole; Fireman J. L. Armstrong.

4 to 8 watch: Electrician J. B. Witte, M. M., 1st Class, H. Burge; Oiler A. C. Bisby, Fireman W. R. Saunders and F. P. Wilson.

8 to 12 watch: Electrician P. V. Butler, Oiler E. R. Conklin, Firemen R. Cameron and D. M. Pruden.

Lieutenant (Junior Grade) Woodbine and Ensign Mannell alternated every twelve hours.

The Naval Militia had charge of the engine-room during the entire trip.

U. S. F. S. "CHICAGO," MAGDALENA BAY, MEXICO, March 19, 1905.

In port the Naval Reserves will do duty as follows:

They will be assigned with the auxiliary watch as follows:—First watch, F. B. Wilson, A. Bisby; second watch, R. Cameron, E. W. Ebersole; third watch, H. Burge, J. Johnson; fourth watch, W. R. Saunders.

During each hour of watch they will do duty as follows: 1 watch on ice machine; 1 watch on evaporators; 1 watch in fireroom as fireman; 1 watch in fireroom as water-tender; 1 watch in engineroom as oiler; 1 watch in engine-room as machinist's mate 1st class.

The day the watch is off duty the men of the Naval Reserve will do duty in the first steam launch.

(Signed:) A. H. WOODBINE,
Lieutenant (Junior Grade) N. M. C., Acting Chief Engineer.

Order for Naval Reserves.

1. Each Naval Reserve will be given the same number as one of the enlisted force with "A" following. They will thus have the same general duties and the same posts at general drills as the enlisted man with that number. They will mess according to the number and will be additional at the table. They will use the washrooms corresponding to their numbers and will keep their effects in the neighborhood of the place where their numbered bag is hung on the racks. They will be under the general care of the man with the same number, who will instruct them in every way for the duties on board ship.

2. The men will consult the various station bills for the Engineer Department, and will find their places at all drills, and will learn all signals for the drills so as to go promptly to their places. They will be mustered at these drills as additional men.

3. Naval Reserves will leave whatever post they may have whenever the drill call sounds, and will go promptly as possible to their drill station. This applies whether on or off watch.

4. Watches for Naval Reserves will be arranged and bills posted in the bulletin board near the log room.

(Signed:) M. RAY COSTERISAN,
Acting Chief Engineer.

ENGINEER DIVISION, U. S. S. "PINTA," N. M. C.,

REPORT.

STATE OF CALIFORNIA, ADJUTANT GENERAL'S OFFICE,
SACRAMENTO, December 1, 1908.

Honorable JAMES N. GILLETT,
Governor and Commander-in-Chief.

SIR: In accordance with the requirements of section 1923 of the Political Code of the State of California, I have the honor to submit the biennial report of this department for the two fiscal years ended June 30, 1908.

Herewith is presented a brief outline of the status of the military and naval establishment of the state; of duties performed, which are subject to supervision and report, with sundry suggestions and recommendations, which seem necessary to the interests of the state forces in advancing the discipline and increasing the efficiency of the several organizations; also such other matters of detail believed to be of advantage to the National Guard and the Naval Militia.

ENROLLED MILITIA.

According to the returns of the commanding generals of the first and second brigades for the year 1908, the number of able-bodied male citizens in this State qualified for the performance of military duty, was 264,823.

NATIONAL GUARD.

Since June 30, 1906, the following changes in organizations have taken place:

MUSTERED OUT.

The National Guard of the State is, in practically all respects, organized, uniformed, armed and equipped similar to the United States army.

From the returns for June 30, 1908, on file in this office, the total strength of the National Guard was 216 commissioned officers and 2,262 enlisted men.

The Guard at present consists of two companies of signal corps and thirty-six companies of infantry, organized into two brigades; and, in addition, three troops of cavalry and one independent company of Veteran Reserves.

The First Brigade, commanded by Brigadier General Robert Wankowski, with headquarters at Los Angeles, consists of the First Company, Signal Corps, and the Seventh Regiment of Infantry.

Troops B, C, and D, Cavalry, are considered as separate organizations, attached to General Headquarters, and reporting to the Adjutant General, being, however, under the general supervision of the brigade commander within the limits of whose brigade they are located.

Among the most important recent requirements of the War Department affecting the National Guard organization has been that fixing the minimum enlisted strength of companies at fifty-eight instead of forty-seven as in the past. This went into effect through orders issued by this department on December 16, 1907, and formed the basis for rating for membership at the inspection which soon followed.

The benefits derived from recent acts of Congress are of great value to the discipline and improvement of the State troops. A decided improvement is noticeable on every hand and the efficiency of the forces is apparent.

The "Dick" Militia Act, approved January 21, 1903, and subsequently amended by the acts of Congress of June 22, 1906, and May 27, 1908, materially increases the annual allotment for the support of the Organized Militia or National Guard of the several states, and thus provides for better organization, better discipline, and a more active condition, with improved armament and equipment; also for annual encampments and maneuvers for instruction in field work associated with the well drilled and disciplined troops of the regular estab-

lishment. This offers an opportunity for working out active war problems which prove of great interest and result in much good to the officers and men of the National Guard, which can not be obtained from any other source.

A well organized, drilled and disciplined National Guard can be depended upon for protection to manufacturing and industrial interests, and causes a feeling of security to exist with the citizens generally in case of riot, insurrection or other domestic emergency. While the National Guard has been called out on numerous occasions of this character in the past, the cases in which they have been called into the service of the United States have been extremely rare. The National Guard of to-day, however, has for its purpose the fitting of officers and men for active service in the field, should they be required to defend our country from invasion, and in foreign lands, if necessary, and if the National Guard is to be so prepared it should attain to the highest efficiency possible.

Congress has acknowledged the importance of the National Guard to the United States; it has recognized its importance to the extent of spending millions of the people's money upon it; it recognizes the importance of having the National Guard come in contact with the Army of the United States in maneuvers and the National Guard has profited greatly by this action.

Perhaps a better idea of how important the National Guard of the country is considered by Congress and by the War Department may be gathered from the recent act of Congress providing for the calling forth of the organized militia (National Guard) of the several states in time of war before any volunteer organizations are called for or organized, thus recognizing the National Guard as the first reserve to the Regular Army. Such legislation could not well have been effected without the acquiescence of the War Department, and that the Department not only acquiesced in such legislation, but actively advocated and supported it, should prove to our citizens and legislators that the National Guard is a dependable military institution. Any fair-minded person who will take the time and trouble to acquaint himself with the work accomplished by the National Guard of this State and other states can not but be impressed with the earnest efforts of both officers and enlisted men to perfect themselves in their military duties in so far as may be possible within the limited time they can devote to such duties. That the National Guard of California can be brought to a much higher state of efficiency must be admitted, but that its efficiency, discipline, equipments, and general condition and training are far in advance of what they were a few years ago is readily apparent to even the casual observer. The holiday times of the State soldier have long since passed and the National Guard of California is now established on a businesslike basis and most certainly deserves every encouragement from the citizen and the lawmaker.

To bring the State troops to the desired condition of efficiency requires constant supervision, attention and instruction on the part of competent officers, and this has been an exceedingly difficult matter to accomplish, owing to the small appropriation made by the Legislature in the past for the traveling and other expenses of such officers. The State of California being so large its military organiza-

tions are necessarily scattered, and ample appropriations should be made for the expenses of travel. The military profession has many ramifications and requires much technical knowledge, and inexperienced officers are usually unable to comprehend their multitudinous duties without assistance and instruction from more experienced officers; hence, the necessity of sending competent officers throughout the State several times a year for purposes of instruction if the best results are to be secured.

(For a detailed statement of the organized strength of the National Guard, see Appendix "C.")

NAVAL MILITIA.

On September 1, 1907, the designation of the "First Engineer Division," located at San Francisco, was changed to the "Engineer Division," and the "Second Engineer Division," stationed at Los Angeles, became a deck division, to be afterwards known as the "Seventh Division." This branch of the State forces now consists of eight divisions, under the command of Captain George W. Bauer, with headquarters at San Francisco.

The total organized strength of the Naval Militia on June 30, 1908, was 43 commissioned officers and 515 enlisted men.

For a long time the U. S. S. "Pinta" was stationed at San Diego for the use of the Third Division, N. M. C., located there. This ship was of little or no value to the State, however, being an old wooden vessel, of obsolete type, and not in condition to be propelled by her own steam. As a result of numerous applications to return her to the United States Government, on October 1, 1907, the Secretary of the Navy issued instructions for the delivery of the "Pinta" to the Commandant, U. S. Navy Yard, at Mare Island. This transfer was accomplished on November 16, 1907.

INSPECTIONS.

The State annual muster and inspection of the National Guard for the years 1907 and 1908 was made in conjunction with the inspection for the War Department, by Colonel Thomas Wilhelm, Assistant Inspector General, N. G. C., (Major, U. S. A., retired, on duty with the Organized Militia of California). Colonel Wilhelm was ably assisted in the First Brigade both years by Major L. D. Collins, Inspector of that Brigade; and in the Second Brigade, in 1907, by Major John Zittinger, Second Infantry, and in 1908, by Colonel D. A. Smith, Fifth Infantry.

The various organizations reported at muster and inspection with an average attendance, in 1907, of 83.24 per cent, and in 1908, of 90.78 per cent; and extracts from the report of the Government inspecting officer show that, with but few exceptions, the organizations of the Guard were fully armed, uniformed, and equipped for active service in the field; also that the entire military force of California—field, staff, line and enlisted—is at a high standard physically, and that, with rare exceptions, the various commands are well instructed and under proper discipline and capable of efficient service; and, furthermore, that fully eighty-five per cent of the officers and enlisted men could be depended upon and would respond to a call in case of domestic

emergency, or for extra service, with the least possible delay. Where deficiencies in arms, uniforms and equipments were reported to exist, prompt steps were taken to correct them.

SMALL ARMS PRACTICE.

The reports of small arms practice for 1907 showed material improvement over the previous year. The progress in this important branch of military work, however, has not, in the case of a number of organizations, been abreast of that along other lines, and it is feared that some company commanders are not sufficiently impressed with its importance.

A lack of proper range facilities is a most serious problem confronting many company commanders. At the present time not a half dozen organizations are equipped with range facilities that will permit of practice at a greater distance than 500 yards. This precludes the holding of practice under the Sharpshooter's and Expert Rifleman's record courses in "Special Course C," as prescribed by the War Department, and works a great disadvantage to the State military establishment.

COAST DEFENSE EXERCISES.

From July 5 to 20, 1907, all the infantry organizations, excepting one (Company C, Fifth Infantry, located at Petaluma), participated in joint army and militia coast defense exercises, held in this State, and were assigned as follows:

ARTILLERY DISTRICT OF SAN FRANCISCO, CAL.

Fort Miley.

As Artillery Reserves: Companies C and H, Second Infantry.

As Supports: Companies I, K, L, and M, Second Infantry.

Fort Winfield Scott.

As Artillery Reserves: Companies A, B, C, D, E, F, G, H, I, and K, Seventh Infantry.

As Supports: Companies L and M, Seventh Infantry.

Companies A, B, D, E, F, and G, Second Infantry.

Fort Baker.

As Artillery Reserves: Companies B and D, Fifth Infantry.

As Supports: Companies E, I, and M, Fifth Infantry.

ARTILLERY DISTRICT OF SAN DIEGO, CAL.

Fort Rosecrans.

As Artillery Reserves: Companies A and K, Fifth Infantry.

As Supports: Companies F, G, H, and L, Fifth Infantry.

In addition to the above named organizations, the First and Second Companies, Signal Corps, were assigned to the Artillery District of San Francisco.

Owing to the stand taken by many employers, who refused to permit their employees to take part in these exercises on penalty of losing their positions, and from lack of interest on the part of some of the members of the company, the organization then located at Petaluma (Company C, Fifth Infantry), did not participate in the Coast Defense

Exercises and was mustered out of the service at a later date (September 30, 1907).

The coast artillery service being entirely new and novel to the State troops, they evinced considerable interest therein and in general acquitted themselves with credit, many showing an aptitude that was the occasion for considerable surprise and much praise on the part of officers of the regular army who acted in the capacity of instructors and observers, as may be noted from comments in their reports, from which a few extracts are given later herein.

Perhaps my own ideas as to the value of these exercises to the State troops engaged therein can not be better stated than to repeat in part my observations to the War Department upon the subject immediately following the exercises:

The method of furnishing transportation direct to company commanders was not a success and often resulted in confusion, as transportation greatly in excess of what was required was furnished some organizations and none whatever to other organizations. A much simpler and more satisfactory method would be to furnish regimental quartermasters with transportation requests sufficient for each regiment and hold them responsible as they are under bond to the State.

While the keenest interest in the exercises was manifested by both officers and enlisted men of the militia and the interest taken by the officers and men of the Coast Artillery did much to bring more closely together the Army and the militia, yet I can not but believe that the scheme is impracticable in so far as this State is concerned, as it is exceedingly difficult to train infantry organizations in their own branch without adding thereto the duties of coast artillery reserves. It may be argued that the coast states should change their organizations from infantry, etc., to coast artillery, but in this State this would be entirely impracticable because, while officers and men were interested and pleased with the work at the recent joint exercises, yet should the organizations be changed to coast artillery, officers and men would soon realize that in the event of war they would be obliged to man the coast fortifications and might perhaps see no active service whatever, while those serving in the other arms would undoubtedly see much service, and as the prospect of active service at some future time is the principal inducement for enlisting in the National Guard of this State, therefore if the prospect of active service is withdrawn, I fear that it will be impossible to maintain the organizations even at a low minimum. For these reasons I am constrained to a disapproval of the idea of organizing the troops of this State as a coast artillery reserve or using them in that capacity at future maneuvers.

It is my opinion that coast artillery reserves should be organized from those living near the coast defenses.

The opinions as given above should not be construed as being opposed to the organizing of State coast artillery troops; on the contrary, I am heartily in favor of such a scheme, but I most certainly believe that organizations from other branches of the service should not be required to take part in coast artillery work but that special companies should be organized for this purpose.

It is with considerable pleasure that I quote the following reports of regular army officers bearing upon the conduct of the troops of this State during the coast defense exercises:

(Maj. George W. Getchell, Coast Artillery Corps, commanding Artillery District of San Diego, Fort Rosecrans, Cal.)

The conduct of the militia during the exercises was, on the whole, a pleasant surprise. They are deserving of commendation especially for the interest shown in their work and for progress made.

* * * * *

As the recent exercises have proved such a success it is recommended that they be repeated annually. It is believed, however, that artillery reserves should be organized as such under Federal control. The supports might well be from National Guard infantry, *but the reserves* should be from men whose military career shall be devoted exclusively to coast artillery work. Such reserves could be organized near artillery districts where regular officers and non-commissioned officers could be sent quite frequently to give instruction. Commanding officers of militia regiments would not care to have portions of their commands repeatedly taken from them for such work and it will be only from repeated instruction that the best results will be obtained.

If militia is sent both for reserves and supports it is recommended that regiments be sent intact. Most militia regiments do not rendezvous as regiments oftener than once a year when sent to camp and no district is so small as to require less than a regiment if the companies can not report in greater strength than this year at this district.

* * * * *

(First Lieut. Charles J. Ferris, Sixth Field Artillery, serving at Battery Fetterman, Fort Rosecrans, Cal.)

Reports that militia showed surprising aptitude and zeal and became capable of rendering valuable assistance in event of war. Recommends that exercises be repeated annually.

* * *

(First Lieut. Earl McFarland, Coast Artillery Corps, with One Hundred and Fifteenth Company, Coast Artillery Corps, at Battery Wilkeson, Fort Rosecrans, Cal.)

* * * Believes results of exercises show that organized militia, co-operating with regular companies, can, in a week's time, be relied upon to effectively man coast-artillery works. Thinks militia lacks in discipline, but believes same due to lack of training, for the steady improvement showed willingness to work and eagerness to learn.

* * *

(Capt. O. E. Hunt, Eighteenth Infantry, U. S. Army, observer, umpire and general assistant, Fort Rosecrans, Cal.)

Considers progress of instruction of militia satisfactory and that officers and men of both regulars and militia deserve praise for thoroughness and earnestness of work.

* * * * *

(First Lieut. H. O. Olsen, Eighteenth Infantry, U. S. Army, instructor of artillery supports, Fort Rosecrans, Cal.)

Reports that exercises were preceded or followed by an informal conference to elucidate the principles followed and objects sought; that in addition to duties pertaining to execution of maneuvers he gave theoretical and practical instruction to junior officers in military sketching and map reading, in the construction of field lines, of information in visual signaling, day and night; that considering the short period of instruction results were very satisfactory; that during last outpost exercises the line for information was laid practically while the command marched from camp to its night position and that the commander of the outpost was in direct communication by wire with the principal parts of the outpost by the time it was fully established. Reports work as very gratifying on account of exceptional eagerness exhibited by officers and men to learn methods of regulars.

* * *

(Col. J. A. Lundeen, Coast Artillery Corps, commanding Artillery District of San Francisco, Cal.)

It is a pleasure to note that during the entire period of the encampment there was no accident to mar the success of the exercises; there was no friction of any kind between the regulars and militia; the conduct of the men during the encampment was excellent.

The enlisted men of the militia organizations, in particular the reserves, took their work seriously, were enthusiastic about it, and learned rapidly.

The comments of officers, observers, and the local press in regard to the reception and treatment of the militia, their behavior and progress, were all favorable.

* * * * *

(Lieut. Col. F. Marsh, Coast Artillery Corps, commanding fire command
No. 4, Fort Winfield Scott, Cal.)

The method of instruction in this fire command was for the men of the militia to be observers merely at the first two drills, then a man was placed beside each man of the regular detachments to watch him during drill, and finally the militia were drilled directly.

After the first few days selected men were taken into the B stations and instructed in the use of the plotting and correction boards. The men learned the drill at the guns quite readily, although they did not have sufficient time to become very expert, and good progress was made in the plotting stations.

During the time available for drills at the guns the four militia companies made very creditable progress. The men would have made a superior class of recruits. They were uniformly well-behaved and showed a marked interest in the work during the entire period. The experiment shows that good men who have had a small amount of military discipline and instruction are immediately useful in the coast artillery and that with a month's work they would be generally equal to the regular companies in the service of the piece, and also that it would be generally possible to find a good percentage capable of becoming experts in the range and position-finding services.

Men working at the guns ought to have canvas clothing as otherwise their uniforms suffer, and every company officer should have a copy of the Coast Artillery Drill Regulations.

(Lieut. Col. A. Slaker, Coast Artillery Corps, commanding Fort Baker, Cal.)

* * * * *

As a result of my experience during these exercises I desire to report that they were successful, especially in regard to the important matter of arousing interest in the militia in defending the locality near their homes. At least two of the companies desire permission to visit Fort Baker between camps (on some Saturdays and Sundays) for the purpose of perfecting themselves in the use of range finders, etc. If such applications come in it is my intention to forward them approved. Interest largely centered in the artillery work.

One company (M) asked and obtained permission to act as an artillery reserve company instead of a support, taking the place of a company detailed as a reserve, but which failed to come at all.

* * * * *

The conduct of the militia was extremely good. They were punctilious in the matter of saluting their own officers as well as those of the regular garrison, and they were quiet and orderly both day and night. Not a single case of drunkenness was observed or reported. This record was marred by some unauthorized shooting of a few blank cartridges on the night of July 19, said to have been done by members of Companies B and M.

* * * * *

(Maj. E. S. Benton, Coast Artillery Corps, commanding Fort Miley, Cal.)

The National Guard took great interest in their work and were busy all the time. There was not a single case of drunkenness or disorder in the camp.

The officers took great interest in the work and lectures.

The strongest recommendation would be the permanent assignment of militia companies by the War Department to different forts and batteries so that they could study the guns with a definite object in view, then return each year to the same guns, and the distribution of books and other means of instruction when not in camp.

(Maj. J. W. Ruckman, Coast Artillery Corps, commanding fire command No. 6, Fort Winfield Scott, Cal.)

The progress made by the enlisted men of the National Guard was excellent and highly satisfactory. That made by the officers was not so good, although two or three did very well and would, with study and careful instruction, make efficient officers. The difference in result between officers and men appears to be due to the simpler duties of the former and mechanical system to which these duties are reduced on the one hand, and the more intricate duties of the officer in connection with coast artillery on the other. * * *

(Capt. Le Vert Coleman, Coast Artillery Corps, instructor of supports.)

The regimental organization of the infantry regiments of the National Guard of California should be retained intact and each regiment of infantry should be camped as a unit under its colonel as artillery supports, supplying the artillery reserves from new artillery organizations of the National Guard raised by the coastwise cities which are protected by the batteries. In this way the regimental pride and esprit de corps of the National Guard is fostered and the only opportunity for assembling the regiments for concerted work is taken advantage of.

Infantry regiments from the interior naturally prefer their infantry work which they regard as their legitimate preparation for war, while artillery organizations of coast cities would be in a position to keep in constant touch with the regular artillery stationed near their homes, as is actually done in the case of organizations of the guard in Greater New York.

* * * * *

The officers of the National Guard companies showed great zeal and aptitude and the conduct of the men was exemplary.

* * * * *

It is confidently believed that by continuing the work so profitably begun this year the National Guard of this State will afford in time of war or other emergency a body of trained troops equal to any task which may fall to its share.

(Capt. J. F. Brady, Coast Artillery Corps, commanding mine command and Sixtieth Company, Coast Artillery Corps, Presidio, San Francisco, Cal.)

The service of the visiting militia was entirely satisfactory. Officers and men were enthusiastic in their work and gained considerable knowledge as to their duties as artillery reserves.

* * * * *

(Capt. E. A. Greenough, Coast Artillery Corps, commanding Sixty-seventh Company, Coast Artillery Corps, Presidio, San Francisco, Cal.)

The men (militia) showed great interest and zeal and were soon able to do most of the manual of the piece with but little attention from the regular detail.

* * * * *

(Capt. E. A. Stewart, Field Artillery, on duty at Battery Godfrey, Presidio, San Francisco, Cal.)

The conduct of the men throughout this movement while under my observation was excellent. There was no boisterous shouting or horseplay and the transfer was made in a quiet and orderly manner that was highly satisfactory. In camp, so far as I had opportunity to observe, the same quiet, orderly spirit prevailed, and I believe these militia troops should be commended for the evidences of discipline they have thus displayed.

* * * * *

(Capt. J. R. Pourie, Coast Artillery Corps, battery officer, Battery Howe, Presidio, San Francisco, Cal.)

* * * The guardsmen showed a commendable interest in the work and so rapid was their progress that within a few days they were able to serve certain of the mortars with detachments composed entirely of their own.

(Capt. Henry B. Clark, Coast Artillery Corps, commanding Battery Duncan, Fort Baker, Cal.)

* * * * *

Officers of the militia should be authorized to make clothing purchases of the quartermaster department.

* * * * *

(First Lieut. G. B. G. Hanna, Coast Artillery Corps, battery officer, Battery Chamberlain, Presidio, San Francisco, Cal.)

* * * * *

The detraining of the incoming militia * * * was conducted in an orderly and systematic manner and as quickly as possible under the circumstances.

* * * * *

(First Lieut. Wm. S. Carpenter, Coast Artillery Corps, Battery Kirby, Fort Baker, Cal.)

I was especially impressed by the character of the men and officers * * * the interest they took in the work, and the rapidity with which they learned the drill, the working of the guns, use of materials and the principles of gunnery * * *

I would recommend that the State be encouraged to organize coast artillery troops and that the companies be assigned permanently as reserves to batteries at their home stations and that the officers and men be encouraged to visit these batteries at all times and participate in all drills possible, especially the service practices.

* * * * *

(First Lieut. J. E. Abbott, Signal Corps, U. S. Army, Presidio, San Francisco, Cal.)

The work of the Signal Corps was somewhat limited, but satisfactory results were obtained from what was done.

The duration of the maneuvers being about eleven days it was impossible to devote much time to the details of all the work of the Signal Corps in the field. During the first week I took charge of the line construction and operation of field lines for use of troops in the field and was accompanied by the officers of the militia Signal Corps who readily took hold of the work and seemed to be much interested in the instruction given. The men of my detachment accompanied the squads of militia Signal Corps and assisted them when necessary and explained the use of a few of the modern instruments now operated by the Signal Corps in maintaining lines of communication in the field. The men in these companies, some of whom were telegraphers and electricians and a majority visual signalmen, displayed a degree of intelligence of the work to be performed that was above the average of the State Signal Corps troops being under my observation and instruction in the past.

* * * * *

(Lieut. Col. George F. Cooke, Twenty-second Infantry, U. S. Army, Presidio, San Francisco, Cal.)

* * * * *

The conduct and bearing of the National Guard troops assigned to the artillery supports was exemplary. They displayed great zeal in their work and aptitude in adapting themselves to the simulated war conditions. Their work was excellent and demonstrated the fact that by continuing the joint exercises so successfully begun in a very short time the National Guard of California will be able to furnish a trained body of men equal to any task which the emergency of war may demand.

(Second Lieut. R. E. Beebe, Twenty-ninth Infantry, U. S. Army, Fort Winfield Scott, Cal.)

* * * * *

After considerable discussion of the National Guard problem with reference to the coast artillery I am convinced that infantry regiments should not be detailed as artillery reserves.

It is useless to hope that our National Guard can devote the necessary time to learn to be both infantrymen and coast artillerymen.

A movement should be begun at once to induce the State of California to organize coast artillery companies in San Francisco; these companies to be made to feel at home with the batteries they would reinforce in time of war. The California infantry should be trained only in the land defense and other infantry problems. If the present scheme is continued only poor National Guard infantry can be expected and long absence from the guns can hardly create other than poor coast artillerymen.

The method of instruction this year has been to train the minds of the National Guardsmen in military duties and not to strain their physical endurance at the same time. This method has been so successful that it is recommended for the future.

In closing I wish to remark that I have myself been a member of a National Guard organization and recognize the difficulties with which they have to attend. The National Guard of California is very fortunate in its men and officers. That its companies are not larger is its only drawback.

The sacrifices which the personnel make and the interest and eagerness which they display in military duty are very creditable to the State of California. The people of the State may well be proud of them and should rally to the needs of the guard. The Regular Army is fortunate that it has such a second line for war.

(Second Lieut. Clarence A. Dougherty, Thirteenth Cavalry, U. S. Army.
Fort Winfield Scott, Cal.)

The work of the National Guard was in the main extremely gratifying. Their officers were apparently well up on their duties before coming here and were ready, willing, and anxious to take advantage of every opportunity to learn anything concerning their duties.

* * * * *

ARMORIES.

The condition of the armories at each post is made a matter of special comment in the report on the annual inspection of the State troops at their home stations. At the termination of the inspection for 1908, the inspecting officer concluded his remarks and observations upon this subject as follows:

The question of armories in the State is an exceedingly important one. California is one of the very few states in the Union not provided with armories, or buildings suited to military purposes. The greatest efficiency can hardly be expected of troops who have no suitable rendezvous for instruction and the care of property. Many of the so-called armories in California have been private residences or storehouses indifferently re-arranged for military purposes. Drill halls and storerooms are generally inadequate, and unless measures be taken to properly house the citizen soldiery in this State they can not accomplish the military work expected of them by the State and urged by the Government.

To meet this great and ever growing need this department has been putting forth its best endeavors in an effort to inaugurate a movement for the construction of suitable armories in localities having one or more military organizations, and for this purpose has solicited and obtained much valuable data relative to the construction of armories in other states. As a result, the matter of armory construction has been brought to the attention of civic bodies in San Francisco, Oakland, and Los Angeles.

It is earnestly hoped that the time is not far distant when the Legislature will enact laws providing for the construction of armories either by the State, county, or city and county.

In this connection, the following excerpt from the First Biennial Message of the late Governor James H. Budd to the State Legislature, on January 4, 1897, is pertinent:

A State armory in San Francisco (and perhaps at Los Angeles) in the near future will be a necessity. It should contain office room for State officers residing there. This should be accomplished under Article XVI of our Constitution, on a vote of the people and the issuance of bonds. The saving would more than justify the expenditure, while the convenience and safety assured would make the same most desirable.

EMERGENCY FUND.

The following excerpt from the report for 1906, relative to this subject, is here given:

I desire to renew and emphasize the recommendation previously made by myself and some of my predecessors in office that provision be made by the Legislature for the establishment of an Emergency Fund, to be used only for the pay, travel, and subsistence of the State military forces, or any portion thereof, when called into service in case of war, insurrection, rebellion, or resistance to the execution of the laws of the State, or for any other necessary purpose; expenditures from that fund to be made only upon direct authorization of the Governor.

The necessity for such a fund became signally apparent at the time of the tour of active duty of the State troops incident to the great catastrophe in this State, April, 1906, and had it not been for the action of the State Legislature in extraordinary session assembled in the following June, no provision would or could have been made until the convening of the regular session of the State's lawmaking body in January, 1907, for the payment of claims for services, subsistence, supplies, transportation, etc. * * *

Realizing that they will be compelled to wait a long time for their money, individuals and firms are rather loth to enter into contracts with the State for the benefit of her military and where they do are often disinclined to submit prices and terms favorable to the State.

INDIAN WAR RECORDS.

The matter of securing the return to this department of records and papers relating to certain periods in the military history of this State and showing the service performed by California soldiers in the early wars and expeditions against the Indians, was discussed at some length in the report for 1906. As stated therein, these records and papers were all delivered some years ago to one Captain John Mullan of Washington, D. C., as agent and attorney for the State in the collection of certain Indian War claims against the Federal Government. It is understood that all of these papers are now in Washington, D. C., some of them being still in the possession of Captain Mullan and others on file in the offices of the Auditor for the War Department and the Commissioner of Indian Affairs.

It is hoped that your Excellency will be disposed to make such inquiries and take such action as may be possible under the circumstances to preserve to the State the valuable military records which have apparently been removed from their proper and legally constituted repository. The return of the rolls and records on file in Washington, D. C., or the furnishing of copies thereof, will enable this department to supply information frequently applied for and to which the people are entitled.

STATE MILITARY LAW.

Several changes were made in the military law by the Legislature of last year, all of which were announced in General Orders, No. 7, series of 1907, from this office. In order, however, that the State law may be made fully consistent with the requirements of the Federal Government and the National Guard of California conform to the organization prescribed for the Army, further amendments are necessary. Looking to this end, a board of officers was appointed on December 9, 1907, to revise the existing State military laws so as to conform to the United States Militia Law of January 21, 1903, as amended by the acts of Congress of June 22, 1906, and May 27, 1908, and to propose such amendments as may be deemed necessary, the results to be arranged in the form of a bill for submission to the next Legislature.

EXTRA PAY OF CALIFORNIA U. S. VOLUNTEERS.

Since the last report of this department an additional allowance of \$118.83 has been received from the Auditor for the War Department in settlement of certain items previously suspended in the fourth installment of the claim of the State of California for pay of volunteers, at State rate, from date of enrollment to date of mustering in to the United States service, or date of rejection by the medical examiner or mustering officer. This reduces the balance of the State's claim, aggregating \$16,324.77, to \$583.51, which amount has been disallowed.

The disbursement of the money collected from the U. S. Government on this account at different times since January 7, 1902, has gone on and checks have been issued upon the State Treasurer, the custodian of this fund, as fast as applications have been received from those entitled to this pay.

On June 30, 1908, the status of this fund was as follows:

First Series.

Amount on hand, June 30, 1906.....	\$3,004 00
Amount for which checks have been issued and paid.	346 00
	<hr/>
Balance	\$2,658 00

Second Series.

Amounts collected from U. S. Government and deposited with State Treasurer:

November 9, 1906.....	\$8,669 88
November 14, 1906.....	6,952 55
March 14, 1907.....	118 83
	<hr/>
	\$15,741 26
Amount for which checks have been issued and paid.	10,704 76
	<hr/>
Balance	5,036 50
	<hr/>
Total balance	\$7,694 50

CLAIMS AGAINST THE UNITED STATES ON ACCOUNT OF
SPANISH-AMERICAN WAR.

There are claims still pending against the United States Government arising out of and incidental to the Spanish-American War, for trans-

portation, subsistence, and incidental expenses, and for pay and subsistence of Naval Militia guard on the U. S. S. "Marion" and the U. S. S. "Pinta," amounting to \$8,013.06.

This amount was suspended by the Auditor for the War Department on August 12, 1903, in the settlement of the third installment of the claim of the State of California. Every effort is being made by this department to procure the additional evidence and explanations required to insure payment of the balance claimed.

CURRENT OFFICE BUSINESS.

There has been a steady and very perceptible increase of correspondence during the past two years. Such correspondence is of a miscellaneous character for military and other information, referring to the Indian, Civil, and other early war periods, and on to the present time. Numerous requests are also made for certificates of service performed, the original discharge being lost or mislaid. These certificates of service are required as identification of service rendered, for proof if claim is pending before any of the departments of the General Government, and for other purposes.

As the head of the military and naval affairs of the State, there are filed in this office all reports, returns, etc., required from the several commands to be made either annually, quarterly, as otherwise directed, or as may be specified by law or in orders.

An annual muster and inspection of every command of the National Guard is required by law to be made under the direction of the Inspector General. One copy of the muster roll and inspection report of each command must be forwarded to and filed with this department for future record. When received they are carefully verified and properly filed.

Returns for the issue of commissions to officers, resignations, applications for retirement, application for service medals and exempt certificates, requisitions for military and naval supplies, and many other returns and papers are required, all of which after being carefully examined, approved, and acted upon, become the filed records of the office.

The following will give some idea of the volume of merely routine work performed in this office during the fiscal year ended June 30, 1908:

Communications and other papers received.....	7,355
Communications written	8,790
General orders issued	26
Special orders and circulars issued	12
Commissions issued	210
Certificates of re-election issued	10
Certificates of service issued	74
Certificates of honorary membership issued	21
Exempt certificates issued	57
Service medals and bars issued	37
Target practice medals and bars issued	902
Resignations accepted	67
Retirements	19
Leaves of absence granted	50

RECOMMENDATIONS.

I respectfully make the following recommendations:

First—That an appropriation be provided for the building of an armory and State arsenal in the city of Sacramento. The building at present occupied as an armory by the National Guard organizations located in Sacramento is totally unsuited for the purpose, as are also the quarters in the basement of the Capitol now used as a State arsenal, where approximately \$200,000 worth of military stores and supplies are constantly on hand.

Second—That an appropriation be provided for purchasing ground and erecting an armory thereon in the city of San Francisco, and also for similar purposes in the city of Los Angeles. These two cities are among the few of their size in the United States that do not have substantial armory buildings. Such buildings are very badly needed in these cities for the reason that property values are so high as to preclude the rental of suitable quarters for the military organizations located there; in fact, if some special provision is not made immediately in both cities for the proper housing of their National Guard organizations, such organizations can not be maintained. It is my opinion that the State should provide armories for all military organizations, but if the Legislature deems it too great a burden for the State to bear, a law might be passed, as has been the case in several other States, notably New York, requiring the cities and towns in which organizations of the National Guard are located, to provide the proper housing facilities for such organizations; or the State might purchase the necessary ground and the city or town required to erect and furnish the building. In this connection attention is respectfully invited to the remarks appearing elsewhere in this report, under the heading "Armories."

Third—That your Excellency ask the Legislature at the coming session to provide an emergency fund of \$250,000, to be used for the pay, transportation, subsistence, and other expenses of the National Guard when ordered out in case of war, insurrection, rebellion, or resistance to the execution of the laws of the State, or for any other necessary purpose; said fund to be available also for the payment of expenses of troops ordered out as escort to distinguished visitors and to deceased officers or State officials entitled to military honors, expenditures from such fund to be made only upon the direct authorization of the Governor. This fund should be increased by the Legislature at each session until it reaches the sum of \$500,000, at which amount it should be maintained; that is, whenever it becomes necessary to make expenditures therefrom the Legislature should as soon as possible reimburse the fund to the amount of such expenditures, so that there may always be available for emergency the sum of \$500,000, it being borne in mind, as previously stated, that this fund can not be touched except by the authority of the Governor. In this connection attention is invited to the remarks upon this subject in another portion of this report.

APPENDICES.

The following reports and tabulations are submitted for your information and made appendices to this report:

- Appendix "A"—Statement of appropriations and expenditures for military purposes for the fifty-eighth and fifty-ninth fiscal years.
- Appendix "B"—Statement of enrolled militia.
- Appendix "C"—Statement of organized strength of the National Guard and the Naval Militia in detail.
- Appendix "D"—Statement of dates of organization of regiments, companies, troops, and Naval Militia.
- Appendix "E"—List of Adjutants General.
- Appendix "F"—Report of Colonel Thomas Wilhelm, Assistant Inspector General, N. G. C., as to his observations and impressions relative to the encampment of the First Squadron of Cavalry, June 16-25, 1907.
- Appendix "G"—Report of Major S. W. Kay, First Squadron of Cavalry, on encampment of his command, June 16-25, 1907.
- Appendix "H"—Report of Colonel H. I. Seymour, Second Infantry, relative to the operations of the organizations of his regiment in connection with the joint army and militia coast defense exercises, July 4-20, 1907.
- Appendix "I"—Report of Colonel D. A. Smith, Fifth Infantry, relative to the operations of the organizations of his regiment in connection with the joint army and militia coast defense exercises, July 4-20, 1907.
- Appendix "J"—Report of Colonel S. H. Finley, Seventh Infantry, relative to the operations of the organizations of his regiment in connection with the joint army and militia coast defense exercises, July 4-20, 1907.
- Appendix "K"—Report of Captain George W. Bauer, N. M. C., on the cruise of the Naval Militia of California for 1907.

Very respectfully,

J. B. LAUCK,
Adjutant General.

APPENDIX "F."

REPORT OF COLONEL THOMAS WILHELM, ASSISTANT INSPECTOR GENERAL, N. G. C.,
AS TO HIS OBSERVATIONS AND IMPRESSIONS RELATIVE TO THE ENCAMP-
MENT OF THE FIRST SQUADRON OF CAVALRY, JUNE 16-25, 1907.

HAYWARDS, CAL., June 23, 1907.

BRIGADIER GENERAL J. B. LAUCK,

Adjutant General, State of California, Sacramento, California:

SIR: I have the honor to report that I visited the First Squadron of Cavalry, consisting of Headquarters and Troops B, C, and D, encamped at Santa Cruz, by special order, on June 19th and 20th.

I found the camp in an excellent location in the suburbs of the town, with wood, water, and other necessities and conveniences near at hand. The arrangement of the camp was practically in accordance with United States Army regulations; the sanitary conditions were excellent, and the rations ample and well prepared by competent cooks.

The service calls are well considered and the duty, so far as I saw, was well performed. The entire command appears to be zealous in the work of instruction and care of the camp.

I know of no command of the National Guard that I have visited that has given me a better impression as to military appearance and performance of duty than the First Squadron of Cavalry.

Captain C.A. Rogers is the medical officer assigned to the cavalry and is especially attentive to the health of the command. His hospital appliances are somewhat limited, but sufficient. The sick list is very small, and will, no doubt, be kept so, considering the healthful location of the camp.

The horses are well cared for in camp. Many of them, however, are undersized, but serve the purpose of the encampment. The equipments appear to be ample and in good condition.

Major S. W. Kay, the commanding officer, appears to be very much interested in the military work of his command, and the troops will, no doubt, be greatly benefited by his methods.

As the troops have ample opportunity for instruction on foot at their home stations, camp duty on this occasion is almost entirely devoted to mounted service and instruction in regard to the care and use of the horse in the field and campaign.

The veterinarian in service with this command, D. F. Fox, is evidently well informed and is capable of imparting to the officers and enlisted men needed information and instruction as to the proper care and treatment of the horse for the best service of the animal.

Following is a list of duty calls and a statement showing number of officers, men, and animals in camp:

First call	5:45 A. M.	Stable and water	4:00 P. M.
Reveille	6:00 A. M.	First Sergeant's call	4:20 P. M.
Assembly	6:05 A. M.	Guard mount	4:30 P. M.
Stable	6:10 A. M.	Assembly	4:40 P. M.
Mess	6:30 A. M.	Adjutant's call	4:45 P. M.
Fatigue and police	7:00 A. M.	Dress parade, first call	4:50 P. M.
Sick call	7:15 A. M.	Assembly	5:00 P. M.

Water	7:30 A. M.	Adjutant's call.....	5:05 P. M.
Inspection of quarters	7:45 A. M.	Mess	6:00 P. M.
Drill	8:00 A. M.	Retreat	6:45 P. M.
Assembly.....	8:15 A. M.	Tattoo	9:15 P. M.
Recall	11:30 A. M.	Call to quarters	10:00 P. M.
Mess.....	12:00 M.	Taps	10:30 P. M.

Very respectfully,

THOMAS WILHELM,
Colonel and Assistant Inspector General,
National Guard of California.

APPENDIX "G."

REPORT OF MAJOR S. W. KAY, FIRST SQUADRON OF CAVALRY, ON ENCAMPMENT
OF HIS COMMAND, JUNE 16-25, 1907.HEADQUARTERS, FIRST SQUADRON OF CAVALRY, N. G. C.,
SACRAMENTO, CAL., August 24, 1907.*The Adjutant General, State of California, Sacramento, California:*

SIR: In compliance with General Order No. 13, Adjutant General's Office, dated May 11, 1907, I have the honor to report that the First Squadron of Cavalry, consisting of three troops, B, C, and D, left their home stations on the morning of the 16th of June for Santa Cruz, California, Troops B and D, via Southern Pacific Railroad, and Troop C marching overland.

It was the intention of the Squadron Commander to unite the three troops at Pajaro, and from that point march overland to Santa Cruz, but owing to the exceedingly poor service rendered by the Southern Pacific in the transportation of the horses they did not arrive at Pajaro for hours after the men, although in each instance they were loaded from ten to fifteen hours prior to the entrainment of troops. Owing to this deplorable service on the part of the railroad the plan of marching the Squadron overland from Pajaro to Santa Cruz was abandoned much to the regret of all, as much benefit was expected to be derived by the troops from this practice march.

Troop B arrived at Pajaro at 6:30 P. M., June 16th, where they went into camp to await the arrival of their horses. The horses arrived about 5 A. M. of the 17th, having been in the cars for thirty hours or more, in no condition for the road, consequently the troop remained in camp until 2:30 P. M., at which time they took the trail for Santa Cruz, arriving there at 8:30 P. M.

Troop C arrived at Watsonville at 2 P. M., where it went into camp at Cassin's Park; leaving Watsonville at 7:30 A. M., the next day, June 17th, arriving at Santa Cruz 11:30 A. M., with men and horses in fine condition; was on the road eight hours thirty minutes, covering a distance of forty miles.

Troop D arrived at Pajaro about 10 A. M., of the 16th, and learning from the Southern Pacific agent at that place that the horses would not arrive until the next day, Troop D proceeded by rail to Santa Cruz.

The different troops reported at Santa Cruz as follows:

June 16th—Troop D, Captain T. C. Waterous, commanding: 3 officers, 31 men, and 37 horses en route.

June 17th—Troop C, Captain C. J. Fulle, commanding: 3 officers, 27 men, 35 horses.

June 17th—Troop B, Captain O. J. Boden, commanding: 2 officers, 33 men, and 26 horses, two of which were left at Watsonville, upon the recommendation of the veterinarian, for treatment. (The two horses were brought to camp the third day.)

The camp at Santa Cruz, designated "Camp J. B. Lauck," was duly established on the 17th day of June with the following routine of duty:

A. M.—5:45—First call.	P. M.—4:00—Stable and water.
6:00—Reveille.	4:20—First Sergeant's call.
6:05—Assembly.	4:30—Guard mount.
6:10—Stable.	4:40—Assembly.
6:30—Mess.	4:45—Adjutant's call.
7:00—Fatigue and police.	4:50—Dress parade; first call.
7:15—Sick call.	5:00—Assembly.
7:30—Water.	5:05—Adjutant's call.
7:45—Inspection of quarters.	6:00—Mess.
8:00—Drill.	6:45—Retreat.
8:15—Assembly.	9:15—Tattoo.
11:30—Recall.	10:00—Call to quarters.
12:00—Mess.	10:30—Taps.

This routine of duty was maintained throughout the encampment with but little variation.

The period between 8 and 10 A. M. allotted to troop drill was devoted to mounted drill in close and extended order, and mounted exercises at the discretion of troop commanders.

This being the first time the troops have been thrown into squadron formation little could be expected the first two or three days, but toward the last the manner in which the troops went through the movements of the squadron was all that could be asked for.

The sanitary condition of the camp was highly spoken of by Captain C. A. Rogers, Assistant Surgeon, Second Infantry, N. G. C., detailed for duty with the squadron while in camp. Relative to the health of the men Captain Rogers in his report says, in part, as follows: "Of the health I can say that it was excellent. This, no doubt, is due largely to the very good rules observed and to the quantity and quality of rations issued."

Troop C had the misfortune to lose one horse while in camp, relative to which the Veterinarian's report is hereto attached.

Dr. David F. Fox, Squadron Veterinarian, in his report makes special mention of the very poor condition of the horses sent via the Southern Pacific upon their arrival at camp, and states that the loss of several would have been but natural result of the treatment received by the horses en route.

The camp was laid out by Lieutenant Earl W. Jonas, Quartermaster, in strict conformity with regulations. Lieutenant Jonas is to be commended for the efficient and painstaking manner in which he performed his duties.

The duties of the Commissary, a difficult office to fill at a National Guard encampment, were performed in a most satisfactory manner by Lieutenant Frank M. Vierra. Not a single complaint was heard in regard to subsistence furnished. The cost per ration was 39.66 cents; the Field and Staff are not included in these figures.

The efficient manner in which Veterinarian Fox instructed the enlisted men in the care of their mounts and his untiring attention to the horses while in camp was commendable. He was ably assisted by Dr. J. P. Nichols, a veterinarian, enlisted in Troops C.

The Squadron Commander desired to express the appreciation of the entire squadron to Captain C. A. Rogers, Assistant Surgeon, Second Infantry, for the instructions and advice rendered; also to Lieutenant A. A. Morey, Naval Militia, for the many courtesies extended while in camp.

The three troops broke camp on the 25th: Troop B marching overland to San Francisco via Los Gatos, Mountain View, Redwood City, and San Mateo. Total distance 84.50 miles, average miles per day 28.16, average miles per hour 4.69. At San Francisco the troop embarked on the steamer Apache for Sacramento. Troop C marched overland from Santa Cruz to Salinas. Troop D entrained at Santa Cruz, June 25th, P. M., for Los Angeles.

The following suggestions relative to future encampments, etc., are respectfully submitted: Arrangements should be made with the railroad company so that horses could accompany men on same train. The deplorable freight service makes it impossible to carry out a pre-arranged plan if this is not done. That camp should be for not less than fifteen days, excluding time necessary to rendezvous—better results are obtained with mounts during the second week. That an officer of the Regular Army be detailed to attend the entire encampment, together with one well instructed non-commissioned officer for each troop. Much benefit would be derived from their presence and advice.

The Commanding Officer can not speak too highly of the efficient manner in which all the troop officers performed their duties. The gentlemanly and soldierly conduct of the enlisted men on all occasions was highly commendable.

Colonel Thomas Wilhelm, Assistant Inspector General, N. G. C., paid an official visit to the camp. The suggestions offered by him were much appreciated, and carried out, particularly in regard to the individual instruction of the enlisted men in care of horses, etc.

The Commanding Officer, on behalf of the entire Squadron, desires to express their appreciation for the many courtesies received from the Adjutant General, and his efforts to make this, the first encampment of the First Squadron of Cavalry, a success.

Respectfully submitted.

S. W. KAY,

Major, First Squadron of Cavalry, N. G. C., Commanding.

FIRST SQUADRON OF CAVALRY, N. G. C.,

"CAMP J. B. LAUCK," SANTA CRUZ, CAL., June 22, 1907.

The Adjutant, First Squadron of Cavalry, N. G. C.:

SIR: I have the honor to report that on the morning of June 21, 1907, I was called upon to visit a brown gelding in the possession of Troop C. I found that said horse presented all the characteristic symptoms of obstruction of the œsophagus, or "low chok." I at once procured a Phillips tube and attempted to dislodge the obstruction. Portions of barley were ejected upon several occasions but not of sufficient quantity to afford permanent relief. Oil and other medicines

such as deemed advisable were resorted to but all to no avail, and the animal died on the following morning.

Cases of this kind while not common are liable to occur any time, and I do not attribute the cause to the neglect or fault in any manner to the officers or men of Troop C.

The horse was a brown gelding about eight years old weighing about 1,050 pounds, apparently sound in every way and in my judgment worth about \$145.

On postmortem examination I found the obstruction to consist of a solid bolus of dry grass located about four inches anterior to the cardiac orifice of the stomach and that it would have been positively impossible to remove it by any means whatever.

I wish to say in conclusion that I was most ably assisted in the treatment of the animal by Dr. J. P. Nichols, who is also a veterinarian and member of Troop C.

Respectfully submitted.

DAVID F. FOX, D.V.S.,
Veterinarian, First Squadron of Cavalry, N. G. C.

APPENDIX "H."

REPORT OF COLONEL H. I. SEYMOUR, SECOND INFANTRY, RELATIVE TO THE
OPERATIONS OF HIS REGIMENT IN CONNECTION WITH THE JOINT ARMY AND
MILITIA COAST DEFENSE EXERCISES, JULY 4-20, 1907.

HEADQUARTERS, SECOND INFANTRY, N. G. C.,
SACRAMENTO, CAL., May 12, 1908.

The Adjutant General, State of California, Sacramento, Cal.:

SIR: I have the honor to herewith submit my report, relative to the operations of the organizations of my command in connection with the joint army and militia coast defense exercises in the Artillery District of San Francisco in the month of July last:

I reported to Colonel J. A. Lundeen, Coast Artillery Corps, U. S. Army, commanding the Artillery District, on the morning of July 5th, prior to the arrival of the troops. The movements of the various subdivisions of the Second Infantry were directed from the District Commander's headquarters, and the companies traveled as independent units. Upon the arrival of the organizations at Fort Winfield Scott and Fort Miley it was found that complete preparations had been made by the army authorities for suitable camp grounds and facilities, thereby facilitating the establishing of the camps. The ration issues were promptly made from the beginning to the end of the exercises, July 5th to July 20th. Of course, for the first few days the Government issues were not quite sufficient to meet the demands of the ordinary appetites of the men of the command, and in many cases replenishment and additions to the Government ration were made by purchases from outside sources. This was a natural condition caused by the fact that the State

soldiers were men of sedentary occupations and modes, requiring more food than for some men often in the field, for a few days. This condition was also brought about in a great measure by the lack of experience of the company cooks, who were unable in some instances to handle the Government issue as economically as is the case with Regular Army cooks. Although the present ration is sufficient for men serving in the field during long periods of time, it can not be considered ample for volunteer soldiers taken from civil life, whose services in the field are but temporary. It is recommended that in connection with future occasions of this character, the State should make provision for a reasonable additional ration allowance.

My experience with the work performed during these exercises and the knowledge that I have of the capabilities of the National Guardsmen lead me to believe, that any attempt to make coast artillerists out of infantrymen of the organized militia would be futile. If they can accomplish the work in the branch of the service for which they were enlisted to a reasonable degree, that is about all that can be expected of them, and no further attempt should be made to enlarge on the scope of their work as was attempted during these exercises. These remarks refer particularly to those organizations of the National Guard assigned to duty as artillery reserves. On the other hand, the duty assigned to that portion of the militia acting as supports was perhaps more beneficial than they were ever before called upon to perform, for the reason that, being organized as small units, they were able to accomplish better results, as was the case at Camp Atascadero, San Luis Obispo County, in this State. There the system of instruction brought the character of work required to be performed closer to home to subordinate officers and the enlisted men. In fact, it was just the kind of instruction which, in my judgment, the organized militia most needs.

I believe that, if it is desired to organize coast artillery reserves, regiments or battalions should be organized for that purpose and that purpose alone, and instructed as such with only enough small arms work to permit of parade purposes and guard duty; that such organizations should be located in the immediate vicinity of coast fortifications where those organizations could be in constant touch with the regular establishment, and so that Regular Army officers from the coast defense organizations could be made available for imparting proper knowledge and giving continuous and constant instruction to the militia. By this method, I believe that an efficient corps of coast artillerists can be created and maintained, and the other branches of the service of the State can be given instruction in their regular lines of work without detriment to their efficiency as infantrymen or cavalrymen. It is true that the militia reserves performed the work mapped out for them in a manner which brought forth the encomiums of the Regular Army officers, yet as I have hereinbefore suggested, it is not the part of wisdom to require infantry soldiers to man coast defense fortifications, for the reason that, in my opinion, it is impossible for officers and men of the organized militia to perform the duties of different branches of the service.

It is recommended that when all the companies of a regiment are ordered into camp the autonomy of the regimental organization be not disturbed. It is believed that where a command is in the field in its entirety for military instruction, the administrative work can be better

accomplished and better results derived generally than if the companies are scattered over a wide field of activity.

It is also believed that when a militia regiment is ordered to camp the details of transportation of the command should be left to regimental headquarters, so that the regimental commander may be able to locate any portion of his command while en route. That is to say the regimental organization should not be disturbed at any time from the beginning of the movement until the conclusion of the exercises.

For the very cordial treatment accorded me and my command by Lieutenant Colonel George F. Cooke, 22d U. S. Infantry and Captain J. P. Ryan, Sixth U. S. Cavalry, and their efficient corps of assistants, and for the excellent treatment extended by Colonel Lundeen, Artillery District Commander and his officers, the undersigned is most thankful and so expressed himself to these gentlemen of the Regular Army.

Very respectfully,

H. I. SEYMOUR,
Colonel, Second Infantry, N. G. C., Commanding.

APPENDIX "I."

REPORT OF COLONEL D. A. SMITH, FIFTH INFANTRY, RELATIVE TO THE OPERATIONS OF HIS REGIMENT IN CONNECTION WITH THE JOINT ARMY AND MILITIA COAST DEFENSE EXERCISES, JULY 4-20, 1907.

HEADQUARTERS, FIFTH INFANTRY, N. G. C.,
OAKLAND, CAL., March 8, 1908.

The Adjutant General, State of California, Sacramento, Cal.:

SIR: In accordance with your letter of July 30, 1908, I have the honor to submit the following report, with remarks and observations:

In compliance with General Orders No. 15, Adjutant General's Office, dated June 15, 1907, I ordered Companies B, C, D, E, I, and M, to proceed from their home stations to Fort Baker, Cal., reporting on their arrival to the Artillery District Commander, at that Post. I designated Major M. W. Simpson to command the Battalion.

The commanding officer, Company C, with his company, failed to report as ordered. From the reports of the officers present of this Battalion, it would seem that the exercises were very interesting to the men of their commands, and well carried out.

I left Oakland Pier, July 4, 1907, at 3:30 P. M., with Companies A, F, G, H, K, L, and Detachment Hospital Corps; the train consisting of seven tourist, two standard sleepers, and two baggage cars; six empty tourist sleepers being attached to the train as far as Bakersfield. The men were subsisted on the train, thus avoiding any delay to the running schedule on the part of the troops for meals; notwithstanding this fact we did not arrive in Los Angeles until July 5th at 3:15 P. M. After a delay of two hours the train was moved to the Santa Fe Depot where the troops detrained and immediately entrained in day coaches. We

left Los Angeles at 5:15 P. M., reporting our departure and strength of the command by telegraph to the Commanding Officer, Fort Rosecrans, and arrived at San Diego at 10:15 P. M., the trip from Oakland Pier consuming thirty hours and forty-five minutes, owing to unnecessary delay on the part of the railroad. I was met at San Diego by Major G. W. Gatchell, commanding Artillery District of San Diego, and after consultation with him it was decided to occupy the barracks in San Diego that night, moving to Fort Rosecrans the next morning. We arrived at Fort Rosecrans July 6, 1907, at 8:45 A. M. Camp was immediately established for the supports (four companies) on a small plateau or clearing some little distance above Fort Rosecrans, the reserves (two companies) making camp with two companies of Coast Artillery, U. S. Army, in rear of the batteries. July 7th (Sunday) was devoted to arranging camp and rest. July 8th (Monday) the active work of the joint exercises commenced. I encamped with the reserves but exercised a joint supervision over both camps of the reserves and supports. After the first day the police of the camps was excellent, considering the location and condition of the ground; in this direction I would strongly urge that the wooden platforms with which the regular troops were supplied be also furnished the State troops, the platforms being decidedly conducive to the comfort and cleanliness of the men. On arriving at the Post, rations were immediately issued for the entire period of the exercises, excepting meat and soft bread, but to guard against the inexperience and waste of the company cooks I directed that but half of the amount of the rations be delivered to the companies, the remainder to be issued to the companies when the camp was half over; the plan proved successful and the ration issued proved ample. Each company kitchen was well and cleanly conducted, and the meals well prepared, an officer of each company visiting the mess prior to its being served. The water supply system of the four companies of supports on the hill back of the Post was poor, owing to the height of the ground used, and the inadequate pumping arrangements, it being necessary to haul water in a large tank wagon for the use of the troops. The system of latrine troughs was a failure owing to the fact that the odorless excavating pump was in poor condition when received at the Post, and after several trials proved useless, necessitating sinks being dug in the camp of the supports, the reserves using the closets in the company barracks. The sinks were well cared for and absolutely sanitary. The work of the reserves was according to schedule arranged and carried out under the immediate direction and control of the Artillery District Commander, Major G. W. Gatchell, and the officers of the Post, who took every care and great pains to make the exercises both interesting and instructive, at the guns in the several batteries, as well as at the lectures held after the daily exercises, at which an officer of the Post was lecturer and instructor. The work of the supports was under the immediate control of Captain Graves, 20th U. S. Infantry, assisted by Lieutenant H. O. Olson, 18th U. S. Infantry, and was directed by the Artillery District Commander, Major E. G. Hunt, Fifth Infantry, National Guard of California, being battalion commander. From my observation it is my unqualified opinion that from the interest shown by both officers and men, and the work performed, that the joint exercises at this Post were in every respect a complete success and that the benefit derived by the

State troops can not be overestimated, the aid and assistance given by the Regular Army officers at the Post to the visiting troops creating a feeling of cordiality and friendliness which went a great way toward making the exercises a success. As the companies of the several regiments of the State troops are scattered, and the opportunity for concentrating the commands so remote, I would respectfully suggest and strongly urge that a command in its entirety (regimental) be sent to one station or post, that it may be under control of its regimental officers directed by the Regular Army officer in command of post or station, thus giving an excellent opportunity for instruction of all its officers in the method of caring for and handling their commands which should not be neglected. The benefit derived by regimental officers would more than overbalance the several objections advanced by an Artillery District Commander. I would further respectfully suggest that the travel ration be issued with money for liquid coffee, to troops en route from one station to another, or that an amount in cash be turned over to a commissary officer with the traveling troops, to purchase subsistence on the trip, and not the method used in the present joint exercises; a delay by the railroad company causing confusion and allowing the companies to arrive at San Diego without the ration made necessary by such delay.

Very respectfully,

D. A. SMITH,

Colonel, Fifth Infantry, N. G. C., Commanding.

APPENDIX "J."

REPORT OF COLONEL S. H. FINLEY, SEVENTH INFANTRY, RELATIVE TO THE OPERATIONS OF HIS REGIMENT IN CONNECTION WITH THE JOINT ARMY AND MILITIA COAST DEFENSE EXERCISES, JULY 4-20, 1907.

HEADQUARTERS, SEVENTH INFANTRY, N. G. C.,
SANTA ANA, CAL., October 17, 1907.

The Adjutant General, State of California, Sacramento, Cal.:

SIR: In compliance with instructions from your headquarters, October 9, 1907, I have the honor to report as follows the part taken by the Seventh Infantry in the joint exercises at Presidio of San Francisco from July 4 to July 20, 1907.

The first information in reference to the above mentioned exercises was received at these headquarters in a letter from the Adjutant General's Office, dated April 19, 1907, in which it was stated that a portion of the National Guard would be selected to participate, the selection being based on rating of inspecting officer for the War Department for 1907.

This was followed by General Orders No. 15, Adjutant General's Office, dated June 15, 1907, in which the twelve companies of this regiment were directed to participate at Fort Winfield Scott; Companies A, B, C, D, E, F, G, H, I, and K, being designated as Artillery Reserves, and Companies L and M as Supports.

Under authority of Paragraph III, General Orders No. 15, all field, staff, and medical officers, non-commissioned staff officers and members of Hospital Corps were assigned to accompany the regiment on this tour of duty. Permission being received from the Adjutant General's Office at a subsequent date, the band was also included.

As per instructions, the regimental commissary was on June 26 detailed to go in advance of the regiment to arrange mess for officers of Second and Seventh Infantry, and on that date request was made for his transportation, but owing to non-arrival of same he did not get away until July 5.

As indicated in Paragraph V, General Orders No. 15, the Chief Quartermaster, Department of California, U. S. Army, made all arrangements for transportation, sending to company commanders manuscript tickets and bills of lading to cover transportation of their commands and equipage, and to the regimental commander transportation necessary for the field, staff, non-commissioned staff and Hospital Corps.

On account of the inability of the railroad company to furnish necessary equipment on July 4th to move the regiment, its departure was delayed until the 5th. The following schedule of departure of various elements of the regiment from their home stations was arranged and in every instance strictly adhered to except that the Santa Fe train from San Diego was delayed en route, causing L and E to be late in entraining, and B, E, and L late in reaching Los Angeles.

Service via Santa Fe :

Company M leave Riverside	1:15 P. M.
Company G leave Redlands	3:12 P. M.
Company K leave San Bernardino	3:33 P. M.
Company B leave San Diego	1:55 P. M.
Company L leave Santa Ana	5:10 P. M.
Company E leave Anaheim	5:20 P. M.

The equipment bearing the above-mentioned organizations should have been turned over to the Southern Pacific at Los Angeles at 6:20 P. M., but owing to the late arrival of San Diego train this was not done until 8:30.

Service via Southern Pacific to Los Angeles :

Company D and Band leave Pomona	3:10 P. M.
Company I leave Pasadena	4:20 P. M.
Company H leave Long Beach	5:30 P. M.
Companies A, C, and F, report at depot	6:00 P. M.

At Los Angeles the train was made up in two sections.

The first section, composed of Companies A, C, F, H, I, D, First Company, Signal Corps, and part of field, staff, and non-commissioned staff, was made up at Arcade Depot of Southern Pacific and left at 7:33 P. M., in command of the undersigned, with Captain A. B. Austin, Quartermaster, in charge, and Lieutenant H. B. Light, Acting Adjutant. The equipment consisted of one locomotive, two baggage cars, seven tourist sleepers, and one standard sleeper.

The second section was made up at La Grande station of Santa Fe, and was composed of Companies B, E, G, K, L, and M, Hospital Corps,

Band, and part of field, staff, and non-commissioned staff, and left at 9:28 P. M., in command of Lieutenant Colonel S. M. Saltmarsh, with Lieutenant C. R. Ferguson, Battalion Quartermaster, in charge, and Lieutenant A. E. Reynolds, Acting Adjutant.

The equipment of second section consisted of one locomotive, two baggage cars, seven tourist sleepers and one standard sleeper.

At 1:00 P. M., July 6th, I reported by wire to the Chief Quartermaster, at Presidio, the approach of the train, the first section of which arrived at Oakland Mole at 4:30 and the second section at 5:33. Boats were in waiting to carry the regiment to Presidio wharf, which was reached at 6:30 and 7:30 by the troops on the respective sections of the train. Here we were met by officers and men, detailed for the purpose, who conducted the different organizations to the points to which they had been assigned, as follows:

Company A to Battery Blaney and Mine Command.

Company B to Battery Lancaster.

Company C to Battery Cranston.

Company D to Battery Godfrey.

Company E to Battery Saffold.

Company F to Battery McKennon.

Company G to Battery McKennon.

Company H to Battery Howe.

Company I to Battery Howe.

Company K to Battery Chamberlain.

Companies L and M, together with the Field, Staff, Band, and Hospital Corps, to the camp of the Artillery Supports near Marine Hospital. With the enthusiastic assistance of officers and men of the regular service, all organizations were comfortably provided for and located for the night at 11:30 P. M.

July 7th was devoted to preparation of camp by the various organizations.

July 8th, Sunday—Recreation and completing of camp arrangements. The officers of the regiment were conducted through the various batteries, and the mechanism and operation of the guns and mortars thoroughly explained by officers of the U. S. Artillery.

Colonel H. I. Seymour, Second Infantry, N. G. C., being in command of the Artillery Supports and the ten companies of this Regiment assigned to duty as reserves, acting independently with the batteries to which they were attached, the following assignment of field officers of this regiment was made July 8th by General Orders, No. 24, Headquarters, Artillery District of San Francisco:

Colonel S. H. Finley to Battle Command.

Lieutenant Colonel S. M. Saltmarsh and Major Truman Cole to Fire Command, No. 4.

Major L. L. Vestal to Fire Command, No. 6.

By my direction Major H. E. Mitchell reported to Colonel Seymour for such duty as he might designate, and he was placed in command of the Second Battalion of the Provisional Regiment consisting of Companies B and D, Second Infantry, and L and M, Seventh Infantry.

Staff officers and Band of the Regiment were placed at the disposal of Colonel Seymour, and the following given permanent assignments:

Captain F. C. Prescott, Jr., as Commissary.

First Lieutenant E. A. Reynolds as Police Officer.

Second Lieutenant I. D. Jaynes as commander of Second Machine Gun Detachment.

Other officers were called on for duty as occasion required.

The Hospital Corps in connection with the Second Infantry was organized as a Field Hospital, in which capacity it served until July 14th, when, by authority of Commanding Officer, Artillery District, it was assigned to duty with the ten companies doing duty as reserves.

July 9—Colonel Seymour being absent, I was in temporary command of the Provisional Regiment. The forenoon of this day was devoted to acquainting the enlisted men of the regiment with the batteries and imparting to them artillery instructions by the non-commissioned officers of the various batteries.

At 2:00 P. M., Lieutenant Colonel F. Marsh, Coast Artillery, U. S. Army, gave a lecture at the ordnance storehouse on "Attack and Defense of Coast Defenses from the Water Side."

At 6:00 P. M., Captain J. P. Ryan, Sixth Cavalry, U. S. Army, outlined the program for the next day and gave instructions to officers along lines to be covered by exercises, namely: "Outposts and Patrols," and "Hasty Intrenchments."

July 10—The problem for the forenoon being "Outposts and Patrols" conducted by Captain Ryan, and as I was in command of the Provisional Regiment, I issued the following order:

FIELD ORDERS,
No. 1.

HEADQUARTERS, PROV. REGT., CAL. NATIONAL GUARD,
NEAR MARINE HOSPITAL RIDGE, CAL., July 10, 1907, 8 A. M.

1. It is reported that the enemy has effected a landing near Half Moon Bay. Hostile patrols were seen in Golden Gate Park late yesterday afternoon. Our main body will occupy Headquarters Camp. A line of outposts will be established from the mouth of Lobos Creek to the General Hospital, both inclusive.

2. This command, forming part of the outpost, will hold the line from the clump of trees near Thirteenth avenue to the Lodge at Fifth avenue, both inclusive.

3. (a) Companies A, E, and F, Second Infantry, N. G. C., and First Machine Gun Platoon, under command of Major John Zittinger forming Support No. 1, will take post on Cemetery Ridge and hold the right section of the line from clump of bushes near Nineteenth street to Mountain Lake, both inclusive, connecting with outposts to the right.

(b) Companies L and M, Seventh Infantry, N. G. C., and Company B, Second Infantry, N. G. C., under command of Major Harry E. Mitchell, forming Support Number 2, will take position on Pumping Station Ridge and hold the left section of the line extending from Mountain Lake, exclusive, to the Lodge at Fifth avenue, inclusive, connecting with outposts to the left.

(c) Companies G and D, Second Infantry, N. G. C., and Second Machine Gun Platoon, under Lieutenant I. D. Jaynes, will form the reserve and take post at the north end of Marine Hospital Ridge.

(d) The detachment of Signal Troops under First Lieutenant J. E. Abbott, Signal Corps, will establish lines of information between the Supports and Reserves.

In case of attack the Line Cemetery Ridge—Pumping Station Ridge will be held.

4. Reports will reach me at Marine Hospital Ridge.

By order of Colonel Finley.

PARKE S. ROPER, Adjutant.

Copies to supports and reserve commanders and staff and to signal officer. Copy to District Commander.

The subsequent part taken in this exercise by officers and men of the Seventh Infantry being fully covered by Major Mitchell's report to me, I attach the same as a part of this report.

At 2:00 P. M., Problem No. 2, "Hasty Intrenchments," was conducted by Captain Ryan, and the enlisted men of the Regiment instructed along that line. At the same hour Major J. W. Ruckman, Coast Artillery, U. S. Army, gave lecture to officers on the subject of "Coast Artillery."

July 11—Problem No. 3 for to-day being "Occupation of a Defensive Position," conducted by Captain Ryan, the following order was issued, covering the general disposition for the exercises:

NEAR MARINE HOSPITAL RIDGE, CAL., July 10, 1907, 8 A. M.

FIELD ORDERS,

HEADQUARTERS, PROV. REGT., N. G. C.,

No. 1.

PRESIDIO HILL, CAL., July 11, 1907, 8:40 A. M.

1. The enemy occupies the wood east of the West Cantonment: our main body will take up a defensive position extending from the south edge of the Presidio reserve north to the bay.

2. This command will occupy the line from First avenue gate to the reservoir, both inclusive.

3. (a) The 1st and 2d Machine Gun Platoons, under command of Lieutenant Barney, will take position in the edge of the woods west of Cantonment Knoll, prepared to open fire against troops advancing from the woods east of the West Cantonment.

(b) The First Battalion, Second Infantry, N. G. C., under command of Major John Zittinger, will occupy the right section extending from First avenue gate, exclusive, to a line passing through the junction of McDowell avenue and Reservoir road and the south end of Target Butts.

Companies B and D, Second Infantry, N. G. C., under command of Captain Lee, will occupy the left section extending thence to the north edge of the woods southwest of reservoir, inclusive.

(c) Companies L and M, Seventh Infantry, N. G. C., under command of Major Mitchell, will take post as reserve just west of the woods on Presidio Hill.

(d) The Signal Detachment under First Lieutenant J. E. Abbott, Signal Corps, will connect the reserve with the post of the machine guns.

4. The Detachment Hospital Corps under command of Captain C. A. Rogers, will establish a dressing station on Presidio Hill near the reserve.

5. Messages will be sent to the station of the machine guns.

S. H. FINLEY,

Colonel, Seventh Infantry, Commanding.

Copies to staff, commanders of right and left sections, reserve machine gun platoons, signal detachment and detachment Hospital Corps.

Major Mitchell's report is referred to for detailed part taken by Companies L and M of this Regiment.

At 3:00 P. M., Captain E. J. Davis, U. S. Army, gave a lecture to officers on "Power, Light and Communication," and Captain J. F. Brady on "Submarine Defense."

July 12—Colonel Seymour having returned, assumed command of the Provisional Regiment, and as I had no further command in connection with the supports, reference is made to Major Mitchell's attached report for information as to part taken by himself and Companies L and M of this Regiment.

At 3:30 P. M. lecture was given by Captain G. A. Nugent on "Position Finding Service," "Instruments."

July 13—2:00 P. M., lecture by Lieutenant A. E. Beebe on "Field Map Working." Special instruction was given by him later on this subject to such officers as cared to pursue the subject. Some of the officers of this Regiment availed themselves of the opportunity.

July 14—Permission having been received from the Commanding Officer of the Artillery District of San Francisco, to withdraw the various elements of the Regiment from their stations, a parade was held at 5:00 P. M., followed by a review tendered to Colonel J. A. Lundeen.

July 15—Target practice by the mortar battery was engaged in, which was witnessed by officers and men of the Regiment.

At 3:30 P. M., Captain Le Vert Coleman lectured on "Defense of Sea Coast by Infantry Supports."

July 16—Target practice by heavy gun batteries was held, which officers and men were permitted to witness.

July 17—I received orders from the Commanding Officer of the Artillery District to withdraw one battalion from the batteries, and have them report at a position on Reservoir Ridge and await instructions for part to take in exercise of the day, which was to be an attack on Artillery Support Camp. Major Cole was placed in command, but owing to failure to receive subsequent orders, the battalion did not get in action, which resulted in a failure to have the exercise carried out as planned.

July 18—The exercise planned for the day before was carried out successfully. I received definite orders to have Companies F, G, H, and I, under command of Major Vestal, take a designated position on Reservoir Hill, preserve the usual precautions against surprise from the enemy, support the artillery of the attacking force, and advance to the attack on Reservoir Hill under cover of the fire of the artillery when it got into action. The movement was successfully carried out, although it was not one that would stand the test of tactical criticism, owing to the exposed position. But owing to the limited area to which the operations were restricted, in order to permit all forces to witness the engagement, no other disposition could be made and carry out the main object to be gained—instruction.

This closed the active duties of the joint exercises, and attention was turned to the preparation for breaking camp on the following morning.

The duties of the companies detailed to artillery reserves consisted for the first few days of observing the handling of the guns and mortars by the regular troops and receiving instruction in their operation, followed by actual drill jointly with the regular troops, and finally conducting the drill without assistance. These drills were entered into very heartily and enthusiastically by each of the companies, and no complaint was received from any as to the duties performed except from Company II, members of which felt that in being asked to aid in mounting a mortar instead of spending their time in drill and manipulation of the guns, they were not receiving the benefit from the duty that other companies were.

On July 19th at 4:00 A. M., mess was served; at 6:00 equipment loaded on wagons, and at 7:48 the troops for first section (being the same as on July 5th, except that the Band was assigned to the first

section), left Presidio wharf. Troops for second section left at 8:20. Owing to an attempt on the part of the railroad people to crowd the troops into a limited number of cars, some delay was caused at the Oakland Mole. Upon our refusal to entrain unless two additional tourist sleepers were provided, they were added to the equipment and the first section left at 1:03 P. M., and the second section at 1:18 P. M.

The equipment consisted of one locomotive, two baggage cars, six tourist sleepers, and one standard sleeper for each train.

The first section arrived at Los Angeles at 10:00 A. M., July 20th, and the second section at 10:20 A. M. All companies were placed on first outgoing trains for their home stations, and reached their destination during the afternoon.

The service rendered by the railroad companies was satisfactory and treatment by employees courteous. I carefully inspected all cars upon arrival at each destination and found no damage done by members of this regiment.

Almost universal have been the expressions of opinion by officers of the regiment that the exercises were of great benefit, and should be repeated another year.

The officers and men of this regiment have been unanimous in expressing appreciation of the courtesy of and painstaking efforts taken by the artillery troops to make their tour of duty pleasant and instructive. This feeling also extends to the Adjutant General's Office for its efforts to bring about the exercises and add to the comfort of the regiment in every way possible.

The following table showing the attendance on July 5th and July 20th, shows the loyalty with which the regiment as a whole responded to its duty. Most of the companies are deserving of special credit for the large percentage which they were able to take and maintain throughout the exercises.

July 5, 1907.

RECOMMENDATIONS.

After a careful study of the movement of the troops and the exercises connected with the maneuvers, I have the following suggestions to offer, which I believe would increase the benefits to be derived by the regiment in future maneuver camps of this character.

(1) The transportation of the regiment should be left, so far as practical, with the regimental quartermaster. This would avoid considerable confusion and uncertainty incident to the recent movement to San Francisco. It was the intention of the Quartermaster's Department to send transportation direct to each company commander for his officers and men; but the fact was that some company commanders received no transportation and others received much more than they needed, all of which had to be reconciled by the regimental quartermaster after entraining.

If, after making general arrangements for transportation, manuscript tickets had been sent to the Quartermaster to have arranged the details of transporting the regiment, much annoyance could have been avoided by the Quartermaster's Department, much uncertainty on the part of officers of the Regiment cleared away, and staff officers given a chance to show if they are capable of performing their duties which they are supposed to know. I believe that experience of officers in handling troops en route is as important a feature as drills and other exercises.

(2) If it is possible regiments should be assigned to duty so that their organizations will not be broken up or consolidated with others. Every regimental commander has his own peculiar ideas in regard to methods of administration and discipline, which can be successfully carried out only in the event that he is in command of his own organization. This is particularly true in the National Guard, in which the social feature and the pride which every officer and man has in his organization plays so important a part in securing effective work and satisfactory discipline.

To particularize, I believe if the Headquarters of this Regiment had been established separate from the Artillery Supports Camp, in close touch with the ten companies assigned to duty as Reserves, and the

Regiment thus kept more intact, that results would have been more satisfactory to both the Second and Seventh Regiments. It would have avoided the multiplicity of officers in the Support Camp, which I believe was rather a hindrance than otherwise to Colonel Seymour in his work.

(3) I believe the State should make provision to pay the enlisted men the difference between United States Army pay and \$2 per day for their services in these camps; otherwise it will be difficult to keep up the standard of membership in the companies.

Very respectfully,

S. H. FINLEY.

Colonel, Seventh Infantry, N. G. C., Commanding.

RIVERSIDE, CAL., August 22, 1907.

The Adjutant, Seventh Infantry, N. G. C., Santa Ana, California.

SIR: I have the honor to submit herewith report on the duty performed by me during the field exercises at San Francisco, California, from July 4 to July 20, 1907, inclusive.

I left Riverside on the afternoon of July 5th, picking up Companies G, K, and M, Seventh Infantry, N. G. C., en route to Los Angeles, California. At Los Angeles I reported to Lieutenant Colonel S. M. Saltmarsh, commanding the second section en route to San Francisco, arriving at the National Guard Camp at the Presidio on the evening of July 6th. The next day, Sunday, was devoted to pitching camp.

On July 8th and 9th, with other National Guard officers, under the guidance of Captain Le Vert Coleman, I visited the various batteries at Fort Winfield Scott.

On Wednesday, July 10th, I was assigned to command the Second Battalion of the Provisional Regiment of Infantry, National Guard of California, composed of Companies B and D, Second Infantry, N. G. C., and Companies L and M, Seventh Infantry, N. G. C. On the same day I received Field Orders, No. 1. Headquarters, Provisional Regiment, California National Guard, dated July 10, 1907 (this order contained in report of Colonel S. H. Finley).

On receipt of this order I designated Company B, Second Infantry as advance guard, instructing Captain Thomas Rutledge to proceed to Pumping Plant Ridge, thence through the woods to the south wall of the reservation; to report to me as soon as this was accomplished if the woods in front of Pumping Plant Ridge were clear of the enemy. As soon as I received report from Captain Rutledge that the woods were clear, I placed the support in the rear of Pumping Plant Ridge and directed Captain Rutledge to establish cossack posts along the south wall road commanding the intersection of streets towards Golden Gate Park. Four cossack posts were established extending from Mountain Lake, exclusive, to the Lodge at Fifth avenue, inclusive, connecting with outposts to the left. This was practically the disposition of my forces as viewed by the umpire. At 11:30 I received the following message over the field telephone: "Enemy advancing against right of outpost line. Place men in position to defend section against attack. Prepare to open fire at command. Finley, Colonel."

At 11:45 A. M., I received this message: "Open fire on enemy; slow fire with expenditure of twenty rounds in fifteen minutes. Colonel Finley." On receipt of this command, fire was opened as ordered. At the conclusion of firing, recall sounded and the exercises came to a close.

On July 11th, I received Field Orders, No. 1, Headquarters Provisional Regiment, N. G. C., dated July 11, 1907 (See Colonel Finley's Report.)

In compliance with this order, the companies under my command were placed below the crest of Presidio Hill. Communication was established with the commanding officer at the station of the machine guns by means of field telephone.

About 10:30 I received the following instructions: "Come forward as rapidly as possible to junction of McDowell avenue and Reservoir road to assist in repelling attack. Finley, Colonel." This order was carried out immediately and upon arriving at the point designated, received verbal orders to place one company on the left flank of the firing line, also to reinforce with one company on the right flank. I instructed Lieutenant Howe, in command of Company L, to take his company, under cover of the woods, to the left flank and report to Major Cole. I personally placed the remainder of the reserve on the firing line on the right flank. About 11:00 o'clock recall was sounded.

Friday, July 12—The regiment, under command of Colonel H. I. Seymour, Second Infantry, N. G. C., marched to the old Reservoir north of the National Guard Camp on McDowell avenue road. At that point information regarding the enemy was received and the regiment was marched through the woods west of the National Guard Camp to the target range road. At this point I received written orders, but same had been dropped and confused by the officer who conveyed them to me and it was impossible to get the various parts of the order in consecutive form so as to ascertain the information contained therein. At the same time I received verbal orders stating that at this hour, 8:30 A. M., a detachment of the enemy, estimated strength, one regiment, was seen entering Golden Gate Park, advancing north toward Fourteenth avenue. I received verbal orders to instruct one company to report to Captain John G. Lee, N. G. C. I designated Company D, Second Infantry, for that purpose. I was further ordered to proceed rapidly to Pumping Plant Ridge and take up a position on said ridge, such position to command the bridge on Pumping Plant road. I designated one company for advance guard, instructing them to proceed rapidly to Pumping Plant Ridge and remain at the crest of the ridge. The balance of my battalion, consisting of two companies, followed at a reasonable distance from the advance guard in double time, and took a position on Pumping Plant Ridge as ordered. This concluded this exercise.

Saturday, July 13—The regiment was formed under command of Colonel Seymour, Second Infantry, N. G. C., and marched to the intersection of Lake street, and Thirteenth avenue, with the right of the line resting on Mountain Lake. At this point information was received that our advance guard, consisting of two companies on Cemetery Ridge, had engaged the enemy on Stotsenburg Heights. I was ordered to proceed with my battalion to a point near Marine Hospital and there await further instructions. At this point I was ordered to report to Colonel Seymour on Marine Hospital Ridge. I reported and received verbal

orders to proceed to a point east of Pumping Plant Station and form for attack and to attack the left flank of the enemy on Stotsenburg Heights. This I did at once, the firing line advancing over the open space by rushes. When about three hundred yards from the enemy the reserve was ordered to reinforce the firing line and a charge was ordered. At this point recall was sounded and the exercise was concluded.

Monday, July 15—Information was received that the forces from Fort Miley would attack the National Guard Camp. My battalion was ordered to take a position on Stotsenburg Heights for the purpose of supporting the machine guns and defending the camp from attack from Baker's Beach. One company was placed in the rifle pits below the guns on Stotsenburg Heights; one company was ordered to patrol the woods north of McDowell avenue; and the balance of the forces were held on Stotsenburg Heights under shelter of the rifle pits. This disposition of my forces continued throughout the exercise. The enemy at no time approached within a distance justifying general action.

Tuesday, July 16—On this date I was instructed to take command of the forces in the National Guard Camp and attack Fort Miley. I issued the following order:

HEADQUARTERS, ARTILLERY SUPPORTS.

NATIONAL GUARD OF CALIFORNIA.

(IN THE FIELD) FORT WINFIELD SCOTT, CAL., July 16, 1907.

FIELD ORDERS.

No. 4.

PROBLEM NO. 7.

The troops supporting the Coast Artillery at Fort Miley are thought to consist of six companies of infantry. This force will attack Fort Miley to-day. The troops for the secondary attack, consisting of the first battalion, under command of Major C. A. Swisler, Second Infantry, will leave the National Guard Camp thirty minutes after the departure of the main body and will move through the woods west of National Guard Camp by way of Lobos Creek, for the purpose of engaging the enemy at the City Cemetery. Care will be taken not to bring on a general engagement until contact with the enemy is made by the forces of the main body. Two machine guns will be placed at the disposal of Major Swisler, to be placed as he may require. The main body, consisting of the second battalion, commanded by Major John Zittinger, Second Infantry, will march at 7:45 A. M., this date to Pumping Plant Station where troops will take wagons and move forward by way of First avenue to Golden Gate Park, making a detour through Golden Gate Park to a point about 400 yards north of Sutro Baths. At this point further instructions will be issued for the disposition of the forces of the main body for the attack. Two machine guns, under command of Lieutenant Barney, will accompany the main body. A detachment of the Signal Corps will accompany the secondary attack, reporting to Major Swisler; and one detachment will report to Major Zittinger in command of the main body. A signal corps station will be established at Stotsenburg Heights. The commanding Officer will be with the main body.

By order of

MAJOR H. E. MITCHELL.

The forces under Major Swisler, conducting the secondary attack, left the National Guard Camp at the appointed time and the action was conducted as outlined in the above order. The main body, on arriving at the beach near the Cliff House, was halted and I made a personal reconnaissance of the fortification from under cover of the trees on the west border of the park. From information received from spies, I learned that the point from which I had originally intended to attack was well protected by troops. I, therefore, decided to make my attack from the

point south of the Cliff House and moved under cover of buildings and trees to the heights above the Cliff House to a point about 150 yards from the heavy guns of the fortifications. From this point I rushed the fortifications, meeting with a very light resistance and succeeded in capturing the batteries. After the batteries were taken the battalion was reorganized and moved in the direction of the National Guard Camp through Fort Miley reserve. On approaching the hills near the City Cemetery, the enemy was seen marching in close formation returning to their camp. I deployed my battalion and opened fire. I was afterward informed that recall had been sounded, which accounted for the enemy's forces returning to camp at that time.

The criticisms of this action were that my forces were too widely dispersed without proper means of communication being established. Owing to the fact that we crossed through a portion of the city it was impossible to run wires in order to maintain communication with the forces of the secondary attack. Therefore, I decided to cut loose from the secondary forces, giving the commander the approximate time at which he might expect an attack of the main body to take place and instructing him to press home the attack as soon as he heard the firing begin. I believe that in actual warfare, under similar conditions, I would take practically the same course. I had hoped to maintain communication by means of visual signals. The signal corps detachments were unable to get into communication with each other.

Wednesday, July 17—At drill call at 8:00 o'clock A. M., I was instructed to take my battalion out for battalion drill, remaining in the vicinity of camp prepared for any emergency which might arise. This I did. Later I received the information that my battalion would remain in the vicinity of camp as a reserve force, as an attack was expected on the camp. During this exercise the battalion was not called into action.

Thursday, July 18—At drill call, 8:00 o'clock A. M., I received instructions to take my battalion out for battalion drill, also that the battalion would act as reserve for the problem of that day, an attack being expected on the camp. After an hour of battalion drill, the reports were received that the enemy was approaching from the woods east of Presidio Hill. I was instructed to take my battalion under cover and await further instructions. About 10 o'clock I received orders to send one company to take position on Cemetery Ridge. I detailed Company B for that purpose. About 10:30 the enemy was observed advancing from the woods east of the camp crossing the golf links. My battalion was ordered to take position along the line of hills extending from south camp road to Twin Knolls. The enemy advancing was fired upon and the action continued until recall, which was about 11:00 o'clock.

On the morning of July 19th camp was broken at 6:00 A. M., and I returned to my home station, arriving there on the evening of July 20th.

I also had the pleasure of attending a series of interesting and instructive lectures given by officers of the Regular Army on subjects relative to coast artillery.

Very respectfully,

HARRY E. MITCHELL,
Major, Seventh Infantry, N. G. C.

APPENDIX "K."

REPORT OF CAPTAIN GEORGE W. BAUER, N. M. C., ON THE CRUISE OF THE NAVAL MILITIA OF CALIFORNIA FOR 1907.

HEADQUARTERS, NAVAL MILITIA OF CALIFORNIA,
SAN FRANCISCO, August 15, 1907.

SIR: I have the honor to submit the following report of the annual cruise of the Naval Militia of California on the U. S. S. "Alert" for the year 1907:

On June 30th, at 2 A. M., the "Alert" sailed from Sausalito for Santa Monica, California, via Santa Cruz and Santa Barbara, having on board 4 officers and 32 men of the First Division, 3 officers and 33 men of the Second Division, 2 officers and 25 men of the First Engineer Division, in addition to the Captain, Executive and Navigating Officer, 3 surgeons and a paymaster, also 1 officer and 37 men of the Fifth Division, stationed at Eureka, these having been sent to San Francisco by steamer previous to sailing.

Upon arrival of "Alert" at Santa Cruz, at 9:35 A. M., June 30th, 3 officers and 31 men of the Fourth Division were taken on board and the vessel proceeded at 2 P. M., to Santa Barbara, arriving at 2:25 P. M., July 1. At this port 3 officers and 28 men of the Sixth Division were taken on board, and on July 2d, at 7:50 A. M., the "Alert" sailed for Venice, California (three miles south of Santa Monica), arriving there at 2:25 P. M., July 2d. At this place, 2 officers and 26 men of the Second Engineer Division and 3 officers and 31 men of the Third Division of San Diego were already encamped.

At this point a transfer of the First, Second, Fourth, Fifth and First Engineer Divisions was made, leaving on board, however, a few experienced men from each division. This transfer was made as the ship has not sufficient accommodations for all and in order to give all divisions as nearly as possible an equal opportunity for experience on board ship.

July 6th, at 11 A. M., the ship proceeded to Avalon, Catalina Island, where officers and men were given liberty, with special instructions to men to comport themselves properly, which, I am glad to say, they did.

July 8th, at 9:10 A. M., the ship proceeded to Venice, arriving at 12:52 P. M.

July 10th, the Third Division and the Second Engineer Division were disembarked and proceeded by rail to their home stations, viz. respectively, San Diego and Los Angeles. At 2 A. M., July 11th, the "Alert" sailed from Venice, stopping at Santa Barbara to disembark the Sixth Division, and arriving at Santa Cruz July 12th at 10 P. M. July 13th, the Fourth Division disembarked, and 2:21 A. M., July 14th, the "Alert" proceeded to Sausalito, arriving there at 9:50 A. M., of the same day. July 15th, the Fifth Division proceeded to Eureka by steamer, arriving home July 16th.

During the cruise the officers of the San Francisco divisions were required to daily fix the position of the ship by cross bearings of prominent points of land as well as by meridian and circum-meridian altitudes of the sun for latitude and A. M. and P. M. time sights for longitude. These officers have undergone a course in navigation at their own

expense under the guidance of Mr. John T. McMillan, a graduate of the U. S. Naval Academy. The officers of the divisions north and south of San Francisco were instructed in the rudiments of the compass, deviation and variation, piloting and some dead reckoning.

The men were exercised in boats, in which they had ample practice, at great gun drill, making and taking-in sail, signaling as well as the usual routine duties of cleaning ship, standing lookout, heaving the lead, steering, etc.

The health of the crew was excellent and there were no accidents. Very few infractions of regulations were noted.

On the trip north much foggy weather was encountered and at one time off Point Concepcion for a few hours a moderate gale was encountered.

Time was taken on the trip south and again on the return trip to partially develop a shoal off Point Sur, reported to be the steamer "San Juan" on June 19th. This matter has been made the subject of a special letter sent through the Branch Hydrographic office in San Francisco, July 15, 1907.

Very respectfully,

(Signed) GEO. W. BAUER.

Captain, Naval Militia of California, Commanding.

To the Honorable, The Assistant Secretary of the Navy, Washington, D. C.

OFFICE OF THE
STATE COMMISSION IN LUNACY.

SACRAMENTO, November 19, 1908.

To the Legislature:

In compliance with the statute, the State Commission in Lunacy herewith presents its sixth biennial report, covering the two fiscal years beginning July 1, 1906, and ending June 30, 1908.

The report includes such facts in regard to the institutions for the insane and feeble-minded as seem necessary for your information, with the annual reports made to the Commission.

Respectfully submitted.

STATE COMMISSION IN LUNACY.

REPORT OF THE STATE COMMISSION IN LUNACY.

The biennial period including the fifty-eighth and fifty-ninth fiscal years and ending June 30, 1908, has been notable by reason of the various improvements made at the hospitals, and the great amount of constructional work either completed or under way. The completion of the new reservoir at the Napa State Hospital will insure that institution an ample supply of water. Reconstruction work is under way at Agnews on a large scale, and it is expected that the hospital will be opened for the reception of all classes of patients by July 1, 1909.

With the exception of the epidemic of diphtheria at the Southern California State Hospital, there has been no unusual sickness at any of the hospitals.

The expense of maintaining the hospitals is running into big figures, but it is a State charity that is necessary and its continued growth must be expected.

Your attention is called to the detailed remarks on various subjects of interest in connection with the hospitals, and to the various statistical tables.

POPULATION OF THE STATE HOSPITALS AND MOVEMENT OF PATIENTS.

Patients are received in the State Hospitals by direct commitment from a Superior Court, and by transfer from one hospital to another of those previously committed. In the figures hereafter given the transfers are omitted, as they have once been counted. On June 30, 1908, the end of the sixtieth fiscal year, there were registered on the books of our hospitals as patients 6,555 persons. During the ten years ending June 30, 1908, the population of the hospitals has increased 1,554, an average yearly increase of 155. The increase has been much greater in the last five years than in the five years ending June 30, 1903, as is shown by the following table:

Increase in population in five years ending June 30, 1908.....	962
Increase in population in five years ending June 30, 1903.....	592
Average yearly increase in five years ending June 30, 1908.....	192
Average yearly increase in five years ending June 30, 1903.....	118

The increase of patients in the last two years has been unusually large, not so much from an increased number of commitments as from the fact that the gross number of discharges and deaths were comparatively less than usual. Of those remaining in the hospitals on June 30, 1908, 4,061 were men and 2,494 were women. Their nativity was as follows:

Born in the United States.....	2,941
Born in foreign countries.....	3,454
Nativity unknown	160

Of the foreign-born residents those most largely represented were as follows:

Ireland	748
Germany	657
Norway and Sweden.....	251
England	239
China	200
Italy	183
Canada	169
Russia	156
France	142
Austro-Hungary	119
Japan	51

Natives of other countries are found in smaller numbers.

As might be expected from the increased numbers shown as residents of the hospitals, there has been an increase in the number of new cases received in the last two years over the previous two years. In the two years ending in June, 1908, there were received in the hospitals 3,019 new patients, the largest number received in any two years, while in the previous two years the new cases received numbered 2,940. The number of new cases admitted to the hospitals is of more importance in indicating the prevalence of insanity than the number resident at the hospitals. Comparing the admissions of the last two years with previous biennial periods the figures are as follows:

1902 to 1904, admissions.....	2,582
1904 to 1906, admissions.....	2,940
1906 to 1908, admissions.....	3,019

Of the 3,019 new patients received for the two years ending in June, 1908, 2,009 were men and 1,010 were women; 1,623 were born in the United States, 1,277 were born in foreign countries, and 119 were of unknown birth.

Comparative statement of admissions for three separate biennial periods of foreign born :

	July 1, 1906, to June 30, 1908.	July 1, 1904, to June 30, 1906.	July 1, 1902, to June 30, 1904.
Germany	263	197	176
Ireland	203	216	226
Japan	47	38	21
Norway and Sweden	121	100	76
Russia	52	49	29
Italy	120	83	88
Austro-Hungary	40	33	36
England	84	108	80
France	43	66	40
Canada	78	80	75
China	47	75	64

Comparing the three biennial periods as to the nativity of those admitted, the percentages of foreign born admitted to total admissions were as follows:

1904—Total admissions, 2,582; foreign born, 1,116; per cent foreign born, 43.

1906—Total admissions, 2,940; foreign born, 1,273; per cent foreign born, 43.

1908—Total admissions, 3,033; foreign born, 1,280; per cent foreign born, 42.

NOTE.—In the above figures transfers are not eliminated.

These figures, considered in connection with the tables above, show that while particular countries show an increase or decrease, the general results have not changed materially in six years.

As to age, 619 were between 20 and 30.

792 were between 30 and 40.

625 were between 40 and 50.

813 were between 50 and 100.

The balance were under twenty, or the ages could not be ascertained. Of those admitted 975 were married and 1,125 single.

From Alameda County were committed 257 patients, from San Francisco 686, from Los Angeles 537; a total from these three counties of 1,530, or more than half of the entire number of commitments.

Comparing the population of the State Hospitals on June 30, 1908, with the population on June 30, 1900, we find that there has been a gain of 1,279 patients, an increase of 24 per cent. Assuming the figures adopted by the State Board of Health to be correct, our State's population at the present time is 2,001,193, a percentage of increase over 1900 of 33 per cent. Put it another way, we had in our State Hospitals in 1900 one insane person to every 281 of the general population, while in 1908 we have one to 305.

In contemplating the figures given of those becoming insane and residents of State Hospitals, we can not avoid a brief consideration of the causes leading up to the loss of reason among so many people.

As a general proposition there are several causes, each having a certain share in the work in the production of mental failure. Original weakness of nervous make-up is commonly the predisposing factor that makes habit, stress or overwork, environment, modes of life, joy and sorrow, with the high pressure of modern business life, active in the productions of insanity. With a better and more stable physical and nervous make-up, with a brain harmoniously balanced, man could stand, so far as his mentality is concerned, longer and greater excesses in alcohol; could meet the misfortunes and trials of life without breaking down under them; could, in a great measure, rise above his environment; could overwork himself and yet recuperate; could greet success without losing his head, and could accept sorrow and misfortune without giving way to prolonged despondency.

Dr. King, Superintendent of the Mendocino State Hospital, has discussed this question ably and fully in his report, and I herewith quote his article in full:

"There is no problem more difficult to solve than that of finding the real cause of insanity. In many cases, the causes are obvious or easily ascertained. In all, or nearly all cases, more than one cause is acting, and in a large percentage of cases there are several causes in action.

"It is obvious that one of the first duties of the physician is to find, if possible, the cause of the disease which he is called upon to treat, as only in that way can he intelligently and properly treat the patient and be of real service to his clientele. It is evident that no one is better qualified to judge of the causes which produce mental disturbance than the physician who constantly has such cases under observation.

"In order to present this matter intelligently, we will divide the causes of insanity into two distinct classes—the predisposing, and the exciting cause.

"To illustrate: Not many years ago consumption was considered to be hereditary, the disease being transmitted directly from the parent to the child. Now, we know that the disease is not transmitted, but is produced by tuberculous bacilli, and that what is transmitted to the child is a weak physical organization endowed with only a moderate amount of vital force, and a lessened resistance to the encroachment of disease. Under such conditions the tuberculous bacilli find a rich soil for growth and development. In such a case the bacilli are the real cause, and the low resisting power of the individual the predisposing cause of the disease.

"Now, the same principle applies in the predisposing causes of mental diseases. A very large percentage of mental diseases is the result of a weak, unstable, nervous organization received from ancestors or acquired by dissipation or wasting diseases by the patient himself.

"It seems to be a general law that anything that interferes with the normal action of the nervous system in either of the parents has a deleterious effect on the mentality of the child, and this condition is more marked and intensified in the child than in the parents. Alcohol, for instance, has a more deleterious effect upon the child than upon the person who drinks it. It seems to poison the germ in its development, and such a germ is not able to produce a healthy, normal individual, and the result is a weakened nervous organization, unstable in its action, a weak will, and a consequent loss of self-control. Such a person is predisposed to stimulation, and frequently has an appetite for alcohol.

"This condition of the nervous system has been termed neuropathic, and a person so afflicted is said to have a neuropathic constitution. It is a well-known fact that

many men can take alcoholic stimulants many times daily without seriously affecting their mentality or their business. In others, the susceptibility is so great that a very small amount at once affects them seriously.

"Why? The answer to this question deserves very careful consideration, but it is obvious to the careful observer. Such persons have received from their ancestors or have acquired for themselves a weak, unstable nervous organization, unable to withstand the ordinary temptations and trials of everyday life. From this class of weaklings come in a large measure the criminals, the paupers, the insane.

"The predisposing cause is generally the weak neuropathic organization and the exciting causes, the exigencies of human life, alcoholic indulgence being perhaps the most frequent, but by no means the only one. As proof of this your attention is called to Table G of this report, under the head of causes. Of the 253 commitments during the fiscal year ending June 30, 1908, 100 males and 14 females used alcohol to excess. In quite a large percentage of cases one or both parents used alcohol to excess. In some of the cases one of the parents was insane or had suffered from some serious disease, such as consumption, epilepsy, chorea, hysteria, or neurasthenia. From this table we learn that 45 per cent of those committed to this hospital used alcohol to excess.

"In most of these cases alcohol was probably an exciting cause, the predisposing cause being heredity. At this point it is pertinent to ask, What was the cause of this abnormal heredity? In order to get at the real facts we must ascertain the history of the patients' ancestors in each case. This, as every superintendent knows, is a very difficult matter, and in a large proportion of the cases can not be done. When we can get the necessary information we generally find in the ancestors a history of wasting disease, some form of dissipation, alcoholism, tuberculosis, syphilis, epilepsy, or other form of nervous derangement. All these things, and many more, reduce the tone of the system, and the germ, which is the father of the child, having been more or less affected by the abnormal condition which produced it, develops into an imperfect child, with a result of imperfect manhood, predisposed to excesses, with imperfect self-control, a weak, unstable nervous organization, a rich soil for the development of criminals and the insane.

"Here we find the real cause of much of the crime and insanity that is the bane of civilization. The predisposing causes are deeply rooted in our civilization, in many cases reaching back to the second or third generation. They were the same then as now. Every healthy, normal man who from any cause, either from serious disease, alcohol, or sexual excesses, or through a life of debauchery, lowers the tone of his vital forces and afterwards propagates the species, is preparing the soil which will surely bring forth a class of degenerates, many of whom will be insane or criminals, and many of whose children will be feeble-minded, or perhaps idiotic.

"Dr. F. W. Hatch has said in an able paper published in the fifth biennial report of the State Commission in Lunacy, 'The ideally normally constructed man is not likely to become insane.' Experience teaches that this is strictly true; it also teaches that the child of the weakling will necessarily be a weakling, and from this class of humanity are recruited a large class of our criminals and our insane. In order to correct this condition of affairs we must strike at the causes which produce so much vicious heredity, and allow the race to return to a normal, healthy condition."

Environment, habit of thought, faulty education, are all additional factors in the production of insanity, and something can be done with concerted effort to lessen the power of these factors as determining agencies. One of the most common predisposing and exciting agencies, alcoholic excess, is receiving much attention at the present time. The remedy for this ought to be found in the proper education of our youth as to the lack of necessity for alcoholic drinks in all healthy persons, and their harmful effects on all people when used in excess, and on some people when used in moderation.

COST OF STATE HOSPITALS.

With the increasing numbers that the State Hospitals are obliged to care for it naturally follows that increased amounts of money are required for their maintenance. Added to the increased cost made necessary by enlarged numbers, the various increases in the rate of wages made in the last few years tend to swell the cost of maintenance.

One other source of increase that has been marked in the last two years is deserving of consideration. We refer to the advance in the cost of the main supplies used by the hospitals. That this item cuts no inconsiderable figure in the matter is readily seen from the following table:

Article.	1906 Price.	1907 Price.	Percent of Increase.
Lard.....	.098	.11	12

Per cent of increase.....			20

The table includes the supplies that are most largely used by the hospitals. It will be seen that the percentage of increase is approximately twenty. The prices given are the average contract prices of all the hospitals and the Home for Feeble-Minded, and the comparison is made on the contracts awarded on competitive bidding for the years beginning July 1, 1906, and July 1, 1907.

The total cost of the five State Hospitals for the two years ending June 30, 1908, the fifty-eighth and fifty-ninth fiscal years, including all expenditures from the appropriations for support and for salaries and wages, was as follows:

Fifty-eighth fiscal year.....	\$885,023 99
Fifty-ninth fiscal year.....	954,949 75
Total for two years.....	<u>\$1,839,973 74</u>

This sum does not represent the entire amount expended for maintenance, as the advance in the cost of supplies made it necessary for the hospitals to use their contingent funds for strictly support purposes to the amount of \$95,904.19.

The increase in population in the hospitals in the last ten years shows a percentage of gain of 31. The increase in cost, including support, salaries, and wages, and support items paid for by the contingent fund, shows a percentage of gain of 52.

In asking for appropriations for the next two fiscal years our figures for support are based on the actual cost of one person for a year, multiplied by the number of people we expect to have in the hospitals.

We intend to ask for some additions to our pay rolls for the purpose of improving our night service in the hospitals. We do not have enough people on duty at night, but with the additions we hope to make the service more efficient.

THE NEED OF ADDITIONAL ACCOMMODATION FOR PATIENTS.

Conditions at the hospitals make the construction of additional buildings an imperative necessity.

The last legislature was most liberal in its appropriations, but with the exception of Agnews and the Home for Feeble-Minded the appropriations for buildings were for cottages specially constructed for treatment on a strictly hospital basis. The elimination of Agnews as a receiving hospital has forced the other northern hospitals to receive and care for the patients normally sent to Agnews. For the two years previous to the earthquake Agnews was receiving a yearly average of 212 patients. As that institution has been practically receiving no patients since May, 1906, or two and one half years, something over 500 patients that would naturally have gone to Agnews have been

divided up between Stockton, Napa, and Mendocino, thus largely increasing the number to be cared for by the other hospitals.

It is my purpose to call your attention to the conditions existing at the various hospitals, pointing out the necessity for enlargement where enlargement is needed.

STOCKTON STATE HOSPITAL.

This hospital receives an average of 450 patients every year. It has practically a full capacity of 1,840 patients, and now has 2,000. It has gained in population an average of 78 patients each year for the last four years. The above conditions show that the necessity for additional capacity is urgent.

How shall we build, where shall we build, and what character of buildings should be erected?

The condition of the contingent fund does away with any prospect of building from that fund, therefore it must be done by legislative appropriation.

Where shall we build? On the farm recently purchased, now in successful operation, and located about two miles from the main hospital.

What character of buildings should be erected? Upon this point there is considerable room for argument. It would really seem best to build two cottages for convalescent patients; one for each sex, and each accommodating not more than 50 patients. It is often advisable to get patients who are improving and manifesting signs of a return to the normal away from the association and oftentimes disturbing influences of the ordinary insane ward. As patients pass through the treatment cottage and come out in an improved condition, if they could be transferred to the farm and placed in a cottage where conditions are more homelike, where they can be among those who are on the upgrade like themselves, where they live as one large family, and are encouraged in housekeeping and light work, it would offer them the best chance for the quickest and most comfortable recovery. The other side of the question simply means to make increased capacity for the more chronic class of patients. Cottages for this class would mean plain buildings, with fairly large capacity, without the special features advisable for the convalescent. Briefly, the convalescent cottages would give increased capacity of about 100 patients, and would at the same time tend to promote recovery. These cottages would cost more than cottages erected for simply housing and caring for the chronic class. For the same money custodial cottages that would probably accommodate nearly twice as many patients as the convalescent could be built.

The situation is before you, the necessity is apparent, and it is up to you, gentlemen, to determine the character of construction.

NAPA STATE HOSPITAL.

This hospital is the most crowded of any in the State. With a normal capacity of about 1,400 patients it now has 1,874. Napa has gained in population an average of 83 per year for the last four years, and 122 per year in the last two years. In the last four years the number resident at the end of the year has increased from 1,506 in June, 1904, to 1,838 in June, 1908, or an increase of 332. The average number of new patients received each year for the last four years has been 347; for the last two years 404 has been the yearly average.

This hospital is caring for more patients than it can comfortably accommodate. The excess is cared for by putting two in a room intended for one, and three in a room that is crowded when it is occupied by two, and by making up beds on the corridor floors. At the present writing there are 312 patients sleeping on shakedown on the corridor floors. The pressing necessity here is for more capacity for patients. The cottages for convalescent patients are pretty nearly as much needed here as in Stockton, but the overcrowding here is so much greater that the largest increased capacity we can get for our money is most desirable.

There are now nearing completion at this hospital two one-story brick cottages, connected with a central dining hall and sitting room. These two cottages are being built from the contingent fund, will accommodate 100 male patients, and will be ready for occupation by January 1, 1909. With a comparatively small appropriation two more of these cottages can be built, as contemplated in the original plan, thus adding another hundred to the capacity for men. The dining-room and sitting room are built large enough to care for two hundred people.

On the women's side I would recommend an appropriation sufficiently large to erect four one-story cottages on the same general lines as those built for the men, and with a capacity of 200 patients.

With a totally increased capacity of 400 patients, and with the completion of the receiving and treatment cottage, the situation would be relieved and the hospital placed in much better condition to care for patients as they should be cared for.

An appropriation is urgently needed to complete the receiving and treatment cottage. The present appropriation is expected to build a wing for women and the central structure, containing the hydrotherapeutic apparatus, operating, and treatment rooms. The wing for men should be added without delay.

AGNEWS STATE HOSPITAL.

This hospital has its service buildings, kitchen, bakery, and commissary practically completed, and has ten cottages for patients under construction, with the assurance that they will be ready for occupation by July 1, 1909. These cottages, with the second floor of the laundry building, will make provision for 900 patients. As there are now at Agnews 750 patients, the hospital will be able to receive 150 to 200 new patients.

There is not sufficient money in the appropriation made for the rebuilding of Agnews to fully complete it. Additional money should be provided. It is being constructed on the cottage system—no building more than two stories in height—all containing patients are of reinforced concrete, and each building is adapted to the class of patients it is expected to maintain. The construction here is on a much more modern and advanced plan than anything on the Pacific coast. When built it will be the equal of anything in the United States.

The location of a series of cottages scattered over a large area has made necessary the installation of a new heating, light, and power plant, with a greatly enlarged sewer system and expensive conduits for carrying the steam pipes, etc. Such an installation is expensive, and will cut us out of at least two buildings; but the light, heat, and power is needed for the successful conduct of the institution, and it is so imperatively needed right now that it can not be longer delayed.

The additional buildings at Agnews, for which a new appropriation should be asked, are a treatment cottage, two cottages for workers, two for convalescent, an assembly hall, an administration building, and cottage for assistant physicians.

The opening of this hospital after July next will diminish to some extent the admissions to Stockton, Napa, and Mendocino, and will enable us to get along without greater enlargements than have been recommended for those institutions.

MENDOCINO STATE HOSPITAL.

Mendocino has in the last four years increased in numbers from 629 to 846, or 217 patients, an average yearly increase of 54 patients. In the last two years the increase has been 134, or an average of 63. The average yearly admissions of new patients for the last two years has been 240, as against an average of 226 for the previous two years.

This hospital has a capacity of about 820 patients without undue crowding. It had on June 30th last 846 patients. With an average yearly increase of 67 patients, it is reasonable to expect a growth that will soon exceed the present capacity of the institution. We have a

vacant ward in a cottage for women completed this year, but we can not well utilize it on account of shortage of funds. When we can put this ward in operation we will have additional capacity for 80 female patients. There is a cottage for men under construction which will care for about 70, and which will be available by July next. These two buildings were intended for treatment cottages, but in our opinion the interest of the patients and the State will be best subserved by using them for cottages for convalescent and the quieter class of patients, and building one cottage for the treatment of both men and women, and to care for about thirty of each sex. This will give us a cottage which will need but one equipment for the two sexes, will also greatly reduce the cost of maintenance, and concentrate those needing very active treatment.

An enlargement of the main kitchen is very necessary at this institution, and it is hoped that the legislature will grant us an appropriation for the purpose.

SOUTHERN CALIFORNIA STATE HOSPITAL.

This hospital has a capacity of about 1,050. In the last four years its population has increased 219 patients. Its average annual increase in the last four years has been 52; in the last two years 76. It has received yearly for the last four years an average of 360 patients; for the last two years an average of 393 patients a year. On June 30th last it had registered on its books a population of 1,114.

This hospital is crowded, and has many patients sleeping on the floors. It is obliged to take patients from a large and populous territory, and it is bound to have a steadily increasing population, for which provision should be made by legislative appropriation. By adding a second story to the building occupied as an associate dining-room we can obtain capacity for 100 male patients at a very reasonable cost. An additional cottage to accommodate fifty convalescent women, built on the same general lines as the cottage now in use, should be provided without delay. These two enlargements will care for the natural growth of the institution for the next two years at the most reasonable cost.

HOME FOR FEEBLE-MINDED.

This institution, by reason of the liberal appropriations made by the last legislature, is well equipped to handle all the inmates liable to be sent there in the next two years. With a present population of 722 inmates it has room for 750, and when the buildings now under construction and just receiving the finishing touches are ready for occupancy they can care for 950 inmates. While not needing any construc-

tion for the accommodation of more people, they do need very much a day-room for the boys. Under present conditions during wet and muddy weather the children have to spend their days in the basement of the boys' wing. The place is dark, damp, and totally unfitted for an exercising place for children.

THE ENGINEERING DEPARTMENT AND CONSTRUCTION AT STATE HOSPITALS.

The work of construction at the State Hospitals has for the last year and a half been under the control of the State Engineering Department. The plans for the buildings have been prepared by the State Architect, an appointee of the State Engineer. After the plans have been finally approved and adopted, the construction is carried on under the supervision of inspectors appointed by the Engineering Department.

In the preparation of plans the Engineering Department has freely consulted the Medical Superintendents and this office regarding the interior arrangements and special features for the care of the insane. After the interior arrangements were agreed upon it fell to the Architect's Department to look after the structural strength and general design. Upon completion of the plans and their final approval it is within the powers of the Engineering Department, with the sanction of the Advisory Board, to decide whether the particular building shall be erected by contract under the building law or by days' labor.

Some confusion has resulted in work on days' labor buildings when it became advisable to contract for certain parts of the work, for instance, electric wiring or heating.

There has also been found to be some conflict of authority in the law as between the Board of Managers and the Engineering Department. While the Engineering Department, with the sanction of the Advisory Board, is supreme in the matter of construction and may refuse to make an alteration desired by the Board of Managers of a hospital, the latter body has vested in it the power to allow or reject all claims, and may tie the work up should it so desire. A Board of Managers may also refuse to permit work to be commenced until it is satisfied with the plans and costs. Differences of the above character can be reconciled by changes in the law defining more clearly the powers of the Engineering Department.

Under the new and more modern methods of building, the building law of 1876 should be greatly modified to meet the changed conditions. The amount of building done by the State Hospitals in the last year is unprecedented. A tremendous lot of work for hospitals and other State institutions was thrown on the Engineering Department right at its birth: in fact, it was overwhelmed with work. It was not possible

for the department to get out plans as fast as desired by Superintendents, and, as a consequence, there has been some complaint of delay in commencing building operations. With those not familiar with the vastness of the burden thrown upon the department, the delay could not always be understood, but those of us who were familiar with the situation needed no excuses. The department has given the hospitals better buildings, structurally, than we have ever had, and of a better style architecturally. It has been hampered to some extent in planning by the insufficiency of appropriations, which were made before its existence. With the department's system of inspection of contract work we are pretty well assured that contractors will follow the plans and specifications. The plans gotten out by the Architect have been very full and complete, and have received general commendation; but this very completeness and the work done in making tentative plans and alterations for those interested, have tended to bring the expense of architectural work somewhat above what was expected. On a fairly good sized job the expense for plans will be less than those of general architects, but on small work with considerable detail the expense will approximate the five per cent usually allowed. The department promises to be of great good to the State. It will give us better, stronger, and more artistic buildings at more nearly a uniform cost for all institutions. There is no reason why the State should not work out some general plan of buildings intended for the same class of patients, and build on the same general lines and for about the same general cost. A system of this kind will result in good, and will avoid the constantly recurring cost of new plans for every building.

Now, that the great rush of preparation of plans in the Architect's office is about over, the work can be systematized, the cost lessened, more general satisfaction given, and delay avoided.

PROGRESS ON BUILDINGS AND IMPROVEMENTS UP TO NOVEMBER 1, 1908.

STOCKTON.

Dairy barn, State construction.....	Completed
Cement sidewalks, State construction.....	Completed
Heating plant, State construction	Completed
Receiving or hydrotherapeutic building, State construction.....	$\frac{40}{100}$ completed
Plumbing material ordered.	

NAPA.

Receiving cottage, State construction.....	$\frac{30}{100}$ completed
Detached cottages, State construction.....	$\frac{95}{100}$ completed
Reservoir	Completed

AGNEWS.

Dining hall.....	Completed
Commissary building	Completed
Bakery	Completed
Kitchen building.....	$\frac{9}{10}$ completed
Demented building, State construction.....	$\frac{3}{10}$ completed
Demented building, contract.....	$\frac{1}{2}$ completed
Two receiving buildings, contract.....	$\frac{4}{10}$ completed
Two buildings for infirm, contract.....	$\frac{1}{2}$ completed
Two buildings for quiet and medium, contract.....	$\frac{1}{10}$ completed
Two buildings, violent and disturbed	Just commenced

All buildings expected to be ready by July 1, 1909.

MENDOCINO.

Men's receiving cottage, State construction.....	$\frac{49}{100}$ completed
Steel water tower and tanks	Completed

SOUTHERN CALIFORNIA.

Storm drains, contract.....	Completed
Septic tank, contract.....	$\frac{25}{100}$ completed
Re-roofing, State, and contract.....	$\frac{100}{100}$ completed
Dairy barn	$\frac{90}{100}$ completed

HOME FOR FEEBLE-MINDED CHILDREN.

Dairy barn	Completed
Girls' cottage.....	Completed
Two epileptic cottages	$\frac{90}{100}$ completed
Administration building.....	$\frac{30}{100}$ completed
Manor house	$\frac{20}{100}$ completed

THE CALIFORNIA HOME FOR THE CARE AND TRAINING OF
FEEBLE-MINDED CHILDREN.

This institution has during the last four or five years been receiving the attention its importance demands. Since 1903 it has increased in population; seven new buildings for the accommodation of the feeble-minded have been added to its capacity, and it is fast getting into position that will enable it to meet the constant demands for admission to its care. It has up to the present time been crowded, but the new buildings will afford much additional room and give better opportunities for classification. The Home is beautifully located, the locality is healthful, the children are looked after with great kindness, and active and intelligent efforts are made to train them and develop their minds by the aid of kindergarten and other instructions. Both mind and

body are strengthened by light occupation out of doors in the orchards and gardens.

The Home has an excellent brass band, made up principally of boys under its care. A good library is gradually being gotten together and is greatly enjoyed by the inmates. The schools, while successful in their work, should be supplied with more teachers and the course of instruction made more varied, and to include some mechanical training.

Two cottages for epileptics are just about completed, one for each sex. These cottages will permit of a better classification of inmates than has heretofore been possible, and will in a great measure assist us in separating the epileptics from other cases. The whole institution is on the upgrade, is doing good work, and deserves commendation.

The border line between actual insanity and imbecility or feeble-mindedness is so lightly drawn that occasionally boys and girls are sent to the Home who are better fitted for the wards of a hospital for the insane. From time to time the Commission has to exercise its right of transfer and remove inmates of the Home to a State Hospital, and occasionally transfers have to be made from a hospital to the Home.

Considerable difficulty is at times encountered in caring for the fairly well-grown boys with criminal tendencies, the result of mental defect. As there is little or nothing in the way of airing courts or closed yards and all the inmates have much freedom, the cases above described are a source of great anxiety, and demand increased watchfulness and care. An effort is being made to locate a cottage upon the grounds of the Home, or to create a new institution for the care of girls who are wayward or immoral by reason of defective mentality. Not much argument is required to show the desirability of some institution of the kind for girls of this description, but a State charity for the purposes above outlined is very apt to be taken advantage of, to be used to the advantage of those who are morally weak, but not mentally so. Such a charity if created must be organized on the most rigid lines or it will be imposed upon.

THE NEED FOR PSYCHOPATHIC WARDS OR HOSPITALS IN CONNECTION WITH THE GENERAL HOSPITALS.

Several years ago the Commission brought to the attention of the legislature the advisability of creating what are known as psychopathic wards, or hospitals, to be connected with the general hospitals or as separate institutions. It is well known that the last legislature made appropriations for the building of receiving, or treatment, or psychopathic cottages at each of the State Hospitals, and it might be thought peculiar that we should now ask for psychopathic wards in connection with the general hospitals in some of our larger cities. It is thoroughly

understood that before a person can be admitted to a State Hospital he must be judicially declared insane and committed by a Superior Court. Psychopathic wards, as an adjunct to general hospitals, will afford quick provision without commitment for a limited number of cases. All persons charged with insanity should, while awaiting commitment, be placed in the psychopathic wards for observation and treatment—under skilled and constant observation and treatment. A large number would not have to be committed to a State hospital, but would be treated in the special wards until recovery.

There are quite a number who are mentally diseased whose condition will not justify their legal commitment to a State Hospital; such, for instance, as transitory confusion and excitement from epilepsy, hysteria, acute alcoholism, and other causes. General hospitals do not care to receive these cases, but in the special wards above requested they would be entitled to care and their temporary mental disturbance would soon yield to treatment. There are other cases who could be legally committed to a State hospital, but whose disease can be successfully treated in the special wards and commitment avoided.

Early treatment in mental cases offers the greatest hope of recovery. Many hesitate to send relatives far away from home to a State Hospital, or delay on account of the physical ill health of the patient, and many are deterred from securing hospital treatment by the necessity of legal examination and commitment.

With psychopathic wards in the home city connected with a general hospital, and conducted on advanced lines, to which admission could be had without legal formality, much valuable time would be saved and the patient would be so placed as to have the advantage of the best medical or surgical skill in the city, provided his mental trouble should prove to be a delirium dependent upon medical or surgical diseases.

There are so many difficult questions involved in the creation of such hospitals that it would seem best to refer it to a special legislative committee to consider the question, and submit a carefully studied plan to the legislature two years hence.

As illustrating the character and extent of the work done in the psychopathic wards of one of the general hospitals of a large Eastern city, it is shown that out of 2,721 admissions of alleged insane during the year 1906, 250 were such as would have been proper patients for retention in a psychopathic hospital. "Many of them would have recovered, and a number would have made such improvement as to permit their return home without the necessity of a commitment to a state hospital."

DEPORTATION OF ALIENS AND NON-RESIDENTS.

A large number of the patients admitted to the State Hospitals are foreign born, who by reason of previous history or on account of becoming insane and dependents on State care within a limited time after their arrival in the United States, are subject to deportation to their native land at the expense of the United States Government. The United States Immigration officials of the Department of Commerce and Labor have been in touch with the hospitals and this office in our efforts to locate and deport such of our patients as are subject to deportation. The majority of those subject to deportation reach America by way of New York and then scatter through the country. In the cases of those reaching our hospitals we find very considerable difficulty in tracing the patient's time and manner of arriving in the United States and his history previous to arriving in this country, data that are of great assistance to the immigration department in determining eligibility for deportation.

A number of cases located at the State Hospitals are now under consideration by the department. In the last two years twenty-three foreign born have been sent to their native countries by deportation by the United States Government, or with the assistance of friends or relatives. That this number can be greatly increased by proper and more rigid investigations of cases promptly on admission we are satisfied.

The admission as patients to our hospitals of persons who are recent comers to the State, and who become insane before they have gained a residence, is another element that tends to keep our hospitals crowded. The law provides that those admitted who have not been in the State a year previous to commitment may be returned at the discretion of the Commission to their home states. There are many difficulties in the way of making this provision of the law sufficiently effective to be of material benefit in reducing the population of our hospitals. In the first place, there is no specific appropriation made upon which we can draw to pay the expense of patients and their attendants to their home state. We are obliged to divert the expense of transportation from the support fund, and that fund is too scanty to allow of the diversion of any considerable amount. It costs on an average not less than \$150 to \$175 for the return of each patient, and we can send but a limited number at that cost. Another difficulty in the way of returning these non-residents is the difficulty in securing the consent of the authorities of the home state to receive them. The question of residence is argued; the patient's soundness of mentality at the time he left his home state is urged. In some states the claim is made that they have no law by which such a patient can be received. We are gradually overcoming

some of the difficulties raised by the other states, and are beginning to get more coöperation.

In our opinion more can be done in this line and the deportation of foreign born than we are now doing, provided the legislature will appropriate a sum of money, say \$15,000, to be used solely for the return to their home states of those in our hospitals who by reason of non-residence are not legally entitled to state care. If, in addition, the legislature will grant the Lunacy Commission sufficient appropriation to cover the expense necessary in obtaining information needed by this office in applying to the Immigration Department for the deportation of insane aliens, I am satisfied that the increased number of deportations will completely justify the expenditure.

With the same fund this office can do more in procuring proof of non-residence of recent comers from other states and enable us to submit such proof as will result in increased discharges.

The following table regarding the deportation of aliens by the United States Immigration Department is of interest in connection with the above results:

Deported by the United States in two years ending June 30, 1908.....	12
Deported this year since June 30, 1908.....	3
Under consideration by Immigration Department, with definite proof necessary obtained	18
Under consideration by Immigration Department, with definite proof necessary not obtained	12

DIPHTHERIA IN THE STATE HOSPITALS.

F. W. HATCH, M.D.

On April 18, 1908, there was an outbreak of diphtheria in the Southern California State Hospital. The source of infection could not be determined. The disease extended quite rapidly, involving officers, employees, and patients indiscriminately.

As soon as the nature of the trouble was definitely determined, those affected were removed from the building and isolated in the cottages for tuberculous patients, who were removed to make room for them, and the building was quarantined. Tents were raised on the lawns near the cottages, and all suspects or carriers (those who, upon bacteriological examination, showed diphtheria bacilli in their throats) were promptly isolated in the tents or cottages and kept there until two negative cultures (cultures showing no bacilli) were obtained from their throats. During the prevalence of this outbreak there were 48 cases of actual

diphtheria. On May 19th, there being no further cases, the quarantine was removed. This epidemic was handled properly and intelligently. Antitoxin was freely used, both as a curative and as an immunizing agent, and it was thought that the disease had been eradicated. The hospital was thoroughly cleaned, scrubbed with disinfectants, rooms, clothing and bedding fumigated, and every possible precaution taken to remove probable sources of contagion. On June 17th there was a second outbreak, much milder than the first, in which there were 23 actual cases of diphtheria with membrane.

Visiting the institution in the latter part of June, I ascertained from the bacteriological examinations being made that a large proportion of the patients, though apparently in excellent physical health, were carriers of what were apparently diphtheria bacilli in their throats, and were therefore sources of danger in that they might give the disease to others, though not themselves showing any symptoms.

At the time of my visit these carriers or suspects were being found and removed to the isolation camp at the rate of about ten a day.

At this juncture the Governor directed Dr. Foster of the State Board of Health to join me at the hospital, and we had a conference with the county health officers and the hospital physicians over the situation.

As a result of the conference, an expert bacteriologist was sent to the hospital by Dr. Foster, with instructions to examine every throat in the building, to isolate those showing diphtheria bacilli, and to keep them under quarantine until three negative cultures were found in each case. Those who were released from the detention camp were placed in special wards set apart for them, and were not allowed to mingle with patients who had not been quarantined until further examination showed that their throats were still clear. This course has been followed up to the present time.

From the outbreak up to the latter part of August some 400 cases carrying the bacilli in their throats had been found.

During September, October, and November the record shows the following numbers who were isolated by reason of showing bacilli in their throats on bacteriological examination:

September.	October.	November.
Males 87	Males 204	Males 126
Females 49	Females 81	Females 67
Repeaters—men 36	Repeaters—men 78	Repeaters—men 47
Repeaters—women 13	Repeaters—women 30	Repeaters—women 29

The term "repeaters," used above, indicates that that number were isolated the second, third, or fourth time, and should not be added to the total.

During the three months mentioned above there have been six cases of clinical diphtheria, (diphtheria with membrane and general symptoms).

Three of the above cases were traced to inoculation by new patients.

The disease as it existed at this hospital yielded readily to treatment by antitoxin. The importance of isolating those who showed the presence of diphtheria bacilli in their throats seemed imperative, and yet we are all positive that many of the bacilli were non-virulent.

Diphtheria persisted for four years in a large Eastern hospital, and many facts brought to light in Southern California State Hospital are in accord with the observations taken during the four-year epidemic.

The notes of the bacteriologists and physicians at the Southern California State Hospital, from which I freely quote, bring out some interesting points:

"It was found that there were an unusual number of sore throats, tonsilitis, congestions, etc., in which the cultures were absolutely negative.

"The average length of time of persistence of bacilli in throats was about four weeks.

"In some cases the first swab failed to detect the bacilli, doubtless owing to the scattering of colonies, as they were found after a second and more thorough swabbing.

"The period of immunity after an immunizing dose of antitoxin was from four to five weeks.

"Smears without cultures were found entirely unreliable.

"The experience of the Eastern hospital, where diphtheria existed four years, that the types most generally recognized as diphtheria bacilli were 'A,' 'C,' and 'D' of Westbrook's classification, was confirmed by the bacteriologists at work at Patton, who considered these types as the characteristic ones of the epidemic.

"Immediately following the first rain at Patton there was a decided increase in the number of suspects or carriers. Great care was taken to eliminate the pseudo bacilli in the work of the bacteriologists.

"The cultures from the throats showed numerous types of the bacillus, just as all cultures from clinical cases do.

"The bacteriologists considered as positive those cultures that showed one of the granular types of organism. In other words there were found in greatest numbers and considered positive only those types of the organism which are most common in clinical cases.

"Morphologically the cultures from the healthy throats showing bacilli were indistinguishable from the cultures from the clinical cases.

"It seems probable, though positive statements can not be made, that these bacilli in healthy throats which were morphologically indistinguishable from true virulent diphtheria bacilli are attenuated forms, which may possibly regain virulence on transfer to less healthy throats."

It is apparent that while we have as many persons carrying diphtheria bacilli in their throats as are now present at Patton, we are likely to have occasional cases of diphtheria.

While fully believing that many of the bacilli found in the throats of those carrying them are non-virulent, the great trouble lies in distinguishing between those cultures that are virulent and those that are not dangerous. Again, in those that, while not virulent to the carrier, may regain virulence when transferred to less healthy throats.

It has been pretty well demonstrated that from one to three per cent of all well persons have diphtheria bacilli in their throats, but it has been shown that only about seventeen per cent of the one to three per cent have virulent bacilli which are dangerous to public health.

There are many questions regarding the bacteriology of diphtheria that are yet undecided and need further observation and study before definite and positive statements can be made.

A word of praise is due to the officials and employees of the Southern California State Hospital for their devotion during those trying times. Two of the physicians, several of the other officers, and a number of attendants had the disease, but all did extra duty cheerfully.

REPORT OF SECRETARY.

To the California State Commission in Lunacy.

GENTLEMEN: I respectfully submit to your Honorable Commission the following report for the fifty-eighth and fifty-ninth fiscal years:

The most important duty of your Secretary being the supervision of the collection of board accounts due the various State hospitals, I will take that subject up first. It is with gratification that this office is able to report that the collections for the fiscal years under consideration are materially larger than ever before in the history of the State.

They were for the fifty-eighth fiscal year.....	\$110,925 90
They were for the fifty-ninth fiscal year.....	140,774 05
<hr/>	
Totaling for the period.....	\$251,699 95

The largest collections for any preceding fiscal year were \$106,541.98, being for the fifty-sixth fiscal year. We believe that the principal reason for the increased collections is that the work of collecting has been systematized, and that while perhaps it may be some years before the total collections of any single fiscal year will surpass that of the fifty-ninth year, yet we are positive that the collections each year will be larger because of the system we are now working under.

The collection of transportation charges and county charges in connection with the commitment of the insane also shows corresponding increase during the period covered by this report.

Appended to this report are tables showing the collections by months, and the amount to each hospital.

TRANSPORTATION CHARGES.

In the collection for the State of charges for transporting the insane to the various hospitals, the Commission meets with much complaint from the relatives of the insane who are required to pay the same. Hardly a week goes by without receiving one or more complaints from such relatives to the effect that the bills are exorbitant. The size of these bills in many cases not only renders it difficult to collect them, but also makes it equally difficult to collect the board or maintenance bills for the hospitals.

A bill introduced by John W. Stetson, the attorney for this Commission, at the last regular session of the legislature to remedy this matter,

was unfortunately reported upon adversely by the Assembly committee to which it was referred. Mr. Stetson's bill provided that attendants of the hospitals should take charge of and convey the insane to the hospitals. The measure would have done away with sheriff fees, materially decreased the cost of transportation in practically every case, saved money to the relatives of insane persons, and also saved the State thousands of dollars annually.

DELINQUENT BOARD ACCOUNTS.

The amount owing the several hospitals by reason of unpaid maintenance or board bills has been quite materially reduced, but the amount delinquent is still much larger than it should be. The amount owing the several hospitals on account of unpaid board bills at the close of the fifty-ninth fiscal year was \$24,323. The total was reduced \$14,534 during that year. It amounted to \$38,857 on June 30, 1907. This reduction was caused chiefly by the efficient work done during the year by the secretaries to the various medical superintendents, whose duty it is to collect the board accounts of their respective hospitals.

In the past there has been some disposition in certain instances to allow accounts to run for months without special effort to enforce their collection. The Commission's ruling directing each secretary to enforce collection of all overdue accounts, and to insist that no account should, under any circumstances, unless entirely unavoidable, be allowed to run delinquent over six months, and to report to the Commission monthly as to each such account, as well as to make a monthly statement to this office of bills rendered during the current month, has had its intended effect of increasing hospital receipts and reducing the amount delinquent.

The Commission has during the year canceled all of those accounts wherein it was convinced that the payor was utterly unable to pay the bill, and also whenever it was satisfied that the enforcement of a collection would result in working a hardship upon the responsible relative of the patient. The Commission deemed it unnecessary to carry this class of accounts; there being practically no hope of ever collecting them, it simply resulted in a waste of time to carry them in the monthly reports. The weeding out of this class of accounts has something to do with reducing the delinquency.

EXAMINATION OF BOOKS AND ACCOUNTS OF HOSPITALS.

Charles F. Waymire, your assistant secretary, and myself have made the required semiannual examinations of the books and accounts of the secretaries to the medical superintendents of the five State hospitals, and at the Home for Feeble-Minded Children at Eldridge, and found them to be neatly and accurately kept. Vouchers are retained for each

expenditure, and a duplicate retained of the receipts given for moneys and property received. The entries of the cash books have, in every instance, agreed with the vouchers and duplicate receipts, and except in isolated instances the entries were properly posted in the ledgers.

SALARIES.

I would recommend to the Commission that it use its efforts in the next session of the legislature to increase the appropriation for the support of the Commission sufficiently to raise the salaries of the members of the office force of the Commission at Sacramento at least 12½ per cent. In support of this recommendation I will call attention to the fact that the employees referred to are paid less than the State employees holding positions of similar responsibility; also, that the cost of living has increased at least 12½ per cent, and that the salaries of the employees in the home office of the Commission have remained stationary, while the Commission has increased the wages of the various employees of the State hospitals 12½ per cent.

MONTHLY COLLECTIONS BY THE FIVE STATE HOSPITALS,

From July 1, 1899, to June 30, 1900.

Months.	Stockton.	Napa.	Agnews.	Mendocino.	Southern California.	Total.
1899—July	\$897 32	\$1,484 95	\$1,248 95	\$809 40	\$736 91	\$5,177 53
August	1,830 92	1,745 85	2,179 15	257 05	1,155 00	7,169 97

REPORT OF ATTORNEY.

To the California State Commission in Lunacy.

GENTLEMEN: I herewith submit to your Honorable Body the following report of my attorneyship for the two years ending June 30, 1908:

As will appear from the report, and from the exhibits attached to this report, the machinery of the Commission for the collection of amounts due for the care, support, maintenance, and clothing of patients at State Hospitals has become very much more systemized. Questions of law raised with great frequency, whenever collections were formerly attempted, have been now in large degree settled, and the work of collections, still a very large part of the duties of this office, have become more and more matters of routine with the result of increase in the sums collected.

The final settlement of important legal questions was a decision by the Appellate Court of the Third Appellate District in the case of the *State Commission in Lunacy vs. Eldridge*, rendered January 3, 1908, and upon which a rehearing was denied by the Supreme Court March 9, 1908. The decision resulted favorably to the plaintiff, and determined a number of questions that had long been unsettled. The first of these was the constitutionality of the law making a parent liable for the support at a State Hospital of an adult child, and incidentally affirming the validity of commitments under the law as it existed at the time of and prior to the insanity law of 1897. Doubts concerning it had been raised in the decision entitled *In re Lambert*, 134 Cal. 630, holding commitments under that act invalid. The decision in *State Commission in Lunacy vs. Eldridge* is of the utmost importance and value in making collections on account of support of patients. This case and the case entitled *Napa State Hospital vs. Emanuel Dasso*, decided by the Supreme Court June 4, 1908, also in favor of plaintiff, finally determined that orders made by the Superior Court in insanity proceedings are not subject to collateral attack. In this latter decision the right of the legislature to create hospitals as public corporations by special act is affirmed.

During the period of this report twenty-two written opinions on questions referred to me by the Commission and Hospital officers have been rendered, a particular list of which are hereto appended. The case of *Martin vs. Holbrook et al.*, pending both in the Superior Court and the United States Circuit Court, have both been vigorously pressed, and numerous court hearings have been had on demurrers. These actions were commenced by a former patient of the Mendocino State Hospital.

and were each for the sum of \$907,000 against the members of the Board of Managers and Superintendent of the Mendocino State Hospital and other public officials in San Francisco for damages for unlawful imprisonment. The plaintiff appeared before the Judiciary Committee of the last legislature seeking an appropriation to compromise these actions. Failing in this, further steps in court were taken, but the plaintiff never succeeded in getting beyond a demurrer. The case now seems to be abandoned, and, if this should be the case, will in due time be dismissed.

The principal pending litigation relates to actions against guardians, or others liable for the support of patients, most of which seems to be occasioned by the dilatory attitude of reluctant defendants, and few cases involve important questions of law that have not already been settled. One exception is an action of mandamus directing the auditor of the county of San Benito to settle with the State on account of feeble-minded persons coming from that county. This action is entitled *The State of California vs. John Welch, Auditor, etc.*, and is now pending in the Appellate Court for the First District on a motion to change the venue from Alameda County to San Benito County. An early decision can be expected. This is the only county, so far as I am now advised, that neglects to comply with the law concerning counties' liability for the care of feeble-minded.

Destruction of the records of San Francisco County in 1906, and difficulty in restoring the same in guardianship matters where there are no records available to this office, has resulted in tedious delay in one or two cases, as shown in the list hereto appended. However, the rights of the State have been protected by filing of new actions to prevent the outlaw of liability, and eventually these estates will be realized on. To the vigorous initiative of the Secretary of the Commission is due the fact that the rights of insane patients have been more than ever cared for in cases where relatives and friends did not appear to protect the same.

Every patient who is a United States pensioner has had a guardian appointed, his pension collected and applied to the care of the patient at the State Hospital, or preserved where there was a chance of his recovery, so that the patient might not go out from the institution without means of support.

A typical instance of what has been accomplished in this direction is the interesting case of Annie E. Gyselaar, a patient at Napa. It was disclosed by the will of John Gyselaar of Eureka, a wealthy resident who died in 1906, that this patient was his wife, although no record of this fact existed; he made some provision for her in his will, but a guardian with adverse interests neglected and refused to provide for her out of her ample estate. The guardian was cited to appear in San Francisco and show cause why he should not be removed. Steps were taken in the Probate Court in Eureka, as a result of all of which an agree-

ment was entered into whereby the patient receives a separate room and private nurse and the best attention that money can give, and to which she was legally and morally entitled, but which she would never have obtained except for the diligent efforts of the Commission and its officers.

There are about twenty-five cases now pending and undisposed of. A particular list of all matters now pending, together with a statement of claims presented and a reference to the disposal of such cases as were mentioned in my last report, are hereunto appended and marked Exhibit "A."

During the period covered by this report I have collected, or secured the collection of, \$10,613.62, a detailed statement of which is hereunto appended and marked Exhibit "B." A list of opinions rendered, marked Exhibit "C," and a list of contracts and miscellaneous papers drawn in the pursuance of my duties as attorney, marked Exhibit "D."

Since the last session of the legislature very many questions submitted to me by the various Boards of Managers, arising during construction work at the State Hospitals, has shown the necessity of some careful consideration and action by the next legislature, to the end that the line of demarcation between the authority of the Department of Engineering and the Board of Managers, and the course with reference to public work at hospitals, must be clearly established. Indeed, some features of the law leave important matters manifestly unsettled.

Payment is to be made from hospital funds for hospital work, and demands must be sworn to by the Medical Superintendent. This he finds it difficult to do when the work is under the inspection of the Department of Engineering and no sufficient data is in the hands of the Superintendent to enable him to make positive oath. Again, the duties of the Inspector of the Department of Engineering are not defined with certainty, and constant conflict of authority becomes imminent. Where work is done by day labor, the question of the employing and discharge of employees and purchase and use of materials should be placed beyond all question by the clear wording of the statute. Matters are now settled only by inference and a constant resort to that fund of diplomacy and forbearance which every one has in some degree, but needs beyond all doubt in undepleted supply for those cases of emergency that can *not* be settled by law.

Section 1774 of the Code of Civil Procedure, which formerly required the settlement of final accounts of guardians of insane persons to be noticed to the Secretary of the Commission, was inadvertently repealed by the recommendation of the Code Commissioner at the last session.

This should be restored, inasmuch as it was the means of collecting many hundreds of dollars that will now escape the notice of the officers of the Commission.

Respectfully submitted.

JOHN W. STETSON,
Attorney for State Commission in Lunacy.

EXHIBIT "A."

**Present Status of Litigations Conducted by Attorney for State Commission in Lunacy
and List of Cases Disposed of since last Biennial Report.**

The following cases are pending or have been disposed of since the date of my last report, and, except when indicated, are actions for the recovery of the cost of maintenance of patients at State Hospitals:

ALAMEDA COUNTY.

Commission vs. Pantosky. Justice Court suit. Filed February 12, 1904. Judgment for defendant September 28, 1906.

Commission vs. John Welch, as County Treasurer of the County of San Benito. Complaint filed December 15, 1906. On appeal to Appellate Court.

Commission vs. Charles Hume. Complaint filed June 3, 1907, to prevent statute of limitations from running. Defendant is ward of C. W. Pendleton, and payments are being made as securities invested by guardian are being realized upon.

Commission vs. John Doyle. Complaint filed June 3, 1907. Same condition as *Commission vs. Charles Hume*, above.

Commission vs. Meshler. Complaint filed June 3, 1907. Same condition as *Commission vs. Hume*, above.

Commission vs. Kliegel. Complaint filed December 23, 1907. Suit dismissed February 28, 1908, by direction of Commission on payment of \$100.

Commission vs. Effey. Justice Court suit. Complaint filed December 24, 1907. March 18, 1908, judgment for plaintiff, \$44.85. Abstract of judgment recorded.

Commission vs. Kelly. Justice Court suit. Filed December 24, 1907. Defendant or property can not be found.

BUTTE COUNTY.

Commission vs. Bennett. Justice Court suit. Complaint filed May 3, 1907. Suit dismissed on payment of \$50.

SACRAMENTO COUNTY.

Commission vs. Hill. Complaint filed April 20, 1907. March 14, 1907, suit dismissed on payment of \$201.25.

Commission vs. Reeves. Complaint filed June 6, 1907. Judgment by default. Execution issued.

Commission vs. Richter. Complaint filed June 6, 1907. October 4, 1907, suit dismissed on payment of \$150.

Commission vs. Smith. Complaint filed June 6, 1907. Settled by Commission.

Commission vs. Lovdal. Complaint filed November, 1907. Payments being made to Commission.

Commission vs. Vesper. Complaint filed December 24, 1907. Dismissed; \$50 paid on account, and property of estate to be sold and proceeds to be paid Commission by order of court.

SAN FRANCISCO COUNTY.

No. 72381. *Stockton vs. Finnegan.* Judgment for plaintiff, \$467.10. Property of estate to be sold. Collection pending.

No. 78684. *Napa vs. Dasso.* December 27, 1905, judgment for plaintiff in the sum of \$428.90. Judgment affirmed by Supreme Court. Collection pending.

No. 78685. *Stockton vs. Staehli.* Judgment for plaintiff in the sum of \$435.60. Records restored March 12, 1908. Collection pending.

No. 81697. *Stockton vs. Mack*. December 12, 1904, judgment for plaintiff, \$360. Records restored. Claim presented to public administrator.

No. 89693. *Commission vs. Prettijohn*. Complaint filed March 7, 1904. Settlement pending the sale of property of estate.

No. 97589; N. S. 13132. *Commission vs. Dasso*. Complaint filed August 22, 1905. Records restored. Settlement pending.

No. 95960; N. S. 13230. *Commission vs. Finnegan*. Complaint filed May 10, 1905. Records restored. Settlement pending; guardian to restore record of guardianship.

No. 95961. *Commission vs. Mack*. Complaint filed May 10, 1905. Records restored and claim presented to public administrator.

No. 95962; N. S. 13231. *Commission vs. Mangin*. Complaint filed May 10, 1905. Records restored. Agreement for settlement with Commission pending.

No. 99919. *Commission vs. McGarrity*. Complaint filed January 19, 1906. Claim presented to administratrix of defendant's estate. \$150 paid on account, March 7, 1908. Balance to be paid by administratrix in course of administration.

No. 424. *Commission vs. Staehli*. Complaint filed June 12, 1906. Action pending.

No. 432. *Commission vs. Estate of J. P. Cody*. Complaint filed June 12, 1906. Action dismissed December 3, 1906, by order of Commission on payment of \$180.

No. 4796. *Arthur Martin vs. Holbrook*. Suit for \$907.000 for false imprisonment. Action pending on demurrer to third amended complaint.

No. 14050. *Commission vs. McMahon*. Complaint filed January 23, 1908. Action pending.

No. 2869. *In the matter of the estate and guardianship of Annie E. Gyselaar, an insane person*. April 4, 1908, petition for removal of guardian filed. Action settled May 15, 1908, on payment by guardian of \$455 and signing contract for support of Annie E. Gyselaar.

No. 17432. *Commission vs. Finnegan*. Complaint filed June 30, 1908. Action pending.

No. 17592. *Commission vs. Anderson*. In Justice's Court. Complaint filed August 20, 1908. Action pending.

SAN JOAQUIN COUNTY.

Commission vs. Eldridge. Complaint filed November 5, 1905. August 6, 1906, judgment for defendant. January, 1908, judgment reversed by Appellate Court. March 10, 1908, rehearing before Supreme Court denied. Payment pending.

SANTA CLARA COUNTY.

Commission vs. Lindemer. Complaint filed March 3, 1908. Action pending.

SHASTA COUNTY.

In the matter of the guardianship of the person and estate of Ellingham. January 2, 1908, citation issued to guardian. March 9, 1908, \$337.51 paid in settlement.

SOLANO COUNTY.

Napa vs. County of Solano. Action commenced March 24, 1906. Appeal to Appellate Court decided adversely to plaintiff. Petition for rehearing in Supreme Court denied July 29, 1907.

SONOMA COUNTY.

Commission vs. Fitzpatrick. Complaint filed December 13, 1907. Settled for \$540.

IN THE SUPREME COURT OF THE STATE OF CALIFORNIA.

In the matter of the application of William Flynn for a writ of habeas corpus. May 4, 1908, return of writ heard. Referred to Judge Sturtevant, San Francisco. May 5, Judge Sturtevant remands applicant to asylum.

In the matter of the estate of Callen. Appeal from Superior Court of San Diego. Claims of Commission not allowed on account of estate appearing to be bankrupt.

IN THE UNITED STATES CIRCUIT COURT OF THE NINTH JUDICIAL CIRCUIT, NORTHERN DISTRICT OF CALIFORNIA.

Arthur Martin vs. Board of Managers of Mendocino State Hospital et al. Action for \$907,000 damages. Pending on demurrer to third amended complaint.

In the matter of Dennis G. Clary. December 19, 1906, case argued. Proceedings remanded to State court and prisoner returned to asylum.

The following is a list of matters referred and under investigation, but not involving actions or other Court Proceedings.

Claim of Napa State Hospital for the maintenance of Emily Pratt. George Huestis appointed guardian, and is collecting United States pension.

Claim of Stockton State Hospital for maintenance of Thomas Lane. No property discovered.

Claim of Southern California State Hospital for the maintenance of Blanche M. Hill, \$480. Claim paid.

Claim of Southern California State Hospital for the maintenance of George D. Blake. Claim abandoned on account of decision in Callen estate.

Claim of Stockton State Hospital for the maintenance of Delia Lally. George Huestis appointed guardian. Claim paid out of estate.

Claim of Agnews State Hospital for the maintenance of Charles Riley. No property discovered.

Claim of Napa State Hospital for the maintenance of L. Nissen. No property discovered.

Claim of Southern California State Hospital for the maintenance of Elizabeth A. Pentz. Matter referred to Dr. Williamson.

Claim of Napa State Hospital for the maintenance of D. A. Bennett. Suit commenced. See register of actions.

Claim of Napa State Hospital for the maintenance of Augusta Knudsen. Collection pending sale of property of Augusta Knudsen.

Claim of Stockton State Hospital for the maintenance of William A. Bustard. Claim paid July 15, 1907.

Claim of Napa State Hospital for the maintenance of Al Franzina Cinto. Claim canceled by direction of Commission August 5, 1907.

Claim of Mendocino State Hospital for the maintenance of Minnie M. Effey. Suit filed. See register of actions.

Claim of Stockton State Hospital for the maintenance of Thomas Jahant. Claim paid.

Claim of Agnews State Hospital for the maintenance of Emil Eitzert. Payment pending.

Claim of Stockton State Hospital for the maintenance of Robert Kent. \$360 paid April 26, 1907.

Claim of Napa State Hospital for the maintenance of Alfred N. Lovdal. Suit commenced. Payments being made.

Claim of Agnews State Hospital for the maintenance of Kate Lindemer. Suit commenced. See register of actions.

Claim of Southern California State Hospital for the maintenance of John F. Keffell. \$525 paid July 10, 1906.

Claim of Napa State Hospital for the maintenance of Joseph McMahon. Action commenced. See register of actions.

Claim of Stockton State Hospital for the maintenance of Emma Thew. Not sufficient property in estate.

Claim of Stockton State Hospital for the maintenance of Drucius V. Root. Matter referred back to Commission on promise of guardian to settle.

Claim of Stockton State Hospital for the maintenance of J. W. Andrews. Claim approved by administrator.

Claim of Stockton State Hospital for the maintenance of Eva McDonald. Collection pending.

Claim of Agnews State Hospital for the maintenance of Ellen O'Neil. No property discovered.

Claim of Mendocino State Hospital for the maintenance of St. John. \$300 paid August 19th.

Claim of Stockton State Hospital for the maintenance of Therese Schnerr. Matter dropped by order of Commission.

Claim of Napa State Hospital for the maintenance of Hannah Smith. Collection pending.

Claim of Southern California State Hospital for the maintenance of Jerda Richer. Suit commenced. See register of actions.

Claim of Napa State Hospital for the maintenance of Ole Swenson. \$150, being balance of estate, paid June 14, 1907.

Claim of Agnews State Hospital for the maintenance of Ellen Sinnott. June 25, 1907, \$50 paid. Payment of balance pending.

Claim of Stockton State Hospital for the maintenance of Ludwig Maier. \$200 paid September 3d.

Claim of Napa State Hospital for the maintenance of John Superior. Claim paid in full July 11, 1907.

Claim of Mendocino State Hospital for the maintenance of Joseph W. Smith. Suit commenced. See register of actions.

Claim of Napa State Hospital for the maintenance of Mattie Reeves. Suit commenced. See register of actions.

Claim of Southern California State Hospital for the maintenance of Josephine Seger. Settled by agreement between Commission and Southern California State Hospital.

Claim of Napa State Hospital for the maintenance of C. G. Bundy. Collection pending.

Claim of Stockton State Hospital for the maintenance of Josephine Doerrrer. July 6, 1907, claim paid in full.

Claim of Napa State Hospital for the maintenance of Bridget Kelly. Suit commenced. See register.

Claim of Napa State Hospital for the maintenance of Mary Bigelow. Collection pending.

Claim of Agnew State Hospital for the maintenance of Margaret J. Curtin. Collection pending.

Claim of Stockton State Hospital for the maintenance of Jeannette Bell. April 15, 1907, received \$234.86 in settlement of claim.

Claim of Napa State Hospital for the maintenance of Alice R. Reynolds. September 6, 1907, \$540 paid in full settlement.

Claim of Stockton State Hospital for the maintenance of Margaret Coffaney. Claim presented to administrator of husband's estate.

Claim of Stockton State Hospital for the maintenance of Fred W. O. Loch. October 29, 1907, dropped by direction of Commission.

Claim of Agnews State Hospital for maintenance of Thomas Martin. Claim paid.

Claim of Mendocino State Hospital for the maintenance of Mary E. Rambo. Collection pending.

Claim of Mendocino State Hospital for the maintenance of Mrs. Thomas Frain. Collection pending.

Claim of Agnews State Hospital for the maintenance of C. H. Catton. Collection pending restoration of records in the estate of Annie M. Catton.

Claim of Agnews State Hospital for the maintenance of Minnie Hanson. Settlement pending balance of real estate.

Claim of Southern California State Hospital for the maintenance of Gideon F. Strader. Investigation pending.

Claim of Napa State Hospital for the maintenance of Kate Anderson. Suit commenced against husband. See register.

Claim of Napa State Hospital for the maintenance of Arthur Graves. Canceled by order of Commission.

Claim of Mendocino State Hospital for the maintenance of Margaret McCarthy. Matter pending appointment of guardian.

Claim of Stockton State Hospital for the maintenance of Isabell Mack. Claim presented to administrator of estate. Santa Cruz County.

Claim of Mendocino State Hospital for the maintenance of Mary E. Randall. Collection pending.

EXHIBIT "B."

The following is a list of collections made through this office supplementary to the list claims and to the list of actions:

July 17, 1906—\$61.85; claim of Southern California State Hospital for the maintenance of E. E. Lewis.

July 19, 1906—\$300; claim of Southern California State Hospital for the maintenance of John Soupaire.

September 29, 1906—\$50; claim of Stockton State Hospital for the maintenance of Lily Wagner.

October 22, 1906—\$90; claim of Napa State Hospital against San Francisco for maintenance of Lenny, criminal insane.

October 22, 1906—\$90; claim of Agnews State Hospital against San Francisco for maintenance of Paoletto, criminal insane.

October 22, 1906—\$360; claim of Mendocino State Hospital against San Francisco for maintenance of Hunt Ruser Guinee Blank, criminal insane.

October 23, 1906—\$105; claim of Agnews State Hospital against Alameda County for maintenance of Thomas Devine, criminal insane.

November 23, 1906—\$225; claim of Stockton State Hospital for maintenance of Clara Harrison, paid by Snook, guardian.

November 23, 1906—\$180; claim of Napa State Hospital for maintenance of John Soupaire, paid by Baker, guardian.

November 28, 1906—\$540; claim of Napa State Hospital for maintenance of Bleuel, paid by M. T. Bleuel.

December 5, 1906—\$147; claim of Mendocino State Hospital for maintenance of criminal insane.

December 5, 1906—\$45; claim of Napa State Hospital for maintenance of criminal insane.

December 5, 1906—\$45; claim of Agnews State Hospital for maintenance of criminal insane.

December 5, 1906—\$180; on account of J. P. Cody estate. Settlement made with Commission direct. See register of actions.

January, 1907—\$75; claim of Napa State Hospital for the maintenance of John Vesper, paid by J. B. Titus, guardian, to Commission.

March, 1907—\$20; medical examination and transportation of Augusta Bock, committed to Stockton State Hospital.

April 8, 1907—\$47.25; claim of Napa State Hospital for maintenance of May E. Soper.

April 23, 1907—\$38.50; claim of Stockton State Hospital for maintenance of Hanora Murphey.

May 10, 1907—\$181; collected from C. W. Pendleton on account of insane wards, as follows: \$28, Brennan; \$28, account of Thompson; \$42, account of Stark; \$21, account of Lenahan; \$19, account of Murphey; \$21, account of Deeds; \$22, account of Daniels.

- May 16, 1907—\$26.50; balance due on transportation of Augusta Bock to Stockton State Hospital.
- May 18, 1907—\$200; settlement of Commission against L. R. Hill.
- May 20, 1907—\$56.65; claim of Stockton State Hospital against Alameda County for maintenance of Lily Wagner, criminal insane.
- May 22, 1907—\$22; medical examination and transportation of Morris Clancy, committed to Napa State Hospital.
- May 23, 1907—\$270; claim of Napa State Hospital for the maintenance of Ann McKechnie.
- June 25, 1907—\$50; maintenance of Ellen Sinnott, paid by R. Sinnott.
- July 6, 1907—\$87; claim of Stockton State Hospital for maintenance of Joseph Doerrer.
- July 10, 1907—\$525; claim of Southern California State Hospital for the maintenance of John A. Keffell.
- August 11, 1907—\$115; claim of Napa State Hospital for the maintenance of John Soupaire.
- August 19, 1907—\$300; maintenance of St. John, paid by Wolff, guardian, direct to Commission.
- July 15, 1907—\$180; for maintenance of W. A. Bustard. Claim of Stockton State Hospital.
- August 24, 1907—\$234; claim of Mendocino State Hospital for maintenance of criminal insane.
- September 3, 1907—\$200; claim of Stockton State Hospital for maintenance of Ludwig Maier.
- September 5, 1907—\$141; on account of Pendleton's wards, Brennan, Stark, Lenehan, Deeds, Hume, and Daniels, at Southern California State Hospital.
- September 6, 1907—\$540; claim of Napa State Hospital for maintenance of Reynolds.
- October 4, 1907—\$150; settlement of Commission against Richter. See register.
- October 7, 1907—\$540; for maintenance of Margaret Flaherty at Agnews State Hospital.
- August 21, 1907—\$343.50; claim of Mendocino State Hospital against San Francisco for maintenance of criminal insane.
- February 14, 1908—\$409; claim of Mendocino State Hospital against San Francisco for maintenance of criminal insane.
- February 28, 1908—\$100; in settlement of Commission against Kliegel. See register.
- February 20, 1908—\$50; in settlement of Commission against Bennett. See register.
- March 7, 1908—\$150; on account of claim against the estate of Mary McGarrity.
- March 9, 1908—\$337.51; from estate of W. A. Ellingham, an insane person.
- March 12, 1908—\$50; claim of Napa State Hospital for maintenance of John Vesper.
- March 23, 1908—\$100; paid on account of Commission against Smith.
- March 23, 1908—\$100; paid on account of Commission against Lovdal.
- March 28, 1908—\$90; claim of Agnews State Hospital against Alameda County for maintenance of criminal insane.
- April 7, 1908—\$225; on account of Pendleton wards—Brennan, \$36; Lenehan, \$27; Hume, \$27; Stark, \$54; Deeds, \$27; and Daniels, \$54.
- April 15, 1908—\$334.86; claim of Stockton State Hospital for maintenance of Jeannette Bell.
- April 21, 1908—\$540; settlement of Commission against Fitzpatrick.
- April 22, 1908—\$405; claim of Mendocino State Hospital against San Francisco for maintenance of criminal insane.
- May 4, 1908—\$250; settlement of Commission against estate of Wm. H. Thompson, deceased.
- May 11, 1908—\$455; on account of Gyselaar guardianship.
- May 18, 1908—\$15; claim of Napa State Hospital for maintenance of Sinclair.
- June 29, 1908—\$60; claim of Agnews State Hospital against Alameda County for maintenance of Thomas Devine.

EXHIBIT "C."

The following is a list of opinions rendered by the attorney for the State Commission in Lunacy since June 30, 1906:

June 30, 1906. Interpretation of subdivision 3, section 2152, Political Code, on qualifications of medical superintendent.

Opinion as to the legality of an assignment of a contract with Napa State Hospital.

September 6, 1906. Opinion as to the validity of clause in commitment from Orange County relieving relative from obligation to support patient at California State Hospital.

Opinion on power of Board of California Home for Feeble-Minded Children to deed certain lands held in trust.

April 2, 1907. Opinion on sufficiency of contract for reservoir at Napa to cover subsequent appropriations.

May 21, 1907. Opinion on power of Board of Managers of Home for Feeble-Minded Children to regulate payments on account of patients.

April 16, 1907. Opinion as to liability of Los Angeles County for maintenance of criminal insane at Southern California State Hospital.

June 10, 1907. Opinion as to power of Board of Managers to make reduction in rates paid for patients at California Home for Feeble-Minded.

June 15, 1907. Opinion as to the power of Stockton State Hospital to receive insane patient from Manila.

July 10, 1907. Opinion on validity of commitment of Dorothy Crick from Butte County.

August 6, 1907. Opinion as to mode for patient to be declared sane.

September 3, 1907. Opinion of disposition of patients' personal property in possession of State Hospitals.

September 4, 1907. Opinion on contracts for supplies for Agnews State Hospital.

October 9, 1907. Opinion on power of County Assessor to levy upon salaries of officers or employees of State Hospitals for State poll tax.

November 10, 1907. Opinion on validity of commitment of insane person made on legal holiday.

January 20, 1908. Opinion on procedure for transfer of patients from one hospital to another.

January 23, 1908. Opinion on method of paying engineers and draughtsmen while engaged in construction work at Agnews State Hospital.

March 5, 1908. Special report and opinion on claims against San Francisco for maintenance of criminal insane at various State Hospitals.

March 14, 1908. Opinion on the power of Board of Managers to guarantee certain property to be exclusively used for religious purposes.

March 19, 1908. Opinion as to validity of claim against Napa State Hospital for death of horse while working on construction of reservoir.

March 21, 1908. Opinion as to when claim of State Hospital against county out-laws.

April 1, 1908. Opinion as to power of Board of Managers of Agnews State Hospital to employ special buyer of reconstruction materials.

EXHIBIT "D."

The following is a list of special services rendered by attorney for State Commission in Lunacy:

June 10, 1907. Revised form of contract under amended building laws.

October 14 to October 21, 1907. Attended the investigation by Commission at Southern California State Hospital.

November 12, 1907. Examined and prepared contracts for two steel tanks at Agnews State Hospital.

November 18, 1907. Prepared contracts for Agnews State Hospital.

December 27 and 28, 1907. Attended meeting of the Commission and assisted in drafting of report of Southern California Hospital investigation.

March 13, 1908. Prepared contracts for heating plant at Stockton State Hospital.

April 14, 1908. Special report on the matter of the guardianship of Higgins, Santa Clara County.

April 23, 1908. Prepared contracts for the construction of two buildings at Agnews State Hospital.

April 28, 1908. Prepared contracts between guardian of Gyselaar estate and Napa State Hospital.

May 14, 1908. Report on contract for steel tower at Mendocino State Hospital.

May 19, 1908. Report on contract for steel tank at Mendocino State Hospital.

June 2, 1908. Prepared two contracts for the reconstruction of buildings at Agnews State Hospital.

June 3, 1908. Examined contracts for steel tower and tanks at Mendocino State Hospital.

June 4, 1908. Examined bond in re lumber contract at Agnews State Hospital.

June 26, 1908. Consultation with Dr. Stocking in re building law.

August 24, 1908. Opinion to Dr. Stocking on power of chairman pro tem. to sign contract.

August 27, 1908. Opinion to Dr. Hatch on power of Board of Managers to convey real estate.

September 3, 1908. Examined contracts for construction of dams and ditches at Southern California State Hospital.

STOCKTON STATE HOSPITAL.

NOTE: For statistical tables, see Appendix.

REPORT OF THE MEDICAL SUPERINTENDENT.

For the Fiscal Year ending June 30, 1907.

To the Board of Managers of the Stockton State Hospital.

GENTLEMEN: In compliance with the law for the government and management of State Hospitals, I submit my report of the business and transactions of this hospital for the fiscal year ending June 30, 1907, showing the principal facts and results.

Tables 1 and 2 show that at the beginning of the year there were 1,896 patients under the charge of the Superintendent, and that the number admitted during the year was 443, making the whole number under care and treatment 2,339. Of this number there were discharged as recovered 116, as not insane 4, as improved 29, as unimproved 5, and 1 was transferred to Napa Hospital; 240 died, and 18 successfully escaped, leaving 1,926 in custody of the hospital on June 30, 1907. This is an increase of 122. The percentage of recoveries to admissions was 22.43, and of deaths to the whole number treated was 10.26.

The other tables containing the usual statistical information concerning the patients do not call for special comment.

From the tables showing the transactions of the Steward's Department it will be seen that the total expenditures for articles consumed and for other expenses, including pay roll of officers and employees and pay of managers, were \$226,124.77, and that the daily per capita cost was 33.74 cents.

We are about to undertake several important improvements at the hospital for which appropriations were secured at the last session of the State legislature.

The most important addition will be the erection of a new building to be used for the treatment of acute cases by hydrotherapy and electricity.

The heating plant for the old male building, new plumbing—which will consist of bath tubs, toilets, and lavatories—for both male and female departments, cement sidewalks through the grounds and on Cali-

fornia and Park streets, will add much to the comfort of the patients and to the appearance of the buildings and grounds.

At the farm a large dairy barn will be erected.

Thanking you, gentlemen of the Board of Managers, for your support of my administration for the past year, and hoping to be able to report the successful completion of our contemplated improvements at the end of the next fiscal year, I am,

Yours truly,

FRED P. CLARK,
Medical Superintendent.

REPORT OF THE MEDICAL SUPERINTENDENT.

For the Fiscal Year ending June 30, 1908.

To the Honorable Board of Managers of the Stockton State Hospital.

GENTLEMEN: I herewith have the honor of presenting to you my first biennial report of patients received, treated, and discharged, moneys received and expended, and improvements made and contemplated at the Stockton State Hospital.

At the last session of the State legislature we were given appropriations as follows: \$2,500 for the construction of a dairy and hay barn at the State Farm; \$6,000 for cement sidewalks on California and Park streets and hospital grounds; \$6,000 for a heating plant for the old building, male department; \$15,000 for remodeling the plumbing in different buildings; \$55,000 for the erection of an hydrotherapeutic building.

Of these appropriations we have expended \$6,000 for the sidewalks, and I feel safe in saying that there are none better in the State. Most of the work was done by patients, the finishing by expert sidewalk builders. With the \$2,500 for a dairy and hay barn we have erected and painted a building, principally with patient labor, which, according to a statement made by Mr. Ellery, State Engineer, could not have been built by contract for less than \$6,000. This building is so constructed that we will be able to store a large quantity of hay and at the same time afford protection to our cattle during the winter months. The contract for the heating plant has been let, and will soon be installed. This system will mean a saving of at least one hundred tons of coal each year, and at the same time warm the wards to better advantage and lessen the possibilities of fire. In regard to the plumbing: we have had bids from different firms under consideration, and will soon be able to let the contract for

the same. We have made considerable progress with the hydrotherapeutic building the past month. By using patient labor, under the direction of Mr. J. W. Dutton, we will be able to erect a very fine building at a moderate cost. This building will not alone relieve our overcrowded condition to a considerable extent, but the treatment given the patients in the form of continuous baths, hot and cold douches, massages, electricity, etc., will be a great aid to us in restoring the patients who come under our care to their mental health.

During the past year we have purchased twenty-one Holstein cows as a nucleus for a new dairy. They have proved to be a very fine lot of milkers, and as soon as our alfalfa fields are producing well I hope to increase the herd to such an extent that we can make most of the butter for the Hospital, besides supplying the patients what milk they require.

We were fortunate in securing a large oil tank, with a capacity of over 11,000 gallons, in which to store the oil used in the engine room of the male department. This tank prevents a repetition of an oil flood in the neighborhood in case of high water during the coming winters.

In regard to contemplated improvements, I would recommend an appropriation to be asked for at the coming legislature for the erection of an electric plant at the hospital, and wiring the buildings for electricity. While at present we are using the natural gas for illumination, during the winter months the supply is drawn on to such an extent that often the buildings are without lights, and at the best but poorly lighted. We should have two large water towers—one each for the male and female buildings. These towers would give the hospital an increased water supply, and at the same time enable us to remove the tanks from the buildings where they are at present, and do away with a great source of danger in the case of another earthquake.

To my mind the most important addition to the hospital would be the erection of a convalescent building for the patients at the hospital farm. This would give the patients who have sufficiently recovered, that they do not require the confinement of the hospital—still at the same time are not strong enough to withstand the worries of the outside world—a chance to build up physically and mentally among surroundings where they will be free from the annoying influences of the more disturbed patients.

During the past year we have received visits from various members of the State Lunacy Commission. Governor Gillett honored the hospital with two visits, and was seemingly well pleased with the institution and the farm. Dr. Hatch, General Superintendent of State Hospitals, has visited the hospital from time to time, and given us many valuable suggestions in regard to improvements, care of patients, etc.

The relationship between the officials and employees has been of the best, and every one connected with the institution, in whatsoever

capacity, has seemingly extended his best efforts for the good of the hospital.

In closing my report I wish to thank the Board of Managers, as a Board and individually, for the courteous treatment extended and the confidence reposed in me as Superintendent, and I sincerely hope that our present harmonious relations will always continue.

Respectfully,

FRED P. CLARK,
Medical Superintendent.

STOCKTON, CALIFORNIA, August 11, 1908.

NAPA STATE HOSPITAL.

NOTE: For statistical tables, see Appendix.

REPORT OF THE BOARD OF MANAGERS.

For the Fiscal Year ending June 30, 1907.

To the State Commission in Lunacy.

The Board of Managers of the Napa State Hospital respectfully report for the fiscal year ending June 30, 1907, as follows:

The Board held its regular monthly meetings during the year, which were attended by every member. At all times the members of the Board have manifested a personal interest in all of the affairs of the hospital.

The minutes of each meeting have been forwarded to your Honorable Commission monthly, and we respectfully refer to them at this time, and desire that the same constitute a part of this report.

At the November meeting the Board appointed by Governor Pardee qualified and entered upon the performance of their duties, and continued to act until January, when Mr. F. W. Bush having resigned, his place was filled by Emmett Phillips, and since January, the Board as at present constituted have acted at each meeting, each member being present.

Since the new Board took office, the Smith-Brown property, so called, has been paid for and the deed passed to the State. The property is a valuable asset of the State, and adds to, and materially aids, the income of the hospital, and makes a consequent reduction of expense to the State. In this connection, we might state that during the year, there was raised upon the property of this institution, products with the market value of \$39,218.65, all of which was either used by it or sold for its benefit. In a statistical way, the per capita expense for maintenance per day here is reduced about one third, owing to the large production of our property.

During the year a great deal of repairing, plumbing, painting, etc., has been done by the Board, all at the suggestion of the Superintendent, which has been in the nature more of a keeping up of the integrity of the buildings, rather than as betterments. A great deal of money is needed each year in the keeping up of our buildings to keep them in a condition of efficiency.

The legislature of the State of California several years ago appropriated the sum of \$40,000 for the purpose of building a dam in the hills about three miles back of the buildings, and upon State property, for the purpose of impounding water to furnish a water supply for the use of the hospital. Work was commenced upon this dam about August 6, 1906, under a contract which still remains in force. This contract will be completed within a few weeks, at which time a second appropriation by the legislature of 1907, amounting to the sum of \$51,000, will become available. At that time, the Board expects to continue the work by day labor under its own superintendent and under its own supervision. We expect in this way to prosecute the work more vigorously and have the dam completed before the coming winter, so that the supply of water may become available during the winter. We also expect to save enough money out of the appropriation to materially assist in building such concrete reservoirs and pipe lines as may be necessary to land the water at the buildings.

The Board desires at this time to express to you its entire satisfaction with the Superintendent of the Napa State Hospital, Dr. Elmer E. Stone, and seeing the institution as frequently as we do, and examining it in all its details at least once a month, we know that the work which he is doing would be difficult to surpass, but there are certain conditions over which he has no control, which are to be deplored, and in this way we mention, as a given instance, that we are now housing more patients than can be properly handled, with the result that some two hundred patients are compelled to sleep upon mattresses placed upon the floors. This is a condition which we can not help, nor can he, but perhaps your Commission can solve it somewhat by readjustment, or a request to the various judges of the State that patients be sent to other hospitals, unless they, too, are overcrowded. If all of the hospitals are overcrowded, then of course the only remedy is with the legislature.

During the year there have been no appeals to the Board by the attendants or employees, they having no grievance of any sort, so far as we know. Apparently, they are satisfied with their work and with their superior officers.

During the coming year there is considerable that we hope and expect to do. The legislature, as we have said, made an appropriation for the completion of the dam, and we expect to complete the work before the winter commences. We also expect to build a number of cottages for the housing of the chronic cases, and one or more cottages for hydrotherapeutic cases. We are awaiting the plans for both of these from the Department of Engineering.

We also expect to do other repair work in the way of keeping the buildings in shape, and all of this work, with the exception of the dam and hydrotherapeutic cottages, will be paid for out of the contingent

fund. In this way there will be no expense, but a decided improvement and help to the State.

In closing, we particularly refer to the minutes of the Board on file in your office, and to the Superintendent's annual report, which recommends itself, which has been carefully drawn and contains a great deal of statistical matter which is of decided value.

Respectfully submitted.

E. Z. HENNESSEY,
RICHARD BELCHER,
H. M. MEACHAM,
EMMETT H. PHILLIPS,
J. H. STEVES,
Board of Managers.

REPORT OF THE BOARD OF MANAGERS.

For the Fiscal Year ending June 30, 1908.

To the State Commission in Lunacy.

The Board of Managers of the Napa State Hospital respectfully report for the fiscal year ending June 30, 1908, as follows:

Regular meetings of the Board have been held during the year, which have been generally attended by every member, and certain special meetings have also been held, as shown by the minutes of the Board which are on file in your office. The minutes of each meeting have been forwarded to your Honorable Commission monthly, and we respectfully refer to them at this time, and desire that the same constitute a part of this report.

Attached to this report and made a part hereof is the annual report of Elmer E. Stone, Medical Superintendent, which in detail gives many matters of interest which will require careful investigation to determine exactly what is being done at the place. This report will show that on the farm connected with this institution there has been raised during the year products to the gross amount of \$38,848.70, all of which has been either used by the institution or sold for its benefit. This amount, of course, very greatly reduces to the State the expense of the institution and the per capita expense for caring for the patients.

During the year we have done a great deal of repairing, plumbing, painting, etc., at the suggestion of the Superintendent, which has been in the nature more of a keeping up of the integrity of the buildings rather than as betterments. A great deal of money is needed each year upon the buildings in order to keep them in a sanitary condition.

The legislature heretofore has made two special appropriations for the dam in the hills about three miles back of the building and upon State property, for the purpose of impounding water for the use of the hospital. This work has been practically completed, and during the coming winter we expect water will be impounded. There still remains, however, to complete the water system, the building of a pipe line, for which a special appropriation hereinafter mentioned should be made.

The Board is entirely satisfied with the work of the Superintendent, Dr. Elmer E. Stone, and can only reiterate what was said in our last annual report, that "seeing the institution as frequently as we do, and examining it in all its details at least once a month, we know that the work he is doing would be difficult to surpass, but there are certain conditions over which he has no control, which are to be deplored, and in this way we mention, as a given instance, that we are now housing more patients than can be properly handled, with the result that some two hundred patients are compelled to sleep upon mattresses placed upon the floors. This is a condition which we can not help, nor can he, but perhaps your Commission can solve it somewhat by readjustment, or a request to the various judges of the State that patients be sent to other hospitals, unless they, too, are overcrowded. If all of the hospitals are overcrowded, then of course the only remedy is with the legislature." This condition has not been relieved, and there are some two hundred and fifty patients now sleeping on the floors. The number of patients is increasing every month, and some radical change in the way of either new buildings or a different method of commitment must be made or soon this hospital will be so badly overcrowded that the work will be seriously hampered and the patients will naturally suffer.

We are now completing here a building for chronic cases which will in a way take care of about two hundred patients. Work has also been commenced on a receiving building, in which hydrotherapeutic treatment will be given, which will also help; but by the time these two buildings are finished and ready for occupancy, the main building, as well as the two will be crowded, if not overcrowded. Some remedy must be provided to take care of the rapidly increasing number of patients.

If the method of commitment continues as it has, then the legislature must appropriate special money every year to erect buildings and properly house the number which come to institutions of this sort.

The method of making appropriations for the support of patients is not in our judgment a fair and accurate one. The Board of Managers of an institution of this sort are men who have been picked because of their business ability or because of their interest in the work, and who have the best interests of the State as well as the best interests of the patients at heart. They make recommendations to the legislature of the amount of money needed for the ensuing two fiscal years to properly

carry on the work. Our recommendations, and the recommendations of all other institutions, are made carefully in view of past experiences and a knowledge of what the future conditions will be. The legislature should be very careful in cutting these recommendations down, for if they are cut, then the money actually needed in the support of the patients is not available. The result is that in order to make "both ends meet," the contingent fund has to be drawn on, with the consequent result that the expenditures which should have been made out of the contingent fund are either hampered and reduced or become absolutely impossible. There is an obligation upon the State to take care of its patients properly, and as long as these institutions are to be run, the legislature should appropriate sufficient money to pay all the necessary cost of maintenance. The amounts may seem very large in the aggregate, but the per capita cost for the support of the patients is small.

In closing, we particularly refer to the minutes of the Board on file in your office, to the Superintendent's annual report, which recommends itself, and which has been carefully drawn, and contains a great deal of statistical matter which is of decided value, and we particularly call your attention to that portion of his annual report under the heading "Requirements." The work of fixing up the main kitchen, which he recommends, we consider a work of urgent necessity and emergency, and shall endeavor to do that out of our contingent fund, as this work must be done prior to the meeting of the legislature in order that the sanitary condition of this institution may not be threatened with extreme danger.

Respectfully submitted.

E. Z. HENNESSEY
RICHARD BELCHER.
H. M. MEACHAM.
EMMETT H. PHILLIPS.
J. H. STEVES.

Board of Managers.

REPORT OF THE MEDICAL SUPERINTENDENT.

For the Fiscal Year ending June 30, 1907.

NAPA, CAL., June 30, 1907.

To the Honorable Board of Managers of the Napa State Hospital.

GENTLEMEN: I submit my annual report as Medical Superintendent for the fifty-eighth fiscal year ending June 30, 1907.

I will not present any lengthy report, but more of a summary of the transactions during the year just past.

The statistical report shows that during the year we have received as patients at this hospital 234 males and 136 females, making a grand total of 370 admissions; 180 born in the United States, 169 foreign born, and 13 unknown. Seventy-three males and 32 females have been discharged as "recovered," 1 male and 5 females discharged as "improved," and 9 males and 4 females discharged as "unimproved"; 1 male discharged as "not insane." Two male patients were transferred to other State hospitals.

During the year, 163 patients have died—110 males and 53 females.

The percentage of recoveries on the number admitted was .283. The total number of patients under treatment during the year was 1,998, and the mortality rate was .0815.

Two male patients have been deported by the United States Government to their native countries, it having been shown that they were insane before coming to this country. Four male patients and 2 female patients have been taken to other states, they not having gained legal residence in this State. Three male patients have been deported to foreign countries by their friends and relatives.

We have collected for the board account of pay-patients \$28,373.10, and from steward's sales \$1,691.67. Of this amount, \$210.70 was refunded on board account and defraying expenses of discharged patients to their destinations, making a grand total of \$29,854.07 paid into the contingent fund.

The receipts from the products of the farms, orchards, dairy and creamery for the year amount to \$39,218.65. The average daily per capita for the year is \$.387.

During the year the balance of \$12,000, which was due on the purchase price of the Delta Farm, has been paid out of the contingent fund. The sum of \$26,515.27 has been paid out of the contingent fund for the many improvements made during the year, leaving a balance in the contingent fund on June 30, 1907, of \$7,515.89.

The work on the new reservoir, located at "Wicks' Flat," has been carried on during the year under the contract awarded to W. J. Schmidt, and the appropriation of \$40,000, made by the legislature of 1905, not being sufficient to complete the work, the legislature of 1907 made an additional appropriation of \$51,000.

The increase in the number of patients admitted during this past year has overcrowded us to such an extent that two hundred of the inmates are obliged to sleep in beds made on the floors in the main hallways and corridors.

The general appropriation bill of 1907 carried the following amounts for use at this institution: \$264,940 for support and \$241,012 for salary, thereby giving an increase in the pay of several officers, the attendants, and many of the mechanics and other employees.

The following changes in the staff of officers has taken place during the year: Frank W. Bush to the office of Steward, vice W. H. Friend; Dr. S. McL. Doherty, Assistant Physician, vice Dr. I. E. Cohn; Jules Weyand to Assistant Supervisor, vice James Raney, and James Raney, Storekeeper, vice J. S. Reynolds.

I desire to take this means of thanking the officers and employees for their support of my administration of the affairs of this hospital.

It is certainly a source of much pleasure and encouragement to have the hearty support of you gentlemen, who comprise the Board of Managers of this hospital, and I hope the confidence you have reposed in me will merit your approval.

Respectfully,

ELMER E. STONE,
Medical Superintendent.

REPORT OF MEDICAL SUPERINTENDENT.

For the Fiscal Year ending June 30, 1908.

To the Honorable Board of Managers of the Napa State Hospital.

GENTLEMEN: I present to you my annual report of the transactions of the Napa State Hospital for the fiscal year closing June 30, 1908, as well as my recommendations for the improvements and requirements of the institution.

During the past year we have received 439 regularly committed patients—263 males and 176 females. At the close of the last fiscal year we had on our rolls 1,689 patients, and at the ending of this, the fifty-ninth year, we have 1,838, a gain of 149 patients during the year. The percentage of recoveries based on the admissions gives us 23 per

cent. One hundred patients were discharged as "recovered," 17 as "improved," and 14 as "unimproved."

We have lost during the year 143 patients by death out of a total of 2,144 under treatment, which gives us a mortality rate for the year of $6\frac{2}{3}$ per cent. The greatest number of admissions came from the bay counties, being 62 per cent of the whole number committed. The patients admitted who were born in this country numbered 240, and the foreign born 187. We have deported to foreign lands during the year through the efforts of the United States Immigration Commission 4, and through relatives, 5.

The sum of \$38,535.35 has been collected for the maintenance of patients and \$1,532.64 from sales by the Steward, making a grand total of \$40,067.99 turned into the Contingent Fund, and from this amount the sum of \$32,713.77 has been paid out for improvements, etc. From the supplies raised on the hospital grounds, it is of interest to note that the same if disposed of at market rates would have realized the sum of \$38,848.70. Of these items 85,790 gallons of milk was furnished, valued at \$12,868.50, and 17,083 pounds of butter were made, valued at \$5,466.56.

The average daily per capita for the year has been \$.403.

In addition to the products of the farms, orchards, and dairy, we have made large quantities of clothing used by the male and female patients at a very much less cost than the articles could have been purchased for, and at the same time we have given employment to a number of patients who have benefited mentally and physically by having their time occupied.

The appropriations made for our support fund have not been sufficient to carry us during the past year, and we face the same conditions for another year. If it were not for our contingent fund we would have a deficit to report. I attribute this shortage in our support fund to the fact that the last legislature did not anticipate the very large increase in our population, and from the further fact that the cost of food and supplies has increased beyond all expectations.

I must again call your attention to our overcrowded condition. Two hundred and fifty men and women sleeping on the floors in the hallways and corridors, and no signs of a falling off in our admissions! Many improvements have been made during the year on the grounds and farms, and the general repair work has been kept up.

The entire building has now been renovated as to plumbing, painting, etc., and a good sanitary condition of the wards exists.

Three changes have been made in the staff of officers, Dr. Doherty succeeding Dr. Stice, and Dr. Frary appointed to fill the position vacated by Dr. Doherty; Dr. Lena Geraldson succeeded Dr. Myrtle Ap Lynne, and the position of assistant matron is vacant.

A much needed improvement, and one that will give us some relief from our congested wards, are the detached cottages for male patients now under construction. This group of buildings consists of a central building for a living room and dining-room, with serving pantries and storeroom. Connected by corridors with this building are four wards. Each of these wards will have a capacity of fifty beds, as well as ample bathing facilities, and quarters for attendants. The cost of this building, including furnishing, will reach in the neighborhood of \$15,000 to \$16,000, paid out of the contingent fund. The work is being done by days' labor, and the bricks used were made on the hospital premises.

The large dam and reservoir which has been under construction for the past three years is nearing completion, and before October of this year will be in condition to store water. With this large supply of water, 150,000,000 gallons, we should be well prepared for the future growth of this institution.

The poultry farm has been a paying investment, as we show a net profit of \$932.97, and have not been obliged at any time to purchase eggs.

Plans having been completed for the receiving and treatment cottage, work has been started on the construction of this building, although we will not be able to complete the entire structure for the amount appropriated, viz., \$35,000. This cottage will consist of four buildings. The central building, two stories in height; the treatment building, in which will be housed the hydrotherapeutic appliances, as well as the surgical department, and to the rear of this will be the kitchen and dining-rooms. These buildings will have connecting corridors on either side, one going to a cottage for thirty male patients, and the other to a cottage for thirty female patients. This building will be used exclusively for the reception of patients and the treatment of acute cases.

Work has been commenced on the house telephone system, which will connect every ward and department with a central switch board.

Every well conducted hospital has as an adjunct a training school for nurses, and I have been preparing to establish a training school for attendants, to be opened on September 1, 1908.

REQUIREMENTS.

The overcrowded condition of our hospital demands more room for housing the patients, and from the increase in population during the past year, we must anticipate the same conditions for the coming year. It will be but a very short space of time before the Napa State Hospital will have 2,000 patients. Our general appropriations, such as support fund and salary fund, must be increased, and I would recommend the following amounts, basing my figures on the per capita cost for the past two years and figuring on an increase in our population of two hun-

dred, and for additional help: \$336,000 for support fund and \$264,000 for salary fund.

I would advise your Honorable Board to ask for the following special appropriations: Seven thousand five hundred dollars for repairing and refurnishing the main kitchen, this being absolutely necessary, as our culinary department is in a most unsanitary condition, and has been for several years. A bill for this improvement was presented to the last legislature, but failed to receive favorable action.

An appropriation for completing the water system, such as a main pipe line from the reservoir, and a distributing system.

The receiving and treatment building will require in the neighborhood of \$20,000 to complete same.

I would suggest that you consider the advisability of building a nurses' home for female employees, such a structure to cost from \$50,000 to \$60,000, with accommodations for seventy-five people. Taking the nurses from their quarters and turning those quarters into dormitories for patients would make sleeping room for at least one hundred female patients.

Many of our inmates must be deprived of the amusements we provide for them, as we can not find room in our present hall for all those who desire to attend; I would urge the putting up of a one-story building, located near the main building, sixty feet wide and one hundred and twenty-five feet long, with a stage at one end, sixty feet wide and forty-five feet deep; the building to be high enough for a gallery space to accommodate four hundred people. Such a building, I believe, can be built with bricks made on the premises and our own labor at an outlay of some \$15,000, and the present amusement hall could be arranged for a dormitory to sleep some sixty female patients.

Through the offices of the very competent Secretary of the State Commission in Lunacy, George Huestis, our collections for maintenance of patients for the past year have been largely increased.

I wish to express my thanks for the support given my administration of the hospital affairs by the officers and employees.

In closing my report, I desire to acknowledge my appreciation of the earnest support your Honorable Board has accorded me and for the many courtesies you have extended to me.

Very respectfully submitted,

ELMER E. STONE.
Medical Superintendent.

AGNEWS STATE HOSPITAL.

NOTE: For statistical tables, see Appendix.

REPORT OF BOARD OF MANAGERS.

For the Fiscal Year ending June 30, 1907.

To the State Commission in Lunacy, Sacramento, California.

GENTLEMEN: The Board of Managers of the Agnews State Hospital begs to submit its biennial report for the period ending June 30, 1908, accompanied by the report of the Medical Superintendent and the Treasurer, which reports should be considered as part of this report, and to which it is necessary to add but briefly, as these reports to the Board of Managers, including the statistical tables, state fully the operations of the hospital for the two years.

You will note by these reports that notwithstanding the very unusual conditions at this hospital, the regular work and maintenance have been about as usual and to this Board satisfactory.

The work of reconstruction has not progressed as rapidly nor as far as we hoped and desired, though we have urged it forward as fast as seemed practicable. Nevertheless, we feel that substantial progress has been made and along right lines, which is far more to be desired than great haste. It has been the policy of this Board to use the money intrusted to it in building a first class, substantial, well arranged hospital, not withholding a dollar necessary for this purpose nor spending a dollar for which direct value was not obtained.

We trust the results thus far secured are satisfactory to your Board, and such as to warrant your indorsement of the request we shall make of the next legislature for additional appropriation to complete the institution according to plans prepared, and which have met your approval.

Before the convening of the legislature we hope each member of the Commission will visit Agnews, inspect the work, and note the active construction going forward. We beg to urge you to do so that you may be fully informed.

The demand of the Governor for strict business methods in the conduct of public institutions is welcomed by this Board, and has been a

source of strength to it in disbursing so large an amount; as has also his personal interest in the work and desire to have built at Agnews a hospital the best of its kind.

For maintenance during the sixty-first and sixty-second fiscal years we recommend the amount carefully estimated by the Superintendent, and which we believe is not a dollar more than will be needed, as follows:

For support	\$214,000 00
For salaries	203,000 00
Total	<u>\$417,000 00</u>

We have the sad record to make that since our last report death has removed from this Board two valued members, O. A. Hale and Isaac Upham.

By their death the State has lost two useful citizens, this hospital two earnest workers deeply interested in its welfare, and we two able, genial coworkers and dear friends. Both had served many years on this Board with rare faithfulness and interest. To chronicle their service would be impossible in this report. We shall cherish their memory and let their example urge us to greater effort for the institution they served so long.

The Board deems it proper at this time to call attention to the salaries paid to the medical staff of this institution. The salaries in all other departments of the hospital have been raised from time to time, whereas those of the medical staff, which were very low in the first place, have remained the same. On account of the increased responsibilities and the very efficient manner in which they are being met and our institution is being conducted, the Board earnestly recommends that you consider this point and that you raise the salaries of the medical staff to a just basis and in keeping with the services rendered.

Respectfully submitted.

JAMES K. WILSON, President.

DR. F. H. BANGS,

T. S. MONTGOMERY,

DAVID RUTHERFORD,

EDWARD WHITE,

Board of Managers.

ANNUAL REPORT OF TREASURER.

To the Honorable Board of Managers of Agnews State Hospital.

GENTLEMEN: Herewith find statement of receipts and expenditures for the fifty-eighth fiscal year, beginning July 1, 1906, and ending June 30, 1907:

Respectfully submitted.

W. M. SONTHEIMER,
Treasurer.

REPORT OF THE MEDICAL SUPERINTENDENT.

For the Biennial Period ending June 30, 1908.

To the Board of Managers of the Agnews State Hospital.

GENTLEMEN: Two years ago at the date of my report to your honorable body we were busy constructing a temporary hospital for eight hundred houseless patients: at the present date we are equally busy constructing a permanent hospital for a larger number. I must, therefore, say now, as I did then, there is too much need of action to afford much time for reviewing the work of the past two years with which you are all so familiar.

We may, however, record the fact that the building of the temporary hospital was successfully accomplished with a very meager appropriation, and before the winter came all were comfortably housed with as good beds, food, and care as they had before the disaster. This successfully accomplished, the emergency met, and the present provided for, we immediately gave consideration to the future, and, without delay, began developing a scheme and plans for a new permanent hospital to embody the latest and most modern ideas of such an institution. Our general plan of the institution we would build was presented to the Governor and to the legislature, and the appropriation we asked was freely given.

Then began the preparation of plans in detail, the removing of old buildings, and later the construction of new.

Perhaps we have not accomplished in the past two years all we hoped to, and our new hospital is not as near completion as we expected it would be at this time; but, no doubt, we expected too much, for on consideration we find much has been accomplished. Two years ago the ruins of our beautiful hospital, in which we took great pride, stood a monument of the great disaster to sadden our hearts: to-day these ruins are gone, every building of our old hospital, and in their place are arising new buildings; perhaps not as imposing as the old, but we believe better adapted to the purpose, with more of comfort and better facilities for the care and treatment of those committed to our charge.

To remove the old buildings with their millions of brick, tons of stone, thousands of lumber, and quantities of other material was a great task and took many months. Determining the general scheme and arrangement of our new hospital and planning in detail the various buildings was even a greater undertaking, and took much time and thought. The architectural working out of these plans, with drawings and specifications in detail for construction, required many months of a large force.

Though we underestimated the time required for all this preliminary work, in due time actual reconstruction began, and is now proceeding briskly and satisfactorily. The bakery and commissary buildings and the dining hall are practically complete, and the kitchen with cold storage and ice making plant is nearing completion. This domestic group of buildings will be ready for occupancy before the end of the year. Ten buildings for patients are under construction or contracted for, and will be occupied by the beginning of the next fiscal year, accommodating eight hundred and forty patients.

To build all the buildings for which working plans have been drawn and to complete our hospital as planned we will have to ask for additional appropriation, as was expected when the plans were determined upon. Before reviewing the plan and arrangement of the hospital in detail, it will be best, I think, to wait till the next biennial report, when we expect the hospital to be complete, fully equipped, and well entered upon the great work we expect it to do.

While the planning and building of the new hospital has largely engrossed the time and attention of the Medical Superintendent as well as the Board, nevertheless the regular affairs of the hospital have gone forward in the usual systematic and business manner. An efficient corps of employees has been maintained with the usual exactions, and patients have received our accustomed careful and kind attention, though our hospital has been one of barracks and makeshift buildings and conditions.

Under such conditions it might be thought the tendency would be to lax and demoralized service, and no doubt there would have been a strong tendency in this direction except for the spirit and tone of fairness, faithfulness, and honorable purpose pervading the body of officers and employees.

Though it has been necessary to encroach upon the grounds largely with our building operations, still we have been able to reserve enough of lawn and shade to afford recreation grounds for our patients, and they have lived largely out of doors with a great measure of freedom.

I felt that recreation and amusement, ever desirable for both patients and employees, should not be neglected under our depressing conditions, and I therefore constructed a temporary assembly hall, with dancing floor, stage, etc., and regular amusements have been provided. Also a rude amphitheater was built and outdoor sports, including field day and baseball contests, have afforded much diversion.

A good orchestra and band have been maintained, which have furnished music for our entertainments and sports and also regular weekly concerts.

You see, therefore, that though our temporary hospital is somewhat rude, nevertheless our patients have not been neglected as to medical

attendance, care, recreation, or amusement, and have enjoyed a greater measure of liberty than ever before, without a single accident of a serious nature during the whole biennial period.

The health of the hospital has been good, with very little acute sickness, and a remarkably low mortality rate, as shown in tables, which are a part of this report and to which you are respectfully referred for much tabulated information.

I also beg to call your attention to the reports of the Steward and the Treasurer, which give fully the business transactions of the hospital.

Last year the wages and salaries of all officers and employees, except the medical staff, were again increased, and now I believe California has the best paid State hospital service in the world, especially as relates to those having immediate care of the patients. We can, therefore, with all consideration, except fitness eliminated, as at Agnews, have the very best service, as we can obtain the highest grade and best trained help. I approve of the increased salaries, and ask if there is not due the physicians the same consideration if the highest possible standard of efficiency is to be maintained in this most important branch of the service. With the completion of our new hospital far greater facilities for treatment and research will be afforded, and a much higher standard of qualification and skill and service should be exacted of the medical staff.

The same spirit of harmony and earnest coöperation has prevailed throughout the institution and with your Honorable Board, as has always characterized the present management.

No Superintendent could have coped with the unusual and trying conditions of the past two years without a faithful corps of officers and employees, and, still more, without the confidence, the counsel and guidance, the active and unanimous support, of a wise and generous board of business men such as I have had.

Gentlemen of the Board, I can not express my deep sense of obligation to you, and my gratitude. I am proud to be considered worthy of the confidence you have shown in me.

In this connection I am sure I shall do no violence to the high regard and friendly feeling I entertain for all the present members of the Board if I express my sense of great loss in the death of two of your recent associates. Both Mr. Hale and Mr. Upham were members of the Board when I entered the service of this hospital fifteen years ago, so that my association with them was long and of late years close.

Two years ago you intrusted largely to Mr. Hale and myself the task of laying before the Governor and the legislature the claims of this hospital, which brought us into close contact, and I learned more fully how much he had at heart the welfare of Agnews.

With Mr. Upham, as president of the Board, my association was so close I was able to see the nobility of his character and his unselfish interest in the hospital, and I not only respected, but loved him as a dear and loyal personal friend.

The burden of responsibility they laid down has been worthily assumed, and I am sure Agnews will receive from you that united and unselfish service necessary to maintain it on the high plane of business integrity and usefulness which alone can be satisfactory to you.

By the beginning of the next biennial period, July 1, 1909, we will have ready for occupancy ten buildings for patients, with a capacity of eight hundred and forty, and will be able to continue to care for sixty in the laundry building, making a total capacity of nine hundred. By the beginning of the second year four more buildings for patients will be ready, if appropriation for construction is received, with a capacity of two hundred and thirty, or a total capacity for the hospital of eleven hundred and thirty. In computing the cost of maintenance, therefore, for the next biennial period I have based my estimate on the care of nine hundred patients for the sixty-first fiscal year and ten hundred and fifty patients for the sixty-second, cost of supplies and the rate of wages the same as now.

On the above basis I recommend that maintenance be asked for the sixty-first and sixty-second fiscal years as follows:

For support	\$214,000 00
For salaries	203,000 00
Total	<u>\$417,000 00</u>

Respectfully submitted.

LEONARD STOCKING,
Medical Superintendent.

MENDOCINO STATE HOSPITAL.

NOTE: For statistical tables, see Appendix.

REPORT OF THE BOARD OF MANAGERS.

For the Fiscal Year ending June 30, 1907.

To the State Commission in Lunacy.

GENTLEMEN: We, the Board of Managers of the Mendocino State Hospital, in discharge of the duty imposed upon us by law, hereby submit to you our report for the year ending June 30, 1907, together with the reports to us of the Medical Superintendent, Treasurer, and Steward, for the same period.

A careful consideration of the reports above mentioned will show you in detail all of the expenditures and transactions concerning the hospital for the year, as well as certain recommendations for the relief of the present and future needs.

The buildings, which were damaged by the earthquake on April 18, 1906, have been reconstructed and repaired. The brick towers, stone turrets, and other heavy ornamentation, and the brick chimneys have been replaced with galvanized iron and practically all traces of the earthquake obliterated and the buildings made stronger and safer. The total cost of this work was \$8,075.54.

With the brick taken from the towers, gables, etc., a substantial wall around the male exercise yard has been built. It is about 400 feet in length and 12 feet in height, the first 7 feet having a concrete center. The cost of this wall was \$516.65. A similar wall is needed around the female yard.

A handsome, substantial, and durable fence, over one mile in length, has been built around the sides and front of the hospital grounds. It is constructed of lawn wire mesh and 6 by 6 posts, well painted an appropriate color.

The tent hospital plant, or outdoor colony, has been enlarged by adding a large dormitory, a lavatory and bathroom, and adding to the dining-room to accommodate 100 patients. While this construction has been of wood, it has been substantial in character, and is satisfactorily serving the purpose for which it was originally intended. A sitting room

and another dormitory are needed, and plans have been prepared and will be submitted to your Honorable Commission for your approval.

The products from the farm, garden, dairy, etc., have more than doubled during the last four years, and the reports show an increase of nearly \$5,000 over last year.

Work was commenced on the female cottage building (for which an appropriation was made at the special session of the legislature of 1906), in March of this year. The foundations and first story of this building have been completed and the work of construction is well in hand. This work is being done by days' labor, and under the direction of the Board of Managers. The first story is concrete and the second story reinforced brick, and will accommodate about 125 patients when completed. Apparatus for hydrotherapeutic treatment of the acute insane will be installed in the building, and highly beneficial results are expected from this method of treatment.

The legislature at its session in the early part of this year made an appropriation for a male cottage building, and plans are now being prepared for its construction.

Plans for the erection and construction of a steel water tower, with a steel tank of a capacity of 100,000 gallons of water, have been prepared by the State Department of Engineering, and contracts will shortly be let for the building of this structure. This will take the water tanks out of the buildings and relieve them of a great weight. A part of these tanks were taken out at the time of the repairs to the buildings from damage by the earthquake.

Before closing this report, we wish to acknowledge the excellent service rendered by the Medical Superintendent, Dr. E. W. King. To his constant and untiring efforts and the perfect discipline maintained in each department is due the excellent general condition of this State Hospital. Nor can we fail to express our appreciation of our Steward, Mr. F. C. Handy, to whose skill and industry the institution is so much indebted.

The spirit of harmony existing throughout the entire official personnel of the institution is exceedingly gratifying to the Board of Managers, who have endeavored to conduct the affairs of the institution strictly for the welfare of its unfortunate inmates.

Respectfully submitted.

W. A. S. FOSTER,
A. J. FAIRBANKS,
J. L. M'NAB,
GEO. D. CLARK,
E. B. MARTINELLI.

Board of Managers.

REPORT OF THE BOARD OF MANAGERS.

For the Fiscal Year ending June 30, 1908.

To the State Commission in Lunacy.

GENTLEMEN: The Board of Managers of the Mendocino State Hospital, in accordance with the law and in discharge of their official duty, submit for your consideration their annual report, together with the reports of the Medical Superintendent and Treasurer, for the same period. The report of the Medical Superintendent shows in tabulated form the movement of population, the medical tables, supplies purchased and consumed, production of the farm, garden, dairy, etc., and other details of the general management of the institution.

During this period the hospital has been free from any epidemic or contagious diseases of serious nature; the welfare of the patients has been guarded, and the general condition of the institution improved.

The two-story cottage for female patients has been completed, furnished, and is now occupied. This is a handsome and substantial building, is well furnished, and relieves the crowded condition of the female wards. The cost of this building was \$35,000.

The steel water tower and tank, for the building of which an appropriation was made by the last legislature, has been erected and is ready to be connected up with the plumbing of the institution. This structure cost \$8,000.

At the outdoor colony a sitting-room building and an additional dormitory building have been constructed, increasing the capacity of this part of the hospital to 100 patients. The cost of these improvements was \$2,283.57.

On account of not being able to secure sufficient wood for fuel purposes, it was necessary to change to an oil burning system, the cost of which was \$3,246.30.

Work has been commenced on the male receiving cottage, and will soon be well under way.

All of the work mentioned above, except the steel tower and tank, has been done by days' labor, under the management of the hospital, with very satisfactory results and a considerable saving of money.

In the way of appropriations the board wishes to call your attention to the various needs of the institution, which they consider important and necessary for its maintenance and welfare for the next two years, commencing July 1, 1909.

The ordinary expense has been considerably increased, due, for the most part, to the higher prices paid for all supplies; to the advance paid

for salaries and wages, and to the increase in the number of patients received, on account of the crowded condition of all of the State hospitals. The amount asked for support and salaries for the next two years, \$356,751, will be none too much for the requirements and needs of this institution.

The Medical Superintendent in his report has in detail given the reasons why appropriations for a receiving cottage for both male and female patients, a milking barn at the dairy, a new kitchen with furniture, etc., additional machinery for the laundry, etc., are highly necessary. We have investigated these matters fully, and strongly recommend that the legislature be urged to appropriate the amounts asked for by the Medical Superintendent.

In closing this report, the Board desires to make mention of their high appreciation of the services of the Medical Superintendent and the other officers associated with him in the management and administration of the affairs of this State Hospital.

Respectfully submitted.

W. A. S. FOSTER,
A. J. FAIRBANKS,
GEO. D. CLARK,
J. L. M'NAB,
E. B. MARTINELLI.
Board of Managers.

REPORT OF THE MEDICAL SUPERINTENDENT.

For the Fiscal Year ending June 30, 1907.

To the Board of Managers of the Mendocino State Hospital.

GENTLEMEN: In compliance of the law and custom I herewith submit to you my annual report for the fiscal year ending June 30, 1907.

The percentage of recoveries to the number admitted was 38.16, and the percentage of deaths to the whole number treated was 6.91.

There have been no epidemic diseases among the patients during the year.

The treatment of patients at the tent hospital continues to be very satisfactory. The patients enjoy the outdoor life, both winter and summer; their physical health is better; they have more freedom; they are, as a rule, quieter, less noisy and disturbed at night, sleep better, and are controlled with less friction.

CAUSES OF INSANITY.

Alcohol, heredity, and syphilis continue to hold the most important place in the production of insanity, as shown by the fact that syphilis was found to be a creative factor in 19 cases, heredity in 28 of the 164 males admitted during the year, while 76 of these cases used alcohol to excess. Of the 64 females committed during the year, 7 used alcohol to excess and in 15 heredity was a causative factor.

ACKNOWLEDGMENTS.

Our grateful acknowledgments are due to Mrs. J. W. Eversole of Ukiah, Mrs. B. S. Hirsch of Ukiah, St. John's Epworth League, Ukiah, and Miss Whipple of Cloverdale, for reading matter sent for the use of our patients; also to Rev. Father Duffy, of Ukiah, for holding services monthly at the hospital and for frequent and repeated visits to individual patients. To the officers and employees of the hospital I am under many obligations; almost without exception they have performed their duties in a conscientious, faithful, and skilled manner, and to the best interest of the hospital. To the members of this Honorable Board of Managers I am under special obligation for advice, support, and encouragement in the many trying duties pertaining to the management of the hospital.

Respectfully submitted.

E. W. KING,
Medical Superintendent.

REPORT OF THE MEDICAL SUPERINTENDENT.

For the Fiscal Year ending June 30, 1908.

To the Board of Managers of the Mendocino State Hospital.

GENTLEMEN: I herewith present to you my annual report for the fiscal year ending June 30, 1908.

It gives me pleasure to state that there has been no unusual amount of sickness during this fiscal year, no epidemics of any kind, no typhoid fever.

The number of commitments during the year was 253, of which 193 were males and 60 females, an increase during the year of 78 patients.

The percentage of recoveries to number admitted was 37.55, and the percentage of deaths to the whole number treated was 6.90.

FEMALE COTTAGE.

During the year a cottage for female patients has been completed and furnished, and is ready for occupancy. It will accommodate about 120 patients. It was greatly needed, as our wards were very much crowded. This cottage was erected at a moderate cost, as we were able to utilize the labor of a considerable number of patients in its erection, thus reducing the cost very materially.

The building was erected under the supervision of Mr. F. C. Handy, our Steward, and to him is due the credit of having brought the work to a successful completion.

MALE COTTAGE.

Considerable work has been done in excavating for the foundation of the building and a large amount of gravel has been hauled for concrete, but owing to an unexpected delay in getting the completed plans for the construction of the building, no work has yet been done on the building itself. We anticipate being able to commence work on this cottage at an early date, when it will be rushed along as rapidly as possible, as we are sure to need more room for male patients before it can be completed.

WATER TOWER.

A steel water tower has just been completed. The height of this tower from the ground to the top of the tank is 134 feet. The tank carries 100,000 gallons of water, and is also constructed of steel. This is not only a great convenience but an absolute necessity, for with such a tank we are enabled to remove all the large water tanks from the ward buildings, where they were a source of constant annoyance as well as a menace to the safety of the inmates. The cost of this tower was \$6,000.

CEMENT WALKS.

Cement walks have been constructed from the main building to the female cottage and to the tent plant. This work has been done by patients, under the supervision of Mr. Handy, the Steward.

KITCHEN FACILITIES.

This hospital was constructed, as far as the ward buildings, kitchen, and laundry are concerned, and made ready for patients in 1893. The bill which passed the legislature establishing this hospital called for a building that would accommodate not to exceed 500 patients. We have at this time, July 31, 1908, 846 patients, and at the present rate of increase, we will have before the end of the sixtieth fiscal year more than 1,000 patients. Our kitchen is entirely inadequate for such service.

To enlarge the kitchen, put in a dining-room for kitchen help, new range, steam table, and other necessary kitchen furniture, and to enlarge the cold storage room, we will need an appropriation of \$10,000.

DAIRY BARN.

We also need a concrete dairy barn for dairy purposes. The barn we are using at present is old and entirely too small for our present dairy, and is also unsanitary. Such a dairy barn as we need will cost the State \$5,000.

LAUNDRY MACHINERY.

Our laundry machinery has been in constant use since this hospital was opened in 1893. It was put in to accommodate not more than 500 patients. It is old, easily gets out of repair, and is entirely inadequate to do the work. I am asking for an appropriation of \$2,500 for machinery to put our laundry in proper working order.

RECEIVING COTTAGE FOR MALE AND FEMALE PATIENTS.

In order to give our acute cases proper treatment in the early stages of the disease, when they might get relief, if ever, I am going to ask the legislature for an appropriation of \$40,000, to erect and furnish a cottage for the accommodation of 60 patients, 30 male and 30 female; this cottage to be used exclusively for the treatment of acute cases of both sexes. This cottage is to be fitted up with all the modern appliances. We are using our female cottage for a convalescent ward, which is a necessity for the proper treatment of cases that have begun to recover. They need quiet, rest and pleasant, homelike surroundings, and everything that will serve to soothe and quiet their super-sensitive nervous system will conduce to their ultimate recovery. The cottage for male patients which is in process of construction, will, when completed, relieve to a great extent the congested condition of our male wards, and one of the wards of this cottage is to be used for a convalescent ward for male patients.

TENT HOSPITAL.

Our tent hospital continues to render us excellent results. At an expense of \$5,387.28, we have accommodation for one hundred patients who are practically in the open air every hour of the day and night. For a certain class of patients, the conditions at this tent plant are much more satisfactory than are the conditions surrounding patients housed in large, stately, brick structures. The sanitary conditions are better, because they constantly breathe pure, atmospheric air. They are quieter, more contented and cheerful, because, although a large percentage of them are considerably demented, they still enjoy the additional freedom which they get in this tent plant.

Originally our tent plant consisted of seven small tents. These were intended exclusively for tubercular cases. The improvement in these cases was so marked that we concluded to enlarge the plant by putting up what we called wooden tents. These were found to be more

and more satisfactory, and we have continued to add new wooden tents until the plant now carries more than one hundred patients.

On April 18, 1906, one of our wards was rendered unfit for patients. The patients on this ward were transferred in a body to the tents. This plant has taken the overflow from our congested wards for the last two years, with great benefit to the patients and to the institution. We have lately constructed a fine sitting-room, octagonal in shape, in the style of a bungalow, with a porch all around, where the patients can congregate in stormy or inclement weather. It is heated by steam and furnished with electric lights. The bathroom and toilets are connected with the main sewer and furnished with hot and cold water.

The results which we get from the treatment of patients here are all that could be expected.

NECESSITY FOR ADDITIONAL HELP.

We have in the State of California five State hospitals, built for the express purpose of giving proper care and treatment to this most unfortunate class of our fellow citizens. On July 1, 1908, this class numbered in California 6,234, exclusive of those in the Feeble-Minded Home at Eldridge.

As a rule, I believe we are giving these unfortunates as good care and treatment as our sister states, but there are defects, and one of them is our night service. At this hospital we have but two night watches for male patients. One of these cares for 101 patients at the tent plant. Many of these patients are sick, bedfast and untidy, and by keeping one night watch on this ward continuously during the night, they are rendered very good service. The other night watch has under his care 384 patients on five different wards, one of which is a hospital ward for feeble, sick and untidy patients, and it is a physical impossibility for one man, no matter how faithful he may be, to give this number such treatment as they ought to have and as they are entitled to. On our female wards a similar condition prevails, although not to such an extent.

It is evident to any intelligent person that on a hospital ward where there are a considerable number of feeble, sick, and untidy patients, there should be an attendant constantly on duty to look out for their wants and to keep them in proper sanitary condition. To do this we must have two more night attendants, one male and one female.

The opening of the female cottage has greatly relieved the congestion of the three female wards in the main building. From the number of commitments which we have been getting during the last five months it is evident that this cottage will soon be full, and this will make it necessary to put on three more attendants.

The male wards are now crowded and we need more room. We hope before the meeting of the next legislature to have the male cottage well under construction, and to have it completed and ready for patients before the end of the next fiscal year. In this cottage we will need five attendants and a night watch.

FEMALE PHYSICIAN.

The increase in the number of patients here will make it necessary to add another member to our medical staff, and I would strongly recommend the putting on of a female physician, and that the legislature appropriate sufficient money to pay her salary. I have estimated for one at a salary of \$900 for the first year and \$1,000 for the second year.

DRUGGIST.

For several years this hospital has been without a druggist, this work having been done by some member of the medical staff. I would recommend that a sufficient amount of money be appropriated to pay the salary of a druggist.

ASSISTANT COOK.

Because of the rapid increase in our insane population, it will be necessary to put on another assistant cook. The salary of the assistant cook is \$50 per month.

STOREKEEPER.

This hospital has never had a storekeeper other than a patient. The increase in the number of patients makes it necessary to have a regular employee to attend to this work.

ESTIMATE FOR ADDITIONAL HELP.

In my estimate for salaries for the next two fiscal years I have estimated for a female physician, a druggist, a storekeeper, an assistant cook, two male night watches, one female night watch, five male attendants for the male cottage, and three female attendants for the female cottage, all of whom will be necessary for the next two fiscal years. This is a very conservative estimate for additional help.

This will add to our present pay roll, which is \$61,268.50 per year, the sum of \$9,772, making the pay roll \$71,040.50, or \$142,081 for the two years.

MAINTENANCE FUND.

In estimating for maintenance for the sixty-first and sixty-second fiscal years, I have taken the number of patients actually in the hospital on June 30, 1908, as a basis. During the last four months we have gained 42 patients, or a net gain of 10.5 per month. Napa State Hospital and Stockton State Hospital are both crowded. Agnews State

Hospital is not in a condition to receive patients, and there seems to be no question as to the necessity of caring for this increase of patients.

At this rate of increase we will have at the end of the sixty-first fiscal year 1,086 patients, and at the end of the sixty-second year we will have 1,212.

As this net increase of 252 patients for the sixty-first and sixty-second fiscal years would be spread over two years, we will estimate on the number at the end of the sixty-first fiscal year, which will give us an average for the two years. This gives us \$107,335 for the year, or for the two years, \$214,670; and this amount added to the estimate for salaries, \$142,081, makes a total of \$356,751 for salaries and maintenance for the two fiscal years.

These figures are the result of a careful estimate of the entire situation and are made on a strictly business basis, and are not subject to a cut without crippling the efficiency of the hospital.

It gives me pleasure to say that the service of the officers and employees of this hospital during the last fiscal year has been highly satisfactory, and especially to the Steward, Mr. F. C. Handy, is the State, as well as myself, greatly indebted for valuable services rendered outside of his duties as Steward. He has had charge of and general supervision over the construction of the female cottage, the new steel water tower, the construction of the male cottage, and the repair of the buildings after the earthquake; and in the management of this work he has saved the State many thousands of dollars.

The cordial relations existing between the Board of Managers and the Superintendent have been an important factor in promoting the welfare of the hospital, and have assisted very materially in bringing about good results. This condition of affairs I appreciate fully.

Respectfully submitted.

E. W. KING,
Medical Superintendent.

SOUTHERN CALIFORNIA STATE HOSPITAL.

NOTE: For statistical tables, see Appendix.

REPORT OF THE BOARD OF MANAGERS.

For the Fiscal Year ending June 30, 1908.

PATTON CAL., September 10, 1908.

To the State Commission in Lunacy, Sacramento, California.

GENTLEMEN: The Board of Managers of the Southern California State Hospital would respectfully report as follows for the fiscal year ending June 30, 1908:

The past year has seen some considerable improvement in the buildings and grounds of the hospital, perhaps the most noteworthy being the beginning of the system of storm water ditches planned to carry off the large volumes of storm water that occasionally have worked havoc with our grounds. This is a most important project. The grounds composing the farm of this institution have suffered severely in the past from the ravages of storm water, and this damage was bound to increase with each succeeding storm. This system of storm ditches is planned to save the property from further loss, but it must be completed if any material good is to be had from it. This section is but the beginning. The efficiency of the present section depends upon the completion of the whole.

This hospital was given an appropriation by the last legislature for the re-roofing with slate of some of the buildings, which were originally roofed with cheaper material. This work is being done satisfactorily by day labor, and when all the buildings are roofed with slate, their appearance and efficiency will be greatly enhanced.

We are looking forward to the erection of a model concrete dairy barn, and a receiving cottage, both of which are badly needed, and for which we already have appropriations.

This hospital has suffered from an epidemic of diphtheria within the last few months. Fortunately, the disease has been mild in form, and the death list was trifling. Prompt and effective measures were used to combat the disease, the State Board of Health acting with the hospital physicians. Aside from this, the general health of the institution has been excellent.

Regular meetings of the Board have been held and the details of our work appear in the minutes of these meetings, copies of which are on file in your office, and to which reference is respectfully made for further information.

Respectfully submitted.

E. P. CLARKE,
GEO. L. HASSON,
H. B. WILSON,
H. McPHEE,
FRANCIS M. PARKER,
Board of Managers.

REPORT OF THE MEDICAL SUPERINTENDENT.

For the Fiscal Year ending June 30, 1908.

To the Board of Managers of the Southern California State Hospital.

GENTLEMEN: I herewith take pleasure in presenting to you my annual report of the work of this institution for the fiscal year ending June 30, 1908.

We regret very much to be obliged to chronicle an epidemic of diphtheria at this institution which broke out originally on the 18th of April, 1908. As it infected the employees first, it was quickly distributed over the institution. There were 48 persons attacked, and these were quarantined. All officers, employees, and patients not infected were given immunizing doses of antitoxine, and those infected received such doses as their condition required. The rooms and wards in which the infected persons had been living or working were fumigated with permanganate of potash and formaldehyde, and all personal effects, clothing, and bedding were thoroughly disinfected and the floors and walls of all wards were scrubbed with carbolic acid. The institution was placed in quarantine, and this was raised May 19th, after all persons infected with the disease had shown two negative cultures. There was a second outbreak of the disease on June 17, 1908. It was much milder than the first epidemic, and only about 23* persons showed membrane in their throats. The microscope revealed bacilli in the throats or noses of over 400,* but these did not display any clinical or systemic symptoms. We telegraphed immediately to Dr. N. K. Foster, Secretary of the State Board of Health, as we had done on the occasion of the previous epidemic, who arrived promptly. In addition to the means taken previously to

* These figures include all cases to August 21, 1908.

suppress the disease, the doctor sent a representative of the bacteriological department of the State Hygienic Laboratory at Berkeley (Miss Margaret Henderson) to take the cultures of all persons connected with the institution—officers, employees, and patients, and to quarantine all those who showed positive returns. This policy has been pursued and is still in use, and we believe it will effectually stamp out the disease.

IMPROVEMENTS.

We regret to say that none of the improvements for which money was appropriated by the last legislature have been finished, up to this time. The plans for the dairy barn are complete, and the award will doubtless be made for building the same at the next meeting of the Board of Managers. The plans for the receiving cottages are still in process of drawing, but will probably be ready at an early date. A portion of the roofs on one of the buildings has been finished. The storm drain is very nearly built; about three fourths of the work has been accomplished.

In addition to the regular work of keeping the various parts of the institution in repair and of making such minor changes as necessity or experience might suggest, the following has been accomplished:

First—Three thousand square feet of cement ditches have been built to replace the open earth work ditches, or the wooden ones which had rotted out.

Second—We replaced the three old ovens which had been in service in the bakery for many years, by two 12 by 14 thoroughly modern ones. We also placed in position a dough mixer, and two 8-foot steel dough troughs. We likewise placed an oven, a little smaller in size than those in the bakery, in the kitchen. This enables us to give roast beef to all the patients throughout the institution, and also to bake potatoes and to provide other articles of food which previously we were unable to give the patients because of insufficient room to cook the food.

Third—One of the greatest needs of this institution for many years was some method of lighting the roads. All the roads around the institution had been in darkness. This year we have placed in position 42 electric lights, giving an abundance of light to the roads encircling the front of the buildings, as well as those running to Highland avenue, and most of the State's property on Highland avenue.

Fourth—The laundry has received some care, but we were in hopes that we would be able to remodel it completely, changing the position of the machinery so as to increase the facilities of the entire department. We have not accomplished this, but we have placed in position two brass washing machines; an additional 42-inch centrifugal wringer and a body ironer. We have likewise changed, as far as possible, the old

method of heating irons by coal fire to the more recent and cleanly method of electricity, and at present there are 14 electric irons in use.

Fifth—We have placed in position under boilers Nos. 4 and 5 two Masons' Smokeless Combustion Company's furnaces. These have been in use a few months only, but they have proven very excellent in several ways; the smoke is consumed completely; there is no danger of blow back (which has occurred three times during the history of the institution), and doubtless there is considerable economy in the consumption of oil, but at this writing we are unable to determine precisely the amount saved.

Sixth—We have built in our garden a propagating house, for the purpose of starting tomatoes and other early tender vegetables, so as to give these a better start than they would obtain if planted in the ordinary way in the garden, and in the use of this propagating house we are enabled to give the patients vegetables two months earlier than we would otherwise.

Seventh—The State Engineering Department is engaged upon plans for a septic tank of sufficient capacity to take the entire sewage of the hospital. We trust that this improvement will be finished very speedily, as its needs has been a recognized one for several years.

TRAINING SCHOOL.

The Training School for Nurses opened the first day of October and closed the latter part of April, with the following graduates:

GRADUATES OF THE CLASS OF 1908.

Kathryn M. Shatto,	James Hospelhorn,	Lewis A. Moisan,
Lucy E. Beebe,	Edith Worley,	Semion J. Murphy,
Fred I. Kimball,	Margaret Moore,	Fred J. Atkinson.
Isaac J. Good,	George J. Butler,	

RECOMMENDATIONS.

I would respectfully recommend that appropriations be asked for the following objects:

Filter and Reservoir—\$17,000. I would urge this recommendation very earnestly. Each summer the mountains around this valley are becoming more and more popular places for campers, and as many of these people go into the hills because of ill health, the streams of the mountains are liable to pollution. Typhoid fever from this source occurs nearly every fall in some of the cities and villages in this vicinity, and as the water, which we use for irrigating purposes, comes from the streams so polluted, we are very liable sometime to have typhoid fever introduced into this hospital.

Roads and Walks—\$4,500. There are practically no prepared walks around this institution. Two thirds of the year our roads are a mass of dust several inches thick, and one of our most urgent needs is that these roads shall be macadamized or properly covered with oil, and bordered with a wide cement walk. This walk should extend from the station to the main building and then back to Highland avenue.

Convalescent Cottage for Men—\$30,000. This cottage should accommodate about 40 convalescent men patients. We have such a cottage for the women, which has been of the most practical use, and a similar cottage for the men is needed.

Laundry Improvements in Building and Machinery—\$4,500. The laundry building has not been enlarged since the population of the institution was 500, and it is now more than twice that size, hence the building should be enlarged. More machinery is likewise needed, especially a sterilizing tub, also another washer should be installed. The present mangle is too small and should be replaced with one of larger size.

Gas Machine and Receiver—\$5,000. This institution has to purchase its gas from a city six miles away; consequently the gas is received under pressure, and doubtless there is considerable waste. I believe it would be a matter of very marked economy if a gas plant with all the necessary machinery, including a receiver, was immediately installed at this institution.

Industrial Building, Store House for Steward and Dormitory for Men—\$35,000. The Steward's department at this institution is very much cramped for room. Two rooms have been used which are widely separated from each other, and are too small for their required purpose. We therefore think a building should be erected, the ground floor of which could be used for the Steward's storeroom and for the issuance of foods, while the second story could be arranged for shops of various kinds; such as, tailor shop, shoe shop, sewing rooms, etc., in which the patients could be supplied with congenial employment. A part of this floor should be set aside for the sleeping rooms for about 40 men—these men working in the shops, or being employed in the kitchen, or elsewhere about the institution.

Sections Nos. 2 and 3 of the Storm Drain—\$14,000. In order to finish the very much needed work of protecting the State's land from washing from the storm and irrigating water, I would respectfully recommend that the projected ditch be continued, and that sections 2 and 3, as planned by the Engineering Department, be built.

There are other repairs and improvements needed, but the above seem most imperative and are required for immediate use. The sums set

aside for these several objects are reasonable; they are based on experience and were determined upon after consultation with competent persons.

ACKNOWLEDGMENTS.

I beg to acknowledge my obligations to all loyal workers of this institution, and especially to Dr. Jessie H. Simpson, our woman physician, upon whose shoulders rested most of the burden of caring for the infected patients during the recent epidemic of diphtheria.

Respectfully submitted.

A. P. WILLIAMSON,
Medical Superintendent.

HOME FOR FEEBLE-MINDED CHILDREN.

REPORT OF THE BOARD OF MANAGERS.

For the Two Fiscal Years ending June 30, 1908.

ELDRIDGE, CAL., September 9, 1908.

To the State Commission in Lunacy.

GENTLEMEN: We have the honor to submit herewith our biennial report for the fifty-eighth and fifty-ninth fiscal years, as required by law.

In making this report, we have adopted that of the Superintendent of this institution, Dr. William J. G. Dawson, as it covers all the ground required; and the recommendations therein made, and the appropriations and the needs of the institution as a basis for appropriations therein asked for from the State legislature, meet with our full approval.

C. E. HAVEN, President.

A. C. BANE,

WILLIAM LYONS.

J. P. BERRY.

WALTER FREAR,

Board of Managers.

F. A. CROMWELL,

Secretary of Board of Managers.

REPORT OF THE MEDICAL SUPERINTENDENT.

For the Two Fiscal Years ending June 30, 1908.

*To the Honorable Board of Managers of the California Home
for the Care and Training of Feeble-Minded Children.*

GENTLEMEN: In conformity with the requirements of the law I herewith submit my report for the biennial period ending June 30, 1908.

In my last report I referred to the serious damage done to our buildings by the earthquake of April 18, 1906, and to the fact that the special session of the legislature (June, 1906,) appropriated the sum of \$72,500 for reconstruction purposes. The money thus appropriated has been

judiciously expended, with the result that our buildings are now in much better condition than they were before the great disaster.

The legislature of 1907 made the following appropriations:

For the construction of dairy buildings and the purchase of dairy apparatus the sum of \$5,000.

For the completion of the main buildings (Administration Building) the sum of \$75,000.

For the construction and furnishing of two pavilions for colonizing epileptic patients the sum of \$20,000.

For the repairing and remodeling of the Manor House, reappropriating the sum of \$3,000, which had heretofore been appropriated for the erection of dormitories.

COHEN COTTAGE.

Mr. Hartwig A. Cohen, of San Francisco, generously donated the sum of four thousand (\$4,000) dollars towards the erection of a cottage for boys, with the understanding that his brother-in-law, Frank Tumbleson, be furnished with a room in said cottage and maintained for life.

To the above amount was added the sum of \$1,063 from the Eastman Fund (a trust fund made available for any purpose), and a small amount from our contingent fund, thus enabling us during the past year to erect and complete a very desirable cottage of wood and cement, of sufficient capacity to house twenty high-grade boys.

OTHER NEW BUILDINGS AND IMPROVEMENTS.

During the past year we have also built and equipped a new dining-room for girls in the recess in front of the old dining-room, thus enabling us to feed our boys and girls at the same hours in separate dining-rooms.

We have just completed a very fine building of reinforced concrete for female inmates, principally with the appropriation by the legislature of 1905; seventeen thousand five hundred (\$17,500) dollars being appropriated for the erection and furnishing of same. This building will accommodate fifty girls.

We have also nearly completed a boys' epileptic cottage, and have in course of construction a similar one for girls, for which the appropriation of \$20,000, before mentioned, was granted; both buildings being built of wood and cement. They are placed on commanding sites on elevations back of the main institution, and will house about forty inmates each.

We are also erecting a new dairy barn, for which the appropriation of \$5,000 before mentioned was granted, and hope to have it completed in the near future.

We have about completed a wooden annex to the Boys' Nursery at an estimated cost of \$1,400. This building is intended to be used for

playroom, kitchen, and dining-rooms. We purpose to convert the nursery building proper solely into dormitories for the accommodation of the little fellows, most of whom are of low grade, and also to enable us to admit the large number of applicants of this class who are awaiting admission.

The plans for a new Manor House have been approved, and we expect to erect the building this fall.

We have developed our poultry plant so that it has become practically self-sustaining.

We have built a new bake oven at a cost of \$739, also erected an oil tank near our pumping plant costing \$1,042, and have installed a new boiler in our powerhouse at a cost of \$834—all of the above having been paid for out of our contingent fund.

We have planted 30 orange and lemon trees, 155 cherry trees, 1,000 grapevines, all table varieties, and 1,600 blackberry, raspberry, and loganberry vines. Our large orchards of fruit trees are in splendid condition, and promise this season an abundant yield of fine fruit, including pears, peaches, apples, prunes, etc.

We have been utilizing the sewage water from our septic tank at intervals to irrigate a field of about eight acres sown to alfalfa, and the result is very encouraging, enabling us to cut four crops, amounting to thirty or forty tons annually.

It has been considered by some that farming by the State did not pay, but our statistics prove to the contrary. The report of the Steward on the farm, garden, dairy, and poultry yard for the biennial period ending June 30, 1908, shows the receipts and disbursements and the profit for each year as follows:

YEAR ENDING JUNE 30, 1907.

Products used by the "Home".....	\$16,363 10
Products sold	1,034 93
<hr/>	
Total receipts from farm	\$17,398 03
Cost of production	13,255 16
<hr/>	
Profit for the year	\$4,142 87

YEAR ENDING JUNE 30, 1908.

Products used by the "Home".....	\$16,296 50
Products sold	1,320 71
<hr/>	
Total receipts from farm	\$17,617 21
Cost of production	15,250 31
<hr/>	
Profit for the year	\$2,366 90

The above figures show a total profit for the biennial period of \$6,509.77 over and above the cost of production.

We have added to our water supply by piping to our reservoirs from Fern Spring, but the supply is still inadequate for fire protection and domestic purposes, especially during the dry months of the year.

Last November I purchased for the "Home" an up-to-date kinetoscope (moving-picture machine), paying for the same out of the Christmas fund, and during the winter and spring months we gave entertainments for the benefit and pleasure of the inmates.

We have purchased a large number of books during the past two years, and have now a well-equipped library of 554 volumes.

Last September we placed on exhibition at the State Fair, Sacramento, a very creditable school exhibit, consisting of grade, kindergarten, and fancywork, for which we were awarded a small cash prize, a first premium, and a diploma. We expect to have even a better exhibit at the State Fair this coming fall, notwithstanding the fact that we have but three school teachers, and only about one fourth of our entire number of inmates are capable of some book learning. Probably one half, however, do a large part of the detail work of the institution.

The inmates, as a rule, are a happy and contented lot, and nothing but kindness is allowed in the government of the institution.

LAYING OF THE CORNER STONE OF THE ADMINISTRATION BUILDING.

The corner stone of the Administration Building of the California Home for the Care and Training of Feeble-Minded Children was laid by the Grand Lodge of Free and Accepted Masons, Thursday afternoon, June 11, 1908, Most Worshipful Grand Master Perrine officiating. The Masonic fraternity responded cheerfully, and there was a large gathering of people from the different parts of Sonoma County and other portions of the State to enjoy the exercises. A fine spread was served under the beautiful oaks near the Manor House preceding the ceremonies, and at the close an interesting and instructive programme was carried out successfully. Our "Home" band and a scarf drill by some of our girls were especially commended. Manager Bane's grand oration was a special feature of the occasion.

As a matter of record it might be well to state that this same stone was first laid November 19, 1890, but for over seventeen years lay buried in the earth, there having been no building erected upon it.

POPULATION.

Our institution is growing rapidly. The number of inmates remaining June 30, 1906, was 594. Our present population June 30, 1908, numbers 729. We admitted 63 patients (including 3 returned escapes) during the year ending June 30, 1907, and 149 patients (including 8 returned escapes) during the year ending June 30, 1908. The number discharged, died, etc., for the biennial period was 77.

Of the whole number of inmates, 216 are epileptics—136 males and 80 females. The average number of spasms, per day, for the whole lot is about forty. Experience shows that epileptics should be separated from the feeble-minded, as they are often a menace to the latter, especially before or after a spasm.

CAUSES.

Briefly, it may be stated that among the causes of idiocy and imbecility, acting before birth, the family history usually shows phthisis, insanity, imbecility, intemperance, etc., to be common factors. Also in the case of epilepsy, heredity and intemperance of parents are considered to be the principal causes.

LEGISLATIVE WANTS.

As a basis for legislation I respectfully submit the following:

- An appropriation of \$10,000 for refrigerating plant and building.
- An appropriation of \$10,000 for playroom for boys.
- An appropriation of \$2,000 for carpenter shop.
- An appropriation of \$7,500 for enlargement of powerhouse and two boilers, with blacksmith shop attached.
- An appropriation of \$5,000 for fencing.
- An appropriation of \$15,000 for enlarging and repairing hospital.
- An appropriation of \$5,000 for water development.

On May 1, 1908, Dr. Zilda Turner-Pettis, Second Assistant Physician, resigned, and I appointed in her stead Dr. Anna M. Gutzwiller, the appointment to take effect July 1, 1908.

ACKNOWLEDGMENTS.

I gratefully acknowledge donations by friends of the "Home" of money, etc., at Christmas times, which enable me to suitably remember our children at Christmas and throughout the year.

To General Superintendent Dr. F. W. Hatch and Hon. B. B. Deming of the Lunacy Commission; also Secretary Gates and other members of the State Board of Charities, I am indebted for visits and timely advice.

To the officers and employees of the "Home" I tender my sincere thanks for their valuable assistance in carrying on the work so successfully.

To you, gentlemen, comprising the Honorable Board of Managers, I am ever appreciative of your hearty coöperation in every way that tends toward the welfare of the institution.

Respectfully submitted.

WM. J. G. DAWSON,
Medical Superintendent.

TABLE I.

Movement of Patients during the Year ending June 30, 1907.

	Males.	Females.	Total.
Number of patients June 30, 1906	327	267	594

TABLE IX.

Showing Autopsies made from July 1, 1906, to June 30, 1908.

25. July 6, 1906—I. G. K., f. Large cavity at apex of right lung; many tuberculous areas through middle and upper lobes; cavity contained very fetid pus. Left lung normal. Kidneys shrunken. Spleen shows many tuberculous areas, miliary in character. Stomach much dilated. Many ulcers in duodenum, probably extending through entire tract. Mesenteric glands much enlarged.
Cause of death: Tuberculosis.
26. July 12, 1906—H. R., m. Both lungs adherent to chest wall; large pericardial effusion. Tubercles, caseous areas and many cavities scattered through both lungs, but particularly on the right side. Lungs adherent to stomach, pancreas, diaphragm and liver. Entire thoracic viscera matted together.
Cause of death: Tuberculosis.
27. August 25, 1906—F. H. J., m. Volvulus of intestines.
Cause of death: Acute intestinal obstruction.
28. September 29, 1906—G. A. L., f. Apex of each lung infiltrated with tubercular deposit. Pneumonic patch in upper right lobe. Spleen thoroughly infiltrated with large tubercles.
Cause of death: Miliary tuberculosis.
29. October 13, 1906—H. T., m. Heart small. Old perihepatitis. Kidneys deep red, cortex atrophied.
Cause of death: Chronic diffuse nephritis.
30. November 12, 1906—L. C. W., f. Pericardium adherent over whole anterior surface and about two thirds the posterior surface. Walls of right ventricle thickened. Cyst in right kidney. Liver large and pale; found fatty by microscope.
Cause of death: Pericarditis and fatty liver.
31. November 12, 1906—M. J., m. One pint turbid pleuritic effusion on left side. Also a pericardial effusion. Left lung covered with plastic lymph; in lower lobe a large gangrenous area amounting to two thirds the lung.
Cause of death: Gangrene of lung, with pleurisy.
32. November 26, 1906—J. S., m. Adhesions with some fresh bands of lymph exist between pericardium and surface of the heart from the base halfway to the apex. Very large fibrinous clots present in both auricles and both ventricles. Traces of old endocarditis.
Cause of death: Septic pericarditis, with compound fracture of maxilla.
33. January 17, 1907—E. M. F., f. Pericardium full of blood-stained serum. Mitral valve thickened and bound down, puckered and misshapen. Gall-bladder much hypertrophied and packed with gall-stones (455).
Cause of death: Mitral stenosis.
34. February 25, 1907—H. U., m. A dilated sac, 11 inches long and 6 inches in diameter, represents the descending colon and rectum fused into one mass. In the jejunum was a small intussusception.
Cause of death: Acute obstruction of bowels.
35. March 5, 1907—A. W., f. Ovaries cystic. Heart small.
Cause of death: Status epilepticus.
36. July 23, 1907—M. L., m. Leptomeningitis old and recent. Scar of old cerebral hemorrhage hardly discernible on left side. Atrophy of mucosa of stomach and intestines.
Cause of death: Marasmus due to spinal disease.
37. August 22, 1907—M. D. B., f. Right pleural cavity two thirds full of bloody fluid highly offensive in smell. Large, ragged, gangrenous cavity in upper lobe of right lung.
Cause of death: Gangrene of lung.

38. December 22, 1907—F. L.^a P., f. Right ventricle occupied by an organized clot. Dropsy of brain present. Porencephalic sacs present, representing the right half of the cerebrum and the left half of the cerebellum.
Cause of death: Thrombosis of heart.
39. December 24, 1907—H. M. T., f. Right kidney cortex extremely thin: malpighian bodies and papillæ congested with ill-defined boundaries. Left kidney entirely replaced by a large and a small cyst. Antemortem clot in right auricle.
Cause of death: Chronic diffuse nephritis.
40. February 23, 1908—L. M. A., f. Heart small. Right lung clear. Left lung tuberculosis at apex over considerable area.
Cause of death: Tuberculosis.
41. April 8, 1908—V. G., m. Ulcerative endocarditis and lepto-meningitis.
Cause of death: Acute rheumatism, with ulcerative endocarditis and lepto-meningitis.

LICENSED PRIVATE ASYLUM SYSTEM.

CLARK'S SANITARIUM—STOCKTON.

ASA CLARK, M.D., PHYSICIAN IN CHARGE.

Located at the corner of South and Center streets. Distance from Southern Pacific Railroad, about one mile; from Santa Fe Railroad, one half mile. Cars of Central Traction Company pass the Sanitarium. Number of patients September 1, 1906, 40. Number of patients limited to 75. Minimum rate for care and treatment, \$60 per month.

The buildings are two stories in height, and the sanitary conditions are perfect. The corridors are wide, airy, and light, affording such patients as can not be trusted on the grounds, and all others during stormy weather, ample room for exercise.

The Sanitarium is located on a tract comprising forty-five acres, the greater part of which is devoted to dairy purposes. The milk, butter, chickens, and eggs are products of the place and are supplied in abundance.

The requirements for admission are justification by consent of patient or patient's natural or legal guardian.

Post office box, 297. Telephone, Green 351.

LIVERMORE SANITARIUM—LIVERMORE.

JOHN W. ROBERTSON, M.D., PHYSICIAN IN CHARGE.

Located a quarter of a mile from Southern Pacific Railroad depot. Number of patients September 1, 1906, 54. Number of patients limited to 60. Minimum rate for care and treatment, \$100 per month. Mental department contains eight segregated cottages for proper isolation and segregation. All cottages one story, containing from six to ten patients in separate rooms or suites. No inclosures or barred windows. Hydrotherapy basis of treatment. No legal steps necessary, but must have statement from friends and physician.

Post office address, Drawer S. Telephone, Main 71.

GARDNER SANITARIUM—BELMONT, SAN MATEO COUNTY.

A. M. GARDNER, SUPERINTENDENT AND PHYSICIAN IN CHARGE.

H. C. McCLENAHAN, ASSISTANT PHYSICIAN.

On coast division of Southern Pacific Railroad, depot Third and Townsend streets, San Francisco. All patients and visitors are met on arrival at Belmont by carriages and taken to the Sanitarium, distance one half mile.

Number of patients limited to 60. Lowest rate for care and treatment, \$125 per month. Number of patients September 1, 1906, 33.

• Patients suffering from contagious diseases are not admitted.

The Sanitarium buildings consist of those erected by the late Senator Ralston as his summer home. The rooms are large and well ventilated, and so arranged as to be filled with sunshine the greater portion of the day. All sewage is carried from the buildings through private sewers to the bay, thereby doing away with the necessity of cesspools.

The ornamental grounds consist of about fifteen acres, under a high state of cultivation. Old oaks and other trees give an abundance of shade, adding materially to the pleasure and comfort of the patients. The entire landed property of the Sanitarium consists of seventy-seven acres, through which are drives and walks which allow of abundance of exercise without the patients coming in contact with persons not connected with the Sanitarium.

All the latest and approved means and methods adapted for the treatment and care of mental and nervous disorders, the drug and liquor habits, are in daily use at the Sanitarium.

Nurses are not allowed to wear uniforms, as it is desired that no apparent distinction should exist between nurses and patients when out walking or driving.

Post office address, Belmont, San Mateo County, Cal. Telephone, Main 41.

OSBORNE HALL—SANTA CLARA.

DR. ANTRIM EDGAR OSBORNE, PHYSICIAN IN CHARGE.

Located on block bounded by Franklin, Lincoln, Jefferson, and Liberty streets, Santa Clara, Cal.; office, 1590 Franklin street. It is three fourths of a mile from Santa Clara station, Southern Pacific Railroad train, bus, or street car. Electric line from San Jose has terminus opposite block.

Number of patients limited to 50.

Number of patients on hand September 1, 1906, 25.

Minimum rate for care, etc., \$30 per month.

There is a department for the care, training, and education of children suffering from nervous disorders and from all forms of mental weakness; a department for adults suffering from the milder and more tractable forms of mental disease; and a department for the aged: senility, dementia, etc. Epileptics and paralytics are also admitted when accommodations can be so applied.

Cottages are of frame, with modern conveniences and suitably equipped for the work. Patients are segregated and cared for according to class as far as possible. Grounds are kept attractive and offer seclusion and privacy. There are no special forms governing admission. Patients may be entered or removed at any time.

Post office address, Santa Clara, Cal. Telephone, North 201.

SOUTHERN CALIFORNIA SANITARIUM FOR NERVOUS DISEASES.

J. H. McBRIDE, M.D., PHYSICIAN IN CHARGE.

Accessible by Pacific electric cars from Los Angeles and Pasadena, and Santa Fe Railroad at Lamanda Park station. Number of patients limited to 30. Number of patients September 1, 1906, 21.

Main building heated by hot water; three cottages heated by furnace and lighted by electricity. Best modern equipment. All forms of baths. Massage and electrical treatment. Minimum rate, \$25 per week.

Post office address, Pasadena, Cal.

PASADENA SANITARIUM.

T. W. BISHOP, M.D., RESIDENT PHYSICIAN.

Number of patients, 25.

Main building and cottage. Facilities for hydropathic treatment. Heated by hot water, electric lighted, modern plumbing.

Post office address, South Pasadena, Cal.

BIRD HAVEN.

SARAH WOOD, MANAGER.

An institution located on the outskirts of San Jose, and reached by the street cars of that city. A private home for the care of feeble-minded of any age.

Capacity, 16 patients.

Post office address, San Jose, Cal.

STATE OF CALIFORNIA,
DEPARTMENT OF THE STATE LIBRARY,
SACRAMENTO, CAL., June 30, 1908.

To his Excellency, JAMES N. GILLET,
Governor of California.

SIR: We have the honor to submit the Biennial Report of the State Librarian for the two years ending June 30, 1908.

By order of the State Board of Library Trustees.

ALLEN B. LEMMON, *President;*
BRADNER W. LEE, *Trustee;*
CHAS. S. GREENE, *Trustee;*
W. C. VAN FLEET, *Trustee;*
JOS. STEFFENS, *Trustee.*

REPORT OF THE STATE LIBRARIAN.

To the Honorable Board of Library Trustees of the California State Library—

GENTLEMEN: I have the honor of submitting my report covering the transactions of the State Library for the fifty-eighth and fifty-ninth fiscal years, ending June 30, 1908.

Balance on hand July 1, 1906.....	\$8,285 26
Amount received during fifty-eighth and fifty-ninth fiscal years.....	82,131 40
Total	<u>\$90,416 66</u>
Expenditures during fifty-eighth and fifty-ninth fiscal years.....	<u>84,070 50</u>
Balance June 30, 1908.....	\$6,346 16

A detailed financial statement is appended (Appendices A and B), showing debits and credits for each fiscal year, also total expenditures for the two fiscal years (Appendix C).

On March 18, 1907, the act of the Legislature increasing the income of the Library from \$3,000 to \$3,500 per month was approved.

BOOKS.

For a detailed statement of the number of books added to the Library, see Appendix D. The unusual expenses incident to moving and storing and bringing back the Library to the Capitol explain why the books added to the collection during this biennial period are so few.

OUT OF THE CAPITOL.

During the whole of the two fiscal years ending June 30, 1908, the activities of the Library have been greatly hindered by having to move out of the Capitol, and by the great amount of extra work required in moving back again. It was impossible in the cramped quarters at Maple Hall to serve the public, except through the extension department. Consequently the staff devoted itself to such improvements of the various library tools as would make the collection more effective when the doors should again be thrown open to the reading public.

NEW QUARTERS.

The new quarters in the Capitol are not ideal, but the one thing imperatively needed is supplied; that is, greater space. The fact, however, that the Library rooms extend from basement to fourth floor and from one end to the other of the top floor makes ready supervision and quick service almost impossible. A private elevator would have aided greatly in getting books to the reading room: this defect may be partially remedied by the installation of a book lift. Owing to the lowness of the ceiling and the absence of a large air chamber above, the fourth floor rooms are unusually warm in summer. However, while as yet all available shelf room has been utilized, it is evident that for the next few years the Library will have adequate stack space for the books.

CATALOG DEPARTMENT.

The work of this department has gone along the lines indicated in the preceding report. The books on continental history and travel have been recataloged; and work has been continued on the books listed in the old card catalog which, it is hoped, may soon be done away with. The volumes currently received have been cataloged. The most satisfactory piece of work done by the department has been the recataloging of the law collection. The text-books, reports, and digests are practically finished, and work will be begun on the statutes as soon as possible. Owing to the fact that in times past many different hands have been employed in listing the law books, its catalog was full of errors and omissions. The new one, worked out in the light of what has been done in the better law libraries of the country, is believed to be a very satisfactory catalog. As in times past Library of Congress printed cards have been used whenever obtainable.

The work of the catalog department has been interfered with by the resignation in two instances of the assistant cataloger and the interim which seemed unavoidable between the leaving of one and the coming of her successor. A second assistant would be a valuable addition to the staff.

REFERENCE AND LOAN DEPARTMENT.

The work of this department had scarcely begun when it was suspended on account of the removal from the Capitol; but enough was done to indicate the value of such an undertaking to the residents of the State. Many lists and bibliographies have been collected, and an adequate reference library will be brought together on the shelves of the reading room. The disastrous results of the earthquake and fire of April, 1906, make the needs of such work all the more evident. Dur-

ing the time that the Library has been closed repeated requests for books have come from various places in the State, showing that the State Library is looked upon as the source from which information may be drawn, and from which may be borrowed the many books which smaller libraries may not hope to acquire.

PERIODICAL DEPARTMENT.

For a list of the current periodicals received see Appendices E, F, and G.

LAW DEPARTMENT.

Fortunately the Law collection was not greatly disturbed by the repairs of the Capitol; some of the older text-books and little used reports and statutes had to be packed away, but the quarters were not vacated. The demand for law books, and especially the court records, continues to increase.

The shelf room of this department is practically filled, and little additional space which is conveniently near is to be had. Shelves are being placed in small rooms each side of the main entrance, but these will not long furnish enough space to provide for the usual increase.

SOCIOLOGICAL DEPARTMENT.

Relations have become established between this department and those of a similar character elsewhere, so that the amount of valuable material coming in by way of exchange is large. Indexes, notes and clippings are constantly being prepared, making quickly available the mass of information which we have on current questions of interest. The demands upon the department by State officers and others are rapidly increasing. A room, connecting with the Law Library, giving much needed space for arranging this growing mass of material will greatly aid in getting at information desired.

CALIFORNIA HISTORICAL DEPARTMENT.

The work of this department is becoming so widely known over the State that scarcely a day passes without the receipt of some valuable book, picture, or other article which throws light on early California history. Account books, broadsides, photographs, and such things, which have long been gathering dust in the attics of pioneer homes, are gradually coming to light; and the owners with commendable regard for the worth of the material to the historian are sending their treasures to the State Library.

Cards have been sent out widely asking for information about the pioneers, authors, musicians, and artists of the State. And not only are the cards coming back in gratifying numbers, but often with them we receive photographs, manuscripts, music scores, and autograph copies of books.

Work is continued on the newspaper index which day by day proves itself of great value when it points instantly to articles and write-ups which otherwise would be sought for laboriously by turning through the bound files.

EXTENSION DEPARTMENT.

Traveling Libraries Division.

There are now 401 communities in California that have formed library associations and have the privilege of borrowing State traveling libraries. It has been found that the success of the undertaking depends largely on securing the right person to take charge of a collection. The demand, however, has been as great as could be cared for under existing conditions. Many of the books have now been in use over four years and are beginning to be badly worn. So much repair work has been necessary that extra help has been employed on occasion in order that the libraries might be sent out promptly. In getting books to replace those no longer in usable condition effort is being made to secure volumes in more serviceable bindings.

County Library System.

The growth of the county library extension plan promises to relieve in some degree the demand on the State Library for traveling libraries. The county rather than the town as a unit of library activity I believe to be the one on which this branch of our popular educational system will be made effective, for the reason mainly that the county can give better financial support. The fact that under the county system the custodian of each deposit station will receive some remuneration for his services will go far toward securing persons of capability to do the work. The distance of the deposit stations from the center of distribution being shorter than in the State system, the books can be exchanged more frequently with less wear, less loss of time and less expense. Better supervision from the headquarters of distribution will be possible, and the borrowers from the deposit stations may more frequently visit the main collection for consultation and selection. It is not probable, however, that the county extension plan will entirely supersede the State traveling library system; but it will enable the State Library to send its collections of books to the outlying and sparsely settled districts.

I am watching with interest the working out of the plan in Sacra-

mento County, which is the first county in California to give adequate support to the undertaking. During the July, 1908, session of the Board of Supervisors the sum of \$3,500 was appropriated to start the work. The Sacramento (city) Public Library, which is excellently organized and has a well-selected collection of about 40,000 volumes, is the head of the system. Every resident of the county is eligible to borrow books from either the deposit stations or the main Library, with every privilege now accorded the city residents. To begin with, twenty deposit stations will be established throughout the county, and later others, as the demand increases. Each collection will consist of fifty books selected from the present and future stock of the Library, and will include both new and used books. The composition of the deposit collections will be changed from time to time as may seem best. Weekly shipments of books called for at deposit stations, but not found in deposit collections, will be made. So far as is possible each deposit station will be a branch library, and every effort will be made to put into the hands of the county reader the books that he desires. In some degree, at least, I think the Sacramento County system may be taken as a model by which other counties may profit.

Study Club Division.

During this biennial period nothing has been attempted in this division. When the main collection of the Library is again opened to the public, however, this work will again be taken up.

Public Libraries Division.

The work of this division is largely done by the two organizers, whose aid is in constant demand, advising the authorities of towns expecting to establish public libraries and assisting librarians and attendants in those libraries already established. This help to the libraries in smaller towns where trained librarians may not be hoped for yet awhile is of greatest value.

The division is getting together a fine reference collection on all subjects of library economy. Plans and views of new buildings conveniently arranged for consultation will often mean a successful library to a community which without this means of knowing what has been done would fall into the errors so often made by designers of such structures.

Nothing that is being done by this division seems to be more popular than the library institutes. Those attending not only receive instruction in the best methods of doing their work, but they also come in contact with their fellow workers and are given an opportunity to compare ideas and to get new suggestions.

Thirty libraries have been organized since this division was established.

Books for the Blind Division.

There are now 287 blind borrowers, scattered all the way from Sis-kiyou County to San Diego. The total accessions number 775 volumes, in the four types: New York Point, American Braille, Moon, and Boston Line Letter. The demand for books is steadily increasing, and the blind express great satisfaction in having all the books they want for study and recreation.

PRESENT NEEDS OF THE LIBRARY.

The facts set forth under the heading "Future Needs of the Library" in the preceding biennial report may well be read over again. At that time the income of the Library was insufficient; at the present time it is far more so. The surplus which had accumulated in the Treasury is gone; the demands upon us have become increasingly great. If the California State Library is to maintain the position which it now occupies as one of the active, working libraries of this country, its financial support must be more liberal. There is not a department of this institution that does not urgently need additional assistants. And on the present income it is impossible to buy the books which we are expected to have on the shelves. It is hoped that an income more nearly sufficient to our needs may be secured; and when I see the great service which the State Library is doing the people of California, I am convinced that the legislators will not overlook our needs.

For the sake of comparison the following table which appeared in the preceding report has been brought as nearly up to date as possible:

Library.	Population 1900.	No. of Employés.	Appropri- ation.	Other Sources.	Total.
Boston Public	560,892	454	\$325,000	\$17,309	\$342,309
Brooklyn Public	1,166,582	260	338,971	27,000	365,971

STATE OF CALIFORNIA, }
 SACRAMENTO COUNTY. } ss.

I, J. L. Gillis, being duly sworn, on oath depose and say: That I am the secretary of the Board of Trustees of the California State Library; that the foregoing statement of the expenditures of the State Library for the fifty-eighth and fifty-ninth fiscal years, from July 1, 1906, to June 30, 1908, is true and correct.

J. L. GILLIS.

Subscribed and sworn to before me, this 17th day of September, A. D. 1908.

ERNEST BRUNCKEN,

[SEAL.]

Notary Public, Sacramento County, California.

4. STATISTICS AND PUBLICATIONS—Messrs. Taylor, Moore, and McLean.
5. AUDITING—Messrs. Rosenthal and Ramm.

SAN FRANCISCO, CAL., November 7, 1908.

To His Excellency, JAMES N. GILLET, Governor,

State Capitol, Sacramento, California.

DEAR SIR: We have the honor to transmit herewith our third biennial report, covering the two years ending June 30, 1908, showing in detail:

First—The condition of the institutions under our supervision, with such suggestions as we deem necessary for legislative and executive action;

Second—Such further suggestions as we deem necessary and pertinent for the best interests of the State in the general field of charities and corrections; and

Third—The transactions of the Board for the biennial period commencing July 1, 1906, and ending June 30, 1908.

Respectfully submitted.

J. K. McLEAN,

E. C. MOORE,

CHAS. A. RAMM

LOUIS ROSENTHAL,

W. S. TINNING,

State Board of Charities and Corrections.

W. ALMONT GATES, *Secretary.*

**An Act to create a State Board of Charities and Corrections,
prescribing its duties and powers, and appropriating money
therefor.**

[Approved March 25, 1903.]

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. A State Board of Charities and Corrections is hereby created of six members, to be appointed by the Governor, with the advice and consent of the Senate, not more than three of whom shall be of the same political party. Such members shall hold office for the period of twelve years, and until their successors are appointed and qualified; *provided*, that the members of the first Board appointed under this act shall, at their first meeting, so classify themselves by lot that two of them shall go out of office at the end of four years, two at the end of eight years, and two at the end of twelve years, and an entry of such classification shall be made in the minutes of said Board, and a duplicate thereof shall be filed in the office of the Secretary of State. Women may be appointed members of said Board, or hold any position in the appointment of said Board. No person shall be appointed a member or continue to act as such while he is a trustee, manager, director or other administrative officer of an institution, subject to the terms of this act. Appointments to fill vacancies before the expiration of such terms shall be made for the residue of terms in the same manner as original appointments. The Governor shall be *ex officio* a member of said Board.

SEC. 2. The members shall act without compensation, but shall be allowed their actual necessary expenses. The said Board may appoint a secretary, who shall receive such salary as may be determined by said Board, not to exceed twenty-four hundred (\$2,400) dollars per annum. All the expenses of said Board, including the salary of the secretary, shall not exceed the sum of six thousand (\$6,000) dollars in any one fiscal year, and said sum of six thousand (\$6,000) dollars is hereby appropriated annually therefor out of any moneys in the treasury not otherwise appropriated. The secretary of said Board shall execute a bond in the sum of five thousand (\$5,000) dollars, and take the oath of office prescribed by the Political Code for the executive officers of this State. The Board shall provide itself with an office in the city and county of San Francisco. Meetings of the Board may be held at such times and in such places in the State of California as said Board may

deem fit. It may make such rules and orders for the regulation of its own proceedings as it may deem necessary, and may fix the number of members necessary to constitute a quorum. The failure of a member to attend three consecutive meetings of said Board during any calendar year, unless excused by formal vote of the Board, may be construed by the Governor as a resignation of said non-attending member.

SEC. 3. The Board is hereby empowered and authorized, and it shall be its duty as a whole, or by committee, or by its secretary, to investigate, examine, and make reports upon the charitable, correctional, and penal institutions of the State, including the State hospitals for the insane, of the counties, cities and counties, cities, and towns of the State, and such public officers as are in any way responsible for the administration of public funds used for the relief or maintenance of the poor in public institutions or of any of the inmates of said institutions. All the persons or officers in charge of or connected with such public institutions, or with the administration of said funds, are hereby required to furnish to the Board or its committee or secretary such information and statistics as they may request or require, and allow said Board, committee, or secretary free access to all departments of such institutions and to all of their records. In order to secure accuracy, uniformity, and completeness in such statistics and information, the Board may prescribe such forms of report and records by the State Commission in Lunacy regarding the State hospitals for the insane and by such other officers, boards, or institutions as it may deem necessary, and also such forms of registration at all public institutions referred to in this section as it may require. The State Commission in Lunacy, on behalf of the institutions under its charge, and the officers of all other institutions, and all officers in any way responsible for public funds used for the relief of the poor or the maintenance of any inmates of said public institutions, are hereby required to follow such forms, records, and registration so prescribed; *provided*, that the intent of this law is that, so far as possible, the Board shall make use of the forms of report, record, and registration now obtaining in the State Commission of Lunacy and other State boards and institutions. All plans of new buildings, or parts of buildings for any of the public institutions coming under the provisions of this act, or any additions or alterations in such buildings, shall, before their adoption by the proper officials, be submitted to the Board for suggestions and criticism.

SEC. 4. The Board shall have power to issue compulsory process to compel the attendance of any witness before said Board or any member thereof, and to require the production of such books or papers relating to any public institution mentioned in section three of this act as they may deem necessary; *provided*, that no witness shall be required to attend before said Board out of the county in which he resides. Any

member of said Board shall have power, and he is hereby authorized to administer an oath to any and all witnesses coming before said Board, or any member thereof, for examination, and to examine such witness or witnesses in reference to any matter relating to public institutions mentioned in section three of this act, appertaining to the inquiry before the Board or said member. Disobedience of a subpoena issued by said Board or refusal to be sworn, or to answer, shall subject such person disobeying or refusing to a forfeiture of one hundred dollars, to be recovered in a civil action brought in a court of competent jurisdiction by said Board in its name as plaintiff, the money recovered to be appropriated to the use of said Board.

SEC. 5. No provision in this act contained shall in any way be construed as preventing the Governor of this State from making a plenary investigation in reference to the conduct of any public institutions under the terms of an act of the legislature of this State. Furthermore, the Governor may at any time order an investigation by the Board, or by a committee of its members, of the management of the above-named institutions or any thereof.

SEC. 6. Three months prior to each regular session of the legislature the Board shall make a full and complete report to the Governor of all its transactions during the preceding two years, showing fully and in detail all expenses incurred and moneys paid out by it, and giving a list of all officers and agents employed, and the actual condition of all institutions under its supervision with such suggestions as it may deem necessary and pertinent, and with recommendations for legislative and executive action.

SEC. 7. The provisions of this act shall not apply to the Veterans' Home of California, located at Yountville, Napa County, nor to the Woman's Relief Corps Home at Evergreen, Santa Clara County.

SEC. 8. All acts and parts of acts in conflict with the provisions of this act are hereby repealed.

SEC. 9. This act shall be in force and take effect from and after its passage.

BY-LAWS.

OFFICERS.

The Board shall elect a president, whose duty it shall be to preside at all meetings and perform such other duties as usually pertain to the office of president, and who shall hold office for one year from and after the second Saturday in August of each year.

The Board shall elect a vice-president, who shall hold office for the same time, and who shall perform the duties of the president in case of the absence of the latter or his inability to act.

The Board shall elect a secretary, who shall hold office during the pleasure of the Board, and who shall receive such salary as the Board may determine, and whose duty it shall be to keep a record of the proceedings of the Board, to have charge of its office as executive officer, and to perform such other duties as are contemplated by the law creating the Board, and as the Board may from time to time direct.

MEETINGS.

The Board shall hold regular quarterly meetings on the second Saturday of February, May, August, and November of each year, at ten o'clock a. m., at its offices in San Francisco.

Special meetings may be held at the call of the president or of three members at such times and places as may be fixed. Notices of special meetings shall be mailed to the address of each member at least five days before the date of meeting.

The Board may meet at any time and place without notice, if six of the members are present or give their written consent thereto.

The nature of the business to be transacted shall be stated in the notice of special meetings, and no other business shall be transacted at such meeting without the consent of five members of the Board.

The president, vice-president, and secretary shall be elected or appointed only at a regular meeting or an adjourned regular meeting.

EXPENDITURES.

The secretary shall keep an itemized account of the expenditures of the Board, and of each member or officer thereof.

An Auditing Committee of two shall be appointed, whose duty it shall be to audit all expenditures of the Board, or any of its members or officers.

QUORUM.

Four members shall constitute a quorum, and a less number can not transact any business except to adjourn from day to day.

AMENDMENTS.

These by-laws may be amended by the vote of four members at any regular meeting without notice, or at a special meeting, provided notice in writing of the proposed amendment is mailed to each member five days before the date of meeting. The by-laws may be amended or suspended at any time by the unanimous vote of six members.

RECOMMENDATIONS FOR LEGISLATIVE AND EXECUTIVE ACTION.

STATE REFORMATORY.

1. That a State reformatory be created as soon as possible for prisoners between the ages of sixteen and thirty years who have never before been convicted of felony, such prisoners to be committed to such reformatory upon an indeterminate sentence. (Page 32.)

STATE PRISONS.

2. That a system of grading prisoners into three classes, with distinguishing uniforms, or dress, based upon meritorious conduct, as is now practiced in all the best prisons of the country, be established in our two State prisons. (Page 33.)

3. That the system of employment of prisoners, known as "The State Use System," that is, the manufacture of articles for use in the other institutions of the State, but not for sale in the market in competition with either laborer or manufacturer, be gradually established in our prisons. (Page 35.)

STATE REFORM SCHOOLS.

4. That the laws governing our State reform schools be redrawn so as to make the same provisions applicable to each, except that girls be not sent to Preston School. (Page 45.)

5. That the ages between which children may be sent to the reform schools shall be from nine to nineteen years. (Page 265.)

6. That when a child is committed to a State reform school upon the charge of vagrancy from a county in which such child has no legal residence, such county shall be released and exempted from the charges made by law, now or hereafter, for the support of such child in such reform school.

7. That an appropriation be made for the necessary equipment, materials, and instructors for the teaching of manual training, or sloyd, to boys; and for dressmaking, millinery, stenography, and office work, to girls, at the Whittier State School. (Page 43.)

8. That at an early date a girls' training school be established separate and apart from the boys' school, and the girls now at Whittier be removed to such girls' training school. (Page 47.)

STATE HOSPITALS FOR INSANE.

9. That the State Hospitals for Insane be authorized to accept for treatment voluntary patients who are legal residents of the State, and who are proper subjects for treatment in such hospitals, without the formality of a legal commitment. (Page 67.)

10. That increased accommodations, now demanded at all the hospitals, be made by means of cottages only. (Page 66.)

11. That for the demented, paralytic, and tubercular patients, and such chronic patients as can be easily managed, cheaper cottages, preferably of wood, be constructed, of such size and arrangement as is best adapted to these various classes. (Page 66.)

HOME FOR FEEBLE-MINDED.

12. That additional teachers and school facilities be provided.

13. That as soon as expedient a separate colony be established in connection with the Home, for the custodial care of adult feeble-minded women of child-bearing age. (Page 73.)

DELINQUENT CHILDREN.

14. That a law be enacted making it a cause for probation for a child under sixteen years of age to smoke cigarettes or tobacco in any form, or drink alcoholic liquors in saloons, or at all to excess, or to use cocaine, morphine, opium, or any similar drug, except upon prescription of a competent physician, and making it a misdemeanor for any adult to contribute to any child delinquency.

15. That in all the larger counties of the State there should be paid probation officers, and that such probation officers, when paid, should be paid by the county. (Page 174.)

16. That the age of majority for girls be raised from eighteen to twenty-one years. (Page 174.)

DEPENDENT CHILDREN.

17. That a law be enacted requiring that the question of dependency of a child shall be first determined by a court before the State shall assume any obligations for the maintenance of such child, and providing the method of such determination; and providing further that in the hearing upon the case of dependency of any child the court shall have the power to sever the parents' rights in and control over such child in cases of abandonment, willful neglect, ill treatment, or abuse, or when it appears that the parent is morally unfit to have the custody and training of such child. (Page 169.)

18. That the various "child-placing" agencies or associations now operating in this State in the work of procuring and placing dependent children into homes be brought under the supervision of this Board, to whom they shall make such reports as may be called for, and from whom they must obtain permission or consent to engage in such work.

19. That the orphan asylums of the State, receiving State aid, be required to make such reports to the State Board of Charities and Corrections as it may call for. (Page 170.)

PROTECTION OF FEMALE WARDS.

20. We recommend that a law be enacted making it a felony for any male officer or person having charge of any female in any hospital, almshouse, prison, or jail, or any male employee of any such institution, to have sexual relation with any such female under his care.

MATRONS IN COUNTY JAILS.

21. That a law be enacted compelling the employment of a matron in every county jail, and prohibiting the handling and care of female prisoners by male jailers exclusively.

BOARD OF CHARITIES AND CORRECTIONS.

22. That provision be made for a chief clerk in the office of the Board of Charities and Corrections, who shall rank next to the secretary in authority and be under his direction, and who shall serve as librarian and statistician of the Board, and perform such other services as inspector, or otherwise, as may be directed by the Board or secretary.

23. That provision be made for the printing, publishing, and mailing of a quarterly bulletin, under the direction of the Board of Charities and Corrections.

24. That authority be given the Board of Charities and Corrections to collect statistics of cost of county almshouses and jails, and of the relief of indigents.

PENALTY FOR FAILURE TO MAKE REPORTS.

25. That a penalty be attached for neglect or refusal on the part of any public officer, or the superintendent or managers of any charitable or correctional institution, to furnish any report now or hereafter authorized or required by law, being first requested so to do.

TENEMENT HOUSES.

26. That a law be enacted regulating the building and construction of tenement houses.

INSTITUTIONS UNDER THE SUPERVISION OF THE STATE BOARD OF CHARITIES AND CORRECTIONS.

1. The State Prison at San Quentin. John E. Hoyle, Warden.
2. The State Prison at Folsom. Wm. H. Reilly, Warden.
3. The Preston School of Industry. Wm. T. Randall, Superintendent.
4. The Whittier State School. J. P. Greeley, Superintendent.
5. The State Insane Hospital at Stockton. Fred P. Clark, M.D., Superintendent.
6. The State Insane Hospital at Napa. Elmer E. Stone, M.D., Superintendent.
7. The State Insane Hospital at Agnew. Leonard Stocking, M.D., Superintendent.
8. The State Insane Hospital at Ukiah. E. W. King, M.D., Superintendent.
9. The State Insane Hospital at Patton. E. S. Blair, M.D., Superintendent.
10. The Home for the Care and Training of Feeble-Minded Children at Eldridge. Wm. J. G. Dawson, M.D., Superintendent.
11. The Institution for the Deaf and the Blind at Berkeley. Warring Wilkinson, Principal.
12. The Industrial Home for the Adult Blind at Oakland. Joseph Sanders, Superintendent.
13. County hospitals and almshouses, 60.
14. County jails, 57.
15. City prisons and village lock-ups.

REPORT

OF

STATE BOARD OF CHARITIES AND CORRECTIONS

1906-08.

INTRODUCTION.

The statute creating this Board provides that "three months prior to each regular session of the legislature the Board shall make a full and complete report to the Governor of all its transactions during the preceding two years, showing in detail all expenses incurred and moneys paid out by it, giving a list of all officers and agents employed and the actual condition of all institutions under its supervision, with such suggestions as it may deem necessary and pertinent, and with recommendations for legislative and executive action."

This Board has been in existence five years, and the membership up to February last remained the same as when first organized. Since that time three new members have been appointed.

1. The offices of the Board, with all of their contents, were burned in the great fire in April, 1906, and the Board not only lost its library and statistical material, but like all others, was compelled to find temporary quarters for more than a year. On July 1, 1907, permanent offices were occupied in the Merchants' Exchange Building. Since that time much has been done to rehabilitate the office and start the foundations of a new library. The office lacks sufficient room, as the appropriation for the expenses of the Board is not sufficient to pay the high rentals now demanded for suitable rooms. This has brought much extra labor upon the secretary, who is only allowed one clerk, and has interfered somewhat with the efficiency of the work. Nor is the Board as well equipped as are similar boards in other states. With a much smaller territory to cover, though with more institutions to look after, the State boards of other states have the following number of employees: Massachusetts 82, New York 32, Indiana 11, Illinois 9, and Ohio 4. To cover the work of this Board thoroughly, even in normal times, would require an increased office force.

II. A State Board of Charities and Corrections is a representative of the people. The institutions of a state belong to the people. They pay the money to maintain them, and it is their right to visit them and see how they are conducted. This they can not do even in the city and county, much less in the State. There is nothing connected with state government about which the people know so little as about their state institutions. Who, then, is to tell whether the wards of the State are getting the proper care and treatment, or whether the money given for their maintenance is being honestly expended, or so expended as to produce the best results? If the people are to know these things they must have representatives to visit the institutions for them, and report back what is found there. For that purpose was this Board created, and to that end this report is made.

The importance of supervision can be best understood when we consider that during the past two years over thirteen thousand wards have been in our State charitable and corrections institutions, and over one and a half millions of dollars have been expended in their care and support, and that over forty-eight thousand wards have been in our county institutions, and that over one million dollars has been expended in their behalf. In the proper inspection and supervision of these institutions much good will result to those who are confined there, and much money will ultimately be saved to the taxpayers, but much more can be accomplished by inaugurating methods of prevention, which will cut off the source of supply. This work, however, is mostly in the abstract. It can not be measured up or looked upon with the eye. It is too important not to be well done.

The members of such a board having different political affiliations, and being connected with different church denominations and with no church, and having nothing to do with the expenditure of a single dollar appropriated for the maintenance of these institutions, are in a position to act impartially. During the biennial period the members of the Board have visited all the various State charitable and correctional institutions, and the secretary has also visited all of them frequently. In the beginning the Board directed the secretary to make official inspections, and in doing so he goes unannounced at irregular intervals. In making an inspection he endeavors to see every inmate and every room, to know the condition of the inmates, the condition of the institution itself, and the methods of administration and management. He has also visited every county jail and county hospital in the State, except in Del Norte and Imperial counties. He has been unable to visit the city jails for want of time. The summary and general conclusions of these inspections are given in this report.

Under the old system, the legislature was the only constitutional authority for investigating an institution. This met biennially, and if

scandals developed between sessions, it was possible for the "trouble breeders" to wreck an institution before an investigation could be made. Three times during the past two years such scandals have arisen in this State. In two cases this Board promptly made a thorough investigation, and reported its conclusions to the Governor and people of the State. In the third case, it participated with another commission in such an investigation. The findings in these investigations have not been satisfactory to all concerned, and, in such investigations never will be, but they have been the result of thorough inquiry and conscientious thought. The State should be pleased that so few scandals have occurred. The knowledge that such a Board stands ready to act promptly in all such cases has a strong deterrent effect. It also becomes a tower of strength to the management unjustly criticised. False accusations can be at once exposed, and the management relieved from this danger and the public mind set at rest.

The Board believes that it is more desirable to prevent bad conditions by timely suggestions and aid rather than to let them grow until they become a public scandal. It, therefore, follows the practice of first making its suggestions to the management, and only in case these suggestions go unheeded or conditions seem to warrant more severe action, does it report to higher authority.

The powers of this Board end with making its report either to the Governor or public, or both. It has no power of removal and no power of appointment. The Board can only make abuses public; the power of correction lies with others.

III. The law creating this Board provides as follows: "All plans of new buildings, or parts of buildings for any of the public institutions coming under the provisions of this act, or any additions or alterations in such buildings, shall, before their adoption by the proper officials, be submitted to the Board for suggestions and criticism."

It was rightly contemplated that the Board thus created would make not only a study of the conditions prevailing in our institutions, but would also make a study of the best methods of housing and care; that they would make themselves familiar with what existed in other states and other countries, and would thus be able to offer valuable suggestions in regard to, or criticisms of, proposed buildings. Such duties are imposed on similar boards of other states, and this Board has endeavored to prepare itself to perform that part of its duties, and has done so until this biennial period.

At the last session of the legislature a Department of Engineering was created, which provided for a State Architect and took the making of plans for new buildings for State institutions from the local boards of managers. This department has interpreted the law as exempting

it from any obligation to consult this Board, and has accordingly not done so. The State Board of Charities and Corrections therefore has had no opportunity to offer suggestions or make criticisms upon any of the plans for new buildings in connection with our State institutions since the creation of the Department of Engineering.

The Board has received plans for new county jails in the counties of Sacramento, Imperial, and Inyo, and revised plans for new county jails in the counties of Humboldt and Solano, plans for another story on the Los Angeles County jail, and for a branch jail at Vacaville, Solano County; also plans for a new county hospital in Santa Clara County and for a detention hospital in Ventura County. In each case the Board has made its suggestions and criticisms in writing, and filed the same with the proper officers. The Board has endeavored to get for the county the best possible for the money expended, and the boards of supervisors have generally accepted the suggestions of the Board and have been pleased with the help it has been able to give them. The Board has also been consulted about new jails by the supervisors of Madera and Stanislaus counties.

IV. The secretary and one member of the Board attended the National Conference of Charities and Corrections in Minneapolis, Minnesota, in 1907, and in Richmond, Virginia, in 1908. The secretary also visited the state reformatories at Mansfield, Ohio, and Elmira, New York, the state reform schools at Laurel, Virginia, and Rochester, New York, and the New York Juvenile Asylum at Dobbs Ferry and the George Junior Republic at Freeville, New York.

V. There are some statistics which this Board considers it very important to show, which it is not now able to get. This includes reports from the county auditors of the expenses of county hospitals, almshouses, and jails, and also the amounts disbursed in poor relief in the various counties. The statute creating this Board does not give it the right to demand this information, or make it obligatory upon the auditors to furnish it. As a result, we are unable to get with any degree of accuracy the cost of the poor to the counties of the State. It has been said that the relief of the poor in their homes has been abused in many places, and that a system is in operation which is making paupers rather than relieving the actual needy. If such is the case it ought to be made known, that it may be corrected. The collection of statistics ought not to be feared by the right-minded, and this Board asks of the legislature authority to compel the furnishing of such statistical reports.

VI. There are in the State twelve charitable and correctional institutions, sixty county hospitals and almshouses, and fifty-seven county jails. In addition to these, there are about 300 station houses, branch jails,

city and town lock-ups. In all of these minor jails persons charged with crime are held. It is of common knowledge that the conditions in some of them are very bad. The law makes it the duty of this Board to visit and inspect them all. At present the work must be done either by the members or by the secretary. The members of the Board have visited all the State institutions. The secretary has visited all of the State institutions several times, and has also visited all of the county hospitals and almshouses and county jails, except in Del Norte and Imperial counties. It is impossible for the members of the Board or the secretary to visit any considerable number of these minor prisons. If the Board is to perform its duty in respect to these, it will be necessary to appoint an inspector for that purpose, and to provide the means for paying his salary and expenses. The Board can not do this on the present annual appropriation.

VII. The Board, early in its existence, commenced the publication of a monthly census bulletin of the inmates of State institutions. This has consisted only of a single page, printed on a neostyle. Under this process the number from a single stencil is limited to about 200 copies. This bulletin has been mailed monthly to all superintendents and members of the governing boards of State institutions, State officers, and various newspapers. The demand for this, simple as it is, has exceeded our facilities. Again, there are many things arising in the course of our work which are of interest to the public, and which the Board would be glad to print and circulate if able to do so. The reports of inspections now await the biennial report before being given to the public, when they would be of more value if given while fresh. Frequently papers will be presented, or addresses given, of general interest in this field, but which do not now find their way to the public. These needs have been felt in other states, where there are State Boards of Charities, and have been met by the publication of a quarterly bulletin. The general work of charities and corrections in this State would be greatly advanced by the publication of such a bulletin, and this Board will gladly undertake the labor if an appropriation to cover the cost of printing and postage can be made.

VIII. We submit in subsequent pages our conclusions as to the needs and requirements of the State institutions, and recommend such legislation as we think necessary to their highest usefulness. We also give you some conclusions upon certain general subjects pertaining to charitable and correctional work of the State. We have adopted the policy of recommending nothing which does not receive our unanimous approval.

PART I.

THE STATE INSTITUTIONS.

CHAPTER I.

THE STATE PRISONS.

BOARD OF PRISON DIRECTORS.

ROBERT T. DEVLIN, <i>President</i>	Sacramento.
TIREY L. FORD.....	San Francisco.
WARREN R. PORTER.....	Watsonville.
CHARLES E. CLINCH.....	Grass Valley.
CHARLES SONNTAG.....	San Francisco.

1. THE STATE PRISON AT SAN QUENTIN.

JOHN E. HOYLE, Warden.

CENSUS.

The number of prisoners in San Quentin Prison June 30, 1908, was 1,670 men and 32 women, an increase over two years previous of 107 men and 7 women, a total increase of 114. The net increase for the two years previous was 112. The number of men prisoners committed during the two years was 1,226, and the number who were discharged, paroled, or pardoned was 996.

CHANGE OF WARDENS.

There has been a change in Wardens since our last report. Mr. John C. Edgar was compelled to resign on account of sickness and Mr. John E. Hoyle was appointed to succeed him. Mr. Hoyle had had no previous experience in this kind of work, but has shown a determination to learn and succeed. He has been in this position only about fourteen months, and the improvements in the physical conditions are evident.

LAND.

The plant consists of 215 acres of land occupying a point jutting into the bay, with a landing for vessels of small size. The land itself is not good for agriculture. Some vegetable gardens are cultivated, and the remainder is used for buildings and pasture land. The available building sites have been materially increased during the past two years by grading down a large hill south of the present prison wall, and using the material to fill in a stretch of low tide land west of the present buildings.

BUILDINGS.

The buildings consist of an office building outside of the wall and detached; the officers and guards' building, through which entrance to the grounds inside of the wall is made; on the north side of the enclosure is a building of two stories, used for offices of Captain of the Yard, Turnkey, etc., on the first floor; and the women's prison on the second floor. The cell blocks, four in number, occupy the south portion of the yard; on the west side is a building, two stories and basement, extending nearly across the width of the yard and containing the library, chapel, hospitals on the two upper floors, and the kitchen and general dining-rooms, tin shop and paint shop in the basement. This basement is level with the yard in the rear. Back of this, and close to it, is the furniture factory, a large three-story and basement building, well built and in fair condition, and not now much used in manufacturing. In the basement are carpenter and machine shops and laundry. Above, a part of one floor is used as a dormitory for prisoners, and on the top floor are the incorrigible cells and the execution room. A large portion of the building is practically unused. Still further back is the jute mill, one story, and adjoining warehouses, where jute bags are made and stored. These buildings are all of brick and in fairly good condition. The cell blocks have been whitewashed on the outside and the cells painted on the inside, and whitewash and paint have been used elsewhere to good effect.

The State has also twenty dwelling houses located on the hill overlooking the bay. These are rented to prison officials.

CELLS.

The cells are arranged in long rectangular blocks, three stories in height, from which they open out on iron balconies running all the way around each floor in the open air. There are four of these blocks, containing 496 cells. On the first floor of one is a series of rooms not originally intended for prisoners, but now crowded full. In one of these rooms more than 40 are herded together. A dormitory has been arranged in the old furniture factory for old men and short term prisoners. This accommodates about 300. The incorrigible cells on the fourth floor of the furniture factory, reached by outside steps, are dark and lack ventilation. In these cells men are sometimes kept for years. If they are unmanageable in the shop, or insane, though not bad enough to go to a State insane hospital, they are kept here.

BAD SANITARY CONDITIONS.

The cells in the cell blocks open to the air and are not heated. They have no wash basins or toilets, and open buckets are used. No towels are furnished. These cells are small and more prisoners are crowded into them than they can properly accommodate, and thus crowded and without necessary sanitary conveniences, prisoners are locked in these cells for more than twelve hours a day.

GENERAL HEALTH.

The whole premises are clean, and considering the construction are in good sanitary condition, as is further evidenced by the small amount of sickness. There are a number of tuberculosis cases which are isolated in a separate hospital. In another room are the paralytics and other bed-ridden cases. There is a good hospital with a physician in charge, and a drug room in connection for the general use of the sick.

FOOD.

Prisoners say that there has been an improvement in the quantity and quality of the food served. They are now quite well satisfied with the prison fare.

INDUSTRIES.

During the past two years, on an average of 200 men a day have been used on the grading of the south hill, preparing a site for the new cell house. The only manufacturing industry is the making of jute bags. The management of this industry is controlled by a law that ties the hands of the prison management. During the last year 1,586,750 bags have been made and are now in the warehouse unsold. The profits have amounted only to \$27,253 for the year. About 750 prisoners on an average work in the jute mill.

DISCIPLINE.

The discipline seems to be good. There is order, general obedience, and a good spirit. The punishments are fewer and less severe than formerly. The straightjacket is sparingly used, and no cases of severe punishment have been heard of. Fewer are in the incorrigible cells. There is a good spirit among both prisoners and guards.

HORRORS.

The terrible things about this prison are the lack of classification and the crowding together in cells. Old and young, the old-timer, who is serving his seventh to tenth term, and the boy committed for his first term associate together. The boy soon learns all about crime from his elders in crime. Close association of prisoners while locked in the same

small cell results inevitably in the worst forms of vice. To the young boy his stay here is a school of crime and wickedness, and he must surely come out much worse than he went in. Under such conditions no reform is possible, and it is not strange that men go back term after term. A boy only fourteen years old and still wearing knee pants was received at this prison to serve a fourteen-year sentence. What can be expected of him when he comes out?

2. STATE PRISON AT FOLSOM.

WM. H. REILLY, Warden.

CENSUS.

The number of prisoners at Folsom on June 30th last was 1,009 men, a decrease of 36 from two years previous. The number of new prisoners committed during the two years was 541, and the number of discharged, paroled, and pardoned was 515.

CHANGE OF WARDENS.

There has also been a change of Wardens at this prison. In February last Mr. Yell retired and was succeeded by Mr. Wm. H. Reilly, who was for a number of years sheriff of Ventura County. The Board of Prison Directors elect Wardens for a term of four years, and Mr. Yell's term having expired, a new man was elected.

LAND.

The prison grounds proper cover about ten acres, but there are in all 483.92 acres. The land is not of good quality for agricultural purposes, and there is not much agriculture beyond the gardens, dairy, hog, and chicken ranches.

BUILDINGS.

The main building is nearly in the form of a letter "U," but with only a part constructed. It is located in a natural amphitheater on the south bank of the American River, the opening of the "U" facing the river. The front part—the northern end of the western arm of the "U"—contains the offices and residence of the Warden. Back of this is the cell house, with the dining-room in the farther end. Over the dining-room are officers and guards' quarters. The new cell house now being built will complete the other (eastern) arm of the "U." The building is of granite, three stories high, and has a massive appearance. There are also twenty-four houses rented to officers and guards.

POWER.

The State owns valuable water rights in the American River, and has constructed a dam with a canal conveying the water to a power plant in front of the main building at a cost for the whole, including machinery, of \$181,220. There is developed a power of about 900 nominal horsepower, of which only about 400 are used at present.

CELLS.

The cell house is a good one, but the cells are not modern. They are of granite and too large. There are 202 cells for two prisoners, 101 cells for four prisoners, and 9 incorrigible cells. The latter are in a separate room opening off the main cell room, and are used for punishment and for the confinement of the condemned. Executions also take place in this room. The shape of the cells is not good, and too many men are confined in them. They are without toilets or wash bowls, and prisoners must buy their own towels if they have any.

SANITATION.

The cells, being enclosed in a building, protect their occupants from cold, but the ventilation is not so good. The prisoners were clean, and general sickness was at a minimum. The hospital is on the second floor of the main part, in a room illy adapted to the purpose, and difficult of ventilation. There were but four cases there when visited.

INDUSTRIES.

Notwithstanding the power plant at Folsom Prison, it is used but little in the industries. The prisoners are in the main occupied in working stone. A quarry of trap rock is worked and crushed for road work. This is sold to counties under a law that leaves but little to the State. About 95 men are worked at this, and the yearly income is only about \$5,000. There is another quarry of granite which furnishes the building stone for the prison buildings and wall. Some of this is, or can be, sold. Besides the stone work, there is only the general housework of the prison. The gross income from the industries for the past year, with 992 daily average of prisoners, is \$44,282.28.

NEW CONSTRUCTION.

Four years ago we recommended an appropriation for cells, cell house, and wall at Folsom Prison, and the legislature made an appropriation for this purpose of \$168,000. A portion of this appropriation was available July 1, 1905, and the last installment is available January 1, 1909. The site for the cell house has been graded, but no building has been done, and we do not appear to be much nearer additional cell accommodations

than we were four years ago. Better progress, however, has been made upon the wall, the south line of which is pretty well under way. At our last visit 36 men were engaged in wall construction.

There was also appropriated \$40,000 for the construction of a hospital for criminal insane, to be erected by prison labor on land of the State at Folsom Prison, but to be under the management of designated members of the State Lunacy Commission, as managers. A commanding site was selected on the hill near the dam about a third of a mile from the main building. Two years ago we reported that the site had been graded, but the work of construction had not been commenced. We can now report that the basement is up and at our last visit in July it was being covered with concrete to form the first floor. There had been expended up to July 1st the sum of \$27,289.31, leaving a balance in this appropriation of \$12,710.69 with which to finish the two remaining stories. There were 34 prisoners at work on this building in July last. The work has gone on so slowly that one of the engineers has said that he thought it would have been cheaper to have constructed the building by contract. Evidently the prisoners working on this building have shirked work to a large extent, and the superintendent has been afraid to force work out of them. Since the change in the superintendent of construction in July much more work has been done by the prisoners, who are by no means overworked, even at present. This building is being constructed, not through the Board of Prison Directors, but by the Department of Engineering and the Board of Managers for the hospital for criminal insane.

DISCIPLINE.

The new Warden found this prison in good state of discipline, and has maintained it. He is imbued with the spirit of humanity and a desire to make better men out of his prisoners. The discipline is firm, yet punishments are few, and a good spirit prevails among both officers and men. The straitjacket is seldom used, and then rarely for more than an hour.

DEFECTS.

This prison is subjected to the evils of overcrowding, but is not so bad in this particular as San Quentin; nor is there as much opportunity for prisoners to associate together. They are, however, housed in cells by twos and fours, and the opportunities for evil are, in consequence, nearly as great. The prison can do but little to make men better until there is a cell for each man.

OPIUM.

This drug, which for many years was the bane of both prisons, is now apparently entirely banished from both. There has been no evidence of it at either prison for a long time. It is evident that the secret ways by which it reached the prisons have been blocked.

3. THE PRISON SITUATION.

OVERCROWDED CONDITION.

In the report of this Board four years ago we had the following to say :

"The prison at San Quentin is badly overcrowded. The cell accommodations are as follows: 196 single cells, 204 cells for two men, 48 cells for three men. 48 cells for five men, and 9 rooms with capacities ranging from twenty-six to forty-five men; making a total of 505 cells and rooms in which are confined 1,451 prisoners, exclusive of females, whose cell rooms are not included in the foregoing figures. At Folsom, there are 262 cells, with a capacity of two men each, 101 cells arranged for four men each, 9 single cells for incorrigibles, and a large room with accommodations for forty-five prisoners. At this writing, there are 927 prisoners in this prison." (September, 1904.)

When that report was written the overcrowded condition of our prisons was very bad. This Board, in that report, urgently recommended appropriations to build additional cells, and the legislature in 1905 appropriated the sum of \$310,000 for "the erection and construction of additional cells * * * and other purposes immediately appertaining to the carrying out of this act" at the State Prison at San Quentin; and the sum of \$168,000 for similar purposes, and for the construction of a wall at the State Prison at Folsom. The first installment of this appropriation was available July 1, 1905, and the last will be available for San Quentin Prison July 1, 1909, and for Folsom Prison January 1, 1909.

Four years have elapsed since that report was written and our prisons now contain (June 30th) 348 more men than then. We have not added one cell. If our prisons were overcrowded four years ago, what must be their condition to-day? Nothing toward the construction of new cells has been done, except the grading of the sites and the preparation of plans. We can scarcely expect to have new cells under two years from now. In the mean time the number of prisoners is growing and the conditions of overcrowding are becoming constantly worse.

MORE CELLS NECESSARY.

The present plans contemplate 800 new cells at San Quentin and 500 at Folsom, or a total of 1,300. There are now only 868 cells, and when these buildings are completed there will be but 2,168 cells. The number of prisoners two years from now will probably exceed 2,800. This is still far less than a cell for each prisoner. All penologists agree upon the necessity of a separate cell for each prisoner if the evils of prison life are to be abated and men made better. If we are to put our prisons upon a proper basis for remedial work, arrangements for more new cells are necessary.

SEPARATION OF OLD AND YOUNG.

There should be a separation of the old and young. The young man in prison for the first time requires a different treatment from the old hardened criminal. He has not in most cases had the proper preparation for earning a livelihood and the making of a good citizen. It is in many cases not too late to give him that training and preparation now. He should, therefore, be committed to a separate institution built and managed upon special lines. The place for him is not a prison, but a reform school of an advanced type, where he can be taught obedience and respect for law and authority, habits of industry, and a trade by which he can earn a livelihood, and such common school education as will fit him for citizenship. In addition to this, his bad habits are broken up, good habits implanted in their stead, upon a foundation of moral principle.

THE REFORMATORY.

This is not altogether theory. It has been tried in other states and there are to-day in this country twelve of such institutions under the name of "Reformatories." Some of these have been in operation thirty years, and have been tested thoroughly. Experience of these shows that from 60 to 75 per cent of all committed to their charge prove to be good citizens when given their freedom. The other 25 to 40 per cent are mainly mental defectives, for whom there is no hope, and which, for the safety of society, should be segregated into a humane institution and kept there during life. To such reformatories are committed young men between the ages of sixteen and thirty years who have never before been convicted of a felony, and who, in the opinion of the judge, are fit subjects for such a school. There are some within this age limit whom the judge should, in his discretion, send to State prison.

NECESSITY FOR, IN CALIFORNIA.

There are in our prisons to-day about 800 who would have been proper subjects for a reformatory. How much better it would be for this State if young boys could be put into such an institution, rather than sent to one of our prisons to mingle with, and become victims of, some of the worst men the human race produces. As an illustration of present conditions, there is at San Quentin prison a boy who arrived there fourteen years old, under a sentence of fourteen years. At Folsom a boy eighteen years old was received on a fifty-year sentence. There are in the two prisons 303 boys under twenty-one years of age, serving various sentences. We take these boys in their young manhood, before some of them have reached the age of maturity, and put them where, when they are released, every spark of decency has been stamped out, and send them forth in all probability common criminals. We give them practically no

education nor any industrial training that will help them when they go out. In the end these men are a far greater expense to the State than would be the cost of modern methods of reform, even though but 50 per cent were brought back to honest citizenship. Both on grounds of humanity and expediency, this State should at once provide a reformatory for first offenders between the ages of sixteen and thirty years.

WHAT SUCH A REFORMATORY SHOULD BE.

Such an institution should provide for a thousand inmates, but completed through a term of years so that much of the construction could be done by the inmates themselves. It should have not less than 500 acres of good agricultural land, so that agriculture in all its forms could be taught among its industries. The main buildings should be enclosed by a wall, which should include not less than 20 acres. Such an institution should be under the direction of a special board of managers.

GRADING AND MARKING PRISONERS.

Certain measures for the upbuilding of the prisoner are now employed with success in many Eastern prisons, but have not yet been adopted in our prisons. They should be put into effect immediately upon the completion of the new cells, if not before. There should be established a system of grades and merits. In the modern prison or reformatory are three grades. The prisoner enters the second or middle grade. If he does satisfactory work and his conduct is satisfactory for a given period of time he is promoted to the first grade. If, on the other hand, he rebels, refuses to work, or to do good work, or violates rules, he may be degraded to the third grade, there to remain until by good conduct and satisfactory work he earns promotion. His daily life is noted by teachers and officers, and his work with each one marked by a fixed scale and sent to the office. Promotions or degradations take place on these marks by fixed rules. These grades are distinguished by different uniforms, as gray, blue, and red or stripes. More privileges go with the higher grades and paroles can only take place from the highest grade. By this system a parole can be earned only by good work and good conduct. Self-control and industry are essential to earn a parole.

PAROLING PRISONERS.

Paroles should never be based on anything but impersonal records; that is, records that are made up day by day on the books of the institution. The parole is thus earned under the rules, and when thus earned should be granted. The parole board should receive no petition, listen to no appeal, nor be controlled by any outside influence. Outside "pull" should never be permitted. In some states the attempt to influence a

parole board to grant a parole is a misdemeanor and punishable by imprisonment.

Under the rules governing paroles in our prisons, there is an unmerited hardship shown to the poor friendless prisoner. Before he can be paroled the prisoner must have sufficient money to buy a suit of clothes, pay his railroad fare to the place where he wishes to go, and have \$25 left in his pocket for emergencies. He earns no money in prison and must depend on friends outside if he is to get a parole. There are in our prisons men whose prison record would entitle them to parole, and who ought to be paroled, but who can not comply with the financial requirements. Any system of paroles is wrong which has a financial requisite, unless the opportunity to earn money is given in prison. Merit alone should determine the parole.

PRISON AGENT.

All paroled prisoners should be under the supervision of a prison agent, whose duty it is to find places of occupation, visit the prisoner occasionally, look after his interests, see that he obeys the rules of his parole, and if not, return him to the prison. Our Board of Prison Directors now has an agent for the parole prisoners, but it has not the proper grading and merit system by which paroles are earned. They are granted by recommendation and sometimes outside influence is exerted. If a grade and merit system is adopted, and paroles are based on it, there can be no ground for any charges that paroles are granted with partiality.

THE INDETERMINATE SENTENCE.

It will be readily seen that there is another link in this system and that is the sentence. If a prisoner is received on a definite sentence of a year or two years, he can violate rules, fail to work, remain in the third class, and still be discharged at the end of his term. No betterment is possible in his case, and he leaves the prison to go straight back into a life of crime. On the other hand, if he were sentenced until discharged by the rules of the prison he would have to earn a parole or remain for life. This is the ideal plan for which penalogists are working, but most states have a modified plan by which the prisoner must remain the minimum time fixed by statute as a punishment for the crime for which he was convicted, and may be kept the maximum time. In case of conviction for grand larceny the prisoner may be paroled after two years and may be kept ten years, unless he earns a parole by the rules of the prison. In case of the reformatory it requires about three years to give the education and training necessary for the best results, and rules governing paroles should not contemplate a shorter time. The modified

form is much better than the old method, and should be adopted at once, unless our legislature can see its way clear to adopt at once the ideal indeterminate sentence.

If the prisons of this State are brought to this basis we feel confident that in a few years our prisons will show a decreased population.

PRISON LABOR.

Occupation for prisoners is absolutely necessary for their moral and physical regeneration. Their day should be full from the time they come out of their cells in the morning until they are again locked in at night. There should be no idle time for planning mischief or for evil associations. The horrors of our prisons could be all wiped out by a well occupied day and a separate cell at night. The worst of all habits, and one which most prisoners have acquired before they reach the prison, is the habit of idleness. It is the duty of the prison to substitute in the prisoner habits of industry for his accustomed idleness, and to do this, life in prison must be somewhat strenuous. The prisoner should be required to do a full day's work, for the habit of shirking in prison will tell against him when employed outside after his parole or discharge. He either will have a wrong idea as to what constitutes a good day's work, or he will have the desire to do as little for his pay as possible. He is then an unsatisfactory employee, and finds it difficult to keep a job. Under the system of basing paroles on a marking system good work can be required to earn a parole. The time is coming also when work will be encouraged by means of wages to the prisoner, which may be paid to his family if he has one, or may be retained to start him in life again after his discharge.

The character of occupations in prison and reformatory must essentially differ. In the reformatory, education and training are of first importance, and all occupation must be with these objects in view. This is a school, and must not be expected to produce an income. On the other hand, the inmates of the prison have passed beyond the age for education, and their occupation should have as a main object the production of a revenue. However, the employment of the prisoner at such labor as will better fit him for taking his place again in society must not be lost sight of.

The labor question in our two prisons will soon become a vital one. With the stone industry at Folsom practically gone, and the market for jute bags at San Quentin very unsatisfactory, it is time now to consider plans for the future labor of our prisoners.

In our report two years ago we discussed quite fully the different systems of prison labor, and recommended for your consideration that known as the "State-Use" system, by which the prisoners are engaged in the manufacture of articles for use in the other State institutions.

This system gives a variety of occupations in a line of work which will enable the prisoner to help himself when he leaves the prison. At present we employ him at San Quentin making jute bags, and however proficient he may become, he can get no employment at that labor when discharged. We may keep him ten years, set him adrift with but \$5, knowing that he can get no work at the occupation at which we have kept him. He is unable to earn a living, and almost of necessity goes back to crime.

Again, the State-use system does not materially interfere with the employment of labor or the investment of capital outside of the prisons. The products are used by the other institutions of the State supported by taxation. Such a system will make the least interference with outside conditions.

The State Prison at Auburn, New York, furnishes the best example of a prison of this character. Here are made on state account, and sold only for use in other institutions, furniture, brass and iron beds, school desks, brooms, baskets, cloth, blankets, and other articles. During the last fiscal year the various departments made and sold products as follows:

Departments.	Prisoners Employed.	Sales.
Cabinet	294	\$94,370 88
Broom	28	12,095 79
Brass and bed.....	50	18,331 20
School furniture	189	139,940 78
Cloth	195	107,395 71
Totals	756	\$372,634 36

The profit on this product was \$34,344.99. There has been no trouble about selling goods, and in some of the important lines it is not possible nearly to supply the demand.

The prison at Sing Sing, New York, makes a better showing than Auburn.

Departments.	Prisoners Employed.	Sales.
Clothing	65	\$40,086 95
Shoe	90	45,637 50
Brush and mattress.....	35	24,440 79
Sash and door.....	85	19,320 17
Printing and stationery.....	54	9,840 10
Cart and wagon.....	128	129,368 59
Knitting and hosiery.....	132	69,874 80
Mat	75	9,373 75
Foundry	54	26,634 47
Miscellaneous	18,360 04
Totals	718	\$393,593 16

The profits on the above products were \$66,767.31. The number of prisoners is about 1,250.

Applying this system to our needs in California, we could manufacture "for the use of public institutions owned or managed and controlled by the State, or the political divisions thereof," institution furniture, including office desks, tables, chairs, and bedroom suites; school furniture, including desks, chairs, and apparatus; cloth, including sheeting, muslins, duck, etc., of cotton; blankets and cloth for men's clothing of wool, or in combination with cotton; clothing made up; shoes of various kinds; knitting and hosiery; foundry work, all needed castings; mattresses and brushes. To these could be added many other lines, as needed.

As stated in our previous report, the sentiment exists in California that prison-made goods should not be sold in competition with manufacturer and laborer. It has found expression in statutes enacted from time to time by which the sale of the product of the granite quarries at Folsom has been stopped, and the manufacture at San Quentin of any article for sale, except jute fabrics, is prohibited.

The extension of the State-use system will not affect the interests that brought about the enactment of these statutes; it will be beneficial to the State in producing by prison labor many articles which it is now required to buy in the open market; it will be beneficial to the prisoners in affording them training in a variety of industries and in doing away with idle time; and, as we have shown, will be in line with the general movement throughout the country.

CHAPTER II.

THE STATE REFORM SCHOOLS.

1. THE PRESTON SCHOOL OF INDUSTRY.

BOARD OF TRUSTEES.

C. H. DUNTON, <i>President</i>	Slatington.
REV. W. S. MATHEW.....	Berkeley.
E. C. VOORHEIS.....	Sutter Creek.
WM. T. RANDALL, Superintendent.	

CENSUS.

The number of cadets in the school on June 30, 1908, was 323, and 73 additional were out on parole. The number in the school June 30, 1906, was 211, and on parole 43. The increase in the number actually present is 112, and in the number under the control of the school, 142.

LAND.

The school owns 570 acres of land. About 100 acres are under cultivation and the remainder is hilly, considerable of it covered with brush and used for pasture and water supply. There are about 25 acres in orchard and vineyard. There are now 40 acres of alfalfa, and about 70 acres in addition were rented for hay and gardens. This last season this land was not rented on account of a decision by the Attorney General that the trustees had no power to rent land. The institution will accordingly be short of feed this year, and must buy what will cost much more than the rent of this land and the cost to the school of producing the necessary hay.

BUILDINGS.

The main building is large and occupies a commanding position on a hill overlooking the village of Ione. It is of brick and is four stories high. It contains the administration offices, the Superintendent's residence, rooms for officers and employees, schoolrooms and dining-rooms, and kitchen for the whole institution.

At some distance on either side of the main building are two brick cottages, two stories and basement, with a central wall dividing each into two parts. They are double houses, and each part accommodates 50 boys, or 100 to each cottage.

The industrial building recently rebuilt has two stories and attic in the main part, with a rear wing of two stories.

An assembly hall, with a gymnasium underneath, has been constructed since our last report. This building is 60 feet by 114 feet, and built of concrete blocks. There has also been constructed a cold storage plant. There are also the necessary farm buildings. All of the buildings are in good condition, with the exception that a fire recently broke out in the main building and damaged it to the extent of about \$2,000. A special appropriation will be necessary to repair this building.

WATER AND POWER.

The supply of water for power and irrigation is taken from Sutter Creek through a ditch and mains thirteen miles in length. The water passes through two reservoirs en route. This water is muddy from mining operations above the intake, and is unfit for domestic use. Water for the latter use is taken from springs about two thirds of a mile back in the hills, and is pure. Since our last report new mains have been laid for 3,200 feet, about half the distance from the lower reservoir to the power-house.

SANITARY CONDITIONS.

The general health of the school has been good. There have been no deaths during the two years. There have, however, been some contagious diseases, and there is no place at all where such cases can be properly isolated and cared for. In a recent case of diphtheria, the only place for the sick boy was in the tower of the main building, where it was at times impossible to give him the attention of a nurse. A hospital is badly needed.

The general sanitary condition is good. The buildings were found clean and in good order.

INDUSTRIAL TRAINING.

This is a school and the industries are all educational. There is a department of sloyd, where elementary training is given in the use of hand and eye. Last year there were 150 boys in this department. The rebuilt trades building contains a mill for woodwork, a cabinet shop, a sloyd room, one for tinner and plumber, a blacksmith shop with accommodations for a machinist, shoe shop, a fine large printing room with fourteen windows, a laundry, photograph room, and a band room.

In addition to these, there is a tailor shop occupying two large rooms, a paint shop, a concrete mixing plant, and forms for making concrete blocks, electrical shop, brickyard, and kiln.

All of the various branches of agriculture, including dairying, butter making, hog raising, poultry raising, fattening, and slaughtering animals for meat, horticulture, and gardening, are taught. The farm produces all of the milk, butter, eggs, meat, fruit, and vegetables used by the institution. The meat supply, including mutton, pork, poultry, and much of the beef, is raised and slaughtered on the place.

The new assembly hall was built by the trades school. Sand and gravel for concrete were found near at hand. One department made the concrete blocks, others the doors, window frames, sashes, mill work, etc. The 60-foot steel trusses were made there also. Then came the laying of the concrete blocks and the construction of the building, to the laying of the slate shingles. No outside help was employed. All the work was done by the boys under direction of their instructors. The State now has a \$40,000 building built on an appropriation of \$15,000, and the boys have the experience and training acquired in its construction, and above all is the feeling of pride and satisfaction in the heart of every boy who contributed his work to the result. To each one of these boys this building stands as a monument to his skill and labor. The cold storage plant was also built by the school.

SCHOOLS.

The schools are in an advanced condition. There are now eight grades, in which four teachers are employed, three women and one man. They are well qualified, experienced, and are doing good work. The Assistant Superintendent is military instructor. Each cadet is in school one half day and at his trade and the regular daily routine work the other half. One half of the cadets are in school in the morning and at work in the afternoon; the other half reverse this program. Military drill is a regular daily exercise.

DISCIPLINE.

The military form of discipline prevails and military courtesies and salutes are observed. There is system, order, and coöperation among officers. Firmness tempered with kindness is the general rule of discipline.

In general, the atmosphere of the school, the quality of its supervision, the character and general disposition of its teachers and care-takers, are, to say the least, approximate to what should exist and be regnant in such an institution. On the other hand, the countenances and movements of the boys reveal no sullenness, but are indicative of a much more hearty acquiescence in their condition than one might expect of that number of boys of their past environment and bringing up.

NEEDS.

1. *Refectory building.* The increase in the number of cadets in the school on June 30th last over two years previous was more than 50 per cent, and has far exceeded our estimate. The buildings are now overcrowded. The dining-room, on the third floor before the recent fire, was too small and an overflow dining-room was improvised. Whoever

planned for a dining-room on the third floor for 300 boys to climb up to three times a day was hardly wise in his day and generation, and no such thing would be thought of now. The fire has burned this out and no effort should be made to rebuild it as before. A new refectory building should be erected, to contain a modern kitchen and dining-room large enough to accommodate 500 boys.

2. *Repair of main building.* The old building must be repaired and the space occupied by the old dining-room fitted for other purposes.

3. *New cottages.* There is a necessity to increase the housing capacity. The buildings are now overfull. New accommodations should be built along more modern lines. It is now generally agreed that the best plan is the small cottage for about 20 boys. This plan furnishes better separation and classification, and produces better results. We think provision should be made for four such cottages, two each year.

4. *Hospital.* There should also be provided a separate small hospital building.

5. *Heating plant.* The present methods of heating are unsatisfactory, and a new detached but central heating plant is needed.

In all of these buildings we believe the work should be done by the trade classes, and none of them should be built by hired labor or by contract. In all cases appropriations for materials only should be made.

2. WHITTIER STATE SCHOOL.

BOARD OF TRUSTEES.

JAMES CLARK, <i>President</i>	Pasadena.
WALTER LINDLEY.....	Los Angeles.
T. E. NEWLIN.....	Los Angeles.
J. P. GREELEY, Superintendent.	

CENSUS.

The number of pupils in the school on June 30, 1908, was 276 boys and 55 girls, total 331, and 218 were out on parole. The number in the school June 30, 1906, was 256 boys and 37 girls, total 293. The increase in the number actually present is 20 boys and 18 girls, total 38, and in the number under control of the school, 41.

LAND.

This school possesses 160 acres of land located in the suburbs of Whittier, on the Whittier division of the Pacific Electric Railway, and it is crossed by a branch of the Southern Pacific Railroad. This land is of the best quality, and, with irrigation, produces large crops of alfalfa and vegetables. There are now 12 acres in alfalfa and 55 acres in vegetables, roots and corn for stock, and the remainder, outside of the

building grounds, is in orchard and fruits. The farm, however, is not large enough to meet the requirements. More alfalfa is needed for the stock, and especially is it desirable to have more land for disposal of sewage.

BUILDINGS.

The main building is a four-story and basement structure of brick and stone. It contains the administration offices, residence of Superintendent, chapel, rooms for employees, and dormitories for six companies of boys.

In the rear is a refectory building, one story, of brick, in which are the dining-rooms and kitchen. A detached frame cottage accommodates the smaller boys. There is a trades building of brick, three stories high, which houses most of the mechanical trades. Another one-story brick building is used for the carpenter, machine, and blacksmith shops. A creamery has been added since our last report. The general farm buildings are sufficient to meet the requirements of the farm.

About three fourths of a mile from the main buildings are the buildings for the girls' school. There are two buildings of brick, two stories and basement, and an industrial building of one story.

WATER.

Irrigation is necessary at this farm, and the obtaining of sufficient water has been a serious problem. The State here owns 5 inches of water in the East Whittier Ditch Company, and has been able to buy some additional each year, but not enough for all needs. Since our last report two wells have been bored on the east end of the place, and the proper machinery installed for pumping one of them. These wells have developed about 65 inches of water.

HEALTH AND SANITATION.

About two years ago there was an epidemic of typhoid fever at the school, and there were many cases in both the boys' and girls' departments. The disease has now been effectually stamped out and the sources of contagion removed. Last winter there was a case of smallpox in the girls' school, the contagion having been brought from Oakland by the patient, who was taken down with it a few days after her arrival. Two other patients came from Oakland with the itch.

The number of deaths at the school during the two years was five from disease and none from accident. The room used for a hospital for the boys is on the fourth floor of the main building. It lacks conveniences, and is too close to the dormitories of the boys. A detached hospital building is badly needed. We found it necessary recently to criticise the care of the sick boys here. The nursing was not well done, and medicines were frequently prescribed by others than the physician in charge, even when he was on the grounds.

INDUSTRIAL TRAINING.

A bill passed the last legislature appropriating money for erecting and equipping a building for sloyd, but through some blunder this bill was lost and did not reach the Governor. This is the most important part of education at schools like this, and should be provided as soon as possible. The boys enter their trade work without the elementary preparation which sloyd or manual training would give them.

The other trade work is largely such as would develop in the work of the place. There has been no new building during the past year, so no opportunity for training in the building trades has been presented. The work in the other trades has been only incidental to the work of keeping up and running the place.

The farm is a model. Neatness and system prevail and good results are obtained. The dairy herd has a fine strain of Holsteins, and sufficient butter is now made to meet the demands of the institution. There is a good poultry department, and a large number of hogs are raised. The farm, however, is preëminently a fruit farm. The citrus crop last year was large and brought good returns. There are 950 orange and 450 lemon trees. Besides, there are numbers of peach, apricot, walnut, olive, fig, and plum trees. There is a green house and a florist. General farming, dairying, gardening, horticulture, and floriculture are therefore taught to a large number of boys.

At the girls' school general housework, cooking, laundering, and sewing are taught. In most of these lines there is nothing done except what the needs of the school demand. The housework is done and the instruction is incidental. In the sewing-room much time is given to making cheap shirts for the boys' department.

SCHOOLS.

There are four schools for the boys and one for the girls. The boys' schools are fairly well graded, but that is impossible in the one girls' school.

The schools are in session six hours each day. Each pupil spends a half day in school and a half day at work, except about 50 smaller boys, who are in school all day. Some are in school in the morning, others in the afternoon. Each teacher has two different schools during the day. There are in reality then seven schools for boys and two for girls. The smaller boys are in school all day because no mechanical training is provided for them.

DISCIPLINE.

This Board was requested by the Governor, in July, 1908, to investigate charges of lax discipline in this school. The following is taken from our report upon the completion of such investigation, made to the Governor at that time:

"The act creating 'The Whittier State School' declares 'that the Board of Trustees shall be a body corporate and politic * * * to receive, hold and use moneys or other property held in trust for the use, and by the authority, of the State of California, and to control, manage, and direct the several trusts committed to them respectively.' (Section 3.) This Board of Trustees has not always acted as a corporate body owing to marked incompatibility of temper and a lack of understanding of their duties and their authority to act only as a Board and not as individuals.

"The act further declares that the 'Board shall make all needful rules and regulations concerning their meetings and the modes of transacting their business.' (Section 7.) We find a lack of care in preserving full and complete records of all matters pertaining to the business of these meetings. Too great care can not be exercised in preserving the details of all such transactions.

"The act further prescribes that the Trustees shall 'control, manage, and direct the several trusts committed to them respectively, including the organization, government, and discipline of all officers, employees, and other inmates of said institution.' (Section 3.) We find that the organization of the school is by no means as complete and systematic as it should be; the thorough organization of good business management is wanting here.

"The Board is required to appoint the several officers of the institution and to prescribe their duties. (Section 9.) Such appointments have not, in all cases, been sufficiently considered, and there has been a marked failure to prescribe the duties of officers. * * *

"The law states that the Board shall see 'that strict discipline is maintained' in the school. (Section 7.)

"A great mass of evidence was introduced to show that the discipline of the staff, as well as that of the school, is confused and loose. There is a lack of system and definiteness of responsibility, and *esprit de corps*. There has been no such thing as frequent and regular meetings of the Superintendent with his staff of officers and teachers, and, as a consequence, there is a decided lack of team work. * * * The military training and discipline are not good. There is a lack of proper company drills and setting up exercises. There is a failure on the part of the major and captains to work together in harmony, captains having even refused to obey the orders of the major."

NEEDS.

1. The two 75-horsepower boilers have been in use eighteen years. They are now in such condition that one or both may fail at any time. Further, with the additional power now required, they are insufficient. We recommend the installation of a new boiler of 125-horsepower.

2. The school is in need of a hospital. There are now no adequate accommodations for sick cases, and with an epidemic the results might be serious. This might also have connected a receiving cottage, where boys could be placed for observation on arrival. During the last year itch and smallpox were brought in by those committed. The physician should have every boy under his observation long enough to determine whether he needs medical or surgical treatment before he is placed in school or at work.

3. There should be constructed without delay a building for manual training, or sloyd. There is now no proper mechanical training for small boys, and many older ones need this elementary training.

4. At least one cottage to accommodate 20 to 25 boys should be constructed. At present the dormitory plan is used, the boys being crowded into five large dormitories. This system does not produce the best results. The cottage will be more like the family.

5. To equip boys for the printing trade to-day, a linotype is necessary. This school has been asking for one for the past four years, and we believe that it would be profitable to provide one.

3. THE SYSTEM IN GENERAL.

DEFECTIVE LAWS.

In our last report we called attention to the defects in the laws governing the two State reform schools as follows: "Two bills providing for the classification of the cadets in the reform schools, one applying to each school, were introduced in the last legislature, but only the one applying to Whittier School became a law. At present, therefore, no boys over sixteen years of age, who are accused or convicted of crime, can be received at Whittier; but the bill providing that no boy under sixteen should be committed to Preston School failed of passage. The result has been to place a limit on Whittier School, and none on Preston School. Consequently, Preston School has had a higher average of attendance than was expected, and Whittier has had a lower." (See page 47.)

The last legislature took no action upon this matter, and the defect still remains uncorrected. Since the last report was written Preston School has increased its population 112 boys, and Whittier School only 20. Appropriations were made on a basis of an even increase in the two schools. As a result, Preston School is short of funds and a deficit will probably be created to meet the maintenance for this fiscal year. If the cadets in these two schools are to be classified on an age basis, then the Preston law should be amended to exclude commitments of boys under sixteen years of age. This Board has heretofore favored a classification on the basis of age, the older boys to be sent to Preston School and the younger to Whittier School, but the Boards of Trustees of each of these schools, and also many of the judges of our superior courts, prefer that these schools shall cover identically the same ground, leaving it to the discretion of the court to which school the boy shall be committed. This Board will now recede from its former position and yield to the opinion of these other officers, who have to deal more directly with the problem.

At any rate, the present condition is very unsatisfactory, and the age limit should be fixed for Preston School or removed from Whittier School.

The new Whittier School law was also defective, in that it did not provide for the retention of boys committed under the age of sixteen years, beyond that age, or for their transfer to Preston School. As the law now stands, the boy must be released at sixteen years of age, whether he is fitted for it or not. A boy, therefore, fifteen and a half years of age could, under this law, only be kept in Whittier six months—too short a time for any good to be accomplished.

In the revision of these laws, the causes for and methods of commitment should be made the same for both schools. At present, any such boys as have been found guilty of crime can be committed to Preston School, while to Whittier School can be committed also incorrigibles, truants, delinquents and dependents, under the juvenile court law. The law governing Preston School should be so amended as to make the causes for, and methods of, commitment the same as now prevail in the Whittier School law.

THE COMMITMENT.

All commitments should be until the boy is twenty-one years of age. No other commitment should be allowed. It is not expected that any boy will remain in the school longer than from two to four years, and nearly all are out in less than four years. But the power to keep the boy until twenty-one years of age acts as an incentive to good behavior to earn a parole before he is twenty-one years of age. This is one of the strongest elements in effecting a reformation. It is in the nature of an indeterminate sentence.

THE EDUCATION AND TRAINING.

The second element in effecting reformation is education and training. This means such education in books as the boy is capable of, and, in addition, such training in an industrial trade as will fit him to earn his living when he is released.

During the past two years, our two reform schools have done good school work and, in the main, good industrial work. There is, however, one sad deficiency at Whittier School; the primary work, the root of it all, is lacking. There is no elementary "manual training," or "sloyd."

THE PAROLE.

The third element essential in working reformation in the boy is the parole. When he is supposed to be fitted to earn an honest living, he is found a place to work and is placed on parole. An agent of the school

visits him, assists and guides him until he is established. This supervision may continue until the boy is twenty-one years old. In the past, this is where our work of reformation has most largely broken down. There was no agent to look after and supervise the boys. A boy was placed on parole; he stayed or not, just as he liked, and in a short time the school authorities did not know where he was or what he was doing. Probably he had fallen and the work on him was all lost. During the last two years we have been trying to correct this defect, and now a parole agent is employed at each school. Preston School has 73 boys on parole, and Whittier School has 218 boys and girls on parole. The work of supervising paroles can not be well done by one agent at Whittier. He can not visit his charges once a year, and he should see them three or four times a year. Another parole officer should be employed at Whittier. Two are needed. It is undoubtedly true that a large number of the 218 on parole from Whittier School can not now be found at all. It goes without saying that the parole agent for this work should be chosen with the utmost care.

The girls need the watchful care of the parole officer far more than the boys. The girl has a weaker organization and has more temptations. The struggle to earn a living is harder. It is difficult to train a girl to-day so that she can earn a living in a manner that conforms to her tastes and desires. In this State, girls are not content to go out to domestic labor. They are unwilling to put themselves down to the level, they say, of Chinese labor. On the other hand, the employer treats them with indifference and neglect.

A SEPARATE SCHOOL FOR GIRLS.

We have made provision for the girls only at the Whittier School. They should be away by themselves. They ought not to be in connection with a boys' school, nor even in proximity. In the first place, the girls, being smaller in number, are secondary in importance. The boys' department receives first consideration, and frequently the girls do not receive the consideration due them. Again, it must be remembered that the majority of girls are committed for immorality, and the presence of a boys' school in close proximity is not conducive to reformation in this difficult matter. Even with apparently the best of precautions, notes are passed between boys and girls, one another's names are learned, and love escapades planned.

The remedy for these evils is a separate girls' school. If centrally located and properly managed as a separate school for girls, there would be many more commitments than are now made to Whittier. We certainly have girls in the State who need reformation, and it is our duty to provide the best for them.

We believe such a girl's school should be under a board of managers composed largely, if not wholly, of women. There should be no large

building. The girls should live in small cottages, arranged for not more than 15 girls besides the family manager, bringing conditions as near home life as possible.

COTTAGES.

We believe the large dormitory plan is a bad feature, even in a boys' school. The cottage plan is now superseding the dormitory everywhere. The new institutions of this character, building to-day, provide cottages for not more than 20. We believe that at each of our boys' schools all future additions should be by model small cottages. Small cottages are even now needed at both schools to relieve the crowded condition. If the girls are removed and provided for elsewhere, the two cottages now occupied by them at Whittier would serve this purpose there.

There is a limit beyond which a reform school should not increase in numbers. That limit is reached when the superintendent can not give personal attention to more, and it is a question whether that number is not about reached now. The prime object of the reform school is to reform bad boys and turn out men. To overcrowd it is to defeat this object and bring upon the State economic loss.

The State Reformatory, if one is established, will take some of the older boys now sent to these schools, to the advantage of all concerned.

NEW BUILDINGS.

In providing for new buildings, we believe the legislature should only appropriate sufficient to buy the raw materials. These schools are industrial schools, and they should construct their own buildings, as Preston School has been doing the last two years.

CHAPTER III.

1. THE STATE HOSPITALS.

STATE COMMISSION IN LUNACY.

JAMES N. GILLET, <i>President</i>	Governor.
C. F. CURRY.....	Secretary of State.
U. S. WEBB.....	Attorney General.
N. K. FOSTER, M.D.....	Secretary State Board of Health.
F. W. HATCH, M.D.....	General Superintendent of State Hospitals.

In the absence of the Governor from Sacramento the secretary of the State Board of Examiners acts in his place. When the Attorney General is absent the Assistant Attorney General acts in his place.

The State Commission in Lunacy was created in 1887, and has a general jurisdiction over the State Hospitals for Insane and of the Home for the Care and Training of Feeble-Minded Children. Its offices are in the State Capitol at Sacramento.

1. STOCKTON STATE HOSPITAL FOR INSANE.

BOARD OF MANAGERS.

C. M. KENISTON, <i>President</i>	Stockton.
N. F. PICKLE, <i>Vice-President</i>	Sonora.
J. C. THOMPSON.....	Stockton.
F. J. DIETRICH.....	Stockton.
C. D. FONTANA.....	Copperopolis.

FRED P. CLARK, M.D., Medical Superintendent.

CENSUS.

The number of patients in this hospital on June 30, 1908, was 1,239 men, and 654 women; total, 1,884, and 133 more were out on parole. The increase over the number in the hospital two years previous was 65, including those then held for Agnews Hospital, but which are now a part of the population of Stockton Hospital. The number duly committed during the two years was 917.

LAND.

The site where the present buildings are located in the city of Stockton, consists of 114 acres, most of which is occupied by the buildings and ornamental grounds. The farm, about two miles northwest of the present buildings, consists of 520 acres. There is also a cemetery of 13 acres.

The farm, purchased three years ago, comprises a variety of good soils and is being brought into a good state of cultivation. This year about \$4,000 worth of potatoes have been grown, enough probably to supply the hospital for the coming year. Three hundred tons of grain hay have been grown and cut, and 100 tons of alfalfa. This is the first year for the alfalfa, which will give increased crops in succeeding years. The dairy herd has now grown to 125 cows, of which 90 are now being milked. The dairy products last year were valued at \$11,770. A general orchard has been planted. The necessary garden vegetables were produced. A poultry plant has been operated with success.

FARM BUILDINGS.

The new dairy barn, for which an appropriation of \$2,500 was granted by the last legislature, has been completed, the work being done mainly by patients, with the result that a building worth \$6,000 has been constructed with this appropriation. The old buildings on the farm were of little value.

HOSPITAL BUILDINGS.

The buildings for hospital use are four in number, one for women, two for men, and one for commissary department, rooms for employees, and a Chinese ward in the attic. The first three buildings are four stories high, counting attics, which are used for patients. They belong to the old plan now being rapidly discarded in the treatment of the insane, but otherwise are in fair condition. With appropriations made by the last legislature new bathtubs and plumbing are being put in, and a new heating system installed to take the place of common stoves heretofore used. The lighting is by natural gas, there being gas wells on the premises. The safety of patients in case of a fire in such buildings is doubtful, although a fairly good fire-fighting system is provided.

COMMISSARY DEPARTMENT.

The purchase and handling of supplies devolves upon the Steward, who, in an institution of this size, is a very important officer. We believe that in this hospital the quality of supplies furnished is carefully looked after, and goods promptly returned that are not up to the contract stipulation. Unless a Steward is well informed and honest, there is opportunity for fraud upon the State in this department.

THE MEDICAL STAFF.

In addition to the Superintendent, there are four assistant physicians, one of whom is a woman. These physicians, with one exception, have been in their present place for a number of years. They possess both qualification and experience.

METHODS OF TREATMENT.

An appropriation of \$55,000 was made by the last legislature for a building for treatment of patients by hydrotherapy. This building has been commenced. Until it is completed and installed, insanity can not be treated here by modern methods and appliances.

THE WARDS.

There are now 49 wards, being an average of 38.4 patients to a ward. Some of the wards have a less number and some as many as 60. About 140 patients in the male department and about 50 in the female department are sleeping in the halls on the floors. The rooms are crowded full with beds. The wards were clean and in good condition. Most of the wards and rooms have been renovated since our last report. Painting, kalsomining, and general repair work are going on most of the time somewhere throughout the buildings.

CARE OF PATIENTS.

There were, on June 30th, 72 male attendants and 43 female attendants. In the male department there was an average of 17.25 patients for each attendant, and in the female department an average of 14.97 patients for each attendant. These attendants care for patients day and night. Some are on night duty only. Those on day duty work thirteen hours a day and retire to their wards, and are subject to call during the night. They have a half day off each week. Many of the attendants have seen long service. One has been there forty-five years, another thirty-eight years, and many more over thirty years. The wages for men are \$40 to \$55 per month, women \$32 to \$50 per month. These attendants are drawn from the general population, and have the average intelligence, sympathy, and humanity. Many of them have had the same patients for years, know them, and have an interest in them. There has been improvement in the dietary of patients. There is now a larger supply of eggs and milk, though the latter is yet very much too small. The meat is especially good, and good grades of groceries are purchased. The kitchens are large and well regulated, and, in the main, the food is well prepared.

NEEDS.

1. The buildings are now lighted by natural gas. It is proposed to put in an electric lighting plant instead of the gas, the dynamo to be run by engine fed by the natural gas. It is estimated that the amount of gas now consumed for lighting purposes would be sufficient to run the dynamo, and, in addition, supply the present kitchen in the men's department with gas for cooking, instead of the coal now used. The range at

the female department is now run by gas, and is very satisfactory. If there is sufficient gas for both the dynamo and the range in the men's department, this improvement would be a decided economy, and at the same time furnish much better and more satisfactory light for the buildings.

2. A building should be constructed at the farm for the convalescent patients. This will permit the removal from the present hospital to the farm of hopeful cases, where the opportunity for outdoor exercise and removal from the present surroundings will be a great benefit to this class of patients. The Board of Managers proposes one building for both sexes. It is a question whether two buildings, one for each sex, would not be better.

3. There should also be buildings erected at the farm for low-grade patients, similar to the plan now in use at the Mendocino Hospital. Such buildings would be cheap, and could probably be built from the contingent fund.

4. There is now a laundry at the male and another at the female department. They are both old. The Superintendent desires to consolidate these into one laundry and install new machinery.

5. At present, the water tanks supplying the buildings with water are placed in towers connected with the buildings. The Superintendent desires to erect independent towers outside and place the water tanks in these. If the hospital buildings were to remain permanently on this location this improvement would probably be desirable. This institution is now too closely surrounded by residences, and getting into town is too easy, to permit the giving of patients the liberty they should receive. The Board of Managers ought, at an early date, to lay out a general plan for new hospital buildings at the farm, and then conform all construction hereafter to these plans, building first for such classes as can be more readily cared for at the farm. With such end in view, it is not wise to expend much money on the present site, but look forward to a complete change of location in the course of eight to ten years. The present site of the hospital is valuable city land, and would net the State considerable money, and it is now undesirable as a location for a State insane hospital.

2. NAPA STATE HOSPITAL.

BOARD OF MANAGERS.

EMMETT H. PHILLIPS, <i>President</i>	Sacramento.
RICHARD BELCHER.....	Marysville.
H. M. MEACHAM.....	Napa.
THOMAS B. DOZIER.....	San Francisco.
J. H. STEVES.....	St. Helena.

ELMER E. STONE, M.D., Medical Superintendent.

CENSUS.

The number of patients in the Napa State Hospital June 30, 1908, was 1,018 men, and 754 women; total, 1,772, and 66 more were out on parole. There has been an increase during the past two years of 124 men and 98 women, total increase 222, and in addition an increase of 23 on parole. The number duly committed during the two years was 809.

LAND.

This hospital has now about 1,800 acres of land, only about 800 acres of which is agricultural land. The remainder is used for water supply and pasture. There was purchased since our last report a tract of 120 acres for water supply. The land extends to tide water on the Napa River, and includes considerable bottom land. Some of this will have to be reclaimed before it will be of any use. The market value of the crops raised last year exceeds \$38,000, of which the largest items were milk, butter, apples, eggs, and pork, in the order named. The above estimate, however, includes all things produced in the farm department. For instance, the hay cut and feed grown are included, though afterwards fed to stock, and reappear in milk, butter, eggs, pork, and poultry.

FARM BUILDINGS.

There are the necessary farm buildings, and they are in good condition. There is also a good creamery.

HOSPITAL BUILDINGS.

The main building of brick is three stories high, and contains 30 wards, besides administration offices and rooms for officers. This building was expensive in its construction. It has been thoroughly overhauled during the last few years, and with new plumbing, toilets, and walls, and woodwork refinished, it is now in good condition.

There are two brick cottages for 30 patients each, one for male and one for female. A group of cottages for male patients has just been completed. These are one-story high and of brick made on the premises. The plan is a central building with large sitting-room, and behind which

is a large dining-room. They are large enough to accommodate 200 patients. Upon each side of this sitting room and about forty feet away, are two cottages for dormitories, with attendant's room, clothes room, toilet, and bathroom. Each of these cottages will accommodate 50 patients. This group of buildings is now ready to receive 100 male patients. It is proposed later to build two more of these dormitory cottages back of the first two, with corridors connecting with the rear end of the dining-room. These will accommodate another hundred patients.

The kitchen is a separate building in the rear of the main building. The walls of this building are apparently good, but the general condition is bad. The commissary building is nearly new, of brick, and in good condition. The buildings are lighted by electricity.

The question of water has been in recent years a serious one. Water has been so scarce that during the summer and fall months the toilets could not be flushed during the day, and but little water was available for irrigation. To meet the question two appropriations have been made, aggregating \$91,000. A reservoir site was procured back in the hills and a dam 56 feet high by about 450 feet long has been constructed, making a reservoir of about 125,000,000 gallons' capacity. This will, it is believed, hereafter solve the problem.

This reservoir was built under the direction of the State Department of Engineering. Our Secretary has inspected the work and pronounces it well done. The patients contributed much labor in the work.

THE MEDICAL STAFF.

In addition to the Superintendent, there are four assistant physicians, one of whom is a woman. There have been some changes in the medical staff during the past year. There is held every morning, Sundays and holidays excepted, a staff clinic, where all important cases are considered and the combined opinion of what course is best for the patient is obtained. Before this staff clinic also come cases for discharge, especially when requests are made by the patient or relatives and there is doubt about the patient's condition warranting a discharge. Before this staff a patient can be brought at any time for reëxamination.

METHODS OF TREATMENT.

More than two years ago, when new plumbing was being installed, a system of baths and massage rooms was installed. In these, the method of treatment known as hydrotherapy has been tested, with very satisfactory results. Patients who have not slept for days upon arrival have been put through this treatment, and after two hours have been asleep and have continued to make up lost sleep. That, with a cleaning out of the system, frequently results in a cure. A new building for treatment purposes is now being constructed, which will be thoroughly equipped for treatment of patients.

THE WARDS.

There are in all thirty-two wards, being an average of over 55 patients to the ward. Some of the wards have as many as 80 patients. In March last there were in one corridor of Ward A, about 12 by 40 feet in size, 18 patients, of whom 13 were on the floor. On the female side, one ward had 57 patients, of whom 18 were sleeping on the floor. Another had 54 patients, of whom 24 were sleeping on the floor. In another ward there were 64 patients, with 24 on the floor. The normal capacity of these wards is 36, 30, and 40 patients, respectively. The excess in these three wards amounted to 69 patients. While these wards were the worst, all wards were badly overcrowded. Two patients were on the floor even in the male receiving ward. This number has since largely increased, and now there are about 250 sleeping on the floor. This means that ticks filled with straw are placed on the floor in the day corridors for beds at night. During the day these patients are crowded in the corridors, which are too small for their accommodation. This treatment of people who are confined, because they are sick and for the safety of the community, is a shame.

CARE OF PATIENTS.

Since our last report, there have been charges of abuse of patients by attendants. One male patient died from the effects of injuries received on the wards. The Superintendent at once discharged the attendants implicated and caused their arrest and trial. They were acquitted by the jury, on the ground that the injuries were accidental in restraining a refractory patient.

On June 30th there were 65 male and 50 female attendants. In the male department there was an average of 15.67 patients to each attendant, and in the female department an average of 15.01 patients to each attendant. Eleven of these attendants are on night duty, and the others sleep on the wards and are subject to call during the night. On every visit we find the wards clean and in good condition. The patients seem to be receiving as good care as the crowded condition will permit. On pleasant days, which is much of the time, nearly all patients are out of doors on the grounds, both morning and afternoon. A few patients only are in restraint.

DIETARY.

The old, out of date, and bad condition of the kitchen does not permit of preparing the food in the best way. The following is a sample bill of fare for dinner, prepared without any knowledge that an inspection would be made that day: Soup, fish, potatoes, boiled rice, bread and butter, tea and milk. The pay patients were given in addition, beefsteak, cauliflower, and turnips. This was on Friday, the only day in the week on which fish is served.

NEEDS.

1. The overcrowded condition should in some way be met, either by a transfer of patients to Agnews, or by the erection of additional cottages. The increase in the number received at both Napa and Stockton has been much larger, because Agnews Hospital was not able to receive any patients.

2. The kitchen should be renovated and refurnished. The old furniture is mostly worn out and should be replaced. The general conditions are unsanitary.

3. It will now be necessary to install a larger pipe line to bring down the water from the new reservoir. It will come down in the creek bed to the lower reservoir, but the old water pipes are but four-inch and insufficient. A new and larger pipe line should be laid from the lower reservoir to the hospital, and a system of distribution provided.

3. AGNEWS STATE HOSPITAL.

BOARD OF MANAGERS.

J. K. WILSON, <i>President</i>	San Francisco.
F. H. BANGS, M.D.....	San Jose.
T. S. MONTGOMERY.....	San Jose.
DAVID RUTHERFORD.....	Oakland.
EDWARD WHITE.....	Watsonville.

LEONARD STOCKING, M.D., Medical Superintendent.

CENSUS.

The number of patients on June 30, 1908, was 419 men and 293 women, total 712, and 47 more were out on parole. There is a decrease from the number two years previous of 58. The number committed during the two years was but 38. The inability of the hospital to receive patients, owing to the destruction of its buildings, accounts for the few commitments. The commitments made were on account of some special reason for sending them to this hospital.

LAND.

The farm consists of 326 acres. The land is low and the quality not very good. It is equipped with a good poultry plant, which has been very successful, producing during the past year 10,257 dozens of eggs, and 3,445 pounds of poultry for table use. There is a dairy of 42 cows, which have shown a very high milk record.

FARM BUILDINGS.

The farm house is a good one of wood, and has been the only dwelling house for physicians and officers during the past two years. Some repairs were put upon it, and its condition is now very good. The stock barns and poultry buildings are all in good condition.

HOSPITAL BUILDINGS.

The temporary barracks have been moved to make room for the new buildings, but must be occupied for some time to come. The new buildings are under way. The bakery and commissary are completed, but not occupied, as it is impracticable to use them until the kitchen between these two buildings is completed. The three, commissary, kitchen, and bakery, form the rear row of the central group, are built on the same grade, separated about fifty feet, and connected by cement platforms, so that a car can be run from the north end of the commissary through all three buildings to the south end of the bakery. About forty feet in front of the kitchen on the same grade there is a building containing dining-rooms for attendants and officers, with lavatory and reception room on the first floor, and sleeping rooms for employees on the second floor. This building is nearly finished. The three buildings have been built from old brick laid in cement mortar and covered with cement plaster. The dining hall is reinforced concrete.

At some distance in front of the dining-room will be another row of three buildings. The center, the treatment building, is not yet commenced. On either side, properly separated but connected by corridors, are the receiving buildings, one for male and one for female patients. These are to be of two stories and are under construction. The buildings for men will extend in a semicircle around the north end of the yard, and those for women in the same manner around the south end, six of each. None of these will be over two stories high, and each will be constructed with special reference to the class of patients to occupy it. Six of these are now under contract and will probably be completed by January 1st. There are now also under construction four other buildings on avenues extending to the rear of the kitchen, for the chronic cases. These will be provided with yards extending still farther to the rear, and the patients in these buildings will never come in contact with those in the front buildings. The complete plan calls for twenty-three new buildings, of which fourteen ought to be ready soon after January 1st next, and the others should be pushed as rapidly as possible. It is then capable of enlargement by other cottages extending to the rear. All of these buildings except the service buildings first mentioned are of reinforced concrete. The general plan is an excellent one, on the so-

called "cottage system," which is now recognized as the best. It provides classification and facilities for treatment which will place it among the advanced hospitals for insane in this country.

WATER SUPPLY.

Four artesian wells furnish water. This is pumped into four tanks of 15,000 gallons each, placed on a steel tower about 84 feet high. Water issues from one of these wells at a temperature of eighty degrees.

THE COMMISSARY.

The commissary department has been badly pushed during the work of rebuilding. Like all other departments, it had to take temporary quarters and do the best it could. The efficiency with which the supplies have been handled during these trying times is highly commendable.

THE MEDICAL STAFF.

As new patients have not been received since the destruction of the old buildings, there has been less medical work required. The patients now there are generally chronic cases, for whom little medical work can be done, except to keep them in general good health. This has been good during the past two years. Considering the fact that the housing is in temporary wooden buildings without plaster, more or less open, the general health is remarkably good. Two physicians, besides the Superintendent, constitute the medical staff.

THE WARDS.

The temporary buildings are in the form of the letter "H," with the dining-room in the central part and two wards on each end. There are two of these buildings, one for males and one for females. An extension has provided another ward, so that in all there are but ten wards for 712 patients. The wards are badly crowded. What little day room is in use is obtained by moving the beds up toward one end of the ward, and thus clearing a small space at the other end. There are also provided at the ends of the wards a few single rooms. One of the wards is composed largely of single rooms. The wards have always been found in a clean condition.

CARE OF PATIENTS.

There were last year 52 attendants, an average of 13.69 patients to each attendant. Fortunately for the attendants here, they have a separate building in which they sleep, and are not molested during the night, the night attendants looking after the night work. The patients are out of doors every day that the weather will permit, and, with band concerts and baseball games, have been entertained.

The kitchen department has been moved the second time, but is still in good service. While the facilities for preparing food are not extra, yet the varieties of food and the manner of preparation have been fairly good. The food is sent out from the kitchen to the two main dining-rooms. The working men have a special dining-room near the kitchen.

Considering all the circumstances, the patients at Agnews have fared much better than we had reason to expect.

NEEDS.

The appropriation made by the last legislature will not be sufficient to rebuild this hospital in the manner desired. The State here has a great opportunity to make an advance in the care and treatment of insane, and we believe it is unwise and false economy to cut short what is actually needed to complete this hospital according to the excellent plans prepared.

4. MENDOCINO STATE HOSPITAL.

BOARD OF MANAGERS.

W. A. FOSTER, <i>President</i>	Willits.
GEORGE D. CLARK.....	San Francisco.
A. J. FAIRBANKS.....	Willits.
E. B. MARTINELLI.....	San Rafael.
JOHN L. McNAB.....	Ukiah.

E. W. KING, M.D., Medical Superintendent.

Location, three miles southeast of Ukiah. Post office, Talmage.

CENSUS.

The number of patients in this hospital on June 30, 1908, was 578 men and 256 women, total 834, and 12 more were out on parole. The increase for the two years was 95 men and 41 women, total 136. The number duly committed during the two years was 481.

LAND.

The hospital owns 880 acres of land, of which 450 acres is mountain land and valuable for water rights, 130 acres is in the building site and gardens surrounding, and 300 acres in the ranch. The latter now contains 75 acres of alfalfa, and the product this year was 275 tons; also a poultry plant producing last year 8,841 dozen eggs, valued at \$2,225. The dairy now numbers 50 cows and contains a good strain of Holsteins. The milk product last year amounted to 35,744 gallons, valued at \$5,361. The total products of the farm last year were valued at \$20,563.89.

FARM BUILDINGS.

The dairy barn is now old, unsanitary, and not large enough to accommodate the present dairy, and which must be constantly increased to meet the needs.

HOSPITAL BUILDINGS.

The main building is of brick, three stories in height, and contains the administration offices, rooms for officers, amusement hall, kitchen, and dining-room for officers and attendants, Steward's office and storeroom, and eight wards for patients. This building is now in very good condition.

A new cottage, two stories in height, has been built since our last report, and will accommodate about 60. It is not yet used because there is no money to employ help. The floor above is also divided into single rooms and is used as a convalescent cottage for women. There are now about 30 women on this floor. In the rear has been arranged baths for hydrotherapy, but they have not yet been used on account of lack of water. The appliances installed here are of the best.

Another cottage two stories high, similar to the one just described, is under construction. It is of reinforced concrete. The iron reinforcement being put in this building is more than we have ever seen put into a building of this size, and we believe an unnecessary amount is being used, which will considerably augment the cost of the building. This building, when completed, will be used for convalescent men and will accommodate about 75. The last legislature appropriated \$30,000 for this building, but from present appearances, the cost will exceed the appropriation.

Another building two stories in height, of wood, is also under construction. This building will contain 20 rooms for employees in the Steward's department. It is being built from the contingent fund.

THE TENT CAMP.

This camp is located in an enclosure of about one acre, surrounded by a wire fence eight feet high. It was originally planned for male tuberculous cases, but has been extended to include paralytics and other chronics. The tents have mainly been displaced by wooden pavilions, cheaply built, but neat in appearance. This camp now accommodates about 100 patients and has cost for construction only about \$6,000, with hot and cold water, steam heat, and connections with main sewer. A new octagonal pavilion for a day room has recently been constructed, which materially adds to the convenience of patients. This tent camp is the cheapest and one of the most satisfactory plants for patients in this State, and should be extended and imitated at other hospitals.

WATER.

A water supply is obtained from the mountains, and heretofore has been used both for the domestic supply and for power. The latter was generated by a Pelton wheel, located in the power building, and the water passing through this wheel went into the main sewer, flushing it out and assisting in the operation of the septic tanks, and was then used to irrigate alfalfa land. This power has been sufficient in the past to operate the laundry machinery, the cold storage and ice plant, the sewing machines, and the electric light plant. The water, however, is now short and the irrigation especially has suffered this season. When the main building was constructed water tanks were placed in two towers, one on each end. Those have proved dangerous and have been torn out. A new steel tower has been constructed, supporting a steel tank holding 100,000 gallons of water, the top of the tank being 135 feet high.

MEDICAL STAFF.

In addition to the Superintendent, there are two assistant physicians. No female physician has yet been employed at this hospital.

WARDS.

There are seven male and four female wards. There is an average of about 76 patients to each ward, and the largest ward has 110 patients. These wards are all overcrowded, the beds being placed in the dormitories as thick as they can be put in. Beds are also placed in the outside corridors. In the male wards we counted 50 beds, and in the female wards 25 beds, placed where beds ought not to be, and where it was never intended they should be.

CARE OF PATIENTS.

There were on June 30th 27 male attendants and 13 female attendants, including one male and one female night watch. In the male department there was an average of 21.41 patients to each attendant, and in the female department there was an average of 19.69 patients to each attendant. These attendants sleep on the wards at night, and there are no night attendants. If patients need any help during the night, it must be given by the day attendants. There is a night watch on each side, making regular rounds. Filthy patients must in general lie in their filth until the day attendants are up in the morning. All of our other hospitals provide night attendants, who clean up filthy patients whenever needed during the night. It should be done here, but has not been done because the salary fund is not large enough to pay for more attendants.

DIETARY.

The kitchen is a one-story room in the basement, but above ground, and is only about 27 by 36 feet. In this must be cooked food for nearly 1,000 people. It can not be done properly. The dietary, however, is better than might be expected. Enough is served, but more variety might be appreciated.

NEEDS.

1. One of the first needs is water, *more water*. This might be easily obtained. A creek running most of the year flows by the premises. By the purchase of 60 acres, a water right could be secured. This land would also be a desirable addition to the premises. The gardens have suffered severely this year for lack of sufficient water for irrigation, and the additional water would soon pay for itself in increased products.

2. *Enlargement of kitchen*. The Superintendent has a plan for an addition on to the side of the present kitchen, which would double its present size and give top ventilation for the escape of steam and odors. This plan will solve the problem of enlargement and make a modern kitchen with a minimum of expense.

3. *New laundry machinery*. The present laundry machinery has been in use a long time and is out of repair. It is also inadequate now to do the work required.

4. *A new dairy barn*. The present dairy barn is old and unsanitary. It is also too small for present needs.

5. *A new cottage*. To provide for the increase of patients, a new cottage will be required. It will probably be best to make this proposed cottage a receiving and treatment building for both sexes, removing to it the treatment apparatus now installed in the new women's building. This apparatus would answer for both sexes and save duplication. The two new cottages are just as badly needed for convalescent cottages.

6. *More attendants*. The appropriation for salaries should provide for a material increase in the number of attendants. The number of patients to each attendant is larger at this hospital than at any other of our State hospitals; and, in addition, several night attendants should be provided.

5. SOUTHERN CALIFORNIA STATE HOSPITAL.

BOARD OF MANAGERS.

E. P. CLARKE, <i>President</i>	Riverside.
GEORGE L. HASSON.....	Los Angeles.
H. MCPHEE.....	Santa Ana.
FRANCIS M. PARKER.....	Los Angeles.
H. B. WILSON.....	Redlands.

E. SCOTT BLAIR, M.D., Medical Superintendent.

Station and post office, Patton.

CENSUS.

The number of patients in the hospital on June 30, 1908, was 657 men and 373 women, total 1,030, and there were 69 more out on parole. The increase over the number in the hospital two years previous was 141. The number duly committed during the two years was 786.

CHANGE OF SUPERINTENDENTS.

On September 1st there was a change of Superintendents, Dr. A. P. Williamson retiring, and Dr. E. Scott Blair succeeding. Dr. Blair had previously served this hospital two and a half years as First Assistant Physician. Whatever criticism is made, therefore, of this hospital, is of a time prior to the coming of Dr. Blair.

LAND.

The hospital has about 400 acres of land, of which 40 acres are valuable only for water rights. About 35 acres are in oranges, about 30 acres in deciduous fruits and vines, 40 in alfalfa, and 25 in gardens and vegetables. This land is mostly very productive. The dairy herd of Holsteins and Jerseys, pure breeds, crosses and grades, now numbers about 75 cows, and has a good milk record. There is also a good hog ranch and a poultry yard. Last year the products were valued at \$29,338, of which the leading were, milk \$8,928, oranges \$6,469, pork \$2,714.

FARM BUILDINGS.

The barn is in fair condition, but the stables need new floors. A new dairy barn, or rather a group of three buildings, are now under construction at an estimated cost of \$12,000. New pens and yards, the latter with concrete floors, have been built for the hogs, and now this is no doubt the cleanest place for raising hogs in the State.

HOSPITAL BUILDINGS.

The main building, three stories high, has now been completed and is furnished with all its numerous wings and the administration front. The old, defective women's wing, which began to crack open about two years ago, has been strengthened by a system of iron rods, until it is now pronounced safe by the State Engineer. The last legislature appropriated \$16,000 for putting a slate roof on the older portions of the main building. This work is in progress.

Besides this main building, there is a cottage of one story for female patients, with a capacity of 44, and a group of three cottages, all one story, for tuberculous cases, with a capacity of 50. Two of these cottages are built upon a plan specially designed for the care of tuberculous cases. They are arranged with open spaces near the roof, protected by an extended roof, so as to permit the free circulation of air and at the same time exclude storms. For the walls, metallic lath and cement plaster have been used outside and in. One of these cottages is for women and one for men, and the third is arranged in rooms for women nurses. Women have the care of the patients in both of these cottages.

WATER.

The hospital owns a private water supply for domestic use, valued at \$5,000. It also owns 720 shares in the North Fork Ditch, worth \$82,800; 30 shares in the City Creek Water Company, worth \$1,500; and rights in the Bear Valley Water Company, worth \$25,000, which provides all water needed for irrigation.

Two years ago an appropriation of \$15,000 was made for a storm ditch diagonally across a piece of cultivated ground, with the idea of taking care of the storm water during winter, and also permitting this piece of land to be graded up and perhaps set to orange trees. The appropriation did not complete the work. It will be necessary to make a further appropriation to complete and extend the ditch and grade the land.

HEALTH AND SANITATION.

The general health at the hospital was normal until June last, when an epidemic of diphtheria broke out. Through a mistake in diagnosis, proper precautions were not taken and the germs were well scattered. The number of cases reached about 100, and three deaths occurred. The premises were in quarantine for several weeks, during which time no new patients were received into the hospital. At this writing, September, two wards are still isolated and the tuberculosis camp is used for a diphtheria quarantine hospital.

THE MEDICAL STAFF.

Besides the Superintendent, there are four assistant physicians, one of them being a woman. The physicians are all young and none of them has had large experience with the insane.

METHODS OF TREATMENT.

The last legislature appropriated \$43,000 "for the erection of two receiving cottages, one for male and one for female patients, and to equip and furnish the same, and to erect between, and in connection with, said cottages a hydrotherapeutic building with all necessary equipment and furniture for baths, massage, and other treatment." These buildings have not been commenced, and until they are completed this hospital is not prepared for the proper treatment of insanity.

THE WARDS.

There are now in this hospital 9 male and 7 female wards, being an average of 62 patients to the ward. The largest ward has 127 patients. The wards are badly overcrowded. They are too large and there are too many patients even for the size of the wards. About 113 men and 19 women were sleeping on the corridors and in places where patients ought not to sleep.

CARE OF PATIENTS.

There are in all 39 male and 31 female attendants, being an average of 14.71 patients to each attendant. During the past year serious charges of the abuse of patients were made, which were duly investigated. We have noted a tendency to control patients and secure order through fear, which must be inspired by violence at some time. We believe that the Superintendent and physicians, on their daily rounds, should see every patient and give patients also an opportunity to enter complaints. Patients should also be seen by the physicians when unstripped for bath, in order that they might discover any marks on them.

NEEDS.

1. A cottage for nurses when off duty should be provided at an early date. If such a cottage should be built, and the nurses removed from the rooms on the wards where they now are, the rooms vacated would provide for 70 to 80 more patients. We are not in favor of a single cottage for attendants of both sexes, but would recommend a separate cottage for each sex.

2. The roof over the present congregate dining-room for men can be raised and a ward provided in the second story that will thus be added,

which would accommodate about 100 male patients. The estimated cost is \$13,750.

3. An appropriation for storm ditches sufficient to complete the job already commenced should be made. This is estimated at \$18,000, including grading of land.

4. The roads upon the grounds should be made more permanent, and thus prevent constant washing out during the winter.

5. The laundry is now too small. The present building can be satisfactorily enlarged for the purpose upon a small appropriation.

6. A cottage for the First Assistant Physician, to cost, with furniture, not to exceed \$5,000.

6. GENERAL CARE OF THE INSANE.

ADDITIONAL HOUSING REQUIRED.

The increase in the number of insane to be cared for in this State during the past two years has been 508. The normal annual increase for a number of years past has been about 150, but last year there was the very large increase of 331.

At present, over 400 patients in our five insane hospitals are sleeping in beds laid down on the floor each night, and 360 more in basements, corridors, and other places not made for patients and where patients ought not to sleep. These are distributed among the various hospitals as follows: Stockton, 190; Napa, 364; Mendocino, 75; Southern California, 132. Total, 761.

In providing additional housing for the insane, we have not kept up with the increase in the number of patients. The completion of all buildings now under construction, or authorized, will not reduce this number more than one half. We may expect an increase of 400 before the next legislature can take action, making in all about 800 patients which this legislature should make provision for. As much of this provision as possible should be made at Agnews, because of the smaller number now there, and because of the improved facilities with which this hospital will be equipped. Increased accommodations, however, should be provided at all the State hospitals. This should be done by means of cottages. We believe that the plan of the "tent colony" at Mendocino (page 60) should be extended to all of our hospitals. The patients are in better health and more contented. This plan is also cheaper. By following this policy the State can furnish good accommodations for its unfortunate insane—accommodations far better than a straw bed laid down on a corridor floor.

TREATMENT BUILDINGS.

The new treatment buildings provided for each hospital are under way, except at Southern California. These will provide the long desired facilities for the proper treatment of insane patients. When these are in operation the percentage of cures should increase, and consequently the heretofore annual increase be reduced.

TREATED AS CRIMINALS.

The procedure for the commitment of an insane patient oftentimes hinders his prompt treatment and cure. He is generally treated, not as a sick person, but as a criminal. He is arrested by the county sheriff on a complaint and warrant, and too frequently taken to and confined in the county jail. He is there treated as a criminal and committed on a kind of indeterminate sentence. When taken to the hospital he frequently thinks he is in prison, convicted of a crime of which he is innocent.

EARLY TREATMENT.

The fact that our laws look upon insanity as a crime, and therefore attach a stigma to every person committed to a hospital for insane, leads many families to wait until it can no longer be avoided before committing a member to the hospital. In many instances treatment thus comes too late, and many, who in the early stages might easily have been cured, are now doomed to a life of insanity. The easier methods of commitment, the removal of the taint of criminality, will go a long way towards securing earlier treatment and consequently many more cures.

VOLUNTARY COMMITMENTS.

If it is still thought necessary to adhere to semi-criminal proceedings for the compulsory commitment of insane patients (which we do not believe), we might still provide for the voluntary commitment of patients without process at all. Why should we not receive into our new treatment buildings patients who come voluntarily for treatment, and thus save perhaps a more extended treatment or a life patient later? The State, as well as the patient, would be a gainer, and the stigma of a commitment would be avoided.

PSYCHOPATHIC HOSPITALS.

Another step in advance, which we must soon take, is the establishment of hospitals for first treatment of the insane in each of our two largest cities. These hospitals would receive and treat all patients voluntarily entering, and such other cases as are now locked up in cells in our receiving hospitals. In course of time nearly all cases would

come to these hospitals, as the option of voluntarily going there, or under compulsory commitment of being sent to one of the regular hospitals, would probably determine the patient to enter the psychopathic hospital without legal form of commitment. Besides this, the family or relatives of an insane patient will in many cases be glad to bring him to such a hospital in the early stages of his affliction, when the chances of successful treatment are the greatest. This favorable time is frequently lost simply because ordinary hospitals will not receive such a patient. At home he can not be treated. Should it finally become necessary to send the patient to one of the State hospitals, this can be much more easily done from a psychopathic hospital, where the temporary treatment and the judgment of expert physicians will be more apt to overcome the reluctance of the family to consent to the commitment. Local psychopathic hospitals are bound to be provided all over the country, and the sooner we get them the sooner we shall be adopting a wise economy by returning more people to the community cured.

ABUSE OF PATIENTS.

During the past two years there have been reported several cases of abuse of patients by attendants.

At Napa a patient lost his life as the result of injuries received in the hospital. The attendants were at once discharged from the hospital, arrested, and put on trial for the offense, but were acquitted by a jury.

At Southern California Hospital charges were made by a newspaper reporter, who entered the hospital as an attendant for the very purpose of learning what was being done. These charges were investigated by the State Commission in Lunacy, at which investigation this Board was represented. As a result, one attendant resigned and four were dismissed.

Personal complaints have been made to this Board by patients, and in all instances these complaints have been investigated. In most cases these complaints are the result of delusion. As an illustration, not long since a complaint came by letter from a patient at one of our hospitals. The letter was well written, showed no signs of mental derangement, and claimed that the writer was cruelly treated. An investigation followed. When seen and questioned the patient said the abuse consisted in the placing of an electrical machine in his abdomen and the breaking in of his ribs to hold the machine in place. As a result of this he had been constantly tortured by the pounding of the battery, which was in operation at that very moment. Complaints have also been made to us by discharged patients that attendants frequently abuse inmates, and in some instances leave marks upon them. The abused patient is then locked in a room as violent and is not seen by the physician until the marks disappear.

ATTENDANTS.

The average number of patients to each attendant in this State is 15.93. On some wards during the daytime two attendants have to look after as many as 30 patients to each attendant, and in one instance three attendants have 127 patients to care for. The wages paid run from \$384 to \$600 per annum for female attendants. For male attendants the wages paid are \$480 minimum and \$660 maximum. These attendants are boarded and roomed by the hospitals, and in most instances sleep on the wards. They are on duty about thirteen hours per day, are subject to call during the night, and have a half day off each week. The work is arduous, the privileges few, and the pay small. Too few attendants are employed and too many hours on daily duty required. Some of the patients become violent and attack attendants and other patients, and have to be restrained. The very confinement makes many patients dissatisfied, nervous, and sometimes ugly. The attendants are expected to deal with them, protect themselves and other patients, and always hold their tempers. It is hard to do so on some occasions, and the patient may be too severely handled. Our attendants are drawn from the general population and have the average intelligence, sympathy, and humanity. Many of the attendants have seen long service in our hospitals. One attendant has served forty-five years, another thirty-eight years, and others for more than thirty years. Many of them have had the same patients for years, and understand them and have developed an interest in them. The attendants can not always be watched, but must be trusted, although each ward is liable to visits by the Superintendent, physicians, and supervisor or matron at any time. We have gone through the wards at all hours, at bedtime, in the early morning, and when patients were taking their baths. The attendants generally have been kind and gentle, and in many cases much liked by the patients. It is not possible to believe that any serious abuses are practiced.

The remedy for such abuses as may occur is in a complete change of system, which will provide instead of large buildings, cottages with more home-like surroundings and a larger number of attendants. More attendants could be employed in the present buildings to advantage, and the quality of work could be improved by better hours of labor and better living conditions.

7. HOME FOR THE CARE AND TRAINING OF FEEBLE-MINDED CHILDREN.

BOARD OF MANAGERS.

C. E. HAVEN, <i>President</i>	Santa Rosa.
REV. A. C. BANE.....	San Francisco.
JOSEPH P. BERRY.....	Santa Rosa.
REV. WALTER FREAR.....	Oakland.
REV. WM. LYONS.....	Menlo Park.

WM. J. G. DAWSON, M.D., Medical Superintendent.

Station and post office, Eldridge.

CENSUS.

The number of inmates in the Home on June 30, 1908, was 395 males, 307 females, total 702, and 27 more were away on parole. The increase over two years previous was 73 males, 46 females, total 119, and an increase of 16 away on parole. The number admitted during the year was 143.

LAND.

The Home has 1,670 acres of land, of which about 300 acres are under cultivation, and the rest is pasture land. While there is not much good agricultural land, yet the necessary crops are raised, a herd of 68 cows kept, and good orchards and gardens cultivated. There are 120 acres in deciduous fruits and 24 acres in vines and small fruits. All of these fruits are usually good in quality and large in quantity. They are partly consumed by the children at the Home in the green state, and the remainder is canned and dried. The dairy furnishes an abundance of milk and a poultry plant supplies the institution in part with eggs. The main products last year were hay, fruit, milk, and eggs.

FARM BUILDINGS.

The farm buildings are not good, the dairy barn especially being old and unsanitary. There was an appropriation of \$5,000 made by the last legislature for dairy barn and equipment, but it is not yet completed. The poultry buildings are new and good enough for the purpose.

GENERAL BUILDINGS.

The general repairs in progress at the time of our last report have been completed and the buildings are now in good condition. The main front is now in process of construction. This will be used for administration. Next in importance to the main building is the Manse, a one story brick building located some distance away and used for epileptic males. Close to this has been built a wooden pavilion with a capacity of 58, which is proving very satisfactory. Detached also is a group of

three cottages, so connected by a sun corridor as to make in reality one cottage. This is used as a boys' nursery. An addition to this has been constructed. The Lux cottage, built by a legacy of \$5,000 left by the will of the late Mrs. Miranda W. Lux, furnishes very fine accommodations for 19 high grade women.

The hospital is badly planned, too small, and poorly built. It is now necessary to erect tents outside to accommodate the patients to be cared for.

Another new cottage, the result of a donation by Mr. H. A. Cohen, is completed and furnishes accommodations for 20 high grade males. There have also been partly completed two cottages for epileptics, placed some distance apart, but in proximity to the general buildings. This we believe to have been a mistake. We think the epileptic colony should have been independent of the Home buildings, and far enough away to have been practically separated.

Another cottage has been built which is now used by the officers in place of the old Manor House torn down, and a new Manor House is under construction. With all these buildings completed, it will still be necessary to use the old barracks this winter, and there is still a waiting list.

A separate residence is provided for the Superintendent.

WATER.

The water supply comes from the mountains to the west of the buildings and is from springs. This last year has been an exceptionally dry one and the water supply is short. Two reservoirs, located on the hills back of the buildings, receive the water from the springs. This summer the reservoirs became nearly empty and a search was made for more springs. They were opened up and connections made. Before the supply is adequate it probably will be necessary to construct another reservoir higher up and collect a reserve supply.

GENERAL HEALTH.

This is not a general hospital, but the Superintendent is a physician. There are also two other physicians employed, one being a woman. The general health has been good, and up to June 30th last free from epidemics. During the two years there have been 56 deaths.

THE SCHOOL WORK.

The inmates of the Home vary in age from the babe to the old woman of eighty. About 300 are, however, under twenty years of age. While some are of a grade so low that they must always be cared for, yet many more are capable of education. The methods of training must

be suited to the various intellects, and should be on industrial lines. To do proper educational work, more teachers are required than for the same number of normal children. The State has not fully realized the importance of this feature of the Home. There should be more school work than is now given. There are three teachers employed. The most of the household work is done by the inmates, and this is a part of the industrial education.

CARE OF INMATES.

There are private rooms, rooms for two, three, or four, but the larger number of the inmates sleep in the larger dormitories. There are day rooms in the building, but most of the inmates are out of doors nearly every day. There are thirty-four attendants employed. The children, young and old, are all well cared for and are the happiest of the State's wards.

DIETARY.

We have seen the meals served on many occasions and can testify to the good quality and abundance of the food.

NEEDS.

1. *A refrigerating plant, including building.* At present there is no refrigeration whatever. Such a plant is a necessity and would probably save its cost during the biennial period.

2. *A gymnasium and play room for older boys.* The only place now for the older boys to play in during the wet weather is in the basement, which is dark, damp, and unsanitary. There should be erected somewhere in the back yard a building of wood that may answer the purposes of a gymnasium and play room. The gymnasium is desirable at all times for the building up of the physically weak.

3. *The remodeling of Madrona Hall.* This building is used for industries on the lower floor and sleeping rooms on the upper floor. More shop rooms are needed, and it is desirable to convert the sleeping rooms on the second floor into shop rooms, and place here the girls' sewing room (which is now in the basement of the main building), printing office, shoe shop, and perhaps some others. Those who are now occupying the sleeping rooms may be provided for in the new Manor House, or the building for attendants, when completed.

4. *A carpenter shop and blacksmith shop.* This building should be of brick. The two shops could be in one building, one story high, so that each may be on the ground floor.

5. *New boilers.* The boiler plant is insufficient to heat the additional buildings now being erected. Some of these boilers are old and will need repairs, and additional boilers must be provided in order to meet the

increased demand. This is probably the most important need of the institution.

6. *A new sewer system.* It will be necessary before long to construct a new sewer system upon the west side. The east side sewer system, which is now used for both sides, is inconvenient to connect with buildings being constructed on the west side. It is also so high that it is impossible to connect buildings that are built on the lower land in front, which really furnishes the best place for cottages.

7. *New fencing.* This farm of 1,670 acres is well spread over hills. It has had practically no new fencing for years, and it takes a great deal of fencing to keep up a place of this size. The present fences will not turn stock, and it is necessary to commence at once a new system of fencing, carrying it to completion as rapidly as convenient.

8. *Addition to hospital.* The present hospital building is too small, and additions should be built thereto.

8. THE PROBLEMS OF THE FEEBLE-MINDED.

INCREASED ACCOMMODATIONS.

The normal number of feeble-minded in this State would exceed 2,000. The Home has always been full and there are now a number of applications on the waiting list which can not be received until more room is provided. There are now in county hospitals, in orphan asylums, and other institutions, and even in homes, children who could be much better cared for in the State Home for the Feeble-Minded. Such a child is generally a menace to the institution, the family, or the community in which he is. It is as desirable in every way to accept into the Home these children, as to keep those who are now there. But to do this means that increased accommodations should be provided.

FEEBLE-MINDED WOMEN OF CHILD-BEARING AGE.

There is another class of cases for which there is urgent need for custodial care. There are throughout the State many feeble-minded women of child-bearing age, unmarried, who are giving birth to children who in all probability will be feeble-minded and become State charges. A number of such cases have been reported to this office or seen in our inspection tours, and in one such case the woman had just given birth to her seventh child, each time going to the county hospital for attendance, and throwing her offspring upon the public to care for. This woman was feeble-minded, and while we do not know what became of these particular children, we know that a number of children from such

parentage have been received at the Home for Feeble-Minded, and it is safe to predict that a large majority of these will reach there in time.

Such a woman is also the cause of much immoral corruption in a community. Her condition, both mental and moral, becomes generally known and she is the victim, willingly or unwillingly, of the human dogs of the community.

There is now no suitable place for such women. The county hospital can not retain them, and as soon as they are over one confinement, they are turned at large, only to again return in due time for another confinement.

Such women could undoubtedly be now committed to the Home for Feeble-Minded, but the Home can, and must, refuse to receive them until a suitable place for them has been provided. A building to accommodate not less than thirty and not more than fifty should be erected at the Home for the custodial care of this class. This building should be so isolated that younger girls at the Home could not be corrupted by these women. Industries should be provided, both as an occupation and an education and, in part, to reimburse the State for their maintenance. Those committed or received here would also be subject to the present law providing for a payment of ten dollars a month, either by relatives or by the counties from which they are committed. This expense will no doubt prevent the hasty commitment of such cases and prevent the building being filled with those who are not proper subjects.

CHAPTER IV.

THE DEAF AND THE BLIND.

1. THE INSTITUTION FOR THE DEAF AND BLIND.

BOARD OF DIRECTORS.

J. W. RICHARDS, <i>President</i>	Berkeley.
WIGGINGTON CREED, <i>Vice-President</i>	Berkeley.
J. W. GARTHWAITE.....	Oakland.
WALTER J. MATHEWS.....	Oakland.
GEORGE W. REED.....	Oakland.

WARRING WILKINSON, Principal.

CENSUS.

The total number of pupils enrolled at the close of the last year was as follows: Deaf boys 73, deaf girls 66, blind boys 36, blind girls 34; total 205. This is four less than were on the roll two years ago. The total enrollment during the two years was 275, and the number graduated and discharged during the two years was: Deaf boys 27, deaf girls 17, blind boys 17, blind girls 9; total 70.

LAND.

The institution owns 130 acres of land, of which about 18 acres are used for ornamental grounds and building sites, 5 acres for vegetable gardens, 15 acres in orchards, and the remainder in pasture. A dairy of 22 cows is kept, and a poultry plant of 500 hens is maintained.

WATER.

The water is now obtained from springs in the hills. This supply, however, is not sufficient, and during the past two years \$1,324 has been paid for water from a private water company. There is a well on the premises that with some development probably could be made to furnish a considerable supply of water.

BUILDINGS.

The central building is two stories high and used for the administration offices, schoolrooms, and assembly hall. It has received many repairs since our last report. There are five detached two-story buildings used for dormitories for the pupils. Each of these buildings has a capacity of about fifty. The two on the north side of the grounds, Dur-

ham Hall and Willard Hall, are used for girls, and the three on the south side, Bartlett Hall, Moss Hall, and Strauss Hall, for boys. Back of the main building is the refectory building, containing the dining-room and kitchen, also a gymnasium. Still back of this, are the laundry and bakery buildings. To the left, on the hill, and well isolated, is the hospital, a small one-story building, but sufficient for the needs of the institution. There is also a large trades building, and the usual farm buildings. The Superintendent is provided with a separate residence. The buildings are mainly of brick and in fairly good condition. They were plainly but well built.

PLUMBING.

The plumbing in Moss, Strauss, and Willard halls was put in in 1879 and 1880. It has been in use nearly thirty years, and is worn out.

EDUCATION.

This is purely an institution for the education of these two classes of defectives, and the training given will rank fairly well with other institutions for similar purposes. The blind receive a very good general education, and some special training in music, typewriting, etc., is given. There is, however, no general attempt at industrial education. This is the weakest part of the institution.

The deaf children receive the general education, and in addition some industrial training. They do the agricultural work. A printing office and a cabinet shop are also maintained. The cabinet work is especially commendable.

GENERAL HEALTH.

The institution has had no epidemic of any kind to contend with during the past two years. There has been general good health, and the sanitary conditions are excellent.

NEEDS.

1. *New plumbing.* The plumbing in Moss, Strauss, and Willard halls should be reconstructed. No estimate of cost has been made.

2. *Street work and sidewalks.* The building site is in the city of Berkeley, and is surrounded by streets on three sides. The property on the opposite sides of the streets from the institution grounds is well improved, and sidewalks are laid. The State, however, has never done its share of the street work. Grading should be done and sidewalks laid. The estimated cost is \$5,000.

3. *More water.* The pipes bringing water from the springs to the buildings are old and now in bad condition, and should be replaced by new ones. It is also desirable to develop the well on the premises, with a view to getting enough water for irrigation.

4. *Electric lights.* At present the electric lights are run by an engine and dynamo on the premises. If any of the machinery should give out, the buildings would be for a time without lights. To avoid the unpleasant conditions from such an accident, a connection could be made at very small expense with the electric light company, ready to switch in, in case of an emergency.

2. THE INDUSTRIAL HOME OF THE ADULT BLIND.

BOARD OF DIRECTORS.

JOHN P. IRISH, <i>President</i>	Oakland.
GEORGE E. RANDOLPH, <i>Vice-President</i>	Oakland.
SOL. KAHN.....	Oakland.
H. C. CAPWELL.....	Oakland.
J. W. SCOTT.....	Oakland.

JOSEPH SANDERS, Superintendent.

CENSUS.

The population of the Home for Adult Blind has not materially changed during the past two years. This is on account of the limited capacity. It is full all the time. The number on the roll June 30th last was 91 males, 25 females; total 116. This number, however, includes 8 who were taken from San Francisco after the fire, but have never been admitted as regular inmates. The number two years ago was 111.

LAND.

The Home owns only a part of one block in the heart of Oakland. On this portion of a block are located all the buildings. Nothing is cultivated except the ornamental grounds.

BUILDINGS.

The buildings are all of wood. A new shop building has been completed during the past two years. This is used for the broom factory. It is two stories in height and fairly well built. The other buildings are all old. The main building was formerly a dwelling house. This is now used for the administration, kitchen, dining-room, and sleeping rooms for women. There are two dormitories for men that look rather old and out of repair. It must be said that this is the poorest housed institution the State maintains. It is hardly up to the standard of a county "poor house." The furniture is old, poor, and there is not enough of it. Of course blind people do not need elaborate furniture, with beveled glass mirrors, but each inmate should be provided with a substantial case of drawers or other convenient receptacle in which to

keep his few possessions, and with a respectable bed and chair. This is not an elaborate lay-out, but more than he now has.

INDUSTRIES.

The industries of the Home are the cane-seating of chairs, mostly in the way of repair, the manufacture of brooms of various kinds, and some hammocks. The cane work and the making of whisk and children's brooms is mostly done by the women. Practically the one industry for men is broom making. The management of the Institution for Blind says that they leave the industrial training of the blind for the Home, and the Home in reality only trains the men in the manufacture of brooms. It must, therefore, be concluded that the industrial education of the blind in this State is very scant. At the Home, the State houses and feeds the inmates at its expense. The profits of the factory, after deducting cost of raw materials, are paid to the inmates as wages. The earnings for the past year were only \$5,556.66.

NEW BUILDING.

The last legislature appropriated \$50,000 for a new building at the Home. The construction of this building has been delayed, but the contract is now let. If the building had been contracted for as soon as the appropriation had been available, it would have had to be built of wood, or exceed the appropriation. Now it is being built of reinforced concrete. The basement will be used for kitchen and general dining-room to seat 300. The administration officers will be on the first floor, and sleeping rooms for employees and women on the second floor. The old building will be remodeled for men. The additional capacity will be only about sixty.

NEEDS.

The new building faces Thirty-sixth street, Oakland. The surrounding lots are built upon and there are sidewalks along all but the State property. A sidewalk should be provided at once along the Home property on Thirty-sixth street. It is not only necessary to be in harmony with the surroundings, but also for entrance to the two new buildings, both fronting on the street.

A special appropriation may be found necessary for furnishings of the new building.

There should be a special appropriation for repairing and refurnishing some of the old buildings.

PART II.

THE COUNTY INSTITUTIONS.

CHAPTER I.

THE COUNTY JAILS.

1. GENERAL CONDITION OF.

The county jail in this State, as in most others, serves two purposes :

First—As a place for detention of persons accused of crime ;

Second—As a place for punishment of persons convicted of crime.

HELD FOR TRIAL.

Under the first division, the jail receives all persons charged with felony and holds them until they have had their day in court, and are either acquitted or convicted and removed to State prison. Among these are persons guilty of the worst of crimes, men who may be classed as the hardest of criminals. There may also be arrested for the first time a young man charged with a light offense, punishable by a fine or county jail sentence, called a misdemeanor. It is a crime against society to place these two classes in the same cage or cell. The inevitable result will be that the younger man will be educated in all the tricks and crimes of the older one. Yet the statutes of this State permit of the confinement of these two classes together, and in nearly all of our jails they are confined and mingle freely together.

SERVING JAIL SENTENCE.

The State law requires that persons convicted of crime and sentenced to serve a term in jail should be confined separately and distinctly from persons belonging to either of the other classes. This law is not observed and prisoners frequently are kept all together in one common lot. In one of these jails, all of the male prisoners, 14 in number, were together in one room, gathered around the dining table, and with the morning paper, were discussing the latest sensational murder, with comments strongest on what the murderer ought to do to avoid conviction. Here was clearly a school for crime, conducted under the auspices of the county. This is certainly a hard place for a young man who is wrongfully charged with a crime, and who, after a few weeks or months of such confinement, is acquitted. He went into the jail innocent of crime and came out, possibly, tainted for eternity.

WITNESSES AND CONTEMPT CASES.

The jail is also required to provide for the separate confinement of persons detained as witnesses, or imprisoned on an order for contempt. Very few of our jails are provided with a place for such separate confinement.

WOMEN.

The State law further provides, "Nor shall male and female prisoners (except husband and wife) be kept or put in the same room." This law, demanded by all sense of decency, is not observed in two counties. In these counties female prisoners are locked in cells in the same cage with men, where they can see and converse with each other. In a majority of the counties women prisoners are searched and handled by men. The female prisoners have no woman to advise with, but must ask for all their wants of a man. Too often the male jailer is not delicate about his manner or talk, believing every female prisoner to be of bad moral character. We have gone with the male jailer to inspect the female wards; the door is unlocked, we walk in unceremoniously, and have found the occupants undressed in bed.

JAIL MATRONS.

We have commented on this matter in our two previous reports and have urged that a matron be provided for every jail. There has been scarcely any improvement. Every county jail should have a matron and all female prisoners should be under her charge. In the smaller counties, the wife of the sheriff or jailer could be made matron at small expense to the county, or, if that be impossible, some woman interested in charity work could be found who would be willing to act as matron. We believe that a law should be passed now making it unlawful to confine in jail any woman except under the care of a matron or female jailer.

CONDITIONS OF HEALTH.

The preservation of our own health and that of the public requires that we give attention to the health of prisoners in jail. It is an established fact that communicable diseases are cultivated in jail and carried from there outside. Failure to note this and make provision against it has caused the death of innocent persons, sometimes sheriffs, jailers, and judges. The public, if for no other than a selfish motive, should be vitally interested in the hygienic conditions of the jail.

LIGHT.

Our jails are in the main constructed on the theory that "evil prefers darkness rather than light." Many of them are dungeons into which sunlight never penetrates. In some the prisoner can not see to read

except by artificial light. In such jails dirt prevails, dampness and mildew are common. Sunlight is both an agency to cleanliness and to health. It reveals filth, destroys germs, and helps to drive evil out of bad men's souls.

VENTILATION.

Health depends very much upon fresh air. We have a cubic air space law in this State, a violation of which is a misdemeanor, but many of our jails violate it with impunity. We once saw a number of Japanese in jail for violating this law, and the very jail in which they were confined violated the law. Even with sufficient air space, there must be means of changing the air frequently. Our jails are not usually supplied with any means of ventilation, except ordinary windows, and in many jails these are few and small. But the windows are not usually open, except in warm weather.

CLEANLINESS OF BUILDING.

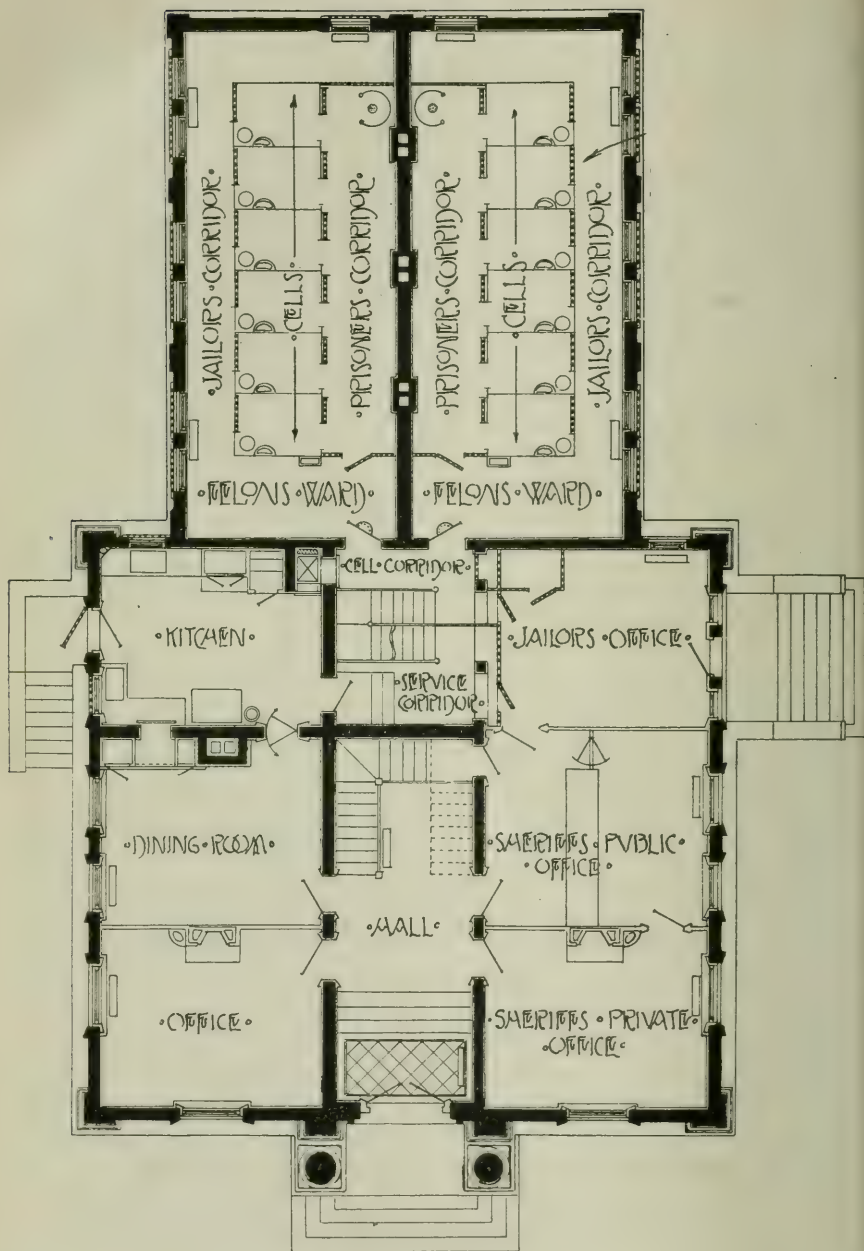

In most of our jails the floors, walls, cells, etc., are in fairly clean condition. Prisoners are required to clean out the cells and usually the cell room. They are in the main fairly well cared for, considering the conditions of construction.

BEDDING AND CLOTHING.

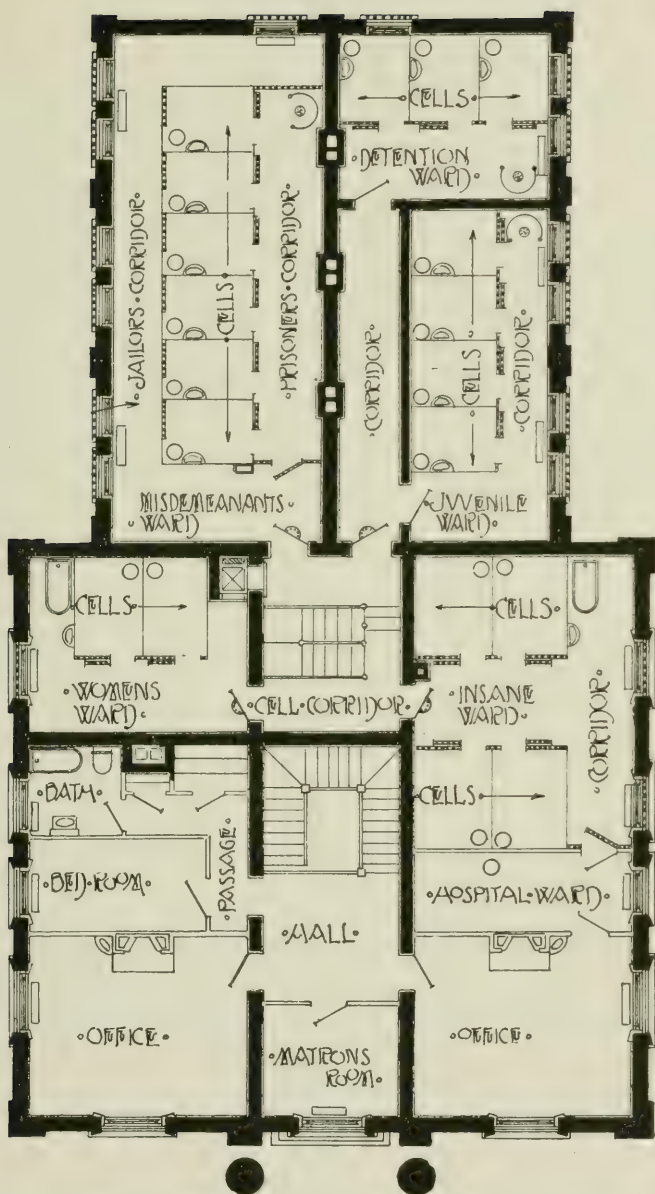

The beds in jails are usually the canvas hammocks strung across the cell, or a strap iron bunk made to turn up against the wall when not in use. Seldom is any bedding but quilts and blankets used. Quilts can not be washed and usually are very dirty, and in some instances vile. Blankets are not washed with the regularity required by rules of health. During the winter season many of our prisoners are tramps, and their clothing is poor and dirty, and usually infested with vermin. Unless the clothing is burned and the prisoner cleaned and disinfected, dirty, vermin infested bedding must be the result. The bedding and clothing are generally washed inside the jail by the prisoners themselves. There are usually the poorest facilities provided. Unless proper facilities for washing and drying in a place separate from the jail room can be provided, the bedding and clothing should be sent outside of the jail for this purpose. In many of our jails insecticides and disinfectants are regularly used, with good effect.

PLUMBING AND SEWERAGE.

In some of our jails no provision is made for the disposition of the waste of the human body, other than buckets, to be carried out in the morning and cleaned. In other cases there is one toilet bowl in each cage, but often this is not in good order, leaks, or will not properly flush.

FIRST FLOOR PLAN—HUMBOLDT COUNTY JAIL.
WARREN SKILLINGS, Architect.

SECOND FLOOR PLAN—HUMBOLDT COUNTY JAIL.

WARREN SKILLINGS, Architect.

Chloride of lime is then used to overcome the odor and it is then called sanitary. The jails are usually in the county seat town, and are connected with the city sewer and with city water.

FOOD.

In many jails the food served is really too good. That is, too much meat is served. Usually two meals a day are served, which is enough for men confined without work. It is not necessary to serve meat more than once, if sufficient other proper food is given for breakfast. Dinner is then served in the afternoon, between two and four o'clock. In very few instances is there reason to complain of the insufficiency of the food. In those jails, however, where the provisions are furnished prisoners, to be prepared by themselves, the conditions are bad. Scattered remnants of meals and pieces of food are found all over the jail. A good kitchen in connection with the jail is the best plan, but the kitchen must be separate from the cell house, and in charge of a good cook. More attention should be given to serving a balanced ration and also to serving it in a more appetizing manner.

EXERCISE AND LABOR.

Prisoners are allowed the use of corridors in many of our jails, for purposes of exercise mainly. There is no room for exercise in a 6-foot by 8-foot cell; therefore, they are given the corridor all day long. This is bad, as it furnishes so much opportunity for social interchange, telling stories of crimes, and playing cards. An hour, morning and evening, should be given, but under the eye of the jailer, who would see that the prisoners exercise and cut out these social features.

The problem of exercise can not be separated from that of industry. A prisoner awaiting trial can not be required to labor, but one serving a jail sentence should be compelled to do some work. Idleness is the bane of the jail system. A prisoner comes out of jail from serving a jail sentence, too frequently with physical deterioration and the habit of idleness more firmly fixed. No prisoner was ever reformed in idleness. From the Proceedings of the National Prison Association for 1907, page 103, we read: "But let any one of us imagine himself waiting, perhaps for many months, perhaps for years, with no exercise but the tramp, tramp in the close and dark corridor of a county jail. It is the path straight to lunacy. Why not have walled yards in the open air, partly sheltered from rain, covered over with steel wire to prevent escape? It is simple; it is easy; it is human justice; it is social interest and wisdom." We are pleased to commend what three counties in this State are doing.

We believe the time is not far distant when the State will provide workhouses for all prisoners who are required to serve any sentence in

jail. Then the county jail will be what it was intended to be, a place of detention of persons accused of crime. Speedy trials of accused persons will then very largely eliminate the present evils. The work-house can be made a place of reformation, and the person who has to serve a sentence therein will emerge a better man than when he entered, a thing now impossible in the county jail.

2. INSPECTION OF COUNTY JAILS.

ALAMEDA COUNTY.

FRANK BARNET, Sheriff, Oakland.

PETER J. WHITE, Jailer. MRS. P. J. WHITE, Matron.

Average number of prisoners in jail.....	73
Total number in jail during the year.....	855

About two years ago the construction of a new jail was commenced and the cell house is now nearly completed. It is located upon the site of the old jail and in the rear of the courthouse. The new cell house is of brick, four stories high, with a center wall dividing the three lower stories, making six separate jails for men. On the upper floor are the departments for women, juveniles, detained witnesses, and hospital and emergency, together with rooms for the matron. When this cell house is completed and occupied, the remaining portion of the old jail will be torn down and the front portion of the new building constructed. This front portion will contain sheriff's offices and residence in addition to departments mentioned on the top floor. There will be in this jail twelve separate departments.

The jail at present occupied is old, very much overerowed, and in bad condition; but as the new jail is soon to be ready, we will omit further criticism of the old one.

The new jail building will have all modern improvements, including electric lights, steam heat, and the best sanitary plumbing. Each cell contains a wash basin and toilet.

The food for the prisoners is prepared in the kitchen in the building. In the new jail this kitchen is located on the top floor.

ALPINE COUNTY.

CHARLES A. GROVER, Sheriff, Markleeville.

The Alpine County jail is made of hewn logs, and is located in the rear of the courthouse. There is only one room, with two cells and no windows. This is the most primitive jail in the State, and in all probability is used the least. Some years the jail has received no prisoners.

The conditions are in every way bad. The jail is insecure and unsafe, the danger from fire being very great.

AMADOR COUNTY.

U. S. GREGORY, Sheriff, Jackson.

Average number of prisoners in jail.....	5¼
Total number in jail during the year.....	50

The jail is located in the basement of the courthouse, the latter being a building of brick and stone. There is one cell room containing thirteen cells, and in addition there are two strong rooms. There is no classification, such as is required by the Penal Code. Prisoners run together and are not confined to their cells. The light and air are insufficient. The security is not good, and prisoners are not safe from fire. The building is lighted by electricity and heated by stoves. It has toilets, bath facilities, and city sewerage.

The general cleanliness and sanitary conditions can not be praised. They are only fair. A new coat of whitewash, however, was being put on at the time of our last visit. The bedding and clothing of prisoners is washed by the prisoners in the jail.

The food is furnished by a hotel on contract at the rate of 50 cents daily per prisoner.

BUTTE COUNTY.

JAMES M. CHUBBUCK, Sheriff, Oroville.

FRANK TOBIN, Jailer.

Average number of prisoners in jail.....	17
Total number in jail during the year.....	222

This county has a good, modern jail, located on the corner of the courthouse yard. The building is two stories high, and there are two rooms of six double cells each and three strong rooms. It is nearly new, in good condition, secure and safe. It is lighted by electricity and heated by hot water furnace. There is a toilet and bathtub in each department. The plumbing is good and connected with city sewer. The premises were clean and in good sanitary condition.

Prisoners are classified as required by law. Part of the time they are confined in their separate cells, but during a portion of the time they are allowed to use the cage corridor, but are not allowed to run in the jailer's corridor.

The bedding is sent outside to be washed, but the clothing of prisoners is washed inside by themselves. Bathing is required weekly.

The food is prepared by the sheriff under contract at 17½ cents per meal. The amount furnished, two meals daily, is sufficient.

CALAVERAS COUNTY.

JOSHUA JONES, Sheriff, San Andreas.

R. S. CROSSETT, Jailer.

Average number of prisoners in jail.....	2¼
Total number in jail during the year.....	32

The jail is in the rear of the courthouse and a part of that building. The cells are of brick, lined with plank. There is one room of five cells, the partitions and walls being of wood. All open off from a large corridor. The two end cells have a little light from the outside. The interior ones are dark and have no ventilation. There is a separate room used for women and another room used by the jailer. There is a separate wooden building on the outside, containing two padded cells, used for a detention hospital for insane. This has good light and ventilation. The jail was built in 1866 and shows its age. It is insecure and unsafe. It is also dark and unsanitary. It is lighted by electricity and heated by a stove. There is no water supply, no toilet, no plumbing, no sewer connections, and but one bathtub.

The cells and corridors were clean, but the bedding and clothing of prisoners was not as clean as it should be. Blankets were reported washed once a year. Prisoners' clothing is washed inside the jail.

There is no classification here, as is required by law, and no means of separating children from older criminals. Prisoners are not confined in the cells, but allowed to use the corridors.

COLUSA COUNTY.

C. D. STANTON, Sheriff, Colusa.

S. J. CARPENTER, Jailer.

Average number of prisoners in jail.....	3½
Total number in jail during the year.....	42

The jail is a substantial, pretty building on the corner of the courthouse yard. It is two stories in height, with sheriff's office in front. There are two rooms of three cells each, one room of four cells, one of six cells, and another room used for the detention of insane patients. The building was constructed in 1878. It is secure, safe, and in good condition. It is not, however, well lighted during the daytime, but is provided with electric lights and heated by stoves. It has city water supply, toilets, and bathtub in each of the five departments. The plumbing is good and sewage is run into a cesspool.

The bedding and clothing of prisoners was in fair condition only. The washing is done by the prisoners inside of the jail. The cells and building were clean and in good condition.

Classification, as required by law, is here followed. There is, however,

no confinement of prisoners in the cells, but they are allowed the use of the corridors. Prisoners are required to do some work in the courthouse yard.

Meals are contracted for outside at 40 cents daily for two meals. Since our last visit, this jail has received a new coat of paint on the outside, which very much improves its appearance.

CONTRA COSTA COUNTY.

R. R. VEALE, Sheriff, Martinez.

C. E. DALEY, Jailer.

Average number of prisoners in jail.....	31¼
Total number in jail during the year.....	586

This building is of stone, well constructed, and located in the courthouse yard. While it is a splendid building, its plan and arrangement are not satisfactory for jail purposes. There are two rooms, one of eight and one of six cells. It is nearly new, secure, and safe. The light by day is fairly good and at night electric lights are used. It is heated by steam. There is a toilet and bathtub in each cage.

The premises, including bedding and clothing, were found clean and in good condition. The washing is done by prisoners inside of the jail.

Proper classification is here maintained. Prisoners, however, are not confined in their cells, but have the use of the cage corridor. No labor is required, except general jail work. Bathing is required once a week.

The meals are prepared in the kitchen on the premises, prisoners doing the cooking. Three meals are served daily.

EL DORADO COUNTY.

GILBERT COOK, Sheriff, Placerville.

Average number of prisoners in jail.....	4
Total number in jail during the year.....	77

The jail is located in the basement of the courthouse. The front portion is below the street level, but the rear extends out above ground. It is old, dark, and unsanitary. There are two cages, one of three cells, and the other, one cell with four bunks. There are also two dark rooms and a padded room for the detention of the insane, and another room used for women. The security is not good, and it is not safe from fire. The building is lighted by electricity and heated by stoves. The toilets are not good, and there are no bathing facilities.

There are not many prisoners in this jail, but there is no classification. No provision is made for children, and prisoners are not confined in their cells, except specially bad cases. No labor is now required excepting the cleaning of streets. The former road work has been discontinued because there were too few prisoners to make it profitable.

The food is prepared by the sheriff.

FRESNO COUNTY.

R. D. CRITTENDEN, Sheriff, Fresno.

Ed JONES, Jailer.

Average number of prisoners in jail.....	72 $\frac{3}{4}$
Total number in jail during the year.....	2,409

The jail occupies a separate building near the courthouse. It consists of two wings extending at right angles from the central building. In the latter are the jailer's and sheriff's offices. The department for women is over these offices. There are two floors of cells in each of these two wings, making four separate departments for men. All of these four floors are plainly visible from the jailer's office, being separated only by grating. There is also a small cell for boys, opening from the office. This cell is within the sight and hearing of other prisoners; in fact, the classification in this jail is not good. These four departments are used, one for short term men, one for long term, one for felonies, and one for city prisoners. There is now some talk of putting another floor in the north wing. No matron is employed, although there are many women prisoners.

The jail has a kitchen in connection and the meals are prepared by a cook, assisted by trusties.

GLENN COUNTY.

J. A. BAILEY, Sheriff, Willows.

Average number of prisoners in jail.....	21 $\frac{1}{2}$
Total number in jail during the year.....	40

The jail is a one-story brick building covered on the outside with cement plaster, and located on the corner of the courthouse yard. The sheriff's offices are in front. The cell house in the rear has one cage of six cells, made of perforated plate. These cells open on a central cage corridor, three on each side, and the room is lighted by a skylight. There is room above this cage for another tier of cells, but this is now empty space. Between the office and the cell room there is a padded cell for detention of insane, but the padding has been badly torn up by a patient and is in bad condition. The building is secure and safe from fire. It is lighted by electricity, heated by steam, and also a stove. There are two toilets and one bathtub, with city water and plumbing in fair condition.

The premises, including bedding and clothing of prisoners, were in fairly clean condition. The bedding and clothing are washed by the prisoners in the jail, and bathing is left to the discretion of the prisoners.

The classification required by section 1599 of the Penal Code is not observed, there being no sufficient provision in the jail for classification. The prisoners are not confined in their cells, but are allowed the use of corridors. No labor is required except on the prison yard.

The food is furnished by the sheriff from his own residence.

HUMBOLDT COUNTY.

J. M. FERRILL, Sheriff, Eureka.

Average number of prisoners in jail.....	11½
Total number in jail during the year.....	144

The old jail is located under the county courthouse, lacks classification, and is very unsatisfactory.

A new jail, however, is in process of construction and nearly completed. This jail is located upon a separate lot on the opposite side of the street from the courthouse, and is modern in every respect. The sheriff's residence occupies the front portion, with offices below. The cell house extending to the rear is divided by a central partition wall, and is three stories in height. The first two floors are devoted to men, making four separate jails of six cells each. The top floor has five compartments, one of six cells, two of four cells each, one of three cells, and one of two cells. These compartments are all so separated that prisoners in one can not see or communicate with prisoners in another. The jail is well lighted by day and is provided with electric lights.

The front of the jail presents a very pleasing appearance, and is ornamental. This jail provides Eureka with one of the best jails in the State in arrangement, construction, and appearance.

INYO COUNTY.

GEORGE W. NAYLOR, Sheriff, Independence.

Average number of prisoners in jail.....	11
Total number in jail during the year.....	113

This jail is very bad, and is inadequate. It consists of a cage or tank in a room of the courthouse. The room is small, with bad light and poor ventilation. The courthouse is a wooden building, and this cage rests on a wood floor. When we visited the jail in the evening there was a prisoner in each of the four cells of this cage. While they were fairly secure, yet they were in great danger from fire; in fact, if the courthouse should take fire, it would be practically impossible to rescue the prisoners. In addition to this single cage, there were some prisoners kept in temporary quarters outside, and even the town hose house had been used for a temporary jail. Among the prisoners in this jail during the past year have been many drunken Indians, including squaws.

The lighting is poor, and the heat is furnished by stove. There are no water-closets, no bath facilities, no plumbing, no sewerage, and no water, except what is carried in in buckets. The premises were fairly clean. The bedding is seldom washed, and then outside the jail. The clothing of prisoners was fairly clean, and is also washed outside the jail.

There is no classification of prisoners and no means of separating children. Some of the prisoners are confined in their cells and others

NEW COUNTY JAIL—EUREKA, HUMBOLDT COUNTY.

are permitted the use of the corridors. Those serving sentence for misdemeanors are required to do road work.

The food is contracted for on the outside, and is good.

The supervisors have conferred with this Board concerning the erection of a new jail, but so far no action has been taken. We regret that something has not been done toward the construction of a new jail before this. It is very badly needed now, and there will be greater need for it before it can be constructed.

KERN COUNTY.

J. W. KELLY, Sheriff, Bakersfield.

H. L. STALEY, Jailer.

Average number of prisoners in jail.....	34¼
Total number in jail during the year.....	1,167

The jail is a separate building on the same block with the courthouse. The main portion in front is three stories high, and the cell house in the rear two stories with basement. The front part is built of brick with wood interior, while the interior of the cell house is steel and cement. The sheriff's offices occupy the first floor of the front portion; on the second floor are two rooms for women, boys, or insane, and on the third floor there are also two rooms. The kitchen is located on the second floor. The cell house is semicircular in form, with small windows for light and ventilation. On the first floor are eight double cells and one single cell. On the second floor there are two divisions, with a passageway between, but not so separated but that the prisoners in one division can talk with those in the other. The basement is used for city prisoners. Of the two divisions on the second floor, one has five and the other six double cells. This floor is lighted by skylights, and is therefore quite light.

The plan of this jail, at the time of its construction, was thought to be a good one, but the building is dark and lacks ventilation, and is inconvenient. Electric lights are used at night. The building is heated by steam, has city water, a water-closet in each cell, a bathtub in each cage, with fair plumbing connected with city sewer.

The bedding was in bad condition, especially on the lower floor. Much of the bedding on this floor should be taken out and burned. The cells down here were not clean, and the bathroom was wet and in bad condition. The prisoners complained of lack of clothing, but it must be remembered that these prisoners go in for a short time, with insufficient clothing, and expect the county to fit them out. While the clothing was not good, it was that which the prisoners brought in.

Prisoners are classified as required by law, and children are provided with separate quarters. The prisoners, however, are not confined in cells, but allowed to use the corridors and herd together. No labor is

required except the housework. Two prisoners were found working on the yard. Kangaroo courts are permitted in the different departments of the jail.

There is in connection with the jail a prison yard, enclosed by brick wall. The bedding is washed by the prisoners in this yard. That on the lower floor used for city prisoners is in very bad condition, ragged and apparently infested with vermin. This bedding is too old to stand another washing and should be burned. The county does not supply sufficient bedding to equip the jail, and that which is supplied is of poor quality. The clothing of prisoners is washed by themselves in the jail. As many prisoners had no change, and the jail was rather cool, prisoners complained that they were unable to wash their clothing. They also complained of insufficient heat in the jail, but investigation disclosed that the county was repairing the heating apparatus and putting in a new boiler. The matter of bathing is in the jurisdiction of the kangaroo court.

The food is prepared in the kitchen on the premises. A cook is hired and is assisted by trusties. Two meals are served daily.

KINGS COUNTY.

W. V. BUCKNER, Sheriff, Hanford.

M. P. MORSE, Jailer.

Average number of prisoners in jail.....	91½
Total number in jail during the year.....	465

This jail is a separate building on the rear of the courthouse yard. The front portion is two stories high, with a cell house in the rear, one story high. The front portion is of brick with wood interior, and the cell house is of granite with a cement floor. In the cell house there is a cage one story in height, but with room enough so that another story could be easily added. The front part of the jail contains the sheriff's offices on the first floor, and on the second floor there are three rooms, one of which is arranged for the care of insane. The building is fairly well lighted by day and is lighted by electricity at night. There is a hot water heating system, city water supply, with five water-closets, one bathtub, and fairly good plumbing, connected with city sewer.

Classification, as required by the Penal Code, is not observed. The cage is divided into two portions, so that prisoners are kept in separate parts of the cage, but this does not comply with the law, though better than no separation. Children are kept apart from other prisoners. Prisoners are not confined in their cells, but are allowed to use the cage corridor. In one of the two portions of the cage there are no cells, and bunks are distributed about the room. In the other portion there are four double cells. There is also a separate division, separated from the other part of the cell house by a wall, which contains four double cells. In connection with this part is the kitchen.

At the time of our visit the bedding and clothing were fairly clean and the building in general in a clean condition. The bedding is sent out to be washed, but the clothing is washed by the prisoners inside the jail.

There is a kitchen in connection with the jail and a prisoner acts as cook. Two meals are furnished daily, for which the sheriff is allowed 37½ cents per day per prisoner.

No labor is required except within the jail itself.

LAKE COUNTY.

G. W. KEMP, Sheriff, Lakeport.

E. M. ALTER, Jailer.

Average number of prisoners in jail.....	1
Total number in jail during the year.....	20

This jail is a small brick addition to the county courthouse. The cells are of brick and lined inside with heavy planking set diagonally. The floor is of brick set in mortar and is rather rough and uneven. The planks of the wall have shrunk and the cracks furnish a good place for insects. There is one cage of two cells set in one end of the large room, but the three prisoners serving sentence were sleeping out in the room.

This jail building is about thirty years old. It is not very secure and not safe. There are a few small side ventilators, but the light is very poor in the daytime. Candles are used at night. The room is heated by a stove. There is city water, one water-closet in rather bad condition, and a common wash tub is used for bathing. The sewage is into a septic tank.

The bedding was poor and not clean. It is not washed, but sometimes spread out in the sun. The clothing is washed by the prisoners themselves inside the jail. The building was found in fairly clean condition. There are no windows, only a skylight.

Prisoners are not classified as required by section 1599 of the Penal Code. No children have been confined in the jail. Prisoners are not confined in the cells unless dangerous felons, but are allowed to roam at will through the cell room. No labor is required except on the court-house yard.

Food is prepared by the sheriff at his house.

LASSEN COUNTY.

T. W. WILSON, Sheriff, Susanville.

Average number of prisoners in jail.....	1¾
Total number in jail during the year.....	54

This is a separate building in the rear of the courthouse, built of wood with stone veneer. There are two rooms, one of two cells and one of

no cells. It is old, unsafe, and insecure. The rooms are dark and poorly ventilated, lighted by electricity, and heated by stoves. The cells are unfit for occupancy. There is no fit place for women or children, and in fact, the accommodations are unfit for men. The premises were not very clean. There are no bathing facilities except a wash tub.

The prisoners are not classified as required by the Penal Code. They are not confined in cells, but are allowed the use of the corridors. No labor is required. There were no prisoners in the jail at the time of our visit.

LOS ANGELES COUNTY.

WILLIAM A. HAMMEL, Sheriff, Los Angeles.

THOMAS MURPHY, Jailer.

Average number of prisoners in jail.....	165 $\frac{1}{2}$
Total number in jail during the year.....	2,516

The jail is a separate building on the opposite side of the street from the courthouse. It is a well-built brick structure. The first floor contains the offices of the sheriff, jailer, etc. The second floor has one room for the turnkey, one hospital room, an operating room connecting, which contains an operating table, case of instruments, and small sterilizer. There are also other rooms, used for office and records. The top floor contains the kitchen, laundry, two rooms with four cells each, and a third room with two cells. There is also a department on the top floor of ten cells for women.

Back of this front portion is the cell house proper, containing two separate cages in the same room, each three stories high. There are fifteen cells and a bath in each cage division. The cells are 5 feet by 7 feet in size.

This jail is nearly new, is secure and safe from fire. There is fairly good ventilation, but the light by day is not good. At night electric lights are used. The building is heated by steam, has city water supply, abundant water-closets, and bath facilities. There is a bathtub and closet in each cage.

There is an attempt to classify the prisoners in the cages in the main cell house, but as these cages are in one room, we do not think that the construction of the jail complies with the law. Children are kept in a detention home not under the management of the sheriff. Prisoners are confined in each of the six main cage divisions, but they are not confined in their separate cells. It is impossible, however, to prevent communication in this jail from one cage division to another.

At the time of our visit the whole premises were clean and in first class condition. The kitchen especially was orderly, there being cup-

boards for everything. Nothing was seen thrown around. The bedding and clothing of prisoners was clean and good. Good blankets are used, for which the county pays \$31.50 a dozen. There is a laundry on the top floor, well equipped, and answering all purposes.

Prisoners are required to bathe weekly. There is not only a bathtub located in each division, but there is also a system of shower baths in the basement. These showers are used mainly for the prisoners, as they are much better than the tubs.

Food is prepared in the kitchen on the top floor, where a cook is employed, assisted by trusties. The meals served are well prepared and sufficient in quantity.

The discipline of the jail is excellent and everything was orderly. The premises had recently received a new coat of paint, and presented a neat and attractive appearance. There is an excellent system of records, the indexes running back about fifteen years. While this jail is not modern in its arrangement, its management is excellent.

MADERA COUNTY.

J. M. JONES, Sheriff, Madera.

J. M. HENSLEY, Jailer.

Average number of prisoners in jail.....	10
Total number in jail during the year.....	659

This jail occupies a separate building located on the courthouse yard. The front part is two stories high, containing the sheriff's office, with rooms above. The cell house proper in the rear is one story in height, and is built of stone. There is one cell room only, containing five cells. On the second floor over the sheriff's offices are three rooms used for women and boys. The security is good and prisoners are safe from fire. The cell house proper is lighted by skylight and at night by electricity.

The premises were in clean sanitary condition. Classification as required by the Penal Code is not possible here. Prisoners are not confined in their cells, but are allowed the use of the corridors. The bedding and clothing is washed by the prisoners inside of the jail. Bathing is required once a week.

The food is furnished by contract, 15 cents a meal.

This jail is entirely inadequate for the county, and the board of supervisors have consulted with this Board in reference to the reconstruction of the cell house, so as to provide a larger building with two floors. This should be done, both for the classification and because the additional cells are needed.

MARIN COUNTY.

W. P. TAYLOR, Sheriff, San Rafael.

Average number of prisoners in jail.....	4 $\frac{1}{4}$
Total number in jail during the year.....	313

This jail is located in the basement of the courthouse. The courthouse building is of brick with wood interior, though the basement floor is of cement. There is a central hall, or corridor, running lengthwise of the rear part of the courthouse basement. On either side of this corridor are three rooms, with outside windows in each room. The rooms are partly underground, and the windows extend down at least halfway below the surface of the ground. The windows are well protected by bars, and around the outside intruders are kept away by means of a high fence. On one side of the corridor the rooms are arranged with beds. On the other side, the two end rooms opening into the middle one, have steel cages made of plate with open grated doors. In one are three, and in the other, two cells. These are tanks or dungeons and are used for felony cases. Outside of this department is a separate room in another part of the basement, which is used for female prisoners.

This jail is fairly secure, but is not safe from fire. If the courthouse should burn prisoners in the jail would probably be cremated. The light by day is not good, and gas is used at night. The building is heated by steam. There is city water supply, with a water-closet in each cell, and one roll-top enamel bathtub. The plumbing is good and is connected with city sewer, but there is no wash basin in any part of the jail, although there is running water in each cell.

Some of the bedding was old. The sheriff says that it is not sent out to be washed, but when too dirty for further use is burned. The clothing of prisoners is washed by themselves in the jail.

The cells and corridors were in fairly clean condition.

The law providing for classification of prisoners is not observed in this jail. Children are not kept in the jail. There is no separate confinement in cells, except occasionally with dangerous cases. Prisoners are generally running together in the corridor, and we found one group of four playing cards at a table in one of the rooms. There is some labor required on the grounds and in the jail.

Meals are contracted for on the outside. Two meals daily are served, one at 9 a. m. and one at 4 p. m.

MARIPOSA COUNTY.

ROBERT S. PROUTY, Sheriff, Mariposa.

R. L. PAINE, Jailer.

Average number of prisoners in jail.....	8
Total number in jail during the year.....	27

This jail is a granite building, 16 by 24 feet in size. The cells are also of masonry, placed on the lower floor. The condition of these cells is so bad that they are seldom used, prisoners being kept mainly on the upper floor. This upper floor contains no cells. Cots are placed in a large room. On the lower floor are two rooms of two cells each. The security is good, and prisoners are safe from fire. The light by day is bad, and at night lamps are used. A stove furnishes heat. There is no water-closet, no bathing facilities, no plumbing or sewerage. The building itself was fairly clean, but the bedding was not.

The condition of this jail is very bad. There is no classification of prisoners, and they are not confined in their cells. At the time of our visit there were but two prisoners, and they were in the loft over the cell house.

MENDOCINO COUNTY.

R. E. DONOHUE, Sheriff, Ukiah.

W. H. GIBSON, Jailer.

Average number of prisoners in jail.....	11 $\frac{3}{4}$
Total number in jail during the year.....	182

This is a brick building with cement floor, located on the courthouse yard. In front is the jailer's office. There is one room of ten cells, eight of these opening upon one corridor. There are two opening on another corridor. Prisoners are fairly secure and safe from fire. The cell house is lighted by a skylight and at night by electricity. It is heated by a stove. There is city water, with one water-closet in bad condition, and one bathtub. The plumbing is not good, and sewage runs into the city sewer.

The bedding was not clean, but the clothing of prisoners, and cells and walls of cell house were fairly clean. A pile of dirt was noted in the rear corridor.

There is no classification of prisoners, and no means for separate confinement of children. The prisoners are confined in their cells at night, but are allowed to mingle freely in the cell corridor in the daytime. No labor is required except work on the courthouse yard. Bathing is required once a week.

Two meals are furnished prisoners daily, by contract, and those who labor receive three meals.

MERCED COUNTY.

JOHN S. SWAN, Sheriff, Merced.

W. M. DAVIS, Jailer.

Average number of prisoners in jail.....	23¾
Total number in jail during the year.....	404

This county jail is a separate building located in the rear of the courthouse. The front portion is two stories in height, with sheriff's office on the first floor, and rooms for women and boys on the second floor. The cell house extending to the rear has two floors, with three cell rooms, containing eighteen cells beside the dungeon. Part of the cells are of stone and part of masonry.

The jail building is not well lighted in the daytime, and at night the light is furnished by electricity and gas. It is heated by stoves. There are an abundance of water-closets and five bathtubs. There is good water supply, good plumbing, and city sewerage. The premises were in fairly clean condition. The washing of clothing and bedding is done by the prisoners. Bathing is required once a week.

Prisoners in this jail are classified as required by law. Children are kept separate. The prisoners, however, are not confined in their cells during the daytime, but are allowed the use of the cage corridors.

There is a very good kitchen connected with the jail. A cook is employed and the meals are prepared here.

The courthouse and jail building are surrounded by a beautiful ornamental park, and upon this prisoners serving sentence are required to work.

MODOC COUNTY.

F. W. CALDWELL, Sheriff, Alturas.

Average number of prisoners in jail.....	11½
Total number in jail during the year.....	33

The jail occupies a separate building, located near the courthouse. It is built of wood and has one large room, well lighted, in which there is a cage of two cells. The security is poor, and prisoners are unsafe in case of fire. It is heated by stoves. There is no water supply, no water-closet, no bathing facilities, no plumbing, and no sewage.

The premises were in fairly clean condition.

There is no classification of prisoners and no provision for children. Sometimes prisoners are confined in their cells and sometimes permitted the use of the large room. No labor is required.

MONO COUNTY.

T. P. DOLAN, Sheriff, Bridgeport.

Average number of prisoners in jail.....	11 $\frac{1}{4}$
Total number in jail during the year.....	16

The jail building is of stone, located a short distance from the court-house, on a separate block. The sheriff's residence is in front and the jail building in the rear, there being a stone wall between the two. There is one room only, containing five cells. It is fairly secure, but not very safe. It is dark in the daytime and lighted by candles at night. It is heated by stoves. There are no water-closets, and no bathing facilities. There is also no plumbing or sewer. The premises were found in fairly clean condition.

There is no classification of prisoners as required by the Penal Code, and no separation of children. Prisoners are not confined to their cells, but are permitted the use of the corridor. No labor is required.

The meals are furnished by the sheriff.

MONO COUNTY BRANCH JAIL.

T. M. JONES, Deputy Sheriff, Bodie.

This is a wooden building, located in a nest of wooden buildings. There is one room with three cells. It is not secure and is dangerously exposed to fire. It is lighted by candles and heated by stoves. There are no facilities whatever. It was found in fairly clean condition.

This jail is used mainly for temporary detention, and therefore no classification is necessary. Prisoners are usually kept here but a few days at the most.

The food is sometimes prepared by prisoners themselves in the jail, and sometimes contracted for outside.

MONTEREY COUNTY.

W. J. NESBITT, Sheriff, Salinas.

J. H. ROBINSON, Jailer.

Average number of prisoners in jail.....	22 $\frac{3}{4}$
Total number in jail during the year.....	485

This jail is a separate building; with a sheriff's residence, located in the courthouse yard. It is a building of fine appearance, constructed of brown stone. Though recently built at large expense, it is inadequate to the needs of the county. The building is located too close to the street, and there is no opportunity for a yard. Access to the building is too easy.

There are two cages on the first floor and two on the second. In all, there are seventeen cells for men and three for women. While there

were seventeen cells for men, there were 32 men in jail, making it seriously overcrowded. The building originally was well lighted, but on account of its proximity to the street, the windows have been partly closed by sheet iron, and the light is now very poor. At night the building is lighted by electricity. There is a water-closet and a bathtub in each department. The plumbing is good, and there is city sewerage. The bedding was fairly clean, but the mattresses were not. The premises in general were fairly clean.

While there are good cages, the prisoners are permitted the liberty of the outer corridor. Although the jail provides the facilities, section 1599 of the Penal Code is violated. Prisoners are not confined in cells, but permitted the use of the corridors. In addition to a bread and water diet, there is a dungeon for punishment, but the jail is not under good discipline.

There is a small building in the rear, and in this the blankets are boiled and cleaned by the prisoners. Clothing is also washed by the prisoners. Bathing is required once a week.

The food is prepared by trustees in a kitchen connected with the jail.

The department for boys is in the basement of the courthouse, in which there are also located padded cells for the insane. The cells in this department are all of wood and are dark. Both the boys and the insane patients sleep on a cement floor. The boys in this department are under the care of the probation officer. There were 5 boys there at the time of our visit, all of them runaways from home. One of these boys had only a year and a half before graduating from high school.

There was one girl, who was kept as a member of the jailer's family.

NAPA COUNTY.

D. A. DUNLAP, Sheriff, Napa.

Average number of prisoners in jail.....	10 $\frac{3}{4}$
Total number in jail during the year.....	249

This jail was built in 1878, and is an addition to the courthouse, and entered through the latter building. The cages are two-story, with an iron stairway and balcony for the second floor. The cage plan for the two floors is the same; a center corridor with three cells on each side opening into it, and lighted by skylight above. Back to back with these are two more rows of cells, each opening toward the walls and into the jailer's corridor. These cells are merely steel tanks, with but a small light and air opening in the door. It would be inhuman to confine a man in one of them for any length of time, and hence there is no confinement in cells except in dangerous felony cases. This makes the whole jail practically one room.

The light is poor. The building is heated by stoves. There is city

water, with water-closets, bathing facilities, fair plumbing, and city sewer.

The bedding was poor and not very clean. The clothing of prisoners was fair. It is washed by the prisoners themselves in the jail. The premises were found in fairly clean condition.

Prisoners are not classified as required by the Penal Code, and it is doubtful whether children are kept separate as required by law.

The food is prepared by the prisoners themselves on a cook stove placed in the corridor. Material is furnished them, and they are compelled to do their own cooking. Conditions resulting on this account are anything but good.

NEVADA COUNTY.

H. R. WALKER, Sheriff, Nevada City.

Average number of prisoners in jail.....	7½
Total number in jail during the year.....	83

This jail is in the rear of the courthouse, and is constructed of brick and wood. It has two floors, both opening into the sheriff's office, which occupies a room of the courthouse proper. The cells on the lower floor are against the outer walls, and small openings furnish light and air, but not much of either. The place is dark and requires artificial light in the daytime. The upper floor is of wood and the cells are planked rooms, but the lumber has shrunk, leaving large cracks. This floor is used for women and children.

The jail was built in 1865. General conditions are not good, the jail having outlived its usefulness. It is fairly secure, but not very safe in case of fire. It does not provide proper bathing and toilet facilities.

The prisoners are not classified, as required by the Penal Code.

The meals are prepared by the prisoners in a kitchen on the lower floor.

ORANGE COUNTY.

THEO. LACY, Sheriff, Santa Ana.

Average number of prisoners in jail.....	13
Total number in jail during the year.....	306

The jail building is located in the courthouse yard. It is constructed of brick and stone, and presents a neat appearance. The sheriff's residence is located in the jail building.

There is one large room used for prisoners serving sentence, and one cage of six cells for felony cases. In addition, there are three strong rooms, one of which is a padded room for the insane. In the basement there is also a kitchen and dining-room.

This jail was built in 1896, and is secure and safe. It is fairly well lighted, electric lights being used at night. It is heated by stoves. There is city water supply. There are five water-closets, three bathtubs,

and a plunge tank in the basement. The plumbing is fairly good and has city sewer connections.

The bedding and clothing was fairly clean, and the premises in general in clean condition. The blankets are washed in the jail and sheets are sent to a laundry. The prisoners wash their own clothing in the basement. Bathing is required once a week.

Prisoners are classified as required by law, and children are kept separate. There is, however, no confinement in cells during the daytime, prisoners being allowed to use the corridors.

The food is prepared in the jail kitchen by trustees designated as cooks.

PLACER COUNTY.

GEO. MCAULAY, Sheriff, Auburn.

Average number of prisoners in jail.....	19¼
Total number in jail during the year.....	491

The jail is located in the basement of the courthouse, a large brick building. This basement is divided into two parts by a partition extending only part way up to the ceiling, so that communication is possible between the two parts. One of these parts has no cells, but is provided with steamer bunks arranged around the outside of the room. This is used for prisoners serving sentence. In the other part, there is a cage with six cells. The two cells nearest the window have some light, the other four are dark. Prisoners in this cage are not confined to their cells, but are permitted to run together in the cage corridor.

The building is nearly new, the security is good, and safety fair. It is lighted by electricity and heated by stoves. There is city water. Each department is provided with a water-closet and a bathtub. The plumbing is fair, and has connections with city sewer. The bedding and premises were fairly clean.

There is maintained the classification required by section 1599 of the Penal Code, but there is no place for confinement of children. The prisoners are not confined in their cells, but allowed the use of corridors. There is no proper provision for women. When women are confined at all, they are put in a cell of the cage for men, which is clearly in violation of law and ought not to be permitted.

The food is furnished by the sheriff from his residence.

PLUMAS COUNTY.

D. J. ROBERTSON, Sheriff, Quincy.

Average number of prisoners in jail.....	4
Total number in jail during the year, no report.	

The jail is a one-story brick building, located in the courthouse yard. It contains, in addition to the cells, the sheriff's office. The interior is of wood, including the ceiling and floor. The building is nearly thirty

years old. There have been some repairs since our last report. There is one room containing six cells. It is fairly secure and safe, lighted by electricity, and heated by stoves. It has town water supply, a water-closet in each cell, one bathtub, good, new plumbing, and good sewerage, in first-class condition. The premises were clean, including the bedding and clothing.

This jail does not furnish facilities for the classification required by the Penal Code. Children are kept separate. Prisoners are confined in their cells a part of the time, and have the use of corridors a part of the time. No labor is required.

The bedding and clothing of prisoners is washed on the outside. Bathing is required once a week.

Food is furnished from a hotel at \$4 a week for each prisoner.

Since this inspection there has been a change of sheriff, and the jail has not been seen since the new sheriff took office.

RIVERSIDE COUNTY.

F. P. WILSON, Sheriff, Riverside.

H. F. NELSON, Jailer.

Average number of prisoners in jail.....	22
Total number in jail during the year.....	303

This is a separate brick and stone building, located in the courthouse yard. It has but one room, and does not classify prisoners as required by law. The main cell room has a one-story cage, but is high enough for another story on the cage. In this cage there are seven cells of modern construction. The sheriff's offices are in front, and on the second floor over the offices are three cells for boys and three for women. The prisoners are secure and safe from fire.

The building is fairly well lighted by day and has electric lights at night. There is a hot water heating system, city water, a water-closet in each department, and three bathtubs. The plumbing is fair, and is connected with city sewer. The premises were fairly clean, and in fair sanitary condition.

Prisoners are not classified as required by law. Children, however, are separately confined. Prisoners are not confined in their cells, but are allowed the use of corridors. No labor is required. The washing is done in the building by prisoners. Bathing is required once a week.

The food is prepared in the jail kitchen, a prisoner being designated as cook.

SACRAMENTO COUNTY.

DAVID REESE, Sheriff. Sacramento.

W. R. COOK, Jailer.

Average number of prisoners in jail.....	80 $\frac{3}{4}$
Total number in jail during the year.....	903

The jail is in the basement of the courthouse. The building is of brick and the cells are steel. All are in one room, there being thirty-six cells in all. The jail is fairly secure, but not safe. It is dark in day-time, and lighted at night by electricity. Heat is furnished by a stove. There is city water. The water-closets and bathing facilities are poor. The plumbing is fair, and is connected with city sewer. The premises were fairly clean.

Prisoners are confined in separate cells, and are not permitted to use the corridors. The classification required by law is only partially observed. The jail is badly overcrowded. At the time of our visit there were 69 men and 6 women.

The prisoners serving sentence are required to work on the county roads. They are sent out on the street car to the end of the road, and then walk to their work. They go in the morning, take lunches, and return about 4:30. Twenty-six men were doing work on this gang.

There is a large exercise court in connection with this jail, and a dining-room in the basement of a building in the yard. The conditions surrounding the dining-room and kitchen are very bad. The cooking is done by prisoners. The sheriff is allowed 25 cents a day per prisoner for purchase of supplies. The washing is also done by prisoners in a room connected with the jail yard.

Female prisoners are kept in a separate department, which has a separate exercise court, but this department is not sufficiently separated from that of the men.

The contract has been let for a new jail for Sacramento County, which will be large and modern in every particular, and when completed will will be one of the best jails in the State.

SAN BENITO COUNTY.

J. J. CROXON, Sheriff. Hollister.

HENRY J. MAGGINI, Jailer.

Average number of prisoners in jail.....	4 $\frac{3}{4}$
Total number in jail during the year.....	106

The jail is a separate one-story building, about 26 by 35 feet in size, located in the courthouse yard. There is one cell room, with four large tanks. There is one window located rather high on each side, which furnishes very little light and air. In addition to the four cells, there are

two rooms. The cells are badly overcrowded, containing at the time of our visit 10 prisoners. The building is not very secure or safe. It is lighted by gas and heated by steam. It has city water, a water-closet in each cell, one bathtub, and fairly good plumbing, connected with city sewer. The premises were in fairly clean condition.

The classification required by the Penal Code is not observed for lack of proper facilities. Children, however, are kept separate. Desperate cases only are confined in the cells, and others are allowed the use of the corridors. No labor is required, but some of the prisoners who are willing are allowed to work.

The bedding is sent out to a laundry when thought necessary, and clothing of prisoners is washed by themselves in the jail.

Two meals are furnished daily, 7 a. m. and 4 p. m., prepared in the kitchen on the premises.

There are not sufficient facilities for women, boys, insane, or emergency cases. The jail is entirely inadequate for the use of the county and should be replaced by a new one at an early date.

SAN BERNARDINO COUNTY.

J. C. ROLPHS, Sheriff, San Bernardino.

J. H. CASE, Jailer.

Average number of prisoners in jail.....	64%
Total number in jail during the year.....	998

This jail is a separate building, including jailer's residence, and is located across the street from the courthouse. In the rear it has an enclosed jail yard. The location of this jail, with its jail yard, is ideal, and is far superior to a location on the courthouse yard, where no enclosure is possible. The building is of brick and stone. There are seven different departments. The main part of the jail is new and furnishes good security and safety. It is fairly well lighted by day and has electric lights at night. It is heated by furnace and supplied with city water. There is a water-closet and bath in each department. The plumbing is fair and connects with city sewer. The premises were in fairly clean condition.

The classification required by the Penal Code is observed, and children under sixteen years are kept separate. The prisoners are not confined in the cells, and the cage corridors are used because the jail is seriously overcrowded. In one department of six cells there were confined fifty-one short-term men. There were about twenty-four bunks provided in the cage for these 51 men. Another department of long-term men had 21 men in eight cells. There were several vagrant boys about eighteen years of age in the lot.

In the enclosed yard is maintained a stone yard, where all men serving sentence, who are able, are put to work. The work consists in breaking

up by hand stone of sufficient size for road or concrete work. The work being done at this jail is to be commended.

Bathing is required once a week, and the food is prepared by prisoners in the kitchen located in the basement of the jail.

SAN DIEGO COUNTY.

FRED M. JENNINGS, Sheriff, San Diego.

DAVID S. WILBUR, Jailer. MRS. E. C. CHAMBERS, Matron.

Average number of prisoners in jail.....	21
Total number in jail during the year.....	482

The jail is a substantial building, located in the courthouse yard, built of brick covered with cement. The sheriff's office is in front, and a kitchen is located in the basement. Beside the offices on the first floor, there are three rooms for juveniles, a sleeping room for the jailer, and a padded room for insane; also a cell room with six cells, one being used for bath. The second floor contains two more cages in different rooms, similar to the one below. On the third floor, now leased to the city, is a fourth cage of four cells.

This jail was built in 1893-4 and furnishes good security and safety. It is fairly well lighted, heated by stoves, has city water, with plenty of water-closets and good bathing facilities. The plumbing is fairly good and connects with city sewer. The bedding was not very clean, but otherwise the premises were in fairly clean condition.

Good classification is observed. The prisoners, however, are not confined to their cells, but are allowed the use of the cage corridor. No work is required except the general house and jail work.

The bedding is washed at an outside laundry, while the clothing is washed by the prisoners themselves in the jail, unless they are able to pay to have it done at an outside laundry. Bathing is required once a week, and the food is prepared by a trusty in the kitchen.

At the time of our visit the jail was badly crowded. There were 36 male prisoners, of whom 14 were Chinese immigration cases awaiting deportation.

SAN FRANCISCO COUNTY.

L. J. DOLAN, Sheriff, San Francisco.

M. KIERNAN, Jailer. MRS. GEORGIA KIERNAN, Matron.

Average number of prisoners in jail.....	284½
Total number in jail during the year.....	2,586

The San Francisco jail is located near Ingleside, and is what was formerly known as Nos. 2 and 3, the latter being for women. Jail No. 1 was located on Broadway and used for the detention of men awaiting trial, but was destroyed by fire. Since that time all male prisoners are kept in No. 2. This building was built for men serving sentence for misdemeanors, and incidentally as a workhouse. It consists of three

wings radiating from a center, in the general form of the letter "Y." The front wing contains the administrative offices, and the other two are cell houses. The building is of brick, fairly well built, with a cement floor in the cell house. Two rows of brick walled cells extend lengthwise through the cell house, facing each way, with a utility corridor in the rear of each row and between them.

The cells are $5\frac{1}{2}$ feet wide, $6\frac{1}{2}$ feet long, and $7\frac{1}{2}$ feet high. In each cell is a toilet with flush, connected with the soil pipe in the corridor. The front of the cell is steel grating, and there is a small ventilator in the rear wall. In each cell are two bunks.

In the north wing there are two tiers of these cells, 80 in all, with an open gallery running around the upper tier. In the south wing there are three tiers of cells, 120 cells in all. In the 80 cells in the north wing there were 124 prisoners; that is, 44 of these cells had to contain two prisoners each. In the south wing the 120 cells held 288 prisoners. The jail is therefore badly overcrowded.

The building is fairly well lighted and has electric lights. There is no heat except that furnished by stoves located way out in the lobby. There is city water, and bathing facilities are provided in a separate bath house, which includes tubs and tanks.

The bedding and clothing of prisoners was fairly clean, and the jail in general was in fairly clean condition.

The classification required by the Penal Code is observed, and prisoners are confined to their cells, no prisoners being allowed the use of corridors, except trusties at work. The only labor required of the prisoners is the general housework.

Sufficient blankets and mattresses are not provided. The laundry work is done by prisoners on the premises, there being a separate laundry in the enclosed yard. The washing of prisoners' clothing is also done in this laundry.

Those serving sentence go to a basement dining-room for their meals. Two meals a day are served to the prisoners, with the exception of the workers, who get three. Comparatively few are at work. Prisoners awaiting trial are served meals in their cells.

The women prisoners in Jail No. 3 are kept now in temporary wooden buildings. There are no cells in these buildings, and the 38 prisoners make them overcrowded. The old jail building is being put in repair, and in a short time will be in condition to house the women again. This building was originally built for a boys' prison. It is badly arranged and does not furnish the required separation. When the repairs are completed there will be one large room with wooden cells or rooms, which are not intended to be locked, and prisoners will be allowed the liberty of the building. The prisoners do the general housework.

The county physician, Dr. J. C. Watkins, was making his rounds of

the men's prison at the time of our visit. The doctor went to each cell, compelled each man to stand before him for inspection, and prescribed for all who were in need. The doctor is good natured, careful in his work, and well fitted for his place.

SAN JOAQUIN COUNTY.

WALTER F. SIBLEY, Sheriff, Stockton.

MARK SMITH, Jailer.

Average number of prisoners in jail.....	25½
Total number in jail during the year.....	510

This jail consists of a brick building, located a block away from the county courthouse. It has three floors, one of which is a basement. This basement floor consists of six cells. The two upper floors have eight cells each. On the top floor is one room with three cells, used for women, and two separate rooms. The building is lighted by electricity and heated by stoves. There is a water-closet in each cell and bathing facilities on each floor. The toilets, however, are out of order and the plumbing is bad. Repairs here are badly needed. There are city sewer connections. The premises were found in fairly clean condition. There is need of new painting in the cells.

The classification required by the Penal Code is observed here. Children are also kept in separate confinement. The prisoners are not confined in their cells, but are permitted to use the corridors. The jail was built about 1892. It is in the form of a tower, with circular cells, and is not well lighted. The plan was to prevent the prisoners in one cell from seeing those in another, but this plan is thwarted by the necessity for putting from two to four prisoners in one cell, and by allowing them to be too much together.

The blankets used for bedding are sufficient and in fair condition. Washing is done outside the jail. The prisoners wash their own clothing in the basement. Bathing is required once a week.

There is a kitchen connected with the jail and a cook is usually hired to prepare the meals, but at the time of our visit this work was being done by a prisoner.

SAN LUIS OBISPO COUNTY.

YANCY McFADDEN, Sheriff, San Luis Obispo.

JAMES L. WALSH, Jailer.

Average number of prisoners in jail.....	25¼
Total number in jail during the year.....	671

The jail is located in the basement of the county courthouse. The latter building is of brick. In the jail proper are two divisions. One contains a steel cage of six cells and the other six cells of masonry, and in addition there are two rooms. The building is old, the security is

fair, and safety from fire not very good. It is poorly ventilated and badly lighted by day. There is city water, two water-closets, and good bathing facilities. The plumbing is connected with city sewer and is not good. The general cleanliness of the premises was good.

Prisoners are not classified as required by the Penal Code, and there is only partial separation of children under sixteen years of age, the law not being complied with. Prisoners are not confined in cells, but use the corridor, which is really a large corral. No labor is required except the general work of the premises.

Washing of bedding and clothing is done by the prisoners. Bathing is required once a week. The food is contracted for with a hotel.

SAN MATEO COUNTY.

R. S. CHATHAM, Sheriff, Redwood City.

Average number of prisoners in jail.....	17¾
Total number in jail during the year.....	503

This jail is located in an out of the way place about a quarter of a mile from the courthouse. The building is of brick, old, and consists of two parts. The front is two stories high, and extending back is the cell house of one story. The first floor of the front portion contains two offices for the jailer, and the kitchen. The second floor has three rooms with barred windows, used for women, boys, or witnesses. These rooms are not connected with each other except through the hall.

The cell house proper is one story in height, with a skylight. The cage has ten tanks, one of which is used for water-closet, opening on the central corridor. Over the top of the corridor is a grating, and above is a sort of cupola for skylight. The heat is supplied by a stove in the central corridor, with the stovepipe running up through the wooden roof of this cupola. This had taken fire on the day of our visit. The cells or tanks are 6 feet 6 inches wide, 7 feet long and 7 feet high. These nine tanks contained 22 prisoners. The latter are locked in from 5 p. m. to 7 a. m., fourteen hours. In one cell were four men. The only openings into these tanks are eight 1¼-inch holes bored through the plate in front, and a 6-inch opening through the door for food. The cells were damp and the clothing hanging in them was covered with mildew.

The bedding consists of old mattresses and blankets somewhat ragged and dirty, lying on the floor of the tanks. In these cells open night buckets are used. The toilet cell contains one toilet bowl, with the plumbing out of order and sewer gas escaping. The floor was wet from water escaping from the toilet bowl. A general air of disorder pervaded the whole premises. No work is provided for prisoners, and several prisoners were sick.

The classification required by law is not observed. Two boys, candidates for Preston School, were confined in one of the rooms with a crippled man, held on suspicion of burglary.

Washing is done in a cauldron in the yard, but the bedding at the time of our visit did not appear to have been so washed. Prisoners wash their own clothing inside the jail, and they complain that it is almost impossible to dry the clothing.

Two meals are served daily, and are prepared on the premises. We saw the dinner served, and it seemed to be sufficient and of good quality.

SANTA BARBARA COUNTY.

NAT STEWART, Sheriff, Santa Barbara.

J. R. JANSSENS, Jailer.

Average number of prisoners in jail..... 26¼

Total number in jail during the year..... 415 .

The jail is a separate building, located in the courthouse yard, and contains the jailer's residence. The cell room on the first floor has a cage of tool-proof steel, with space enough above for another tier of cells. The upper floor has two parts, one used for boys and one for women. The insane are kept in a room in the jailer's residence, very much to the annoyance of his family.

The jail building is nearly new, the security is good, and it is safe from fire. It has city water, water-closet, and bathing facilities in each department. The plumbing is fair. The jail was found in clean condition.

The classification required by the Penal Code is not observed because there are not sufficient departments. Children are kept separate from other prisoners. Prisoners are not confined in their cells, but are allowed the use of the cell corridor. They are given labor upon the prison yard and the streets. Bathing is required once a week, and the food is prepared by the jailer on the premises.

SANTA CLARA COUNTY.

A. B. LANGFORD, Sheriff, San Jose.

THOS. MONAHAN, Jailer.

Average number of prisoners in jail..... 71

Total number in jail during the year..... 1,064

This jail is a rectangular brick building, located on the same block with three other county buildings. It has one room of four cells, one room of fifteen cells, and eight single rooms. The building is old, but in good condition. Prisoners are fairly secure and safe from fire. The building is not well lighted. It has steam heat, city water, a water-closet in each department, and two bathtubs. The plumbing is connected

with city sewer system, and is in bad condition. At the time of our visit the sewer was stopped and water was standing in it. There were no traps to protect from sewer gas.

The classification required by law is observed, and children are kept separate. Prisoners are not, however, confined in cells, except at night and are allowed the use of the corridors in the daytime. Prisoners in this county have been worked on the roads and also at a rock quarry, but at the time of our visit they were only required to work in the yard.

A blanket and mattress is furnished each prisoner. The bedding is washed by a trusty. Clothing is washed by prisoners in the enclosed jail yard. Bathing is required once a week. The food is prepared in a kitchen in the yard by a prisoner, acting as cook. The supervisors in this county have limited the sheriff to 10 cents a day per prisoner for food.

Last winter this jail was badly overcrowded. In this jail there are fifteen cells, and at one time there were 85 prisoners in this cage.

SANTA CRUZ COUNTY.

H. V. TRAFTON, Sheriff, Santa Cruz.

E. L. ALZINA, Jailer.

Average number of prisoners in jail.....	21¼
Total number in jail during the year.....	319

The jail is a separate building, including the jailer's residence, in the courthouse yard. It is near the center of the city and surrounded closely by other buildings. The front part is two stories high, and contains the sheriff's office and residence. There is a department for women, and two separate cells on the second floor. The cage proper is two stories in height, in the same room, and does not provide proper classification. It is fairly secure and safe from fire. The building is lighted by electricity, heated by steam and stoves, has city water, three water-closets, three bathrooms, good plumbing, and city sewerage. The premises were found in clean condition.

The classification required by the Penal Code is not observed. Prisoners are not confined in cells, but are permitted to use the corridors. They are worked at a rock crushing plant one and one half miles from the jail. This plant consists of a rock crusher, road roller, and stationary engine combined, and cost \$5,500. Fifteen men were being worked here under guard. The plant is a good one, and is profitable to the county.

The washing of bedding and clothing is done by the prisoners. Bathing is required once a week. The food is prepared in the jailer's kitchen.

There is an old city prison in Santa Cruz, but all commitments are under State laws and to the county jail.

SHASTA COUNTY.

JAMES L. MONTGOMERY, Sheriff, Redding.

ALEX. LUDWIG, Jailer.

Average number of prisoners in jail..... 18 $\frac{1}{4}$
 Total number in jail during the year..... 284

This jail is back of and connected with the courthouse. It is two stories in height. The lower floor contains a cage of four cells in one room, with a corridor running around, and is used for felons. The upper floor consists of one large room with no cells, and is used for prisoners serving sentence. Iron beds are placed around the room. Opening off the vestibule on the first floor are two separate cells with light doors, as well as grated doors. These are for women, boys, or special prisoners. Outside, and opening on a sidewalk, is a wooden building with two padded cells for insane. The danger from fire here is great. There is also a separate building containing two dungeons.

The building is in fairly good condition, fairly secure and safe. It is dark by day and lighted by electricity at night. It is heated by stove, has city water, water-closets, and two bathtubs. The plumbing is not good, and one of the toilets is bad. It is connected with city sewer. The premises were in fairly clean condition.

The classification required by the Penal Code is observed, and children are kept separated from other prisoners. The prisoners are confined inside the cage, but not in the cells. The only labor required is on the courthouse yard. Bedding is sent to a laundry to be washed, while the clothing of prisoners is washed by themselves in the jail. Bathing is required once a week. The food is prepared on contract by a hotel.

SIERRA COUNTY.

JAMES MCGREGOR, Sheriff, Downieville.

Total number in jail during the year..... 1

The county jail is in the basement of the courthouse, a wooden building. There is one steel cage, and two rooms with three cells each. The building is about fifty years old, is insecure, and not safe. A fire in the wooden courthouse would almost certainly burn the prisoners in the jail. The building is lighted by electricity and heated by stoves. It has town water supply, water-closets, one bathtub, and sewer into river. The premises were found in a clean condition.

The classification required by the Penal Code is observed, and no children have ever been in the jail to the knowledge of the sheriff. Felony cases are confined to their cells, but those serving sentence are permitted the use of the corridors. No labor is required.

The bedding was in clean condition, and is sent out to be washed, as is also the clothing of prisoners. Bathing is required weekly, and the food is furnished by a hotel on contract.

SISKIYOU COUNTY.

CHARLES B. HOWARD, Sheriff, Yreka.

F. C. POLLARD, Jailer.

Average number of prisoners in jail.....	41½
Total number in jail during the year.....	88

The building is of stone, and located in the rear of the courthouse. The sheriff's offices occupy the front part, back of which is a cell room with a cage of four cells. Above the sheriff's office is a cage of two cells, and there are also two rooms. The jail was built in 1900. The security and safety are only fair. The building is lighted by electricity and heated by a stove. It has city water, two water-closets, two bathtubs, fair plumbing, and city sewer. One of the toilets was out of order and in need of repair. The premises were found in fairly clean condition.

The classification required by law is not observed. Children are kept separated from other prisoners. Prisoners are not confined in their cells, but allowed the use of the corridors. No work is required except on the courthouse yard.

The blankets are sent out to a steam laundry to be washed, while the clothing of prisoners is washed by themselves in the jail. Bathing is regularly required. Two meals per day are prepared by a hotel at 40 cents a day per prisoner.

SOLANO COUNTY.

J. J. McDONALD, Sheriff, Fairfield.

Average number of prisoners in jail.....	38½
Total number in jail during the year.....	220

A new jail has been built since our last report. It is a rectangular building, two stories in front and three stories in the rear, the three rear stories occupying the same height as the two front stories. The front portion contains the offices of jailer and sheriff, and sheriff's residence, on the second floor. The cell house has a center wall dividing each floor into two parts, making of the two first floors four separate jails. The top floor has four separate departments for women, boys, witnesses, and for emergency.

This is a modern, up-to-date building, light, well ventilated, and well arranged. There are ventilators in each cage. It is lighted by electricity and heated by steam. There is a washbowl and water-closet with running water in each cell, and a bathtub in each cage. The premises were clean and new. This jail furnishes the best of classification in all departments. Prisoners here are confined in cells, and are not allowed the use of corridors, except for exercise.

There is a kitchen in connection with the jail, in which the food is prepared.

NEW COUNTY JAIL—FAIRFIELD, SOLANO COUNTY.

SONOMA COUNTY.

J. K. SMITH, Sheriff, Santa Rosa.

F. LA POINT, Jailer.

Average number of prisoners in jail..... 20 $\frac{1}{4}$

Total number in jail during the year..... 534

The jail is a brick building, located on a separate lot from the courthouse, and is surrounded by other buildings. The front is two stories in height, and the cell house one story. On the first floor of the front part is the sheriff's office, and above are rooms for women and boys. There are thirty-two cells in the jail proper.

The building is not in good condition, and is unsafe. The cell house is lighted by skylight by day and electricity by night. It is heated by stoves, has city water, three water-closets, three bathtubs, and fair plumbing, connected with city sewer. The bedding was not found in clean condition, and the clothing of prisoners, and the building proper, only fairly clean.

No classification is possible in this jail. Prisoners serving sentence, and those awaiting trial, are all herded together. In this jail we found upon one visit the prisoners seated around a table on which the meals were served, under a skylight, discussing among themselves the latest murder; in other words, conducting a school for crime. Held in a room for examination, we found an insane woman, who did not know why she was there, in company with a characterless woman serving sentence for vagrancy. The insane woman was probably respectable. Her companion, a stranger to her, was certainly not. This jail has no matron, and a man had custody of both of these women.

Bedding is sent outside for washing, but the clothing is washed by the prisoners in the jail. Bathing is required every week. The food is cooked on a stove inside of the cell house by a prisoner.

STANISLAUS COUNTY.

A. S. DINGLEY, Sheriff, Modesto.

Average number of prisoners in jail..... 8 $\frac{3}{4}$

Total number in jail during the year..... 238

This jail is in the basement of the courthouse, a brick building with wood interior. There is one room with six cells, or tanks, with grating over the top, and a separate room for vagrants. This latter is of wood, and has a rusted out iron floor. There is no place for women or boys. The building is old and insecure. There was one escape last year. Neither is it safe from fire. The conditions are very bad, and the jail should be condemned. It is lighted by electricity, has city water, one water-closet, no bathing facilities except a garden hose, poor plumbing,

and city sewer. The premises were not found in clean condition. The bedding and clothing of prisoners were also not clean.

There is no classification of prisoners. Children under sixteen years of age are not kept separated from other prisoners. Prisoners are not confined in their cells. No labor is provided. The sheriff recently asked the supervisors for authority to work prisoners on roads, but the supervisors said the farmers would oppose it, as they wished to work out their taxes. (Query: Are the roads of this county so good that they can not furnish sufficient labor for farmers to pay their taxes, and at the same time furnish work for prisoners? We doubt it.)

There is a kitchen on the premises, and two meals daily are supplied.

SUTTER COUNTY.

F. B. NOYES, Sheriff, Yuba City.

BENNETT SCHILLIG, Jailer.

Average number of prisoners in jail.....	1
Total number in jail during the year.....	55

This jail is a small building in the rear of the courthouse, built of brick and iron. It is connected with the sheriff's office, which is a room in the courthouse. The jail is old. There is but one room of four cells. It is not secure, and only fairly safe from fire. It is lighted by electricity and heated by stoves. It has city water, one water-closet, and no bathing facilities. There is fair plumbing, and sewage is into a cess-pool. The premises were found in fairly clean condition. The bedding is not washed. When it becomes too bad to endure longer it is burned. Clothing of prisoners is washed by themselves in the jail.

No classification of prisoners is possible, there not even being a place for women. Prisoners are not kept in their cells.

Food is furnished from the jailer's house.

This county, however, has few prisoners, not over two at any one time during the past year.

TEHAMA COUNTY.

J. BOYD, Sheriff, Red Bluff.

A. A. KAUFFMAN, Jailer.

Average number of prisoners in jail.....	9½
Total number in jail during the year.....	139

The jail is a one-story brick building, detached, but connected with the courthouse. The floor is of wood, with a basement underneath, which has a steel plate ceiling. The cage is in the center of the jail room, and has six cells, three facing each way. It is of strap iron, laid sidewise, and is dark. There are two rooms in front, one used for women, and one for the jailer.

There is no classification, and prisoners are not confined in their cells. Work in the courthouse yard and about the courthouse is all the labor required.

The bedding is not washed, but is thrown away when too bad. Clothing of prisoners is washed by themselves inside the jail. They also prepare their own food.

TRINITY COUNTY.

J. H. BOYCE, Sheriff, Weaverville.

Average number of prisoners in jail.....	1
Total number in jail during the year.....	12

The jail consists of two cells in the rear of the sheriff's office in the courthouse. The latter is a business block on the main business street of town. The cells are of good size and well ventilated, but dark. It is proposed to put two cells in the basement below on a cement floor. This will be a better arrangement, having better ventilation and better light, and the two places will furnish better classification than heretofore.

The present jail is certainly not secure, and there is great danger from fire. It is lighted with electricity and heated by a stove. It has city water, water-closets in each cell, no bathing facilities, good plumbing, and town sewerage.

The bedding is fair, and the cells were fairly clean at the time of our visit.

Food is prepared outside on contract.

TULARE COUNTY.

W. W. COLLINS, Sheriff, Visalia.

D. R. DOUGLAS, Jailer.

Average number of prisoners in jail.....	16½
Total number in jail during the year.....	683

This jail is a separate building, occupying a separate lot, about a block distant from the courthouse and across the street from the Southern Pacific depot. The building is of brick with wood interior, and is in good condition. There are in all three departments. The first floor front is occupied by the jailer and sheriff for offices. On the second floor, over the offices, is a department with a steel cage of four cells, placed on a wood floor. There are also on this floor two rooms. In the cell house proper, there is one department in the basement which is used for city cases. Over this is a cage of six cells, two large, and four small. The jail is fairly secure, and fairly safe from fire. There is fairly good light by day and electricity is used at night. Ventilation is furnished by windows only. The building is heated by stoves, has city water, with water-closet in each department, but the bathing facilities are not good. The plumbing is fair only, and connected with city sewer.

The bedding was found fairly clean, except in the department for city prisoners. Clothing was in fair condition. The cells and corridors were clean. Blankets are sent to a laundry for washing.

Proper classification as required by law is observed. Children are kept separated. Prisoners are not confined in cells, but are allowed the use of the corridor. Labor is required on the yard and in building only. Prisoners wash their own clothing in the yard. Bathing is required weekly. Two meals are furnished the prisoners daily by a hotel on contract, at 15 cents a meal.

TUOLUMNE COUNTY.

WILLIAM SWEENEY, Sheriff, Sonoma.

W. H. SQUIRES, Jailer.

Average number of prisoners in jail.....	4 $\frac{1}{4}$
Total number in jail during the year.....	79

This building is a brick structure, one story high, and located about one block from the courthouse. It is now very old. The cells are ten in number, of brick masonry with solid steel bars. The building is solid. There are long ventilating spaces in the cells, protected by steel bars, and there are steel shutters on the outside. There is a jail yard surrounded by a high brick wall. There are two rooms of five cells each. The building is lighted by electricity and heated by stoves, has city water, water-closet in each cell, with bathing facilities, and fair plumbing. The bedding and clothing was in fairly clean condition.

Classification, as required by law, is not provided. Prisoners are not confined in their cells, but are allowed the use of corridors. Beside the work in the building, prisoners are required to saw wood in the yard. The washing is done by prisoners inside the jail. Bathing is required regularly, and the food is prepared in the kitchen on the premises. Two meals a day are served.

VENTURA COUNTY.

E. G. McMARTIN, Sheriff, Ventura.

J. SALVIDO, Jailer.

Average number of prisoners in jail.....	131 $\frac{1}{2}$
Total number in jail during the year.....	384

This jail is a brick building, adjoining the courthouse. The front part is two stories in height, with a cell house extending to the rear, one story in height. In the front is the jailer's office, above which are rooms for boys and women, four in number. In the cell house is a cage with six cells. The jail building is in good condition, furnishing good security, and is safe from fire. It is lighted by electricity, and fairly well lighted by day. It is heated by stoves, has city water, with plenty of water-closets and bathing facilities, good plumbing, and city sewer. It was clean and in good condition.

Prisoners are not confined in cells, but are allowed the use of the cage corridor.

A rock-crushing plant has been established in the jail yard, consisting of a crusher run by gasoline engine. Rock is gathered from the ocean beach and drawn to this yard, where it is crushed by prisoners, and then sold to the city. The under sheriff said that the number of tramps had greatly decreased in Ventura since the establishment of this plant. It was generally known among them within a week, and now any of this class passing this way go through Ventura without stopping.

Prisoners were furnished with a canvas suit, one half brown and one half blue, so as to make escape difficult.

Food is prepared by the jailer.

YOLO COUNTY.

SAM MONTGOMERY, Sheriff, Woodland.

Average number of prisoners in jail.....	7½
Total number in jail during the year.....	72

This jail occupies part of the basement and part of the first floor of the courthouse. There are five tanks on the first floor, and eight in the basement, with two padded cells for insane. The courthouse was built in 1859, and raised up and the present jail constructed underneath in 1864. The cells are dungeons, but the top is covered with grating, so that there is some ventilation. False wooden floors have been put in and bunks are made on the floor. The jail contained at one time last winter 18 prisoners. Two boys, about seventeen years of age, were found with other prisoners serving sentence.

The jail is dark in the daytime, and at night is lighted by electricity. It is heated by stoves, has city water, one water-closet in each department, and one bathtub. The plumbing is fair and connected with city sewer. The premises were fairly clean.

Prisoners are classified as required by the Penal Code, but there is no separate place for children or women. Prisoners are not confined in cells, but are allowed to run together in the corridors. No labor is required except on the courthouse yard. Washing is done by prisoners in the jail. There are no requirements as to bathing. Food is prepared on contract outside of the jail.

A new jail in this county is badly needed.

YUBA COUNTY.

GEORGE H. VOSS, Sheriff, Marysville.

H. M. LYDON, Jailer.

Average number of prisoners in jail.....	24½
Total number in jail during the year.....	182

The jail is located next to the courthouse. There are two parts, one built about forty years ago, containing fourteen steel cells. There is very little light or ventilation in this part. On the second floor are six wooden cells or rooms for women. In this building there are no bathing facilities, except washtubs, and the toilet bowls do not flush.

Under the hall of records is another cell room containing a cage of three cells, used for felons. This new cell room is in very good condition. It is lighted by electric lights, and heated by hot water. It has city water, with water-closets, and bathing facilities. When visited, the bedding was not clean, but otherwise the premises were in fairly clean condition.

Classification is not always enforced, as we found here in the better portion of the jail, three men awaiting trial on charges of felony, with four prisoners serving sentence. All were running together. Prisoners are not confined in their cells, but are allowed the use of the corridors.

The bedding consists mostly of quilts, which are not washed, and were in dirty condition. The prisoners wash their own clothing.

Two meals are furnished daily under contract with a restaurant, at 35 cents a day per prisoner.

This county is in great need of a new jail.

CHAPTER II.

THE COUNTY HOSPITALS.

Since our last report a new county hospital has been built in Santa Clara County, at a cost of about \$100,000. It is a model in arrangement and well equipped for medical and surgical work. Many of our county hospitals have received additions or improvements. New buildings have been added to the one in Los Angeles. Decided improvements have been made at San Bernardino. An excellent operating room has been built at San Joaquin. A new building has been added at Fresno, which is a model in arrangement. Some improvements are noted in management. There are many, however, where it is most needed, that show no signs of improvement.

Many of our county hospitals are only homes for indigents, almshouses; but others are in addition caring for the sick poor. Some are provided with good operating rooms and dispensaries, with sterilizing and other apparatus. Graduate and student nurses are also employed in many of them.

But there are many which are only very poor "poor houses," and which furnish scarcely the things necessary to sustain life, not including the comforts.

We repeat the following from previous reports:

"The ideal county hospital should be located near the county seat, and be easily accessible. It should provide:

"1. A residence for the superintendent separate and apart from the quarters of the inmates.

"2. Separate quarters for both sick and surgical cases. The ward system may be partly used, but there should be single rooms for such cases as may require isolation.

"3. A certain number of comfortable private rooms for patients who can afford to pay a limited sum for such care. In all of our larger counties there are private patients who need hospital treatment who can afford to pay a small sum of from \$5 to \$10 a week, but who are not able to pay the larger sums demanded by private hospitals. This class should be provided for in the county hospital and receive special care.

"4. Good accommodations for the paralytic and permanently disabled.

"5. Separate and isolated quarters for both the consumptives and those afflicted with contagious diseases.

"6. Suitable rooms for the custodial cases—the old people who are able to get around and partly help themselves. These may be in the main building or in detached buildings. They should have sleeping-rooms, a day-room, a smoking-room, and a dining-room. Those who are able should be required to perform some labor. This must be graded in accordance with their ability. It would be better for them, and they owe it to the county. The keeping of such people in idleness is an injury.

"7. For the perfect separation of the sexes, especially of the custodial cases. The arrangement should be such that no scandal can arise.

"8. Suitable rooms for the employees. These should, for the most part, be in the administration or residence portion of the building.

"The county farm should not be large, but should be of good land. In too many cases the county farm is the poorest land in the vicinity. The farm should produce all the vegetables, milk, eggs, pork, and poultry needed on the place, and be large enough for these purposes. In most cases, it would be a mistake to attempt to run a county farm to produce an income. When this is attempted, it rarely succeeds. There is not usually the same interest on the part of the paid superintendent to make it pay that there would be if he had to get his income from the farm. Again, his main work is the care of his patients, and that requires his time and attention, and the farm work can be only secondary."

We have tried to collect the statistics showing the cost of maintenance of our county hospitals, but so many of the county auditors have failed to respond that we were compelled to abandon it this year. Officials do not apparently appreciate the importance of accurate statistics. We believe it would promote economy and careful management if we could procure and publish the statistics of the cost of our hospitals. In many of our county hospitals accounts are not kept by the Superintendent, but bills are allowed by the supervisors and paid by order on the treasurer. It is therefore necessary to obtain these statistics from the county auditor.

The same is true in regard to relief furnished indigents outside of the county hospital. It would be of interest to many citizens of the State if we could show the amount of indigent relief granted by the board of supervisors, but we are unable to do this without authority.

INSPECTION OF COUNTY HOSPITALS.

ALAMEDA COUNTY.

W. A. CLARK, M.D., Superintendent, San Leandro.

Average number of patients.....	374 ¹⁴
Total number for the year.....	1,150

The farm consists of 125 acres, of which 80 acres are tillable and 45 acres pasture. There is no garden and but a few orchard trees. A dairy of 42 cows, a herd of 40 swine, and 900 chickens are kept. There is a modern dairy barn, with milking machine, a horse barn, hog house, and a chicken house.

The hospital buildings consist of a central building used for the sick, separate buildings for indigents, and seventeen tents with from two to fourteen beds each. The condition of the central hospital building is excellent, but some of the buildings used for indigents are in bad condition, unfit for use, and should be condemned and torn down. There are some housed in a basement and others in an attic up under the roof. No heat is provided for those who are compelled to occupy the tents, and in the winter season they are uncomfortable. Two separate buildings are used for women, and there is also a separate cottage for the Superintendent, and one for the nurses. The buildings are clean and in good sanitary condition, except from the fact of overcrowding. The main buildings are heated by steam and provided with electric lights.

Three meals are furnished all patients daily. They receive meat twice a day, vegetables in variety, fruit three times a week, and breakfast foods in the morning.

Besides the Superintendent, there are three internes, a visiting physician and surgeon, and nine nurses employed. The medical care of the patients is excellent, and this hospital is doing fine medical and surgical work.

Within two years the number of patients has increased from 315 to 424, and the larger proportion of these are indigents. No new provision has been made for them except by the erection of tents, with the result that the place is badly overcrowded, and the patients do not receive the care and comforts to which they are entitled.

The library was found to be badly infected during the past year and all of it was burned.

AMADOR COUNTY.

FRED B. LEMOIN, Superintendent, Jackson.

Average number of patients.....	52
Total number for the year.....	111

The site consists of $7\frac{1}{2}$ acres of land, located in the town of Jackson. There is a small garden. The stock consists of 3 cows, 6 hogs, and about 150 chickens. The farm buildings are small, but answer the purpose.

The hospital building is a large two-story brick structure, with an annex connected. The buildings are in good condition and contain thirteen rooms. There is also a good operating room. The separation of the sexes is not well provided for. A separate cottage is furnished the Superintendent.

The premises were clean and in good sanitary condition. Both electric and gas lights are used, and the heating is done by stoves. There are good water-closets and bathroom facilities.

Two regular meals are furnished the inmates, at 8 a. m. and 3 p. m., with a lunch at noon. Meat is furnished twice daily, and vegetables, fruit, and breakfast foods daily.

The medical attendance is furnished by the county physician, and no nurses are employed. The wife of the Superintendent acts as matron. A cook is the only domestic help employed.

The water supply is adequate for house use, but the pressure is not sufficient for fire protection. There are, however, three fire escapes, two flights of stairs and one ladder.

There are porches all around the building and verandas above. The walls were being tinted and kalsomined at the time of inspection.

BUTTE COUNTY.

J. V. RICHARDSON, Superintendent, Oroville.

Average number of patients.....	42
Total number for the year.....	308

The farm consists of 156 acres, of which 56 acres are tillable and 100 acres in pasture. There is an orchard of 18 acres, mostly in oranges and olives. These trees surround the buildings and make a pleasant location.

The main hospital building is an imposing structure of brick, two stories in height, with porches and verandas around it. It contains five wards and five rooms. There are several small buildings in the yard, occupied by indigent men. These buildings are all one story in height, and some of them are quite old and in bad condition. The Superintendent has rooms in the main building. It is also provided with an operating room and a drug room. The buildings are heated by stoves and lighted by electricity, and the water supply is from private springs.

The buildings and premises were found clean and in fairly good condition. The walls, however, need kalsomining and the inside wood-work needs painting. The porches should have new floors and some new buildings should be erected for indigents, in place of some of the old buildings now used.

Two regular meals and a cold lunch are served patients daily, with meat twice daily, fruit and mush daily, and vegetables in variety.

The county physician prescribes for the inmates. No nurse is employed, except one steward and a matron. There are also employed a cook, a laundryman, and a farm laborer.

CALAVERAS COUNTY.

J. W. ROBERTS, Superintendent, San Andreas.

Average number of patients.....	58 $\frac{3}{4}$
Total number for the year.....	308

The farm consists of 37 acres, of which 18 acres are tillable and the remainder pasture. No garden is cultivated for want of water for-irrigation, and there are only a few fruit trees.

The stock consists of 5 cows, 8 hogs, and about 250 chickens.

The main building is of wood, two stories in height, well arranged, and in good condition except the plastering. The walls need repairing and kalsomining or tinting. Fire escapes have been constructed and fire fighting apparatus installed. Porches and verandas extend all around the building. There are two stairways outside and one inside. There are two buildings outside used for men. One of these is very old and unfit for use. There is a separate building for women, but this is not adequate and a new building should be provided. There are eight wards, two sitting rooms, and ten single rooms in the main building. The Superintendent has a separate cottage. The buildings are lighted by electricity and heated by stoves.

The patients receive two regular meals a day and a cold lunch. Meat and fruit served once a day, vegetables in variety, and mush for breakfast.

The county physician prescribes for the sick cases. There is employed one nurse, a cook, a farm laborer, and a night watchman. The wife of the Superintendent acts as matron.

COLUSA COUNTY.

JAMES A. WHITE, Superintendent, Colusa.

Average number of patients.....	25 $\frac{1}{4}$
Total number for the year.....	100

The farm consists of 39 acres, situated near the bank of the Sacramento River, and is nearly all tillable. About 6 acres are devoted to garden and 7 to orchard, with a good variety of fruit. The stock con-

sists of 9 cows, with 4 other head of cattle, 12 old hogs, 20 pigs, and 215 chickens. There is a barn in fair condition.

The hospital is a one-story building, or buildings, connected by covered passageways. The front part is used by the Superintendent and family, and at the back a covered porch connects the various wings. One is used for dining-room and kitchen, one for male patients, containing two wards, and one of five rooms for female patients. The buildings and wards are all neat, well kept, and in good condition. The grounds are well kept and clean, and there is a fine growth of shade trees in the front yard. In the rear is a good orchard. The hospital is provided with an operating room and a drug room. The buildings are lighted by acetylene gas and heated by stoves. The water supply is from a well, and the sewage is into a cesspool about five rods from the building. This is certainly too close and is liable to contaminate the well water.

Three meals are served daily, meat twice a day. Fruit is served once a day, vegetables in variety, and mush about twice a week, as patients do not care for it.

The county physician prescribes for the patients. There are employed a steward, who acts as nurse, a cook, and a farmer. The Superintendent's wife acts as matron.

The supervisors should provide a cesspool with proper sewer connections.

CONTRA COSTA COUNTY.

C. W. JENKINS, Superintendent, Martinez.

Average number of patients.....	71
Total number for the year.....	403

The location is a beautiful one on a hill overlooking the valley, about one mile south of Martinez. There are but 4 acres of land, of which 3 are in cultivation; 40 acres for pasture are rented. The quality of soil is not good. A small garden only is cultivated, and about one acre is in orchard. The stock consists of 13 cows and 250 chickens.

The hospital buildings consist of five one-story wooden structures. They are old and not in good repair. The buildings provide for five wards, one separate building being used for female patients. There is an operating room, but a poor one. The buildings are lighted by electricity and heated by oil burner stoves. The water supply is fairly good. The premises were clean and in fair sanitary condition.

Three meals are served daily to the patients. Meat is served twice a day to the workers and once to the other patients. Vegetables are furnished in variety, and fruit daily for supper and mush daily for breakfast.

The county physician prescribes for the sick cases. There are two nurses, one man and one woman, one cook, and a farm laborer employed.

Two patients also are employed at a small remuneration to assist about the premises.

The buildings were greatly overcrowded during the past winter, having at one time 93 inmates; 46 patients were admitted in March last, nearly all of whom were cases of delirium tremens and injuries in saloon brawls. The facilities for medical work are inadequate. There are two tuberculosis cases, young girls, ten and twelve years of age.

EL DORADO COUNTY.

S. H. RANTZ, M.D., Superintendent, Placerville.

Average number of patients.....	53 ¹ / ₄
Total number for the year.....	125

The hospital is located on a hill, consisting of about 6 acres of land, within the limits of Placerville. There is about one acre of garden and small fruits, and a few fruit trees.

The main building is two stories in height, built in the shape of an "L," with a porch all around the lower floor and three verandas on the second floor. There is a separate cottage for the Superintendent. The buildings are of wood and the walls on the inside were not plastered, but finished by putting canvas upon the studding. The outside stairway makes a good fire escape. There is an old house on the premises which should be torn down. The buildings are lighted by electricity, heated by stoves, and have a good water supply. The premises and buildings were in a fair state of cleanliness and good sanitary condition.

Two meals, morning and evening, with a midday lunch, are served. Meat is served once a day, vegetables, in variety, mush daily and fruit frequently.

The county physician prescribed for the cases. A cook is employed.

The main building needs a general overhauling, plastering, and tinting.

FRESNO COUNTY.

GEORGE H. BLAND, M.D., Superintendent, Fresno.

Average number of patients.....	13
Total number for the year.....	1,129

There are 80 acres in the farm, all of which are tillable. There is a good garden cultivated, but no orchard. The place is stocked with 20 cows, 4 horses, some hogs, and some chickens.

The main hospital building is nearly new, Mission style of architecture, with a central portion two stories in height and the wings one story. Some distance in the rear is located another building, used for indigents. This building is two stories in height. Both buildings are constructed of brick. There are in all ten wards and sixteen small rooms. Two of these small rooms in the hospital are for private patients.

The hospital also contains an operating room, a dressing room, and a drug room, all well equipped for best medical and surgical work. The building for indigents is equipped with a separate kitchen and dining-room. There is a grove of trees in the rear. Each inmate in this building is provided with a chest and shelf in addition to his bed. The furniture is all new, and all the buildings are clean and in first class condition. They are lighted with electricity and heated with steam.

GLENN COUNTY.

W. I. LEAKE, Superintendent, Willows.

Average number of patients.....	13
Total number for the year.....	83

The hospital site of 20 acres lies about one mile north of Willows. The land is nearly all under cultivation. The quality is fair. No garden is cultivated, and there are only a few trees on the place. The stock consists of 12 cows, 10 hogs, 2 horses, and 12 chickens.

There is one large central building of wood, which is in fair condition. There are eight rooms for inmates, and at present there are no women. The premises were found only fairly clean, the ceilings and walls being badly colored, and in some places the plastering is off. The sewage runs into a cesspool, which is in bad condition and located quite close to the buildings.

Three meals daily are served. Meat is served twice a day, vegetables in variety, fruit daily, and mush for breakfast.

The county physician prescribes for patients. There are no nurses, and a cook is the only employee. The wife of the Superintendent is the matron. The Superintendent of this hospital is paid \$12.50 per month each for the board of patients, he furnishing everything in the way of provisions, and paying the help. He owns all the stock on the premises.

The plastering should be repaired, the woodwork painted, a new floor put in the kitchen, and the cesspool cleaned and remedied.

HUMBOLDT COUNTY.

D. H. McFARLAN, Superintendent, Eureka.

Average number of patients.....	70 $\frac{1}{4}$
Total number for the year.....	189

This hospital is located on a site of 20 acres about one and a half miles from the business center of Eureka. About 15 acres of the land are tillable, about 9 acres in garden, well cultivated and productive. The stock kept on the premises consists of 4 cows, 2 horses, and 150 chickens.

The central hospital building is a large two-story wooden structure, with verandas and two wings, or wards, extending to the rear. The

building is an imposing one, and in good condition. The first floor contains the offices, a drug room, an operating room, large general dining-room, and a well equipped kitchen. The second floor contains rooms for Superintendent's family and nine rooms for female patients. The two wings extending to the rear each contain two wards for men and also one single room. The wards have porches on the inside, connecting with the dining-room.

The building is well lighted and supplied with electric lights and steam heat. The water supply is from private wells. There are eight water-closets and four bathrooms. The plumbing is good and sewerage connects with cesspool. The premises were found clean and in good condition.

Three meals are served daily. Supper was served during our visit and was a substantial meal, well cooked. Meat is served twice a day, vegetables, fruit and mush daily. The patients are prescribed for by the county physicians. Two nurses are employed, one male and one female. In addition, an engineer, cook, waitress, and night watchman are employed. A farm laborer is employed when needed.

INYO COUNTY.

JOHN A. DOANE, Superintendent, Big Pine.

Average number of patients.....	19½
Total number for the year.....	39

This farm is located near the village of Big Pine and consists of 80 acres, of which 45 are tillable and the remainder pasture land. One acre is used for garden, and there are a few fruit trees and vines. The stock consists of 4 cows, 5 other cattle, 4 hogs, and 200 chickens.

There are two buildings; one is used for the residence of the Superintendent, with kitchen and dining-room for inmates. The other building is for male inmates. This has two wards of seven beds each, opening onto a cozy sitting-room. The Superintendent's house is two stories in height. If any women are admitted they must be placed here. An old house on the place is occupied by an old man and wife, using their own furniture. The plumbing in the buildings is very bad, there being no traps or vents. Lighting is done by means of lamps and candles and heat is supplied by stoves. The water-closets are outdoor vaults and the sewerage is into a cesspool. The buildings were found in a clean condition.

Meat is served the patients twice a day, fruit frequently, vegetables daily in variety, and mush twice a day.

A physician located at Big Pine is employed to prescribe for the patients. There are no nurses. One cook and a farm laborer are employed. The wife of the Superintendent acts as matron.

KERN COUNTY.

F. BUCKREUS, Superintendent, Bakersfield.

Average number of patients.....	42
Total number for the year.....	366

The site consists of 6 acres, located just west of the city limits of Bakersfield. There are about 3 acres of orchard, but the balance of the land is uncultivated. Two cows are kept and about 50 chickens. There is a small barn on the premises.

The central hospital building is two stories high, with a one-story ward wing extending out east and another west, and a brick kitchen building in the rear. This latter is about six feet distant from the main building, and the passageway is enclosed. There are three wards and three rooms for inmates, two rooms for employees, one for Superintendent, and one for the matron. The women are kept on the second floor of the main building. There is an operating room with good appliances, and a drug room. The building is lighted by electricity, and heated by steam. There is city water, a water-closet, and a bathtub in each department, and fair plumbing connected with city sewer. The premises were found in clean condition.

Three meals are served patients daily, at which meat is given twice, vegetables and fruit daily, and mush for breakfast.

The county physician prescribes for patients. There are two male nurses and one female nurse, two cooks, and one laundryman. A matron is also employed.

KINGS COUNTY.

B. W. MOORE, Superintendent, Hanford.

Average number of patients.....	11¼
Total number for the year.....	60

The site consists of 10 acres of poor alkali land one mile east of Hanford. There is a small garden patch and no orchard. No other land is cultivated. The stock consists of 2 cows, 3 hogs, 2 horses, and about 300 chickens. There is a barn in good condition.

The hospital buildings are two in number, one story high. The main building consists of six sleeping rooms with two beds each, with a porch extending around three sides. The porch on one side is enclosed by wire screen. There is a separate building for tuberculosis cases. The old dwelling house, which is in connection with the main hospital building, is used by the Superintendent. The buildings are all of wood, and in fairly good condition. The tuberculosis building consists of four rooms. It is nearly new, and has a large front porch screened in, where the patients sleep during the summer season.

There are no women at this hospital now, and there is no proper place for them if any should be received.

There is a good operating room, with new appliances, for surgical operations.

The buildings are lighted by acetylene gas, heated by stoves, and water is furnished by well and windmill. There are three water-closets inside, and one outside, with two bathtubs. Plumbing is in fair condition, and connected with cesspool. The premises were found in a clean condition at the time of our visit.

Three meals are served daily, at which meat is given twice, vegetables daily in variety, fruit daily, and mush for breakfast.

Patients are prescribed for by the county physician. The wife of the Superintendent is matron, and one cook is hired.

LAKE COUNTY.

H. C. WILKINSON, Superintendent, Lakeport.

Average number of patients.....	3½
Total number for the year.....	14

This county does not own a county hospital. A contract is made with Mr. Wilkinson to board the charges of the county for \$1 a day, he furnishing everything and providing all care. For this purpose he rents a house, which is not in good condition, is not plastered, and the walls are covered with muslin on which wall paper has been placed. Most of this has torn loose and hangs in a ragged condition. It furnishes an excellent place for vermin to hide, and one of the inmates was found sleeping out in an open woodshed, because he said the bedbugs drove him out of the house. In one of the rooms of the house was an Indian with a broken leg. In the same room were two women and two children, and their household equipment. They had moved in and were doing their own cooking on a camp fire in the yard. Another old man had just been brought in, and there seemed to be no decent place to provide for him.

The Superintendent resides close by, and the meals are prepared in his own house and taken over to the inmates. He informs us that he has tried to rent another and better house, but no one will rent to him for the purposes of an infirmary. The bank which owns this house refuses to make any repairs, and the board of supervisors tell the Superintendent that they have contracted with him, and it is his duty to solve the problem. As a result, the problem is not solved, and the inmates suffer. It seems to us that the only solution of the problem is for the county to provide a building. The plan here pursued is by no means a satisfactory one.

The county physician prescribes for all patients.

LASSEN COUNTY.

J. E. BASS, Superintendent, Susanville.

Average number of patients.....	61¼
Total number for the year.....	18

This is nominally a farm of 160 acres of land, only a few acres of which are tillable, the rest being mountainous and rocky. One cow, 1 horse, and about 200 chickens are kept.

There are two buildings; one, an old one, occupied by the Superintendent and family; the other, a new, cheaply built structure, containing four rooms. This building is used for patients. Proper separation of the sexes is not provided, and the provision for the sick is not good. The buildings are lighted by lamps and heated by stoves. There is a good water supply, and good sewerage. The plumbing, however, is not in good order. The premises were found clean and in fair sanitary condition.

Three meals are provided daily, and meat is served for each meal. Vegetables, fruit, and mush are served daily.

The county physician prescribes for the sick. No nurse is employed, and the wife of the Superintendent acts as matron. No other help is employed.

LOS ANGELES COUNTY HOSPITAL.

D. C. BARBER, M.D., Superintendent, Los Angeles.

Average number of patients.....	278½
Total number for the year.....	3,404

The county hospital is located in the city of Los Angeles, and only sufficient ground is owned to furnish a site for the buildings. The farm supplies used here, such as milk, eggs, fruit, and vegetables, are received from the county farm at Downey.

There are three new brick buildings of good size, two stories in height. Two of these are used for medical wards, and one for contagious diseases. There is also a new dormitory for nurses. A new brick building for kitchen and dining-room is in course of construction, and a new brick morgue has recently been built. The old wooden buildings, however, are still in use. In fact, there seems to have been sufficient increase to fill up the new buildings. The old buildings are not in the best condition. A good laundry is maintained, which also does work for the county farm.

As this institution provides for the sick only, there is fairly good equipment for the purpose, including operating, dressing, and drug rooms. Besides the Superintendent, who is a practicing physician, eight assistant physicians and internes are employed, and there is also a corps of forty-five nurses, together with such domestics and other help as is required in an institution of this size.

The Superintendent is provided with a separate cottage.

LOS ANGELES COUNTY FARM.

ANDREW F. WADE, Superintendent, Downey.

Average number of patients.....	209
Total number for the year.....	357

The farm consists of 333 acres of land, all of which is tillable, and valued at about \$600 per acre; 15 acres are in garden, 30 acres in oranges. There is also a good acreage of alfalfa, and the farm in general is in good condition. The stock consists of 74 cows, 50 other cattle, 14 horses, 269 hogs, and 1,500 chickens. The farm buildings are all in good condition.

The buildings for inmates are four in number, and arranged around a court. The front building is used by the Superintendent for residence and administration. Two buildings, at the right and left, are used for patients, and the rear building contains the kitchen and dining-room. These buildings are all of brick, and in good condition. There is a separate building across the roadway for the women, and also a long, one-story brick building used for chronic insane cases, which have been returned from the State hospitals for county care. This building contains twenty-six rooms for men, and twenty-six for women. In the rear are two enclosed courts, furnishing good places for the insane patients to get out into the open air. The building is in charge of a man and his wife, and we believe the care here furnished to be fully equal to that furnished by our State insane hospitals. Since our last visit there has been built a residence for the physician, and a chapel is now under construction. At this institution there is no special provision for sick patients, as the county maintains a hospital in the city of Los Angeles, and sick cases are sent there.

The buildings are lighted by lamps and heated by stoves. The water supply is private, but ample. Bathing facilities are not good. For sewerage there is a system of septic tanks, which are satisfactory. The premises were found clean and in good sanitary condition. In fact, there is every appearance of good, careful management. We were pleased to find one of the supervisors a frequent visitor, and giving this institution his special attention.

The food is good and sufficient. Meat and mush are served daily, vegetables in variety, and fruit frequently.

There is a resident physician, interne, three nurses, two domestics, and eight farm laborers.

MADERA COUNTY.

W. C. REED, M.D., Superintendent, Madera.

J. M. HENSLEY, Steward.

Average number of patients.....	36½
Total number for the year.....	184

The farm consists of 40 acres of land, all of which is tillable. It is rather sandy, and not very productive. About half an acre is in garden, and there are only a few fruit trees. The stock consists of 4 cows, 3 other cattle, 2 horses, 3 hogs, and about 150 chickens.

The hospital building is of wood, one story in height, with a high basement, and a porch the whole length of the front, about 120 feet. Some of the wards are in the basement. They are five in number. The steward in charge resides in the building, and for lack of sufficient accommodations, is compelled to keep the female patients in his own rooms. This is not agreeable, and very inconvenient. The toilet facilities are not sufficient. The building is lighted by lamps and heated by stoves. The premises were found clean, and in good sanitary condition.

Three meals are furnished the patients daily, with meat at each meal. Vegetables in variety, fruit twice a week, and mush twice a day.

The Superintendent and county physician resides in Madera, and the institution is in charge of the steward, whose wife is the matron. A nurse and a cook are employed.

There should be provided at this hospital a morgue. The plastering on the dining-room and kitchen, and on the wards under these rooms, is partly off, and in bad condition. These rooms should be replastered. The bathtubs are old and in bad condition, and should be replaced.

MARIN COUNTY.

W. F. JONES, Superintendent, San Rafael.

Average number of patients.....	35¼
Total number for the year.....	76

The hospital is located about six miles northwest of San Rafael, on a farm of 98 acres, of which 45 acres are tillable, and the balance is pasture land. The tillable land is of good quality. About 3 acres are in garden and 5 acres in orchard. Ordinary farm crops are raised. The stock consists of 8 cows, 6 other cattle, 2 horses, 7 hogs, 250 chickens, and 45 turkeys. The place has turned off this summer quite a quantity of hay and a large number of hogs. The farm buildings consist of a barn and a dairy building.

The hospital building is in two parts, forming a letter "L." The structures are two stories high. There are six rooms for women and

five wards for men, besides some shanties in the yard, which accommodate six men, who occupy these places from choice.

Since our last visit, a new residence has been built for the Superintendent, which furnishes him ample accommodations, and is a great improvement to the place. At the time of our visit the hospital building was all torn up. The old paper had been scraped clean from the walls, and new plaster was being put on the walls where the old plaster was broken. The walls and the woodwork are to be painted. The exterior is also to be repainted. Some partitions will be removed, and a new arrangement of dining-rooms made, so that the men and women will have separate dining-rooms, and much better than they heretofore have had. Improvements being in progress, of course, nothing could be judged as to the normal condition of the place, but the prospects are for a greatly improved, and a very satisfactory hospital.

This hospital has never made provision for sick, and receives but few except custodial cases.

The buildings are lighted by lamps, heated by stoves, have private water supply, and when the improvements are completed, will have eight water-closets, and four bathrooms. The plumbing, of course, will be new. Sewage runs into a field.

Three meals are served daily, at which meat is furnished twice, vegetables in variety daily, fruit daily, and mush for breakfast.

The county physician prescribes for patients. No nurses are employed. There is one cook, and one farm laborer. The wife of the Superintendent is matron.

MARIPOSA COUNTY.

GEORGE STEWART, Superintendent, Mariposa.

Average number of patients.....	25
Total number for the year.....	41

The farm consists of 8 acres of land, of which 4 are hill pasture. The quality is not good. There is about $1\frac{1}{2}$ acres of orchard and no garden. No stock is kept, except about 50 chickens.

The hospital building is a large, two-story structure, originally built for a sanitarium. There is a small building in the rear, in which the Superintendent and family reside, and which also contains the dining-room and kitchen, and rooms for women. Another small building is used as a day room for the men. There are in all twenty-five rooms for the inmates, which furnish good classification, and there is also good separation of the sexes. An operating room is also provided. The buildings are lighted by lamps and heated by stoves. The water supply is from a spring. The bathing facilities are good, the plumbing in fair condition, and the sewerage fairly good. The premises were found clean

and in good condition, with the exception of some of the bedding, which was dirty.

Three meals daily are served the patients, at one of which meat is furnished. Vegetables are served in variety, fruit twice or more a week, and mush every morning.

The county physician prescribes for the sick. No nurses are employed. The wife of the Superintendent acts as matron, and together with the Superintendent, with the assistance of patients, does all the work.

The Superintendent and wife receive \$315 a month for caring for the men, regardless of the number, and in addition to that, \$15 a month for each woman. While this is not a very good plan, yet we found the inmates receiving good care, and they seemed to be well fed and provided for.

MENDOCINO COUNTY.

J. LIFTCHILD, M.D., Superintendent, Ukiah.

GEORGE LAMBERT, Steward.

Average number of patients.....	64½
Total number for the year.....	133

The farm consists of about 140 acres, of which 40 only are tillable, the balance being pasture and brush land, about half of which is waste. The quality is poor, with the exception of about 20 acres. Two acres are cultivated for garden, and about 2 acres are in orchard. The stock consists of 7 cows, 2 horses, 2 hogs, and about 150 chickens.

The hospital buildings consist of five ward buildings, a cook house, and steward's residence, arranged around a hollow square. All are built of wood, and the hospital buildings are one story in height, with a high basement. They are old and out of repair. The furniture is poor, and many of the chairs have homemade bottoms of string. The bedding is old, the quilts especially being old and not clean. There are five wards for inmates and several small rooms. There is good separation of the sexes, but only fair provision for the sick. The buildings are lighted by electricity, and heated by stoves and fireplaces. There is city water supply. The plumbing is fairly good, but the sewerage is not very good. The premises were found in fairly good sanitary condition.

Three meals daily are served. Meat is served once daily and twice on two days of the week. Vegetables in variety are served daily, and mush every morning, except when meat is served.

The county physician prescribes for the sick. One nurse and a cook are employed, and the wife of the Superintendent is the matron.

The hospital should be supplied at once with new chairs, some new beds, and new bedding.

MERCED COUNTY.

H. G. PECK, Superintendent, Merced.

Average number of patients.....	29 $\frac{1}{4}$
Total number for the year.....	168

The site consists of 6 acres of land, all of which is tillable and of good quality. There is, however, no garden and no orchard. The stock consists of 3 cows, 10 hogs, and 50 chickens.

The hospital building is a fine structure, in Mission style, the center of which is two stories in height and the wings one story. This building is of brick, plastered over with cement, and is new and in first class condition. There are two wards and four rooms for men, and two wards for women. The Superintendent is furnished with comfortable quarters, consisting of six rooms. There is an operating room and drug room, and the sick are well cared for. The building is lighted by electricity, and heated by steam. It is supplied by a private water concern, which supplies the city of Merced. It is provided with seven water-closets and six bathtubs, all in good condition. The plumbing is good, and there is city sewerage. The premises were found clean and in first class condition. The bedding and clothing of inmates was clean.

Three meals are furnished daily, at all of which meat is served. Vegetables are served in variety daily, fruit once a day, and mush every morning.

The county physician prescribes for the sick. There is one graduate nurse, who acts also as matron, and a steward, who is in reality a nurse for the men.

MERCED COUNTY BRANCH HOSPITAL.

C. F. WADE, M.D., Superintendent, Los Banos.

MRS. WILLIAMS, Matron.

Average number of patients.....	9 $\frac{1}{4}$
Total number for the year.....	58

This hospital is located in the western part of the county. It is a comfortable farmhouse, situated on 10 acres of land. The house is small, one story in height, and is built of wood. The condition is not very good, but the inmates seem to be contented and well cared for.

MODOC COUNTY.

JOHN STILE, M.D., Superintendent, Alturas.

MRS. HARRIS, Matron.

Average number of patients.....	11 $\frac{3}{4}$
Total number for the year.....	43

The county contracts for the care of the inmates with Mrs. Harris, paying her 50 cents a day per inmate, and \$10 a month for laundry. She is required to furnish nothing except fuel, the county furnishing

the food. The hospital site consists of 5 acres of land, of which about half an acre is in garden. There are a few apple trees. Mrs. Harris keeps on the place 1 cow, 2 hogs, and about 50 chickens.

The hospital building is an old residence, situated a short distance only from the courthouse, and is occupied by the matron's family. In addition, there is a new ward building, one story in height. There is also a separate building of two rooms, used for tuberculous cases. No women patients are kept here. There are four rooms in all for patients. The buildings are lighted by electricity, and heated by stoves. Since our last visit a plant for irrigation has been provided. The premises were found in good sanitary condition.

Three meals are furnished daily, and meat is served once a day at least; vegetables in variety daily, fruit daily, and mush in the morning.

The plan under which this institution is managed is not a good one, and the matron does not receive enough pay for her services. On the other hand, no good provision is made for sick or injured cases. There should be an operating room, and some private rooms for this class.

MONO COUNTY.

JOSEPH MOORE, Superintendent, Bridgeport.

Average number of patients..... 4

This hospital is located $6\frac{1}{2}$ miles south of Bridgeport on a farm of 160 acres, of which 100 are tillable, and the remainder pasture. The quality is fair. Three acres are cultivated for garden, but there is no orchard. The stock consists of 4 cows, 2 horses, 4 hogs, and about 200 chickens.

The buildings are new. The county hospital of this county was previously located at Bodie, but this farm has been purchased, buildings constructed, and the hospital established here. The county has expended considerable money in this plant, much more than the returns at present warrant. The building is a wooden two-story structure, which was not very well built. There are four rooms for inmates, and the Superintendent is fairly well provided for in the building. The separation of sexes is not good, and the provision for the sick is bad. The building is lighted by lamps and candles and heated by stoves. There are no water-closets in the building, no bathrooms, no plumbing, and no sewerage.

The inmates seem to be well fed and were apparently contented. The county physician prescribes for the sick. There are no employees except the Superintendent and wife. They receive \$100 per month and reside on the premises, receiving their support from the county in addition to salary. We were informed by the county officials that the hospital was costing about \$100 per month for each patient, there being but four males and one female. It is evident that the finances are not well

managed, and the farm is not being made to furnish that portion of the support it should.

MONTEREY COUNTY.

H. A. HUNTER, Superintendent, Salinas.

Average number of patients.....	47½
Total number for the year.....	146

The farm consists of 70 acres, of which about 60 are tillable, the remainder constituting the building site. Five acres are in gardens, and there is some orchard. The stock consists of 10 cows, 3 horses, 21 hogs, and 125 chickens.

The main hospital building is a large two-story structure of wood. Then there are several small buildings, rather old, located in the yard. There are about twenty-five rooms for inmates in the main building and five in the outside buildings. The Superintendent and family have four rooms in the main building. There is good separation of sexes. There is also an operating room, which is not very good. Lighting is by lamps and heating by stoves. The water supply is from a well and wind-mill on the premises. There are four water-closets in the house, in good condition, and one outside, three bathrooms, fair plumbing, and sewerage. The premises were found clean and in good sanitary condition.

Three meals are furnished daily, and meat is served twice a day; vegetables daily in variety, fruit occasionally, and mush every morning.

The county physician prescribes for the sick. There is one nurse, two cooks, a dishwasher, two farm laborers, and a storekeeper employed. The wife of the Superintendent is the matron.

The number of inmates in this hospital has been on the increase, at this time reaching 53, and the accommodations are inadequate. The old buildings on the outside are not suitable. There have been some repairs since the last inspection.

NAPA COUNTY.

Q. C. FLY, Superintendent, Napa.

Average number of patients.....	47¾
Total number for the year.....	176

The farm consists of 10 acres of land just outside of the city of Napa. It is all tillable, but little of it is tilled. The quality is good. One acre is in garden. No stock is kept upon the premises except a driving horse belonging to the Superintendent, and 65 chickens.

The hospital buildings consist of one large two-story wooden building, in fair condition only, and another wooden building used for sick cases, which is in good condition. In this building are two small rooms used for a detention ward for insane. We must condemn this plan, as the noise from violent insane patients is a serious menace to the health of sick people and surgical cases in the hospital ward connected. There

is an operating room, but not a good one. There are thirteen rooms for inmates in the large building, and four in the smaller. The lighting is furnished by acetylene gas and is fairly good. The heating is done by means of stoves. There is a good water supply. The water-closets are out of repair. There is a private sewer to the river. The premises were found in clean sanitary condition.

Two meals daily are served the patients, one at 7:30 a. m. and the second at 3 p. m. Meat, vegetables in variety, fruit, and mush are served daily.

The county physician prescribes for the sick. There is one cook and one nurse employed. The Superintendent receives as compensation \$150 per month, and is required to furnish all of his help.

NEVADA COUNTY.

GEORGE A. STEWART, Superintendent, Nevada City.

Average number of patients.....	65 $\frac{3}{4}$
Total number for the year.....	182

The hospital is located on a tract of 4 acres of land within Nevada City. A good garden is cultivated and 4 cows are kept. The building itself is the result of patchwork, made by making additions to the old building. It is two stories in height. There are five large wards for patients. There is a separate detached building used for women, but this is close to the men's department. The porches of the two buildings face each other, with only a walk between them. The rooms of the women open upon the porch. There is no matron and no other woman employee about the premises. There were six female patients at the time of our visit.

The building has undergone some improvements, especially with reference to a water supply and fire protection. Five hydrants have been established about and in the building, and all of these have direct pressure sufficient for fighting fire.

The premises were found in fairly clean condition. There is fairly good provision for the sick, there being an operating room.

The county physician prescribes for the sick, and an interne, or medical student, is usually employed, together with two nurses.

PLACER COUNTY.

J. T. WALSH, Superintendent, Auburn.

Average number of patients.....	73 $\frac{1}{2}$
Total number for the year.....	319

The farm consists of 52 acres, of which 15 only are tillable, and the remainder of the land is pasture. It is located almost within the corporate limits of Auburn. Three acres are devoted to garden, and there is some orchard. The stock consists of 8 cows, 11 hogs, and 150 chickens.

The hospital buildings consist of eight separate structures, connected by covered corridors, and built of wood. They are well separated. These buildings are nearly new and in excellent condition. This arrangement is a very good one for this climate. The Superintendent has a separate cottage. There are seven wards in all. The women occupy the upper floor of one of the buildings, and the only criticism we can make of this ward is that these women do not get down to the ground. They are kept on this upper floor, but are provided with a veranda, which permits them to get out into the air. There is a water-closet and bathroom on each ward. The plumbing is in good condition. The buildings are heated by stoves. The premises were found clean and in good sanitary condition.

Three meals are furnished the patients daily. Meat, vegetables in variety, fruit, and mush are served daily.

Two county physicians are employed to look after the sick, alternating each month. One good female nurse is employed, together with a cook, laundress, and dairyman. The nurse is also matron. This hospital is one of the best arranged and best conducted of the small hospitals in the State.

PLUMAS COUNTY.

JOHN M. KINGDON, Superintendent, Quincy.

Average number of patients.....	26 $\frac{3}{4}$
Total number for the year.....	80

The site consists of 7 acres, located on the banks of Indian Creek, about $1\frac{1}{2}$ miles from Quincy. About $3\frac{1}{2}$ acres are tillable and the balance is hill land. The tillable portion is of good quality, but the hill land is nearly waste. A small garden is cultivated, and there are a few fruit trees. The stock consists of 2 cows, 1 horse, and about 120 chickens.

The hospital building is of wood and one story in height. It is 26 by 100 feet, with an addition to the rear of about 18 by 50 feet. There are nine separate rooms. There is also one ward in a small outside building, containing six beds. There is a separate cottage for the Superintendent's residence. No women are kept, and no provision is made for them. The provision for the sick is not very good. The buildings are lighted by lamps and heated by stoves. There is no plumbing, and but one bathroom. The premises were found clean.

Two meals are served the patients daily, with a lunch in the evening. Meat is served twice a day, vegetables and mush daily, and fruit three times a week.

The county physician prescribes for the sick. The wife of the Superintendent is the matron. No other persons are employed except a cook.

Since our last visit a new windmill and tank have been put up and a

gas engine is to be installed, furnishing fairly good water supply. A new stable is in process of erection. Other improvements are contemplated.

RIVERSIDE COUNTY.

O. A. POWELL, Superintendent, Arlington.

Average number of patients.....	35¾
Total number for the year.....	219

The farm consists of 42 acres of extra good land, all of which is tillable. About half an acre is in garden and another half acre in orchard. There is also a good stand of alfalfa. The stock consists of 6 cows, 2 horses, 6 hogs, and 36 chickens. There are two barns in good condition.

There is one main hospital building, two stories in height, which also furnishes rooms for administration offices and rooms for the Superintendent. There are in addition to this four cottages. All of the buildings are of wood, nearly new, and in excellent condition. There are four rooms and seven wards used for the inmates, and in addition, three cottages of four rooms each. The Superintendent has five rooms for his own use and officers and employees six more. There is good separation of the sexes, and a good operating room and provision for the sick. The buildings are lighted by electricity and heated by stoves. There is a good private water supply, including irrigation. The plumbing and sanitary conditions are good.

Three meals are furnished the patients daily. Meat is served twice a day, vegetables in variety, fruit and mush daily.

The county physician living at Arlington, close by, prescribes for the patients. Three nurses are employed, also a cook, laundress, dining-room girl, farm laborer, and porter. The wife of the Superintendent is matron.

Last year about \$1,000 worth of products were sold from the farm.

SACRAMENTO COUNTY.

J. L. WHITE, M.D., Superintendent, Sacramento.

Average number of patients.....	230½
Total number for the year.....	1,849

The farm consists of 60 acres, located just outside the city limits of Sacramento. The land is all tillable. There are good gardens and orchard. The stock consists of 8 cows, 2 other cattle, 4 horses, 30 hogs, and 60 chickens.

The hospital proper consists of five buildings connected with each other by covered corridors. There is also an outside cottage for employees. The buildings are all of good size, two stories in height, in fair condition, and built of wood. The front building in the center is the

administration building, and also furnishes rooms for the Superintendent and other officers. In the rear of this is a building containing kitchen and dining-room on the lower floor, with women's ward on the second floor. Radiating from these two, like the points of a star, are the other buildings. There are in all nine wards, seven for men and two for women. The buildings have verandas in front and on each side. Toilets and baths are arranged in the rear end of each ward. The beds and furniture of the buildings are not good. Many of the patients are compelled to sleep on iron beds, the bottoms of which are made of strap iron, and no springs used. The hospital is provided with an operating room and a drug room. It is lighted with electricity and heated by steam, with stoves on the wards. The water supply is a private well, and the sewerage is into a cesspool. The premises were found fairly clean. There was a superabundance of flies.

Three meals are served daily; meat once a day, vegetables, fruit, and mush daily.

The Superintendent and his assistant are physicians, and there are also two internes and six nurses. A steward, assistant steward, storekeeper, two cooks, farmer, milker, gardener, engineer, ambulance driver, watchman, laundryman, and laundress are employed.

SAN BENITO COUNTY.

JOHN BUTTS, Superintendent, Hollister.

Average number of patients.....	24¾
Total number for the year.....	70

This hospital is located 3 miles south of Hollister on a tract of about 19 acres of land, of which all is tillable. There is no garden cultivated, and no orchard on the place. The stock consists of 5 cows, 3 horses, 2 sheep, 6 swine, and 40 chickens.

The hospital consists of one central building in the form of the letter "T," and a separate building for tuberculosis patients. The buildings are of wood, of good size, and in fair condition. In all there are twenty rooms for inmates, five for the Superintendent, and two for employees. There is no proper separation of the sexes, women being assigned to rooms in the same building where the men's rooms are, and there is no good provision for the sick. The rooms are not heated, and the only heat is a stove in the sitting-room. Water is supplied by the same company which supplies Hollister. There are only two bathrooms to accommodate the Superintendent and family and twenty-four patients. The premises were found clean and in good sanitary condition.

Three meals daily are served, with meat at each meal, vegetables and mush daily, and fruit twice a week or oftener.

The county physician prescribes for patients. There are two regular nurses employed, a cook, and waitress. The Superintendent's wife

is matron. The inmates are kept on contract, the Superintendent receiving 50 cents a day per patient, and furnishing all the food. The county furnishes the buildings and clothing of patients, allowing the Superintendent the use of the ground.

This hospital needs much better heating arrangements, and it also should be provided with an operating room.

SAN BERNARDINO COUNTY.

DAVID C. STRONG, M.D., Superintendent, San Bernardino.

Average number of patients..... 96 $\frac{1}{2}$

Total number for the year..... 814

The hospital site consists of 20 acres about one mile west of the business center of San Bernardino. Nearly all of the land is tillable and of good quality. The stock consists of 14 cows, 3 horses, 33 hogs, and 125 chickens.

The central hospital building is two stories in height and is used almost exclusively for sick cases. It is well provided with an operating and drug room. There is a separate building, new and in good condition, used for the indigent women, three pavilions for indigent men, and also separate pavilions or tents for tuberculosis cases. The Superintendent is provided with a separate cottage, and there is also a cottage for nurses. The main building is of brick and the others of wood. There are in all sixteen wards and nine private rooms. The buildings are lighted by electricity and heated by a hot water plant. Both city and private water supplies are used, and the place is well supplied with toilets and bathrooms. The plumbing is in good condition. The premises were found in clean sanitary condition.

Three meals daily are furnished patients. Meat, vegetables, and mush are served daily, fruit frequently.

The Superintendent is a physician, and there is also an interne and twelve nurses. Two cooks, dishwasher, farmer, dairyman, laundryman, laundress, and gardener are employed. The superintendent of nurses is also the matron.

There has been considerable improvement at this hospital since our last visit. The women's building has been moved into a much better location and put in good condition. The main building has been renovated and the walls repainted with marvolor. A new brick laundry occupies the site of the old building. Some of the new buildings for indigent men are cheaply constructed of boards and canvas, with screens for windows. Arrangements have been made here for the taking of private pay patients, and eight rooms were set apart for this class and were well filled. This is now one of the best county hospitals of the State, a credit to the Superintendent and to the county.

SAN DIEGO COUNTY.

JAMES DUFFY, Superintendent, San Diego.

Average number of patients..... 108½
 Total number for the year..... 604

The farm consists of 107 acres, of which only about 30 acres are tillable, the balance being waste. About two acres are cultivated for garden and two for orchard. The stock consists of 10 cows, 5 horses, 10 hogs, and about 700 chickens. There is a separate house for the farmer, with a barn and creamery.

The main hospital building is of brick, two stories and basement. It is nearly new and in good condition. There are five wards and twenty rooms for patients, fifteen rooms for employees and six rooms for the Superintendent. There is good separation of the sexes, one of the best of operating rooms, with physicians' dressing room, drug room, etc. The buildings are lighted by both electricity and gas, and heated by a hot water system. There is a good private water supply and an abundance of toilets and bathrooms. The plumbing and sewerage are good. The buildings were found clean and in first class condition.

Three meals daily are served. Meat is served twice a day, vegetables, fruit, and mush daily.

Much of the credit for the condition of this hospital, which we have heretofore pronounced the best county hospital in the State, is due to Dr. Gocheneur, the county physician, who has had charge of the medical work of the hospital. There is one graduate nurse with from eight to ten student nurses. The wife of the Superintendent is matron. Two cooks, a dishwasher, two farm laborers, teamster, laundryman, and a porter are employed.

SAN FRANCISCO COUNTY.

C. M. WOLLENBERG, Superintendent, San Francisco.

Total number of patients for the year..... 1,766

This has undergone many changes since our last report. Some of the buildings have been destroyed by fire, some have been torn down. For a time the institution was discontinued, the patients being cared for by the San Francisco Relief and Red Cross Corporation, and later again turned over to the city, with a new set of buildings of modern type, built by the Relief Corporation.

These buildings are eleven in number, and now make one of the best arrangements for the care of indigents that it has been our privilege to see. The site consists of 90 acres of ground, located about 1½ miles south of Golden Gate Park. About 65 acres of the land is tillable and the remainder is waste. The quality is fairly good. Thirty acres are cultivated as gardens. There is no orchard. The stock at our last visit, consisted of 4 cows, 19 horses, 8 hogs, and some small pigs.

SAN JOAQUIN COUNTY.

J. D. DAMERON, M.D., Superintendent, French Camp.

Average number of patients.....	184½
Total number for the year.....	1,004

The farm consists of 449 acres of land, all of which is tillable and of fair quality; 10 acres are in gardens, and 10 in orchard. The stock consists of 70 cows, with 30 other head of cattle, 16 horses, 200 hogs, and 1,400 chickens. The farm buildings consist of barns, hog houses, and chicken houses, all in fair condition.

The hospital buildings are six in number, two stories in height, arranged around a hollow square, with covered walks and verandas connecting them both on the lower and upper floors. The front building is of brick, and occupied by the superintendent for residence and offices. The other buildings are of wood. All are in good condition. The plan of arrangement for these buildings is a good one for this climate. There are seven wards, besides smaller rooms. There is good separation of the sexes, an excellent operating room, with dressing and drug rooms. A new operating room, modern in every particular, has been erected since our last visit. The buildings are lighted by both electricity and gas. There are plenty of water-closets and bathrooms. The plumbing is in good condition, and the premises were found clean and in excellent sanitary condition.

Meat, vegetables, and mush are served daily, and fruit frequently.

The Superintendent is a physician, and there is also an interne, a corps of twelve nurses, of which two are graduates, and the head nurse is matron. There are employed three domestics, six farm laborers, three engineers, two laundrymen, a bookkeeper, and others.

This hospital must be especially commended for its management. The best of surgical and medical work is being done. Not only is this hospital among the best managed in the State, but the farm in connection is equally well managed. Milk, butter, eggs, poultry, pork, vegetables, and fruit are produced in quantities. Every department seems to be successfully managed.

SAN LUIS OBISPO COUNTY.

DANIEL WOLF, Superintendent, San Luis Obispo.

Average number of patients.....	47
Total number for the year.....	150

The farm consists of 200 acres of land, located about one mile east of the town. About 50 acres are tillable and about 100 used for pasture; 50 acres is waste. The quality is fair; 3 acres are cultivated for gardens and 6 acres are in orchard. The stock consists of 4 cows, 1 horse, 1 hog, and 15 chickens.

The hospital buildings consist of the administration building, three ward buildings, a building for dining-room and kitchen, and several small outbuildings, all built of wood. There is good separation of the sexes and fair provision for the sick. There are plenty of water-closets and bathrooms, the latter equipped with the best enameled roll top tubs. The plumbing and sewerage are good. We noted at this hospital that good clean sheets and pillowcases were used on the beds, as well as good mattresses. Much of the inside woodwork has been newly painted.

Three meals are served daily, meat twice a day, vegetables and mush daily, and fruit frequently.

The county physician prescribes for the sick, and there are three nurses to care for them. The Superintendent's wife is matron. In addition, there are employed a cook, waiter, dishwasher, watchman, and washwoman.

There has been much improvement in this hospital since our last visit, and it is now very well managed. Much credit is due to the wife of the Superintendent, who has much tact in managing and pleasing the old people, many of whom are hard to please.

SAN MATEO COUNTY.

A. EIKERENKOTTER, Superintendent, San Mateo.

Average number of patients.....	33 $\frac{3}{4}$
Total number for the year.....	83

This hospital is located in the hills 4 miles west of San Mateo. It consists of 160 acres of land, of which 25 are tillable and the balance used for pasture. The quality is poor. The stock consists of 11 cows, 7 other cattle, 6 horses, 6 sheep, 17 hogs, and 200 chickens.

The hospital buildings consist of one general building for men, an old barracks for men, an old building for women, and a separate residence for the Superintendent. The building for men is two stories in height, of wood, and in fairly good condition. The old barracks are abominable, and should be torn down and burned up; and the same might be said of the building for women. There are four wards in the main building for men. The buildings are lighted by lamps and heated by stoves, where heated at all. There are two bathrooms for the men, one for women, and one for the Superintendent's family. The plumbing is in fair condition. The main building was not found as clean as it should be. The walls and ceilings are dirty and need kalsomining. The windows, the kitchen, together with the bedding and clothing of inmates, were only fair. The floors, however, were clean.

Three meals are served daily, with meat twice a day, vegetables, fruit, and mush daily.

The county physician prescribes for the patients. There is one male nurse, a cook, and a farm laborer employed. The wife of the Superintendent is matron.

This hospital needs a good many improvements to put it even in ordinary repair. There should be some new plastering and some new furniture, especially beds. A new building should be constructed for the women.

SANTA BARBARA COUNTY.

THOMAS H. HICKS, Superintendent, Santa Barbara.

Average number of patients.....	42
Total number for the year.....	116

The hospital is located on 14 acres of land just outside the corporate limits of Santa Barbara. All of the land is tillable and of fair quality. About 2 acres are in gardens. The stock consists of 4 cows, 1 horse, and 150 chickens. There is a barn and a small chicken house.

The hospital consists of an old dwelling house, enlarged, and three separate buildings located on the outside, and a pesthouse located at some distance. The buildings are of wood and the condition is fair. There are three wards for the inmates and several small rooms. There is fair provision for the sick, but no operating room. The buildings are lighted by electricity and heated by furnace and stoves. The water supply is private, but good, and water-closets and bathrooms are sufficient, and in good condition. The premises were found clean.

Three meals are served daily; meat twice daily, vegetables, and mush daily, fruit three times a week.

A man and wife are employed as nurses, and are qualified for their work. The county physician prescribes for the sick. In addition, there is employed a cook. This hospital is in good condition and well kept. The sick are especially well cared for, as is usually the case when good nurses are employed.

SANTA CLARA COUNTY.

HOWARD GATES, M.D., Superintendent, San Jose.

Average number of patients.....	115
Total number for the year.....	621

The hospital site consists of 52 acres, located about 3 miles southwest of San Jose. The ground is all tillable and of good quality. There is no garden, and but a small orchard. No stock is kept.

This is properly a hospital, and no almshouse cases are kept here except women. The indigent men are all kept at the county almshouse, located at Milpitas. The hospital buildings are new, having just been completed, and at the time of our visit were not yet occupied. They are built of wood, are well constructed and well arranged. The institution consists in reality of a group of buildings, connected by enclosed corridors. If we were to criticise the construction, it would be that the kitchen and dining-room department is located too near the other build-

NEW COUNTY HOSPITAL—SANTA CLARA COUNTY.

ings. We think it should be placed farther in the rear. There are inclines connecting the upper floors with the dining-room. In all there are fourteen wards for inmates, and, in addition, about twenty small rooms. In the rear is a separate building for indigent women. There is also a separate cottage for nurses. The equipment for sick and surgical cases is of the best. There is a fine operating room, together with dressing rooms, sterilizing apparatus, and every convenience needed in a well-equipped hospital. It is now one of our best county hospitals, and we commend it to other counties desirous of constructing new hospitals. It is well lighted, has good water supply, plenty of toilets and bathrooms, good plumbing and sewerage. As it had not been occupied at the time of our visit, we are unable to say what the management is to be, but we have every reason to believe that it will be of the best.

During the construction of the buildings the indigent women have been kept in temporary quarters in the yard.

SANTA CLARA COUNTY ALMSHOUSE.

J. S. CARSON, Superintendent, Milpitas.

Average number of patients.....	151 $\frac{3}{4}$
Total number for the year.....	333

The almshouse farm consists of 230 acres of land, of which about 100 are tillable. It is located near Milpitas. The quality of the land is rather poor. About 20 acres are cultivated for gardens and 3 in orchard. The stock consists of 45 cows, 35 other cattle, 6 horses, 80 hogs, and 150 chickens.

The buildings are four in number. One is an old dwelling house, expensive when built, and was on the place when purchased. It is not well suited for the purpose. Other buildings have been added recently. One of these especially is well arranged and well constructed. There is a separate cottage for the Superintendent's residence. There is also a cottage for the nurse. No women are kept here, nor are any sick cases taken. Both these classes are provided for at the county hospital. The buildings are lighted by lamps and heated by steam. The premises were found fairly clean.

Three meals are served daily. To the men who work, meat is served three times a day, to others, once a day. Vegetables, fruit, and mush are served daily.

The sick are prescribed for by the county physician, living at Milpitas. One nurse is employed, also a cook, second cook, dairyman, second dairyman, farmer, night watchman, engineer, and plumber.

SANTA CRUZ COUNTY.

S. E. MILLER, Superintendent, Santa Cruz.

Average number of patients.....	601 $\frac{1}{2}$
Total number for the year.....	223

The hospital site consists of 15 acres of land, located 11 $\frac{1}{2}$ miles north-east of Santa Cruz. The land is of good quality and nearly all tillable. About three quarters of an acre is in orchard. The stock consists of 4 cows, 3 hogs, and 100 chickens. There is a small barn and chicken house.

The hospital buildings are three in number, and are located around a hollow square. This square is planted with flowers and shrubbery, making a neat little park. All the buildings are of wood. One of them is in fair condition; the other two are old and in bad condition. There are six wards for men and one for women. The sexes are well separated. There is provision for the sick, but it is not good. The buildings are lighted by electricity and heated by stoves. They are supplied with city water. There are two bathrooms, both in a building on the outside, but connected with a hot water boiler. The plumbing is poor. The premises were found clean.

Three meals are served daily, meat twice daily, vegetables and mush daily, fruit twice a week.

The county physician prescribes for the patients. There is one male nurse. The wife of the Superintendent is matron. A cook is the only help employed.

In reality, this hospital only makes provision for indigents. A hospital department, with a good operating room, should be added. There should be a place for insane and also a better place for isolating contagious disease. Some of the buildings are old and should be replaced by better ones. There have been practically no improvements since our last report.

SHASTA COUNTY.

D. F. STABEL, M.D., Superintendent, Redding.

W. C. WELCH, Steward.

Average number of patients.....	451 $\frac{1}{2}$
Total number for the year.....	241

The hospital site consists of 51 acres of land, situated three miles south of Redding. Thirty acres are tillable, and the balance pasture. The quality is only fair. About 1 acre is in garden and 2 acres in orchard. The stock consists of 7 cows, 2 other cattle, 2 horses, and 200 chickens. There are two barns on the premises, in fair condition.

The hospital building is a one-story wooden structure with a central open court. This court has a cement floor with good drainage. There

are also good cement walks and steps in front. A porch extends all around the outside of the building and also around the court. A new building, open near the ceiling, is being erected for tuberculosis cases. In connection with this is a new toilet for all patients, with stone floors and sewer connections. There is good provision for the sick, including an operating room, surgical and medical wards. The buildings are lighted by electricity and heated by stoves. They were found in clean sanitary condition.

The meals served are breakfast at 7 a. m., lunch at 12 m., dinner at 4 p. m. Meat is served twice a day, vegetables, fruit, and mush daily.

The Superintendent is a physician. There is also one professional female nurse employed. The wife of the steward is the matron. In addition, there is employed a cook, an assistant, and a laundryman.

SIERRA COUNTY.

R. B. DAVY, M.D., Superintendent, Downieville.

J. F. QUINN, Steward.

Average number of patients.....	26
Total number for the year.....	38

The hospital consists of 2 acres, located in the village of Downieville. There is 1 acre of garden and a few orchard trees. Two cows are kept and about 50 chickens.

The hospital is a large two-story wooden structure in fairly good condition. There is a separate small building for women, but there were no women at the time of our visit. There are nine rooms for inmates, beside the small house for women. The provision for the sick is not very good. The buildings are lighted by electricity and heated by stoves. The water supply is good. The water-closets are all out of doors, and there is but one bathroom. Sewerage is into a river, which runs through Downieville. The buildings were found clean and in good sanitary condition.

Three meals are served daily, meat twice a day, vegetables and mush daily, and fruit frequently.

The Superintendent is the physician, and the steward is the only employee about the premises.

SISKIYOU COUNTY.

MELBOURNE DUNN, Superintendent, Yreka.

Average number of patients.....	56½
Total number for the year.....	173

The hospital is located on a site of 13 acres in the town of Yreka. Nearly all of the land is tillable. Four acres are used for garden. The stock consists of 2 cows, 2 horses, and about 25 chickens. There is one small barn on the premises.

The hospital buildings are two in number, large, two stories high, and built of wood. One of these buildings is just completed. It is well built and seems to be complete, even including screens on all the windows. The other building is rather old and not in the best of condition. In this old building there is one sick ward, fourteen single rooms and three double rooms. In the new building are eighteen rooms for two beds each, four rooms for one bed, and a sick ward of ten beds. There is a good operating room, drug room, etc. No provision is made for women and no women are kept at the hospital. The buildings are lighted by electricity and heated by furnace. There are six bathtubs and plenty of water-closets, with good plumbing and sewerage. In the new building there is hot and cold water in each room. The buildings were found in clean sanitary condition.

Two meals only are served, at both of which meat is served, and frequently two kinds of meat is served for dinner. Vegetables in variety, frequently three kinds for dinner; fruit and mush are served daily.

The county physician prescribes for the sick. There is one day and one night nurse, both male. In addition, two cooks, a dishwasher, and one outside man are employed.

SOLANO COUNTY.

H. E. FINNEY, Superintendent, Fairfield.

Average number of patients.....	49
Total number for the year.....	190

The hospital is located about $2\frac{1}{2}$ miles northeast of Fairfield, on a farm of 60 acres, all of which is tillable, though the quality is poor. There is very little grown on the place. The stock consists of 5 cows, 2 horses, and 150 chickens.

There is one two-story building used for men, with a separate building in the rear for kitchen. There is also a separate one-story building for women. They are all built of wood. The women's building is old and in bad repair. The floors are in bad shape, and there is no plastering. The beds are iron, without spring mattresses, and are hard and uncomfortable. Besides a bed, each inmate has an old chair, and this constitutes their whole furniture. There are five wards and two rooms for men and two wards for women. The Superintendent has a separate cottage. There is also an operating room. The buildings are lighted by natural gas and heated by natural gas stoves. The only water-closet for both sexes is in the back yard and is in bad unsanitary condition. The stench is almost unbearable. There are three bathrooms. The buildings were found in a clean condition.

Two meals and a lunch are served daily. Meat is always served once

a day and sometimes twice. Vegetables and mush are served daily, and fruit occasionally.

The county physician prescribes for the sick. One nurse, a matron, and a cook are employed. The matron acts as nurse for the women.

SONOMA COUNTY.

S. S. BOGLE, M.D. Superintendent, Santa Rosa.

Average number of patients.....	110½
Total number for the year.....	408

The hospital is located on a farm of 120 acres three miles northeast of Santa Rosa. The land is of fairly good quality and most of it can be cultivated. When the hospital was visited the steward was away, and we were unable to get the list of stock kept on the place.

The central hospital building is one story in height, of wood, and in good condition. The indigents occupy old buildings, isolated and in the rear part of the yard. Some of these buildings are in very bad condition. In the hospital proper are eight wards and on the outside there are at least twelve rooms for the indigents. The buildings are lighted by acetylene gas and heated by stoves. The sanitary arrangements are sufficient and satisfactory for the hospital building. This building was found to be in clean condition. This can not be said of the buildings occupied by the indigents.

Three meals daily are served, at which are furnished meat, vegetables, and fruit, with mush for breakfast.

The Superintendent is also county physician, and prescribes for the patients. There are employed three nurses, the head nurse acting as matron. At the time of our visit, the Superintendent and steward were both away, and the head nurse was only a substitute and not familiar with the place, and therefore the information obtained was somewhat meager.

STANISLAUS COUNTY.

C. H. ARMISTEAD, Superintendent, Modesto.

Average number of patients.....	35
Total number for the year.....	181

The farm consists of 20 acres, located one mile east of Modesto. About 14 acres are tillable; half an acre is in garden and half an acre in orchard. The stock consists of 7 cows, 1 horse, 4 hogs, and 100 chickens.

There is one large central hospital building, with a separate ward outside for detention of insane patients. The main building is of wood, large, and of fine appearance, with plenty of porches and verandas. There are six wards besides the insane pavilion. The sexes are properly separated. There is good provision for the sick, including an operating

room. The buildings are lighted by electricity and heated by stoves. There are five bathtubs, plenty of water-closets, and good plumbing. The premises were in a fair sanitary condition when visited.

Three meals are served daily, meat twice a day, vegetables, fruit, and mush daily.

The county physician prescribes for the patients. Two nurses and a matron are employed. In addition, there are two cooks.

This hospital building is a good sample of one built for appearances rather than utility. It is badly arranged and lacks conveniences. It has its own waterworks, run by electric power, with gasoline engine in reserve.

SUTTER COUNTY.

C. W. BURCH, Superintendent, Yuba City.

Average number of patients.....	15
Total number for the year.....	67

This hospital is located $1\frac{1}{2}$ miles northwest of Yuba City on a tract of 5 acres. The land is of very poor quality. No garden is cultivated, and there are only a few fruit trees on the premises. No stock of any kind is kept, except some chickens.

The hospital building is a small wooden structure. Notwithstanding what we said of this building two years ago, it is still maintained in the same poor condition. It is a disgrace to a rich county like this to provide such miserable accommodations for its indigents. The building is old and was never plastered, and the walls are a convenient place for vermin to hide, and there is every evidence that they avail themselves of the opportunity. The furniture is scanty and poor. Many of the chairs were bottomed with strings. The water-closet located on the outside is very unsanitary, and the stench almost unbearable. There are three rooms in the hospital building for inmates, and a pesthouse of two rooms is located at some distance away. The pesthouse is in better condition, and one inmate has chosen that as a place to stay in preference to the main building. Fortunately no women are kept here. There is no provision for sick. The Superintendent has a separate cottage. The buildings are lighted by lamps and heated by stoves. The water supply is a well with a hand pump. The premises were not clean when visited.

Three meals are served daily, with meat at each meal. Vegetables, fruit, and mush are served daily.

The county physician prescribes for patients when needed. There are no employees, except the Superintendent and wife.

TEHAMA COUNTY.

T. J. HERMAN, Superintendent, Red Bluff.

Average number of patients.....	26¼
Total number for the year.....	147

The hospital is located just outside of the corporate limits of Red Bluff on a tract of 35 acres, all of which is tillable. The quality is good, and there is no waste land. No garden, however, is cultivated. There are 6 acres of oranges, 3½ acres of grapes, and 6 acres in general fruits. The stock consists of 3 cows, 3 horses, and about 150 chickens. The farm buildings are old and in bad condition. There should be a new barn and a new poultry house.

The central hospital building is two stories in height, with two detached buildings to the rear and connected by covered corridors. Since our last visit a separate brick building has been constructed for the indigents. This is one story high and divided into single rooms, and makes a great improvement over the accommodations at the time of our previous visit. The condition of the buildings is fair, and there is fairly good provision for the sick, including an operating room. There are two wards and two rooms for inmates in the main building and fourteen rooms in the brick building for indigents. There are no women kept at this place. The buildings are lighted by electricity and heated by stoves and fireplaces. The water supply is a private windmill. There is one water-closet inside and three outside. There are two bathrooms, one for the Superintendent's family, and only one for all of the patients. The premises were clean.

Two meals and a lunch are served daily; breakfast at 7 a. m., dinner at noon, and a lunch at 5 p. m. Vegetables, fruit, and mush are served daily.

The county physician prescribes for the sick. There are no nurses employed, except when one is engaged for a special case. There are two cooks, one farmer, and an orchardist employed.

The county pesthouse is located only about fifteen rods away from the other buildings. There are no screens on the windows, and the men suffer from flies and mosquitos. There is serious danger of these insects carrying the contagious diseases from the pesthouse to the hospital. Screens, at least, should be provided for all windows.

TRINITY COUNTY.

D. B. FIELDS, M.D., Superintendent, Weaverville.

E. E. HARRIGAN, Steward.

Average number of patients.....	19½
Total number for the year.....	31

The site consists of 4½ acres, all tillable, located within the limits of Weaverville. The quality of the soil is good, and outside of the building site, the land is used for garden. There is one acre of orchard. Only 1 cow is kept and about 100 chickens.

The hospital building is two stories in height, of wood, and is in good condition. There are three wards and five small rooms. The Superintendent is provided with a separate cottage. No women are kept. There is good provision for the sick, including a drug room, but no operating room. Since our last visit new stairs have been erected for a fire escape and good fire fighting apparatus has been installed. The buildings are lighted by electricity and heated by stoves. The water supply is city, but the hospital has its own water for irrigation. There is but one water-closet and one bath-room. The plumbing is fairly good. The premises were found in clean sanitary condition.

Three meals are served daily; meat at each meal, vegetables in variety, fruit and mush daily. We had evidence that the meals furnished the inmates were exceptionally good, better than is ordinarily expected in a hospital of this character.

The Superintendent is county physician, and prescribes for the sick. The steward and his wife do all the work. There are no other employees.

The beautiful yards and fine gardens around the hospital make a neat appearance.

TULARE COUNTY.

FRANK OSBORN, Superintendent, Visalia.

Average number of patients.....	18
Total number for the year.....	128

The site occupies a city block of about 1 acre in the city of Visalia. There is no attempt made at agriculture, nor is there any stock kept.

The hospital building is of brick, two stories in height, with a one-story ward building extending out at each side, with kitchen and dining-room to the rear. There are porches around three sides of the ward buildings, and also around the lower floor of the main building. The women are kept upstairs, and there is no veranda on the second floor, where they can get out into the air. There is also a building of three rooms in the yard, which is occupied by old miners. At one time there was a tent on a platform, for tuberculosis cases, but this has proved

unsatisfactory and is not now used. There is an operating room, but it is not very good. Light is furnished by electricity and heat by stoves. The building has city water supply, three water-closets, two bathrooms, and fair plumbing, connected with city sewer. The premises were found in clean condition.

Three meals daily are served, with meat twice, vegetables and fruit daily, and mush for breakfast.

The county physician prescribes for the patients. There is one nurse and one cook employed. The wife of the Superintendent is matron.

In the arrangement of this hospital building, the Superintendent's family are not well provided for. There should be a separate bathroom for them, also a separate dining-room. The water-closets are entirely too small. A better heating system should be adopted. There is no dining-room for women, and they must either eat with the men or have their meals carried to their rooms on trays. The latter is the method pursued.

TUOLUMNE COUNTY.

ANDY SHINE, Superintendent, Sonora.

Average number of patients.....	44 $\frac{1}{4}$
Total number for the year.....	101

The site consists of 4 acres, located in Sonora: 3 acres are tillable. The ground is of good quality. There is a small garden and 1 acre of orchard. No stock is kept, except 3 hogs and 60 chickens.

The hospital building, which was originally built for a hotel, is located on a low hill and overlooks the depot at Sonora. It is a two-story wooden structure in good condition. In the rear is a separate wooden building for women. There are in all thirty-six rooms for men and six for women. The Superintendent has rooms in the main building. There is an operating room and fair provision for the sick. The buildings are lighted by electricity and heated by stoves. The water supply is private. There are plenty of water-closets and three bathrooms. The plumbing is good and the sewerage runs into the city sewer. The premises were clean.

Three meals are served daily; meat, vegetables, and mush daily, fruit four times a week.

The county physician prescribes for the sick, and one nurse is employed. There is also a matron, who has charge of the women's building. One cook is employed.

Since our last visit, new floors have been put on the porch, in the halls, and in some of the rooms. These floors were newly painted. At the time of our visit, repairs were being made in the building for women. The premises show good management, and the inmates give evidence of good care.

VENTURA COUNTY.

F. M. PACKARD, Superintendent, Ventura.

Average number of patients.....	20½
Total number for the year.....	127

The county buildings in Ventura are all located on one block of ground at the county seat. The hospital is just back of the courthouse and adjoins the jail. There is of course no stock kept in connection with it, and no tillable ground. There is, however, a small ornamental garden in the corner of the block.

The central building is a two-story, wooden structure. It is in good condition. There are in all nine rooms for inmates and a good operating room. In the rear are several small buildings used for such indigents as prefer to have their own rooms on the outside. A new pavilion for a detention hospital for insane has been built. The buildings are lighted by electricity and heated by stoves. There are plenty of water-closets and bathrooms. The plumbing is good, and the sewerage is into the city sewer. The premises were found in clean sanitary condition.

Three meals daily are served, with meat three times a day, vegetables, fruit, and mush daily.

In this hospital the Superintendent furnishes all help, all provisions, all washing and all wood, and gets \$5.50 per week per patient for food and care.

The county physician prescribes for the sick.

YOLO COUNTY.

C. E. BINNING, Superintendent, Woodland.

Average number of patients.....	32
Total number for the year.....	127

The farm consists of 40 acres, located about a mile northwest of Woodland. The land is tillable and of fairly good quality. No garden, however, is cultivated, and only a few orchard trees are grown. The stock consists of 10 cows, 5 horses, 2 sheep, 11 hogs, and 200 chickens. The farm buildings consist of a cow barn, horse barn, chicken house and hog house, all in fairly good condition.

The main hospital building is two stories in height and is used for Superintendent's residence and offices, operating room, drug room, and sleeping rooms for employees. Back of this are three wings, one story in height. One of these is used for kitchen and dining-room. At either side are rooms for patients, with porches. The men's wing has one large ward and the women's wing is divided into six small rooms. There are water-closets and bathrooms at each end. To the rear there is a detached building, with one large ward for indigent men. There is

fairly good provision for the sick. There is a drug room and an operating room, but not a good one. The buildings are lighted by electricity and heated by hot water. The water supply is from a well, with electric motor. The plumbing is not in good order. There are but two bathrooms to accommodate thirty-eight patients, together with the Superintendent's family and officers. There should be five bathrooms, including a special one for the family of the Superintendent. The premises were found in a clean sanitary condition at the time of our visit.

Two meals are served daily, one at 7:30 a. m. and one at 3 p. m. Meat is served twice a day, mush every morning, fruit three times a week, and vegetables in variety, two kinds usually for dinner.

The county physician prescribes for patients. There is one female nurse and one extra nurse. The wife of the Superintendent is the matron. In addition, a cook, second cook, and one farm laborer are employed.

There is need of considerable painting about these premises; there is also need for additional beds and chairs to properly accommodate the patients.

YUBA COUNTY.

C. E. STONE, M.D., Superintendent, Marysville.

J. E. VANDERPOOL, Steward.

Average number of patients.....	52 $\frac{3}{4}$
Total number for the year.....	261

The site consists of 7 $\frac{1}{2}$ acres in the city of Marysville. About half an acre is used for garden and the balance, outside of the building site, for pasture. The stock consists of 2 cows, 1 horse, and 5 hogs. There are two small barns in good condition.

The main building is two stories in height, with a high basement, the latter containing the kitchen and dining-rooms. The first and second stories of the main building contain the offices and rooms of the steward and officers. Back of this is a long enclosed corridor, opening off from which there are three wings, all extending back. Two of these are partly two stories in height and the center is one story. There are three wards and about twenty rooms for inmates. The premises were found in a clean condition.

Three meals daily are served, with meat, vegetables, fruit, and mush daily.

The Superintendent prescribes for the sick. There is also a good nurse and a matron. In addition, there are employed a cook and laundress.

PART III.

MISCELLANEOUS.

CHAPTER I.

THE DEPENDENT CHILD.

1. THE ORPHAN ASYLUM.

One of the largest charitable problems of the State is the care of the dependent child.

There has grown up in the State the institution of the orphan asylum, of which there are now 44, with a population of 4,954 children receiving State aid. The amount paid by the State for each orphan child in such asylums is \$100 per year, and for each half orphan \$75, until the child reaches the age of fourteen years. The total amount paid out under this law, for the care of dependent children for the last two years, was \$840,680.57.

This is a large sum and makes the cost of the dependent child in this State far above that of any other state in the Union. But what of the results attained? What becomes of these children after the state aid ceases at fourteen years of age? We do not know. They are not followed up and looked after during this most critical period, and we have no statistics. We are maintaining a very expensive system, and have no means of knowing what the results are, but have reason to believe they are not the best.

Another great objection to the system as now managed is that the question of dependency is not determined by any state authority. The living parent places a child in the orphan asylum, promising to pay for its care. He perhaps does not pay, and the management asks aid of the State, on the ground that this child is a half orphan and dependent. The parent may be a father perfectly able to pay, but also willing to shirk the duty of caring for his children, and spend his earnings in dissipation. The State should be able to force such a parent to meet his obligations, and to this end the child should not become dependent upon the State until a judicial hearing is had and the parent brought into court if possible.

The court should also be empowered to go farther, and in all cases of moral delinquency of parents, of such a degree as to make them unfit to have the custody of the child, or in case of abandonment, or in case of neglect or refusal to pay the charges of the orphan asylum, being able to do so, to sever forever the parent's right and control over the child, and provide for its adoption without obtaining consent of such parent.

The best place for the child is a good home. The asylums, however good work they may do, are unnatural and can not be to the child a parent. The State should encourage the placing out of the child into good homes, and there are undoubtedly many good childless homes in this State, where children of this kind would be welcome. The earlier they are placed out the better for the children and the home, as they can then grow up in a family and become a part of it.

The orphan asylum is now a necessary institution. It would be impossible to place out into homes the large numbers of children now there. It should, however, be improved and many more of the younger children placed by some agency into good homes, and the safeguards against abuse which we have mentioned, should be thrown around them.

All such institutions should be required to make reports to this Board, in order that statistics may be obtained. We believe that this Board should be empowered to visit, inspect and report upon the management of these institutions, with the object of improving and perfecting their work, to the end that the dependent child of the State may receive the personal care and special training for citizenship which is his right, and for which the State is annually contributing immense sums of money. If a given orphan asylum is doing good work, it is to the advantage of that asylum to have an inspector of the State so report. If it is not doing good work, it is vastly important to the child and to the State that this particular work be improved.

2. CHILDREN'S HOME FINDING SOCIETIES.

We have in this State several societies or associations engaged in the work of placing children in homes, but these societies are responsible to no State authority, and the kind of work they are doing is known only to themselves. If such agencies are doing good work it would be to their advantage to be commended, but if bad work, then it would be to the advantage of the State to stop them. These societies or associations should be required to report regularly to this Board, in order that the kind of work they are doing, and the amount of work, may be known to the Board. The Board should also, through its agents, visit these children once or twice a year in the homes where they are placed, so that it may know that they are receiving proper care and training. The State should always look after its dependent children, but for these, who have passed from the hands of parents to those of strangers, the State is doing nothing. We believe that all such societies should be under the supervision of this Board, and should be compelled to make such reports as this Board may call for, and that it should be made the duty of this Board to supervise the work of such home finding societies.

We believe that the normal place for a child is a good home and that when the natural home is broken up, a place for the child can be found often in another good home, where it will receive all that attention to which it is entitled and which its nature demands, and it will carry light and happiness into what otherwise would be a childless home. There are cases by the many thousands, where each, the child and the foster parents, have contributed to the life and happiness of the other.

This Board believes in this work and desires to have it encouraged, but it also believes that it should be well done and that the State has a right to know that it is well done. That is what the supervision of such societies means, and it is to the interest of all such societies doing good work, that such work be made known, and it is also to the interest of the State and the helpless child, that such societies as are not acting for the best interests of the child, if any such there be, should be put out of business.

CHAPTER II.

THE DELINQUENT CHILD.

1. JUVENILE COURTS AND PROBATION LAWS.

We have sent out letters of inquiry to the Superior Courts of all the counties in the State, asking information concerning the use of the probation laws, and from the replies received we report the following results.

PROBATION COMMITTEES.

Probation committees have been duly appointed in the following counties: Alameda, Humboldt, Lake, Los Angeles, Placer, Riverside, Sacramento, San Bernardino, San Francisco, Santa Barbara, Santa Clara, and Sonoma—eleven counties in all.

PROBATION OFFICERS.

In all the above counties probation officers have been duly appointed, upon the nomination of the probation committee. Probation officers have also been appointed by the judges in the counties of Fresno, Monterey, and Sierra.

In Fresno County the sheriff has been appointed chief probation officer, which we believe to be against the true spirit of the probation system.

SPECIAL PROBATION OFFICERS.

The courts in the counties of Fresno, Napa, Placer, Riverside, Santa Clara, and Sonoma have released prisoners to the charge of persons designated as special probation officers for the particular case. Fresno County reports having released between twenty-five and thirty to such special officers.

RESULTS.

Eleven counties report that good results have followed the use of the probation system. These are the counties of Alameda, Fresno, Los Angeles, Monterey, Napa, Riverside, Sacramento, San Francisco, San Bernardino, Santa Barbara, and Santa Clara. All other counties of the State have either reported that nothing has been done under the probation laws, or have failed to report at all.

JUVENILE COURT CONFERENCE.

At the request of some of the probation officers, this Board called a conference of Superior Court judges, district attorneys, probation committees, probation officers, and trustees and superintendents of our two State reform schools, and the members of this Board; which conference was held at San Francisco on March 21, 1908. The conference was well attended by all the different classes invited, and all counties having juvenile courts and probation officers were represented, so also was the Whittier State School, the Preston School of Industry, and the State Board of Charities and Corrections.

With an agreement almost unanimous, the following propositions were agreed to:

1. That in the opinion of the conference the probation committee is a very useful adjunct in juvenile court work and should by all means be retained, and that the power to nominate the probation officers is not unconstitutional and should be retained. The vote on this proposition was unanimous.

2. That in the larger counties the law makes it mandatory upon the board of supervisors to provide a detention home.

3. That probation officers should be paid a salary from the county treasury.

4. That a parental or adult contributory delinquency and dependency law is necessary.

5. That the age of majority for girls be raised from eighteen to twenty-one years.

6. That the ages for commitment to both Whittier State School and the Preston School of Industry be fixed at between nine and nineteen years.

7. That the laws governing the two reform schools be redrawn, so as to make them conform with respect to commitments, with the exception that girls be committed to Whittier only, and that the Preston law provide for the commitment of dependent male children.

8. That commitments to Whittier and Preston Schools are to be considered rather in the nature of guardianship than as a punishment for crime, and these institutions as schools and not prisons. In such case, a trial by jury is not essential.

Upon motion, the following committee was appointed to put the foregoing propositions into proper form for action by the next legislature, and urge their adoption: Judge Oster, San Bernardino, chairman; Judge Wilbur, Los Angeles; Judge Murasky, San Francisco; Superintendent Randall, Preston School; Superintendent Greeley, Whittier School; Secretary Gates, State Board of Charities and Corrections; Mr. Pringle, member of Probation Committee, San Francisco; Senator McCartney, Los Angeles, and Senator Caminetti, Jackson.

2. REPORTS OF PROBATION OFFICERS.

The following is a summary from the reports of probation officers:

ALAMEDA COUNTY.

Probation Officer C. Ruess reports as follows: "During the two years about 100 juveniles and about 75 adults, to give the lowest estimates, were released on legal probation. About 200 juveniles and 25 adults were released on voluntary probation. That is, about 200 juveniles were spared even the juvenile court, by placing themselves on probation, failure to mean that they would be brought up in court. The adults on voluntary probation were those thus spared the record of a plea or verdict of guilty in the police courts, under the same conditions. Voluntary probation is not recognized by the law, and our experience does not lead us to recommend it. It was resorted to chiefly to save the court from having so many cases to deal with and to save children and others from a court record. We are now discontinuing the practice gradually.

"As to success, I made a calculation a while ago and found that about 7 of 8 of the adults and about 5 of 6 of the juveniles keep out of jail while on probation, and presumably afterwards. Adults succeed better because they are more able to realize their situation and because we do not take such risks with them.

"We have records now of about 600 juvenile and about 300 adult cases which have passed through the probation office since 1903, about three fourths of all being within the last two years, and one fourth in the preceding three years."

MONTEREY COUNTY.

D. G. McLean, Chief Probation Officer, reports as follows: "Since January 1, 1907, I have had under my care 126 children, 10 girls and 116 boys, with ages varying from seven to eighteen years." The following disposition was made of these cases: Sent to their homes outside of county, and in many cases outside of State, 38; discharged, 26; sent to State reform schools, 9; to other institutions, 7; placed in homes, 6; released on probation, 5; given employment, 20; miscellaneous, 15.

From the above it will be readily seen that most of these boys were vagrants. Of this Mr. McLean says: "The boy tramp is one of the most serious problems to-day before the American people. Not one fourth of the boys have been arrested that might have been in this county, and with few exceptions the other counties have given the subject little attention on account of probation officers being allowed no compensation, and the sentimental idea that it is wrong and cruel to lock boys up. Let them think of the parents whose boys have run

away, the mothers who are spending sleepless nights weeping for their wayward boys; think of the homes made happy, the life saved from crime. The majority leave home from trivial causes, principally from reading 10 cent novels. Some leave because of unhappy homes, only to find worse places, and then find themselves unable to return, but go gladly when a reconciliation is made by the officer with the parent. When given a ticket, not one has failed to go home. Get the history of those boys as I get them after their association with tramps and hoboos and the sentimentalists will lose their false ideas of "kindness and rise in indignation and cry 'Save the boys!' Let every county in the State do its duty, and we will settle the boy-tramp problem. We sent home one half; if even one half of that is saved, we have done something. * * * For three years we have demonstrated by actual count that one half of the boys we have handled have been returned home and families made happy and a human being saved."

PLACER COUNTY.

J. H. Breslin, Chief Probation Officer, reports that he was appointed June 10, 1908, by the Probation Committee. That but three cases have come under the charge of the probation officer, one being sent later to Whittier State School, one being in a private school, and one under the care of the probation officer.

RIVERSIDE COUNTY.

B. W. Handy, Chief Probation Officer, reports that he has had ten boys placed in his charge. One of them was again delinquent and committed to Whittier State School.

SACRAMENTO COUNTY.

The secretary of the Chief Probation Officer reports that he "can not tell how many cases there are annually. It would take too long a search of records of court." He further says, "The probation officer keeps a complete record of all cases," but he fails to give this office any statistics as to the work being done.

SAN FRANCISCO COUNTY.

Probation Officer J. C. Astredo reports as follows: "There have been in excess of 1,300 delinquent boys brought to the Juvenile Court since the fire and the number of dependency petitions filed in the interest of dependent children now exceed 800, said petitions covering the cases of over 2,000 children.

"The principal work of the Probation Office has been in preparing the cases of delinquent children, that the judge may be properly advised, and in guiding those who have been placed on probation by court order. The system now had in this office secures a monthly report bearing on

the actions of the probationer in relation to his home, his school and his employer; the system being sufficiently elastic to permit of daily reports from these sources whenever the need of the boy demands it. The reports on file show that a satisfactory condition exists among the children on probation and we feel confident that a great number of boys will be dismissed from probation at Christmas time because of their excellent record. One other source of satisfaction is the fact that few boys on probation have been again arrested.

"During the past six months there has been in operation at the Detention Home a clinic where all children arrested are examined as to their physical condition and suggestions made to the court and to the parents regarding this condition of the children and the proper course to pursue to remedy the defects. This plan of work is productive of excellent results and the public coming in contact with the court seem to greatly appreciate this special effort on behalf of their children.

"The parental school, acting as an adjunct to the court, has succeeded in correcting a great number of delinquent boys who would have otherwise been sent to the various corrective institutions, and by the joint efforts of the school and probation officers together with the influence of the home a high standard of school efficiency has been established. In addition to the ordinary instruction, the parental school uses manual training in all its branches, including gardening and athletics, as a means to interest boys in the school.

"The special effort of the Juvenile Court is to change the environment of the children so that commitment to an institution may be avoided and results to this end may be seen in the limited number of commitments made to the Preston School of Industry and to other corrective institutions to which the court sends the delinquent boys.

"Regarding adult probationers, some two dozen adults now report to the probation officer and the majority have satisfactory records of progress. In two instances, however, it has been found necessary to have the court placing the man on probation, reconsider its order and to, in turn, order the defendant confined in the State prison."

SANTA CLARA COUNTY.

Geo. W. Lee, Chief Probation Officer, reports that during the past two years the Juvenile Court and its officers have handled 2,150 cases, of which 187 were placed on probation, 12 sent to industrial schools, 56 sent to institutions for dependent children, 7 married on recommendation of the Probation Committee. The report further says, "The committee is called upon to straighten out family troubles where children are concerned, forcing parents to provide for them, finding homes for orphans, protecting wayward girls and keeping them from the street.

* * * The public would no doubt be surprised to know of the great

number of parents in this county who would willingly shift the responsibility of caring for their offspring upon the public."

3. PREVENTION OF DELINQUENCY.

With all the work of correction which the State, or its citizens in their private capacity, can do, there will still be a constant supply of criminals. The most important work that can be done is that of *prevention*.

The Juvenile Court and probation officers, aided and strengthened with further legislation and better support, will do much to catch the child at the first steps and turn him back. But this is not enough. We must go still further back and remove the causes.

A CONTRIBUTORY DELINQUENCY LAW.

We must reach the delinquent parent and the adult who influences and induces the child to become delinquent. This will in a measure be accomplished by a law enabling the court to reach and punish those who contribute to child delinquency.

4. COMPULSORY SCHOOL LAWS.

It is the inalienable right of every child to have that school training that will enable him to earn his living when he reaches manhood. It is also the duty of the State not only to see that this right is not denied him, but also that he is prepared to perform the duties of citizenship when those duties shall fall upon him. Our compulsory school law is a fairly good law in itself, but ineffective unless enforced. From the statistics collected by the Commissioner of Labor Statistics for the past two years, two conclusions must be drawn; first, that the giving of permits for children to work is much abused, and perjury as to children's ages is frequently committed; and second, that sufficient effort is not made to compel the attendance of those children even who do not have permits to work. What an incentive to honest life is it to send a child out to work with a lie on his lips and a perjured permit in his pocket, that an avaricious parent may gain a little profit out of his small hands. Nor should any child within school age be permitted to roam the streets or other public places when schools are in session. From these will come the future criminals. Penologists are generally agreed that truancy and idleness are the first steps to crime. These can be prevented by a rigid enforcement of a good compulsory school law. Every year a census of school children is taken. In the taking of this census sufficient facts should be obtained to enable a truant officer to locate the child and compel his attendance at school. The school where the child is enumerated draws from the State a certain sum of money for his education, and the school is therefore morally bound to give the education for which it

draws the money. As a result, about 13,000 children coming within the provisions of this law in the county of San Francisco alone, were not accounted for in any school last year. This is a very large number and demonstrates the necessity of more rigid enforcement of the law.

5. CHILD LABOR LAWS.

Reasonable labor for children is far better for them and the public than child idleness on the streets. But the child has the right of that physical and mental development which will make of him a well grown man. The parent has no right to sap and weaken his constitution by premature labor, nor to deprive him of the opportunity to prepare himself for a useful manhood and good citizenship. That there is a strong tendency in this country to sacrifice the child that the parent may reap profit is undeniable. Laws to prevent this can not be too strong. We have a fairly good child labor law on our statute books now, but the machinery for enforcing it is not as efficient as it should be. The Bureau of Labor Statistics, whose duty it is to enforce this law with many others, has done a vast amount of useful work, as will be seen by an inspection of their report, but they have too small a force to do well all the work required of them. They have been unable to properly enforce this law. We ask, therefore, that sufficient assistance be given to the Commissioner of Labor Statistics to permit of the proper enforcement of this law, to the end that the children of this State may be given their rights in the public schools and not sacrificed on the altar of selfish greed.

6. TENEMENT HOUSE LAW.

In our last report we recommended a tenement house law, but the proposed law failed of enactment. The city of San Francisco has since passed an ordinance embodying about the same restrictions as were proposed in the State law. The evils of tenement house construction in this State are not, however, confined to San Francisco, and it is desirable that a State law should be enacted, which will protect the enforced dwellers in tenements from the evils of unsanitary and dangerous construction. It is much easier and better to prevent these evils in the beginning, than to try to cure them after they are firmly established.

TABLE XXIII—COUNTY JAILS—SUMMARY.

Number admitted during fifty-eighth fiscal year.....	18,66
Number admitted during fifty-ninth fiscal year.....	22,83
Total number admitted to jail during the two years.....	41,49
Of these there were—	
Sent to state prison.....	1,681
Sent to state reform schools.....	363
Served jail sentence.....	20,870
Released on probation.....	620
Not indicted.....	7,715
Acquitted.....	1,161
Released on habeas corpus.....	165
Escaped.....	169
Died.....	62
Sent to insane hospitals.....	1,021
Otherwise passed out.....	7,346
Total passed out.....	41,17
Increase during the two years.....	32

TABLE XXIV—COUNTY HOSPITALS.

Number admitted during fifty-eighth fiscal year.....	19,54
Number admitted during fifty-ninth fiscal year.....	17,49
Total number admitted during the two years.....	37,03
Of these there were—	
Discharged.....	29,013
Run away.....	655
Died.....	5,970
Sent to state institutions.....	647
Sent to other counties.....	186
Sent out of state.....	62
Total passed out.....	36,53
Increase during the two years.....	50

TABLE XXV—SAN QUENTIN STATE PRISON.

EXPENDITURES.

Institution for Deaf and Blind	40,832 86	26,038 22	66,871 08	206	347 82	0.95
Grand totals	\$826,324 43	\$1,103,434 40	\$1,929,758 83	10,208	\$189 04	\$0.517

* The increased cost for support in San Quentin is owing to large sum expended in repairs.

NOTES.—The cost of maintenance includes the first five subdivisions of the expenditure tables.

The expenditures of trustees, managers, and directors are paid from the appropriation for support.

TABLE XXXIX—STATE INSTITUTIONS.

Showing the Income, or Contingent Fund, Received.

	58th Fiscal Year.	59th Fiscal Year.	Total.
State Prison—San Quentin ¹			
State Prison—Folsom ²	\$19,272 12	\$17,897 19	\$37,169 31
Preston School of Industry ³	1,560 83	782 87	2,343 70
Whittier State School ³	7,790 12	7,219 81	15,009 93
Stockton State Hospital ⁴	27,676 10	32,395 68	60,071 78
Napa State Hospital ⁴	29,355 63	37,936 63	67,292 26

Home for Feeble-Minded ⁵	10,967 42	9,450 44	20,417 86
Home for Adult Blind ⁶	27,577 42	22,990 42	50,567 84
Institute for Deaf and Blind ⁷	6,923 67	5,814 04	12,737 71

¹The receipts from the sale of jute products are paid into the State treasury and go into the State General Fund.

²The Folsom Prison Fund is made up of the sales of crushed rock, rents of State's houses, and commissary's sales.

³The contingent fund of the reform schools is made up from the commissary's sales of products. The money collected from the various counties for the care of inmates is paid into the State treasury and goes into the State General Fund, and was last year as follows:

	58th Fiscal Year.	59th Fiscal Year.
Preston School.....	\$26,779 17	\$30,485 28
Whittier School.....	36,097 30	38,558 10
Totals.....	\$62,876 47	\$69,043 38

⁴The contingent fund of the State hospitals is made up from money collected for pay patients and a small part from commissary's sales.

⁵The contingent fund of the Home for Feeble-Minded is made up from money received for the care of patients from families or relatives, and a small part from commissary's sale of produce. The money paid by the various counties for the care of indigent inmates is paid into the State treasury and goes into the general fund.

⁶The contingent fund for the Home for Adult Blind is made up from profits of the manufacturing plant.

⁷The contingent fund of the Institution for the Deaf and Blind is made up from amounts paid in behalf of pupils.

BIENNIAL REPORT

OF THE

STATE BOARD OF PRISON DIRECTORS.

*To His Excellency, JAMES N. GILLETT,
Governor of California.*

SIR: In accordance with law, the State Board of Prison Directors herewith submit their report for the two years ending June 30, 1908.

In our last biennial report we called the attention of your office to the rapidly increasing population of our prisons, adding that generous appropriations had been made by the legislature for increasing the capacity at both San Quentin and Folsom prisons. We also in our last report called attention to the fact that while we were endeavoring to complete the construction of the proposed new buildings with all possible expedition, we experienced considerable delay, owing to the fact that we were compelled to carry on the work with prison labor. In that report we expressed our realization of the fact that the crowded conditions of our prisons prevented us from establishing that system of prison discipline demanded in a well-conducted prison, stating it to be our opinion that prisoners should be divided into classes, according to conduct, age, and other characteristics. We referred to the statement frequently made that the California prisons were breeding places for vice and crime, and declared that while this statement was an exaggeration, there was a modicum of truth in it, because our prisons were built at an early date when the population of the State was much smaller, and consequently our prison population much less.

We have devoted much of our energies in the construction of additional buildings to the prison at San Quentin, for the reason that that prison is much larger, and the need for relief from congestion and its consequent evils much more acute than at Folsom. We have been compelled to level down a large hill in order to secure a site sufficiently large upon which to place the proposed prison buildings, and this preliminary work, requiring much time, has finally been completed. Plans prepared by the State Engineer have been approved by this Board, and we are now prepared to say that as soon as these plans are fulfilled the State of California will have at San Quentin a model

prison. The work when completed will enable us to segregate the prisoners into a number of classes, and will place the prisons of California on a plane with the best prisons of the United States. At the present time we are unable to give each prisoner a separate cell, but this defect will be obviated upon the completion of the new buildings.

In California, as you are aware, the system in operation at present is what is known as the congregate system; that is, the prisoners are not kept in solitary confinement, but mingle together in the workshop, in the dining-room, and in the assembly yard. In European countries the system in general use is that of solitary confinement, by which the prisoner is kept in his cell and allowed to see no one but his keeper. This system has also been in use for a number of years in this country at the prison in Philadelphia. By the congregate system the State is enabled to use machinery and manufacture products by that means, but unless some measure of segregation is made for classifying the prisoners certain evils are bound to arise from their promiscuous association during such time as they are not actively engaged in work. At the present time we are unable properly to segregate prisoners; but our plans provide for the construction of the new buildings with the idea of segregation, while at the same time not interfering with the manufacturing capacity of the prison.

In our last report we stated that the parole system had been in operation in California sufficiently long to enable us to say that the system is beneficial, not only to the individual prisoner, but to the general discipline of the prison itself. We stated that in the exercise of the parole power we had been conservative, and had examined each applicant and conscientiously investigated each case coming before us with the utmost care. We desire to call your attention to our last report in this connection, and to what was there stated.

We would say that from the passage of the parole law in 1893 up to the present time the total number of prisoners paroled has been 583, of whom 433 were paroled from San Quentin and 150 from Folsom. The total violations of the conditions governing prisoners on parole since 1893 have been fifty-seven (57), making the percentage of violations .0977. It is to be noted in this connection that the Board has insisted on the proper supervision of paroled prisoners. They are required to have employment satisfactory to the Board, to work steadily, and to report each month the number of days that they have been employed, the number of days idle, and the amount of money earned. They are forbidden to take any intoxicating liquor, or even to go into a place where intoxicating liquor is sold. If they leave their place of employment, or in any other manner or degree violate the conditions of their tentative freedom, they are immediately returned to prison. The fact

that less than ten per cent have been returned to prison conclusively demonstrates that the power confided to us has been exercised conservatively, and also demonstrates that under the system a large number of men may be reformed sufficiently to become law-abiding citizens. We would add that of the total number (57) given as constituting the violators, thirty-six (36) have been returned to prison, the others not having, as yet, been apprehended. The Board exerts every endeavor to apprehend those who violate the conditions of their parole and escape, believing that the return of a paroled prisoner who so dishonors the trust imposed, has a good moral effect on his fellows.

We believe that your plan for pardoning and restoring to citizenship any prisoner who shall remain on parole for approximately two years, and who may be recommended to you by this Board for executive clemency, is an added incentive for paroled prisoners to observe the conditions governing them, and that this hope of full restoration to the rights and duties of citizenship has had a salutary effect on the prisoners in general.

We regret to report that the sale of grain bags during the past year has been much below the usual number, and, as a consequence, we have had to carry over from last year an excess of more than 2,000,000 bags. The reason we have been unable to dispose of this useful product of the jute mill has not been due to the fact that the price was excessive, but may be ascribed to the fact that the last legislature passed a law limiting our action, and placing so many restrictions on the sales of bags that it is almost impossible to dispose of them. We believe that the law defeats its own purpose.

Conditions in California continually change. We believe that this law should be repealed, and that the matter of the sale of the jute mill product at San Quentin should be intrusted to this Board, giving them power to make rules and regulations for the sale of grain bags, subject to the approval of an advisory board, consisting of the Governor, the Secretary of State and the Attorney-General. We believe that we are better qualified to judge of conditions that prevail than are those who are not familiar with the subject, and by requiring all rules and regulations to be approved by an advisory board, as outlined, a check will be placed upon our action, so that if it be hasty or ill-advised they may interpose their objections. By making rules and regulations elastic enough to embrace conditions as they arise from time to time, we are confident that the farmers of the State will be very much benefited, and at the same time we will be able to dispose of our product to advantage.

At Folsom we have been engaged in the construction of an asylum for the criminal insane, and take pleasure in stating that the building

is nearly completed, and in a short time we expect will be ready for occupancy. While the construction of this building is under our jurisdiction, its management when completed will be under the State Lunacy Commission, and we expect they will make an immediate and more detailed report upon this branch of work, and make such suggestions as they think proper for its direction. We have also been engaged in constructing a new wall around the prison at Folsom, and such work is satisfactorily progressing. As we said in a former paragraph of this report, we have been directing most of our attention and energy to the improvements going on at San Quentin, but at the same time we have been carrying on similar work at Folsom, and preparing ground for the erection of new buildings.

We desire to particularly call your attention to the population at San Quentin prison. At the close of the fifty-eighth fiscal year it was 1,549, while at the close of the last fiscal year, the fifty-ninth, it had risen to 1,702, an increase of 153. In order to properly provide for the additional number of prisoners it became necessary to fit up accommodations for some of the older men, and for short-term prisoners, in what is known as the sash and blind building.

We draw your attention particularly to the report of Warden Hoyle showing that by the exercise of rigid economy, the cost of maintenance has been reduced so that there remained a credit balance at the close of the fiscal year. This certainly is a very creditable showing, especially in view of the fact that a considerable sum of money was expended during the year for general repairs.

We have made much progress in California by the establishment of reformatories at Ione and Whittier for young people under twenty-one years of age. But for all those above that age, who have committed some criminal offense, there is no other place than the State prison.

It is to be remarked also, that in many cases young boys under eighteen years of age have been sent to the State prison, the law giving the judges of the superior courts power to send them to the State prisons, or to one of the reform schools, so called.

There is unfortunately a large class of young men who have learned no trade and who have no way of earning a living. They fall into crime largely as the result of their environment. Men of this class, up to say the age of thirty years, should be placed in an institution midway between the reform school and the penitentiary proper. While there, they should be subjected to a discipline different from that in operation in a well-regulated penitentiary, should be taught habits of industry, educated, if necessary, and taught some useful occupation from which they can get a living on their release. Institutions of this character have been in successful operation in some of the Eastern

States, and the beneficial results produced have been such as to justify the expense necessary for their maintenance. Men of this class should be separated from the older offenders and be given one more opportunity before they are sent to an institution, incarceration in which means disgrace, and in which it is difficult, if not impossible, to carry on a systematic plan of education necessary to fit them for useful citizens. We believe that California should establish a reformatory for the reception of prisoners under the age of thirty, to be governed as some institutions in the Eastern States are, and we so recommend.

In our last report we directed attention to the controversy between the State of California and the Folsom Water and Power Company relative to the amount of water the State was entitled to have for power purposes. We desire to say that the Superior Court of Sacramento County has declared in favor of the State, and that motion for a new trial has been denied. The case is now before the Supreme Court of the State of California, and we expect an early decision upholding what we claim to be the rights of the State in the matter.

In our last report we called attention to the system known as the indeterminate sentence, and stated that we believed the system to be worthy of careful consideration.

In our previous reports we have given our views upon prison management, and it would be but repetition to restate them here. We respectfully call your attention to our previous reports, and ask that they be read in connection with this.

The reports of both Wardens show in detail the operation and management of the institutions under their charge. We desire to say in this connection that Warden Hoyle at San Quentin and Warden Reilly at Folsom are men who possess in a singular degree the rare qualities essential to proper prison management. The successful warden must be not only a business man and a good executive officer, but is also required to have intimate knowledge of the habits and qualities of those who compose his prison population. While it is necessary that he should be firm and strict, it is equally necessary that he should be kind and willing to help those who deserve consideration. We take great pleasure in saying that not only are our Wardens possessed of these qualities in a noteworthy degree, but the discipline of the prisons has never been better in the history of the State than it is to-day. The Wardens have under them a willing and efficient set of officers, and we desire to express our approval of the service they are rendering to the State.

There is urgent necessity for the construction of additional buildings for the accommodation of our officers. At Folsom Prison, ever since its inception, the Warden has been living in rooms within the prison build-

ing itself, and we deem it essential not only for his own comfort, but for the best interests of the State, that there be speedily constructed a building for the occupancy of himself and his family; also for the use of the State Board of Prison Directors and such other officers as may have business with the State. We believe that a house suitable for this purpose could be constructed for \$12,000, which would include the purchase of the necessary furniture. We therefore respectfully ask that you recommend an appropriation for this purpose. If this house is constructed for the Warden, the building at present occupied by him can be turned over for the use of the officers and guards of the institution; otherwise, it will necessitate the erection of additional and suitable quarters for them.

We also believe it would be wise policy to erect ten additional houses on the prison grounds for the use of such officers and guards as have families.

At San Quentin even a greater necessity exists for the construction of houses for the use of the officers and guards and their families, some of whom are living in houses outside of the prison grounds, and we would respectfully ask that a suitable appropriation be made for this purpose.

We would also call your attention to the fact that the buildings at both San Quentin and Folsom are in need of repair, and we do not feel justified in meeting the expense of these repairs out of the State Prison Fund, and ask that a suitable appropriation be made for this purpose also.

The present appropriation bill contains, and the one to be adopted at the coming session of the legislature will also probably contain, a clause limiting expenditures from the Support Fund to \$500, which sum is totally inadequate, and a special appropriation should therefore be made for that purpose.

A notion seems to prevail with some of the prisoners that it is necessary for them to hire an attorney when preparing their application to the Board for parole. It has come to our knowledge that attorneys in such instances have charged excessive fees for this trivial service. It has been the rule of the Board in the past to obtain their information as to the applicant's fitness for parole, his antecedents, the opinion of the committing judge and prosecuting attorney as to advisability of paroling the applicant, all of which investigation has been done through their clerks without charge to the prisoner.

Under the United States law it is a criminal offense for an attorney to accept a fee in excess of \$10 for the prosecution of a pension claim. In order that the prisoners and their friends may be protected from designing persons in this matter, we would respectfully ask that a

statute be passed making it a criminal offense for an attorney to accept a fee in excess of that fixed by the legislature at its discretion for such service; this statute to apply also in cases of application for pardon. As the Board of Directors renders its opinion as to the parole or pardon of an applicant on written documents, and on the reports of the officers, an attorney's fee for any service rendered in connection with such parole or pardon should be limited to a reasonable amount.

The Board requires in each case coming before it for consideration as to parole, letters from the judge who sentenced the prisoner, the prosecuting attorney, and the defendant's attorney, the same to cover the character of the prisoner's offense and a statement as to his fitness for parole. In very many cases this has been found a difficult matter for many obvious reasons, and we respectfully request that it be made the duty of the committing judge to file with the commitment a brief statement as to the character of the offense while it is still fresh in his mind. This could be rendered comparatively easy by the prisons furnishing the judges with blanks for such purposes.

We would call your attention to the fact that the law at the present time contains no provision such as would show that the sentence of the court has been executed by the delivery of the prisoner to the prison to which he has been sentenced. We would suggest that a statute be passed making it the duty of the Wardens to give duplicate receipts to sheriffs upon delivery of a prisoner to their institution, one of such receipts to be filed with the Board of Examiners and the other in the court in which the judgment was rendered, so as to furnish information as to the execution of the sentence and thus complete the records of the case.

In conclusion, we desire to give utterance to our appreciation of the interest you have taken in prison management, and your desire to have the prison management maintained on the highest possible plane.

Respectfully submitted.

ROBT. T. DEVLIN, President.

WARREN R. PORTER,

CHAS. SONNTAG,

C. E. CLINCH,

TIREY L. FORD,

State Board of Prison Directors.

REPORT OF THE WARDEN
OF THE
STATE PRISON AT SAN QUENTIN

FOR THE YEAR ENDING JUNE 30, 1908.

WARDEN'S REPORT.

SAN QUENTIN, CAL., July 20, 1907.

Honorable State Board of Prison Directors, San Quentin, California.

GENTLEMEN: As a matter of record I deem it advisable to explain that the report of former Warden John C. Edgar, for the fiscal year ending June 30, 1907, is lacking, due to the fact that Warden Edgar was confined to his bed with a serious illness, during the last two months of the year, and for that reason tendered his resignation, July 13, 1907.

In view of the above mentioned circumstances, I beg to submit herewith the usual annual departmental reports of the State Prison at San Quentin for the fifty-eighth fiscal year ending June 30, 1907, to wit:

Clerk's Report,
Jute Department,
Commissary Department,
Captain of the Yard,
Captain of the Guard,
Resident Physician,
Distributing Officer,
Turnkey,
Chaplain and Librarian.

Respectfully yours,

JOHN E. HOYLE, Warden.

CLERK'S REPORT.

CLERK'S OFFICE, CALIFORNIA STATE PRISON,
SAN QUENTIN, CAL., June 30, 1907.

To the Honorable the State Board of Prison Directors.

GENTLEMEN: I herewith submit, in tabulated form, a statement of all financial transactions of this prison for the fifty-eighth fiscal year ending June 30, 1907, together with a summary of the assets and liabilities of the institution at the close of said fiscal year.

Respectfully,

JOHN E. HOYLE,
Clerk.

JUTE MILL DEPARTMENT.

SAN QUENTIN PRISON, July 1, 1907.

To HON. JOHN C. EDGAR,

Warden of State Prison at San Quentin.

SIR: I herewith submit to you the annual report of the Jute Mill Department for the fifty-eighth fiscal year ending June 30, 1907.

Respectfully,

IRVING T. BALLARD,

Commissary.

STATEMENT OF RAW JUTE AND MANUFACTURED GOODS OF THE JUTE MILL DEPARTMENT FOR THE FISCAL YEAR ENDING JUNE 30, 1907.

6,330 bales jute in warehouse June 30, 1906, at 400 lbs.	2,532,000 lbs.	
90 bales jute in jute mill June 30, 1906, at 400 lbs.	36,000 lbs.	
5,009 bales jute received present fiscal year, at 400 lbs.	2,003,600 lbs.	
10 bales jute received present fiscal year, at 389 lbs.	3,890 lbs.	
Raw jute in process of manufacture, June 30, 1906	117,344 lbs.	
		4,692,834 lbs.
<i>Deduct—</i>		
2,037 bales jute in warehouse June 30, 1907, at 400 lbs.	814,800 lbs.	
116 bales jute in jute mill June 30, 1907, at 400 lbs.	46,400 lbs.	
Raw jute in process of manufacture June 30, 1907	103,521 lbs.	
Raw jute sold	150 lbs.	
		964,871 lbs.
Net weight in pounds of raw jute used		3,727,963 lbs.

MANUFACTURED GOODS.

4,839.168 yards burlap, at .71 lbs. per yard	3,435,810 lbs.	
Twine used in sewing 4,342,150 bags, at $\frac{1}{4}$ oz.	67,847 lbs.	
Twine used in hemming 42,240 bags in mill at 1-16 oz.	165 lbs.	
Twine used in tying bundles for 8,686 bales bags	2,036 lbs.	
Twine used for covers on 8,724 bales bags and twine	273 lbs.	
Twine used in sewing 8,724 bales, bags and twine	307 lbs.	
Jute rope for baling 8,724 bales, bags and twine	26,172 lbs.	
3-ply twine manufactured	5,215 lbs.	
4-ply twine manufactured	10,048 lbs.	
Loom waste, baled	21,523 lbs.	
Miscellaneous issues of 5-ply twine	376 lbs.	
		3,569,772 lbs.
Loss in manufacture		158,191 lbs.
Equals 4.243%.		

GRAIN BAG STATEMENT FOR THE FISCAL YEAR ENDING JUNE 30, 1907.

Bags sold prior to July 1, 1906, awaiting orders for shipment.....	1,551,800	
Bags sold during present fiscal year.....	4,310,700	
	<u>5,862,500</u>	
Deduct bags shipped present fiscal year.....	4,133,150	
Deduct bags annulled.....	<u>34,000</u>	
	4,167,150	
Bags sold prior to July 1, 1907, awaiting orders for shipment.....		1,695,350
Bags sold in advance of manufacture prior to July 1, 1906.....	1,056,300	
Bags sold during present fiscal year.....	4,310,700

Balance due from sundry bag debtors on June 30, 1907.....	<u>\$117,655 99</u>	

SEGREGATED COST OF MANUFACTURED GOODS, BURLAP AND BAGS, FOR THE FISCAL YEAR ENDING JUNE 30, 1907.

BURLAP.

Spinning and weaving 4,839,168 yards of 45-inch burlap at \$60,192.22	
equals	1.244 cents per yard
11.20 ounces of jute, at 5.72 cents equals	4.004 cents per yard
Loss in manufacture of 4.243% equals167 cent per yard
Cost of 45-inch burlap, per yard	5.415 cents

SEWING.

5% of cost of production is	\$3.168 01
67,847 lbs. jute twine used, at 6.6 cents	4,477 90
Total cost	<u>\$7,645 91</u>
4,342,150 bags equals, per bag176 cent

BALING.

4½ yards 45-inch burlap, at 5.415 cents	24.367 cents
4.82 ounces jute twine, at 6.6 cents	1.988 cents
3 lbs. jute rope, at 5.72 cents	17.160 cents
Cost per bale	<u>43.515 cents</u>
500 bags to the bale equals, per bag087 cent

SHIPPING.

Drayage, per bale	5 cents
Freight, per bale	50 cents
Cost per bale	<u>55 cents</u>
500 bags to the bale equals, per bag110 cent

COST PER BAG.

39½ inches 45-inch burlap, at 5.415 equals	5.941 cents
Cost of sewing as above, per bag176 cent
Cost of baling as above, per bag087 cent
Cost of shipping as above, per bag110 cent
Cost per bag	<u>6.314 cents</u>

CAPTAIN OF THE GUARD'S REPORT.

SAN QUENTIN, CAL., June 30, 1907.

To HON. J. C. EDGAR,

Warden of the State Prison, San Quentin, California.

SIR: I herewith submit my report for the fiscal year ending June 30, 1907.

I am pleased to report that during the past year, no opium or other narcotics have been smuggled into the prison by the prisoners, owing to the vigilance and watchfulness of the guards, and close searching of prisoners.

There is now a larger number of prisoners working outside the walls than heretofore, and the guards have to be all the more on the alert owing to several attempts to escape, which were frustrated.

The Lowell machine guns on Posts No. 4 and No. 5 should be replaced by the latest improved rapid fire guns, and all of the machine guns could be worked to better advantage if they were placed on tripods.

We should have a dozen new shotguns, as the ones in the armory have been used for years and are in poor condition. The rest of the arms are in fair condition. Regular target practice has been kept up, and the scores have been very satisfactory.

During the past year there were received on commitment to this prison 532 prisoners, while the discharges for the year numbered 571, showing a decrease of 39 prisoners for the year.

I am pleased to report that the guards under my charge have been watchful and diligent in their duties; with one or two exceptions I have not had cause to censure any of the men under my charge, and with their encouraging assistance my duties have been made a pleasure.

I append herewith, in tabulated form, my report on the number of prisoners received and discharged from this institution during the past fiscal year; also the number of prisoners visited by relatives and friends; also a record of the number of visitors shown through the prison during the fiscal year.

Respectfully,

E. V. ELLIS,

Captain of Guard.

RESIDENT PHYSICIAN'S REPORT.

SAN QUENTIN, CAL., June 30, 1907.

To HON. JOHN C. EDGAR,

Warden of the State Prison at San Quentin.

SIR: I have the honor of submitting an annual report, in tabular form, for the fifty-eighth fiscal year ending June 30, 1907.

In submitting this report I wish to state that I assumed charge of the Medical Department on the 5th day of June, 1907, and that all the statistics prior to June 5, 1907, are taken from the records of my predecessors.

Respectfully,

WAID J. STONE, M.D.,
Resident Physician and Surgeon.

TURNKEY'S REPORT.

SAN QUENTIN, CAL., June 30, 1907.

To HON. JOHN C. EDGAR,

Warden at State Prison at San Quentin.

SIR: Herewith I submit the annual report of this department for the fiscal year, July 1, 1906, to June 30, 1907.

Very respectfully,

D. SULLIVAN,

Turnkey.

CHAPLAIN'S REPORT.

SAN QUENTIN, CAL., June 30, 1907.

To HON. JOHN C. EDGAR,

Warden of State Prison at San Quentin, Cal.

SIR: I have the honor herewith to present my report as Chaplain of State Prison, San Quentin, California, for the year ending June 30, 1907.

Regular services have been maintained in the prison during the past year both in the male and female departments thereof, with excellent attendance, both in the Protestant and Catholic services, with extra services on memorial and other holidays.

The school has been maintained with an average attendance of about twenty.

There have been received 2,754 illustrated magazines, 312 bound volumes, and about 10,375 periodicals for distribution and reading among the prisoners.

There have been drawn by the prisoners during the year 23,886 volumes, averaging about 1,990 books per month.

Respectfully submitted.

A. DRAHMS,

Resident Chaplain.

REPORT OF THE WARDEN

OF THE

STATE PRISON AT SAN QUENTIN.

FIFTY-NINTH FISCAL YEAR.

WARDEN'S REPORT.

SAN QUENTIN, CAL., October 5, 1908.

To the Honorable the State Board of Prison Directors.

GENTLEMEN: I have the honor to submit herewith the report of the State Prison at San Quentin, California, for the fifty-ninth fiscal year, accompanying which you will find the financial reports of the Captain of the Yard, Captain of the Guard, Commissary, Turnkey, Distributing Officer, Resident Physician, and the Chaplain and Librarian, as well as a statement in detail relative to the operation of the jute mill during the year.

THE PRISON POPULATION.

The prison population at the close of the last or fifty-eighth fiscal year was 1,549; while at the close of the present fiscal year it is 1,702, being an increase of 153, making it necessary to resort to the expediency of fitting up accommodations for many of the elderly and short-term prisoners in the sash and blind building. However, these quarters have been made very comfortable and secure. The number of prisoners received at this institution by commitment during the past year was 709, being 674 State prisoners and 35 United States prisoners, or 109 more than had been received during any year in the history of the institution.

The health of the inmates has been excellent, notwithstanding their crowded condition.

FINANCIAL STRINGENCY.

At the beginning of the year we faced a financial condition, which, under the circumstances, was not encouraging, viz., a deficit in the fund for support amounting to several hundred dollars; but by practicing the most rigid economy in all the departments, the cost of maintenance has been so reduced that the close of the year finds us with a surplus, notwithstanding the fact that a considerable sum has been expended during the year for general repairs.

REPAIRS.

The cells and rooms of the several cell buildings, also the furniture belonging to same, as well as the interior of the offices inside the prison yard, have been repainted and otherwise repaired.

Several of the officers' houses have been partially reconstructed and others have been repainted and provided with new roofs, etc., besides such other minor repairs as were found necessary to restore them to a proper condition.

The administration building has been thoroughly renovated.

The interior of the front building has also been repainted, including the officers and guards' barber shop, which was thoroughly renovated and practically refitted.

IMPROVEMENTS.

The road gang is now engaged in improving that portion of the Green Brae road within the State grounds, and the work being done is of such character that when completed it will last for many years. The wooden culverts have been replaced with substantial stone ones.

Though the subject properly belongs to the Construction Department, it may not be out of place to mention here that the excavation work on the south hill has been steadily and advantageously carried on until but little remains of that once conspicuous eminence.

PAROLE SYSTEM.

On the whole the parole system is working very satisfactorily. As will be observed by reference to the report of the Turnkey, Table No. 10, more paroles have been granted this year than during any previous year since the passage of the parole law, viz., 92, and the percentage of violations is practically the same as the average percentage since the law went into effect.

Of the eight violators during the past year, there are only three who have not been returned to this prison. Among the parole violators will be found quite a percentage of those who were paroled when they had but a short time to serve, and those who were practically without ties of any sort to keep them, except their obligations to your Board for the confidence imposed in them, which they did not have honor enough to respect.

COST OF MAINTENANCE.

The average gross cost of maintenance per capita for the past fiscal year is approximately \$4.40 per month less than for the year previous, while the net cost of maintenance per capita for the past year is somewhat in excess of that for the year previous, due to the fact that the earnings of the Jute Department for the fifty-eighth fiscal year were largely in excess of those for the fifty-ninth, the reason for which will be found in the report of the operations of the Jute Department for the year just closed, and to which report I most respectfully invite your careful attention.

PUNISHMENT RECORD.

It is with considerable pride that I make reference to the great reduction made in the punishment record of this institution during the past year, and a comparison of our present monthly records with those produced during former years will, I am confident, show results which will meet with the approval of your Honorable Board.

I have been able to demonstrate to my own satisfaction, at least, that a very large majority of our inmates can be reached much more readily and effectively by appealing to their sense of reason and resorting to such means as will awaken the better sides of their natures, than by subjecting them to a course of severe punishment.

RECOMMENDATIONS.

With a view to bringing about a better condition of affairs wherever practicable, and believing that careful and conscientious consideration of the moral and social, as well as the pecuniary and physical interests of the employees of an institution like this, are not inimical to its successful operation, I beg to be allowed to call the attention of your Honorable Board to several matters, which, after a close personal observation of the conditions existing here, may, I think, be considered in the light of actual needs.

ALLOWANCE TO GUARDS IN LIEU OF BOARD.

It appears to me that the guards of this institution should be placed on an equality with those employed at Folsom, in respect to the matter of a monthly cash allowance of \$15 being made to each married guard in lieu of board, which would enable such married guards to board at home with their families instead of being compelled to eat at the prison as at present, or board themselves without consideration.

As you are aware, this custom was formerly in vogue here, such allowances being paid out of the appropriation for support after the State Prison Fund was abolished, until a change was necessitated on account of the increased expense due to a material increase in the cost of supplies, thus making the appropriation inadequate for the needs of the prison after paying such allowances.

RESTORATION OF COMMISSARY PRIVILEGES.

At the same time that the above mentioned custom was discontinued, and for the same reasons, the practice of permitting the employees to purchase certain supplies, such as meat, flour, coal, etc., from the Commissary Department of the Prison, which had been continued for many years, was also abolished, and while it would appear from our present schedule of expenses for support that it would not be safe to restore

such privilege to the employees under the present conditions, it is equally apparent that the enactment of an amendment to the present law by which the amount of supplies required by the employees from the Commissary Department could be restored monthly to the appropriation for support, thus furnishing the desired relief, and in nowise tending to create a deficit in our appropriation.

As the law now stands the money paid to the prison by the employees for such supplies as might be furnished them would revert to the General Fund, and therefore be unavailable for our use.

ERECTION OF HOUSES FOR EMPLOYEES.

It would seem that there need be no apology for advocating the erection, at as early a date as possible, of a sufficient number of cottages or moderate-sized houses for the accommodation of such officers and guards, with their families, as may be employed at San Quentin.

This is a matter which has received the consideration and support of several of my predecessors in office, but nothing has been done in this direction for about eight or ten years.

No better argument in favor of this scheme is needed than to direct your attention to the actual conditions under which the married guards and several of the officers of the institution are now living outside the prison grounds at San Quentin, where they are paying all the way from ten or twelve dollars to fifteen or eighteen dollars per month for places of residence many of which are mere shacks and the sanitary condition of same is extremely bad. I sincerely believe that if a committee consisting of members of your Honorable Board was appointed to investigate these conditions, the proposition to secure an appropriation sufficient to erect the necessary houses for our officers and guards' families would receive your hearty support.

Owing to the fact that we have a sufficient number of skilled mechanics among our inmates to successfully prosecute such an undertaking, the expense of same would be simply a matter of the cost of material, and our employees could thus be furnished with comfortable and sanitary residences at low rentals, which, however, could be placed at such a figure as would within a few years reimburse the State for the entire cost of their construction.

PROVISIONS FOR EXERCISE AND AMUSEMENT FOR EMPLOYEES.

To the casual observer the needs of the employees of an institution like this for physical exercise and opportunities for clean, social diversion and amusement would not perhaps be fully appreciated, but isolated as it is from the centers of population, and owing to the fact that the duties to be performed by the most of our employees require constant

vigilance and watchfulness rather than physical activity, the monotony soon tells upon one's physical nature, as alertness—a very necessary quality here—is generally prevalent in an individual in proportion to his physical condition, and I would, therefore, suggest that means be adopted at an early day to furnish healthy diversion and exercise to these employees at San Quentin.

To this end I would recommend the erection of a gymnasium of moderate size, with convenient shower baths adjoining same; also that a fair sized billiard and pool room be provided, the equipment for which might, if deemed necessary, be paid for by contributions from the employees.

Up to the present time no provision has been made in this direction beyond permitting the use of one room as a card room, while just outside the prison grounds there are three saloons in operation in direct violation of the law, which offer many temptations to our employees and in the past have caused many of them to lose their positions through becoming intoxicated, and there is no question but what these saloons receive far more patronage from our employees than they would if proper provision was made for their entertainment and diversion on the State grounds.

CONTINGENT FUND.

Allow me to suggest that since the State Prison Fund was abolished there has been imperative need for a contingent fund to provide for the payment of current petty expenses, such as postage stamps, traveling expenses, etc.

Under the present conditions it is necessary for the Warden to pay these expenses out of his private funds and put in a claim for reimbursement at the end of each month, such monthly expenses generally averaging about \$100. When it becomes necessary to send an officer outside the limits of the State after a parole violator or an escaped prisoner, it is not unusual for the expense to amount to several hundred dollars, and there seems to be little need for argument in favor of a contingent fund to meet such expenses, which, in my judgment, should not be less than \$2,000.

PAROLE LAW FOR RECIDIVISTS.

The frequent petitions of recidivists for recommendations for executive clemency seem to have given rise to a suggestion to so amend the parole law as to make this class of prisoners eligible for parole. I understand that this plan is favored by his Excellency, Governor Gillett, and after having given the subject considerable thought I am personally free to confess that the idea also appeals strongly to me.

It is not proposed, however, nor would I recommend, that the condi-

tions under which a recidivist secure a parole be made any easier than the requirements under which he may at present be recommended for executive clemency.

In this connection it may not be improper to state that I am deeply impressed with the wisdom of the plan to parole all prisoners before their discharge, the length of the time they might be permitted to remain at liberty prior to their final discharge to be governed by any conditions or circumstances which might affect the application of a prisoner for parole under the present system.

REFORMATORY OR INTERMEDIATE PRISON.

That there is a growing need for a State reformatory or intermediate prison for the reception of young men and first-term prisoners seems to me very apparent, especially in view of the laws that exist in California at the present time, which make it necessary to commit all felonious offenders over eighteen years of age to the State prisons, where they must mingle with prisoners of fixed criminal tendencies, the effects of which associations and influences seem to me to be very largely responsible for the great percentage of recidivists shown upon our records.

I would, therefore, most earnestly recommend that this matter receive your serious consideration and hearty support.

In conclusion I may say that any degree of success which has attended my efforts in the administration of the affairs of this institution during the past year is very largely due to the uniform courtesy and coöperation extended to me at all times by your Honorable Board, which has made it a pleasure to me to carry out your policy, and for which I beg to tender you, individually and collectively, my sincere thanks.

I also wish to express my hearty thanks to the officers and guards of the prison, to whom much credit is due for their loyalty, their untiring efforts, and their faithfulness in the discharge of their duties.

Yours most respectfully,

JOHN E. HOYLE,

Warden.

CLERK'S REPORT.

CLERK'S OFFICE, CALIFORNIA STATE PRISON.

SAN QUENTIN, CAL., June 30, 1908.

To the Honorable the State Board of Prison Directors.

GENTLEMEN: I herewith submit, in tabulated form, a statement of all financial transactions of this prison, for the fiscal year ending June 30, 1908; together with a summary of the assets and liabilities of the institution at the close of said fifty-ninth fiscal year.

Respectfully,

BRAINARD F. SMITH.

Clerk.

TABLE No. 3.

Abstract of Expenses for the Fifty-ninth Fiscal Year.

Discharged prisoners' allowances.....	\$2,020 00	
Discharged prisoners' transportation.....	1,886 55	
Transportation of insane prisoners.....	22 65	
Prison Directors' expenses.....	727 30	
Execution account.....	50 00	
Salaries.....	72,726 82	
Water.....	6,531 95	
Gas.....	2,810 45	
Electric light.....	8,138 60	
Turnkey Department.....	168 02	
Distribution Department.....	26,231 17	
Female Department.....	11 11	
Hospital Department.....	1,820 63	
Guards' Department.....	1,184 58	
Captain of Yard's Department.....	1,776 42	
Electrical Department.....	1,232 63	
Stable.....	2,493 65	
Horseshoeing and Wheelwright Department.....	394 02	
Warden's residence, furniture and fixtures.....	749 97	
General expense.....	2,121 49	
General repairs.....	2,429 32	
Clerk's office.....	310 76	
Library.....	485 43	
Laundry Department.....	1,554 10	
Prison Mess.....	\$68,971 45	
Officers' and Guards' Mess.....	13,770 24	
Hospital Mess.....	5,130 34	
Night Guards' Mess.....	6,031 35	
Female Mess.....	2,288 12	
	96,191 50	
Total gross expense.....		\$234,069 12

TABLE No. 4.

Cost of Maintenance of Prisoners.

Average number of prisoners for the year, 1,622 $\frac{2}{3}$ —total cost.....	\$234,069 12	
Average cost per head per month.....	12 02 $\frac{51}{100}$	
Average cost per head per day.....	40 $\frac{166}{100}$	
Total expenses for the year (Table No. 3).....	\$234,069 12	
Support of United States prisoners.....	\$8,372 00	
Rent of State houses.....	1,100 60	
Earnings of the Jute Department.....	26,866 56	
Earnings of the Commissary Department.....	157 34	
Earnings of the Prison farm.....	3,504 02	
	40,000 52	
Net expenses of the prison for the year.....	\$194,068 60	
Average cost per head per month—net.....	\$9 97 $\frac{1}{100}$	
Average cost per head per day—net.....	33 $\frac{23}{100}$

STATISTICAL FORM FOR STATE INSTITUTIONS.

Prepared in accordance with resolution of the National Conference of Charities and Corrections, adopted May 15, 1906.

California State Prison at San Quentin, for the Year ending June 30, 1908.

Population.	Male.	Female.	Total.
Number inmates present at beginning of fiscal year	1,522	27	1,549
Number received during the year	720	16	736
Number discharged or died during the year	572	11	583
Number on hand at end of fiscal year	1,670	32	1,702
Daily average attendance (<i>i. e.</i> , number of inmates actually present) during the year	1,590	32	1,622
Average number of officers and employees during the year	113	1	114

EXPENDITURES.

Current Expenses—

1. Salaries and wages	\$72,726 82	
2. Clothing	26,231 17	
3. Subsistence	96,191 50	
4. Ordinary repairs	2,429 32	
5. Office, domestic and outdoor expenses	36,490 31	
Total		\$234,069 12

Extraordinary Expenses—

1. New buildings, land, etc.		
2. Permanent improvements to existing buildings		
Grand total		\$234,069 12

JUTE MILL DEPARTMENT.

SAN QUENTIN, CAL., July 1, 1908.

To HON. JOHN E. HOYLE,

Warden of State Prison at San Quentin.

DEAR SIR: In presenting the annual report of the Jute Mill for the fiscal year ending June 30, 1908, it seems necessary to make some explanation of the disparity of profits between this year and the one preceding it, namely, 1907.

In the year just ended the profits are about normal upon the amount of bags sold during the fiscal year, the sale of which, owing to the stringent law passed by the last legislature, was curtailed to about one half of the output of the Jute Mill.

In the year 1907 the profits were abnormal for the following reasons: In former years the Directors have usually bought in the month of October raw jute in one lot sufficient to run the mill through the calendar year and the price of bags by law being set the 15th of January for the season, it was an easy matter to estimate the cost of the bags knowing positively the cost of the raw jute to arrive and be taken into stock during the fiscal year. But in this year the price of jute was constantly advancing and the Directors thought it prudent to buy in small lots, thinking the price might drop at any time; 2,500 bales was bought at .0462 per pound and 5,000 bales at a subsequent date at .0572 and 2,500, to complete the quantity needed, was to be purchased later, but was not bought at the time the price of bags had to be set for the year, and the Directors thought best and safest to base the cost of the bags on the middle price of jute, which was .0572 and $7\frac{3}{4}$ cents for bags was a correct estimate to make on that average for jute. Subsequently, the 2,500 bales of jute was purchased at .0609 per pound, but it did not arrive in time to be taken into stock for that fiscal year and thereby raise the average of jute to the proper figure for the sale of bags at $7\frac{3}{4}$ cents. The result was, of course, the increase of profits for the mill, as about five million bags were sold on too high an estimate for the average price of jute received and taken into stock for that fiscal year. Conditions being such as stated the mistake was unavoidable.

All of which is respectfully submitted.

IRVING T. BALLARD,
Commissary.

**STATEMENT OF RAW JUTE AND MANUFACTURED GOODS OF THE JUTE
MILL DEPARTMENT FOR THE FISCAL YEAR ENDING JUNE 30, 1908.**

2,037 bales of jute in warehouse June 30, 1907, at 400 lbs.	814,800 lbs.	
116 bales of jute in Jute Mill June 30, 1907, at 400 lbs.	46,400 lbs.	
12,553 bales of jute received during year, at 400 lbs.	5,021,200 lbs.	
8 bales of jute received during year (broken)	2,277 lbs.	
Raw jute in process of manufacture June 30, 1907	103,521 lbs.	
	<hr/>	5,988,198 lbs.
5,345 bales of jute in warehouse June 30, 1908, at 400 lbs.	2,138,000 lbs.	
74 bales of jute in Jute Mill June 30, 1908, at 400 lbs.	29,600 lbs.	
Raw jute in process of manufacture June 30, 1908	129,657 lbs.	
	<hr/>	2,297,257 lbs.
Net weight of raw jute used during year		3,690,941 lbs.

MANUFACTURED GOODS.

4,914,884 yards 45-inch burlap, at .71 lb. per yard	3,489,568 lbs.	
1,204 yards 32-inch burlap, at 1 lb. per yard	1,204 lbs.	
Twine used sewing 4,478,300 bags, at $\frac{1}{4}$ -ounce per yard	69,673 lbs.	
Twine used hemming 36,265 bags, at $\frac{1}{16}$ -ounce per yard	141 lbs.	
Twine used tying bundles for 8,886 bales bags	2,083 lbs.	
Twine used tying covers for 8,907 bales bags, etc.	278 lbs.	
Twine used sewing 8,907 bales bags and twine	313 lbs.	
Jute rope for baling 8,907 bales bags and twine	26,721 lbs.	
3-ply twine manufactured	5,657 lbs.	
5-ply twine manufactured	461 lbs.	
Loom waste baled	26,301 lbs.	
	<hr/>	3,622,700 lbs.
Loss in manufacture		78,241 lbs.
Equals 2.144%.

Deduct—

Expense of sewing bags and repairing sewing machines, estimated at 5 per cent.....	3,539 66
Net expense of spinning and weaving 4,914,884 yards burlap.....	<hr/>
	\$67,253 63

SEGREGATED COST OF MANUFACTURED GOODS, BURLAP AND BAGS, FOR
THE FISCAL YEAR ENDING JUNE 30, 1908.

BURLAP.

Spinning and weaving 4,914,884 yards of 45-inch burlap, at \$67,253.63. equals	1.362c. per yd.
11.20 ounces of raw jute at 5.232 cents per lb., equals	3.662c. per yd.
Loss in manufacture of, 2.144 per cent, equals	0.084c. per yd.
Cost of burlap	5.108c. per yd.

SEWING.

5 per cent of cost of production, equals	\$3,539 66
69,793 lbs. jute twine, at 6.11 cents, equals	4,275 35
	<hr/>
4,478,300 bags sewn, equals	\$7,815 01
	0.174c. per bag

BALING.

4½ yards 45-inch burlap, at 5.108 cents, equals	22.906c. per bale
4.82 ounces jute twine, at 6.110 cents, equals	01.840c. per bale
3 lbs. jute rope at 5.232 cents, equals	15.696c. per bale
Cost per bale	40.442 cents
At 500 bags to the bale, equals	0.080c. per bag

SHIPPING.

Drayage, per bale	05.000 cents
Freight, per bale	50.000 cents
Cost per bale	55.000 cents
At 500 bags to the bale, equals, per bag	0.110 cent

COST PER BAG.

39½ inches 45-inch burlap, at 5.108 cents, equals, per bag	5.667 cents
Cost of sewing, per bag	0.174 cent
Cost of baling, per bag	0.080 cent
Cost of shipping, per bag	0.110 cent
Cost per bag, f. o. b., San Francisco	6.031 cents

CASH RECEIPTS AND DISPOSAL OF CASH FOR THE FISCAL YEAR ENDING
JUNE 30, 1908.

CAPTAIN OF THE GUARD'S REPORT.

SAN QUENTIN, CAL., June 30, 1908.

HON. JOHN E. HOYLE,

Warden of State Prison, San Quentin, Cal.

DEAR SIR: I hereby submit my report for the fiscal year ending June 30, 1908.

I am pleased to report that no escapes have taken place during your first year of incumbency. There was one attempt to escape by two prisoners working at the quarry, a few days after you took office, and they were caught a few hours afterward. The guard at the quarry having become a little lax in watching the men while blasting, allowed them to get over the hill.

I am pleased to say that no opium or other drugs have been smuggled inside the prison during the past year.

At present nearly 500 prisoners are working outside the walls, and the guards have to be more watchful and diligent than ever to prevent escapes, as a great many of the prisoners are long term men.

I would recommend that a dozen new shotguns be purchased for the Armory, as the ones now in use are in bad condition, having been in use a long time.

Target practice is taking place this month, and the scores being made are quite satisfactory, as the men continue to improve in their practice.

I would recommend that all the Lowell and Gatling guns be placed on tripods, as they could be worked to better advantage by so doing.

A number of fine improvements have been made in front of the prison, namely, a fountain, a fine band stand, also in lawns and flower plots, and the officers and guards and their families feel very grateful to you to be allowed to hear the band play outside the walls every other Sunday, also on holidays, thus breaking the monotony of prison life.

During the past year there was received on commitment to this prison 736 prisoners, while the discharges for the year numbered 583, showing an increase of 153 prisoners for the year.

I report with pleasure that the guards under my charge have been diligent and watchful in the discharge of their duties and with their encouraging assistance, my duties have been made easy.

I herewith append in tabulated form my report on the number of

prisoners received and discharged from this institution during the past fiscal year, also the number of prisoners visited by relatives and friends. Also a record of the number of visitors shown through the prison during the fiscal year.

Respectfully submitted.

E. V. ELLIS,
Captain of Guard.

RESIDENT PHYSICIAN'S REPORT.

SAN QUENTIN, CAL., June 30, 1908.

HON. J. E. HOYLE,

Warden of State Prison at San Quentin, Cal.

SIR: I have the honor of submitting herewith an annual report in tabular form of the Medical Department for the fifty-ninth fiscal year ending June 30, 1908.

Respectfully submitted.

W. J. STONE, M.D.,
Resident Physician.

TABLE 1.—*Diseases Treated at Hospital for each Month during Fiscal Year ending June 30, 1908.*

Diseases.	1907.						1908.						Total
	July	August	Septem-ber	October	Novem-ber	Decem-ber	Jan-uary	Feb-ruary	March	April	May	June	
Abscess, cervical gland					1							1	1
Abscess, left ear					1								1
Abscess, left lung					1				1	1	1		3
Abscess, gluteal region					1								1
Abscess, rectal	1												1
Abscess, right scapula region											1	1	2
Amputation of fingers						1	2	4	4	4	2	2	19
Anaemia chronic	1												1
Angina pectoris	1												1
Anasarca		1											1
Appendectomy				1									1
Asphyxia											1		1
Asthma							2	1	2	2			7
Auto-intoxication	1	1					1						3
Asthma, cardiac	11	18	20	20	7	6	6	12	9	6	5	3	123
Bronchitis, acute	1	2	3	3	6	3		2	2				22
Bronchitis, chronic	2	2	2	2	2	1	1	2	2	2	2	3	23
Bronchitis, foetid					1	1	1						3
Bronchitis and laryngitis	1	1							1				3
Carcinoma				1	1	1	1	1	1				6
Celulitis			1	2	1								4
Cerebral hemorrhage							1						1
Cerebral softening	3	2											5
Chancroids prep. oedema		1	1	1									3
Cholesystis			3	3	2	2							10
Circumcision	2	2		1	2	2	2					1	12
Conjunctivitis	1	1			1	1	1	1					6
Constipation													1
Contused wounds			1	1				1	1				4
Convalescent	1	1			1	2	3	1	1	1	1	1	13
Cystitis								1	1			1	3
Debility						1	1	1	2	3	3	2	13
Dementia	1	1	2	1	1		1					1	8
Dysentery					1							1	2
Epilepsy			1	1	1	1			1	1			6
Epistaxis									1	1			2
Erysipelas				1								1	2
Fecal impaction	1												1
Fever, typhoid				2	2								4
Fever, typhoid susp.							1						1
Fistula in ani	1	2	2	2	1								8
Fistula external		1	1										2
Fracture acromion process right scapula								1	1				2
Fracture, compound, ring finger							1	1					2
Fracture, Pott's												1	1
Fracture of radius ulna	1	1											2
Furunculosis			1	1					1			1	4
Gastrectasis										1			1
Gastritis	1										1		2
Gastro-enteritis	1	2											3
Hematocele				1	1								2
Hemoptysis				1	1	1	1			1	1		6
Hemorrhoids	1						1	2	2	2	1		9
Held pending development of symptoms			2	2	3	1	3	2				2	15
Hemiplegia		1	1									1	3
Hernia abdominal				2									2
Hernia inguinal				1	1	1							3
Herpes zoster									1				1
Hyperchlorhydria												1	1
Hypochondriasis									2			1	3
Inanition							1					1	2
Infection antrum of highmore			1										1
Infection hand and thumb								1					1
Totals	33	40	42	50	38	25	31	35	35	26	19	26	400

TABLE 1.—*Diseases Treated at Hospital for each Month during Fiscal Year ending June 30, 1908—Continued.*

Diseases.	1907.						1908.						Total
	July	August	Septem-ber	October	Novem-ber	Decem-ber	Janu-ary	Feb-ruary	March	April	May	June	
Infected knee	1												1
Indigestion, acute			1	1					1				3

TURNKEY'S REPORT.

SAN QUENTIN, CAL., June 30, 1908.

To HON. JOHN. E. HOYLE,

Warden of State Prison at San Quentin, Cal.

SIR: I submit herewith my annual report for the fiscal year ending June 30, 1908.

Very respectfully,

D. SULLIVAN,
Turnkey.

TABLE

Prison Account,

	1881	1882	1883	1884	1885	1886	1887	1888	1889

CHAPLAIN'S REPORT.

STATE PRISON, SAN QUENTIN, CAL., June 30, 1908.

To HON. JOHN E. HOYLE,

Warden of State Prison at San Quentin.

SIR: I herewith present my report as Resident Chaplain of State Prison at San Quentin, California, for the year ending June 30, 1908.

There have been issued from the Prison Library during the year 20,935 volumes to the prisoners, averaging 1,747 volumes per month.

There have been received as donations from various sources 3,535 magazines; 12,518 better class illustrated periodicals; and 571 bound books, that have been found acceptable, generally solicited from city libraries and rebound and incorporated into our own.

The prison school has been regularly maintained, averaging twenty pupils daily.

The usual Sabbath services on the part of both resident and non-resident chaplain have been regularly conducted, with numerous additional services on the Sabbath and holidays.

Respectfully submitted.

A. DRAHMS,
Resident Chaplain.

BIENNIAL REPORT

OF THE

WARDEN OF FOLSOM STATE PRISON

FOR THE

FIFTY-EIGHTH AND FIFTY-NINTH FISCAL YEARS,

ENDING JUNE 30, 1908.

WARDEN'S REPORT.

STATE PRISON AT FOLSOM, August 21, 1908.

To the Honorable, the State Board of Prison Directors.

GENTLEMEN: Acting upon the custom heretofore prevailing I hereby have the honor to present reports of the operations of the State Prison at Folsom for the fifty-eighth and fifty-ninth fiscal years, which are fully set forth in the report of the Clerk, General Overseer, and Physician.

APPROPRIATIONS NECESSARY.

The expenditures for maintenance have been made with the sole purpose of keeping within the appropriations for the fifty-eighth and fifty-ninth fiscal years, and to do this it has been found necessary to neglect the purchase of many needed articles, and also omit making repairs. An estimate has been carefully made of the amount necessary for maintenance for the sixty-first and sixty-second fiscal years, and it is believed by strict economy the same amounts appropriated for the fifty-ninth and sixtieth fiscal years, viz, general appropriation, support, \$175,000; general appropriation, salaries, \$156,000, will run the prison for the sixty-first and sixty-second fiscal years, provided there is no material increase in prison population.

NEW CELL BUILDINGS.

Since last report excavating for the site of the new cell building has been steadily prosecuted, but as most of it consists of removing solid rock, it has been necessarily slow. However, in a short time we will be ready to commence the erection of the new cells building.

WALL CONSTRUCTION.

The proposed wall around the prison is being erected as fast as possible.

A NEW LIGHTING PLANT.

The State Board of Prison Directors having entered into a contract by which the prison and grounds will be furnished with a modern lighting system, and its installation is expected to be completed by September, 1908, I desire to acknowledge my appreciation of their action.

CLASSIFICATION OF PRISONERS.

In the matter of classification of prisoners, I heartily agree with the Warden's report submitted October 29, 1906.

GENERAL REMARKS.

The health of prisoners remains good; infractions of the rules have been of a trivial nature thus far during my administration. As the parole law furnishes an incentive for prisoners to behave themselves, with the object of securing their liberty, it is not likely disobedient prisoners will give much trouble in the future.

Our rock-crushing plant, through years of operation, has arrived at a point where it costs considerable money to keep in repair, hence is idle a few days each month, thus slightly increasing the cost of the production of rock per ton, and precluding the production of as much per month as when said crusher was new and running steadily.

An improvement which would prove of great benefit to this institution would be the erection of a building to be occupied by wardens as a residence and also used by the members of the State Board of Prison Directors upon their monthly visits to this prison. Such a building would allow of the utilization of the quarters now occupied by the Warden, as quarters for officers and guards; a much needed improvement.

ACKNOWLEDGMENTS.

The State Board of Prison Directors have my sincere thanks for courtesies extended, and helpful suggestions made to me during my first few months of official duties.

Officers and guards have done their full duty at all times in carrying out the policy of your Honorable Board, and are entitled to commendation.

Respectfully submitted.

W. H. REILLY,
Warden.

CLERK'S REPORT.

STATE PRISON AT FOLSOM, July 1, 1908.

To the Honorable, the State Board of Prison Directors.

GENTLEMEN: I herewith submit for your consideration a full statement of the financial transactions of this prison for the fifty-eighth and fifty-ninth fiscal years, ending June 30, 1907, and June 30, 1908.

Very respectfully,

LEON F. STINSON,

Clerk.

TABLE No. 9.

Rock-crusher Transactions from June 10, 1896, to June 30, 1908.

COST OF ROCK-CRUSHING PLANT.

Cash received from General Fund.....	\$24,985 61	
Cash received from Revolving Fund.....	4,805 35	
	<hr/>	\$29,790 96
Cash received from special appropriation—Von Geldern.....		344 80
Total cost of plant.....		<hr/> \$30,135 76

COST OF CRUSHING ROCK.

Rock-crusher expenditures and claims due June 30, 1897.....		\$47,492 39
Inventory July 1, 1897.....		33,009 78
Cost of crushing 84,785 $\frac{305}{1000}$ tons of rock.....		<hr/> \$14,482 61

Cost per ton, 1896-1897..... 17.199 cents.

Inventory July 1, 1897.....	\$33,009 78	
Supply purchases to June 30, 1898.....	18,387 12	
	<hr/>	\$51,396 90
Inventory July 1, 1898.....		34,884 55

Cost of crushing 79,996 $\frac{1}{4}$ tons of rock.....

\$16,562 35

Cost per ton, 1897-1898..... 20.7 cents.

Inventory July 1, 1898.....	\$34,834 55	
Supply purchases to June 30, 1899.....	9,088 53	
	<hr/>	\$43,923 08
Inventory July 1, 1899.....		34,682 94

Cost of crushing 34,840 $\frac{5}{100}$ tons of rock.....

\$9,240 14

Cost per ton, 1898-1899..... 26.5 cents.

Inventory July 1, 1899.....	\$34,682 94	
Supply purchases to June 30, 1900.....	8,002 93	
	<hr/>	\$42,685 87
Inventory July 1, 1900.....		34,448 13

Cost of crushing 32,748 $\frac{1}{10}$ tons of rock.....

\$8,237 74

Cost per ton, 1899-1900..... 25.15 cents.

Inventory July 1, 1900.....	\$34,448 13	
Supply purchases to June 30, 1901.....	\$9,804 40	
Less rebates on supplies.....	19 37	
	<hr/>	9,785 03
Inventory July 1, 1901.....		\$44,233 16

Inventory July 1, 1901.....	\$17,130 93	
Loss by fire June 30, 1901 (estimated).....	17,097 20	
	<hr/>	34,228 13

Cost of crushing 45,217 $\frac{133}{100}$ tons of rock.....

\$10,005 03

Cost per ton, 1900-1901 (estimated)..... 22.13 cents.

Supply purchases to June 30, 1902.....	\$8,866 71	
Inventory July 1, 1901.....	17,130 93	
Rebuilding account.....	6,441 06	
	<hr/>	\$32,438 70
Inventory July 1, 1902.....		23,987 20

Cost of crushing 32,631 $\frac{85}{100}$ tons of rock.....

\$8,451 50

Cost per ton, 1901-1902..... 25.9 cents.

PHYSICIAN'S REPORT.

STATE PRISON AT FOLSOM, June 30, 1908.

To HON. W. H. REILLY,

Warden of the State Prison at Folsom.

SIR: I herewith submit report of prisoners treated by the Resident Physician of the prison for the fiscal years ending June 30, 1907, and June 30, 1908, showing all transactions in the Medical Department.

Respectfully,

A. E. INGERSOLL,
Resident Physician.

TABLE No. 1.

Number of Cases Treated during the Fiscal Year ending June 30, 1907, including Office Calls and Cases Treated in Hospital; Number excused from Daily Labor on Account of Illness, and Number of Deaths.

GENERAL OVERSEER'S REPORT.

STATE PRISON AT FOLSOM, CAL., July 1, 1908.

To HON. W. H. REILLY,

Warden of State Prison at Folsom.

SIR: I have the honor to submit herewith my biennial report, in tabular form, for the fifty-eighth and fifty-ninth fiscal years, commencing July 1, 1906, and ending June 30, 1908.

Respectfully.

J. A. AGUIRRE,

General Overseer.

TABULAR STATEMENTS

SHOWING CONDITION OF

STATE NORMAL SCHOOLS, CALIFORNIA POLYTECHNIC SCHOOL, THE CALIFORNIA
INSTITUTION FOR THE DEAF AND THE BLIND, HIGH SCHOOLS, PRIMARY
AND GRAMMAR SCHOOLS, KINDERGARTEN AND NIGHT SCHOOLS

1907-1908

FROM THE

TWENTY-THIRD BIENNIAL REPORT

EDWARD HYATT
SUPERINTENDENT OF PUBLIC INSTRUCTION

SACRAMENTO, CALIFORNIA

PRINTED AT THE STATE PRINTING OFFICE
W. W. SHANNON, SUPERINTENDENT

INTRODUCTION.

By the Superintendent of Public Instruction.

This statistical report has been shorn of many details common to such documents. It undertakes to give the live, essential, general facts that are of real use and interest; and to omit the cumbersome and confusing mass that results from giving each particular point for each particular school or each particular county. *Summaries* are the vital things, that can be used; and this will be found to be a book of summaries, brief and complete. If any one needs further any of the details from which these summaries are made up, he can get them by addressing the Superintendent of Public Instruction.

EDWARD HYATT.

STATE BOARD OF EDUCATION.

JAMES N. GILLET , Governor,	-	-	-	-	-	-	-	-	-	SACRAMENTO

JANUARY 10, 1907.

Total number of High Schools entitled to receive State aid June 30, 1906	167
Total average daily attendance in such schools	20,430
Rate per school on one-third basis	\$330 53
Rate per child on average daily attendance	\$5 40
Amount apportioned on one-third basis	\$55,198 51
Amount apportioned on attendance basis	\$110,322 00
Total amount apportioned	\$165,520 51
Balance on hand unapportioned	\$78 91

Seven high schools fall below 20 in average daily attendance for the year closing June 30, 1906, and receive no State aid. Two fall below 20 in average daily attendance, but receive State aid owing to the fact that they have been in existence one year only.

DECEMBER 9, 1907.

Total number of High Schools entitled to receive State aid June 30, 1906	167
Total average daily attendance in such schools	20,430
Rate per school on one-third basis	\$143 08
Rate per child on average daily attendance	\$2 33
Amount apportioned on one-third basis	\$23,894 36
Amount apportioned on attendance basis	\$47,601 90
Total amount apportioned	\$71,496 26
Balance on hand unapportioned	\$189 08

JANUARY 7, 1908.

Total number of High Schools entitled to receive State aid June 30, 1907	171
Total average daily attendance in such schools	21,209
Rate per school on one-third basis	\$153 78
Rate per child on average daily attendance	\$2 47
Amount apportioned on one-third basis	\$26,296 38
Amount apportioned on attendance basis	\$52,386 23
Total amount apportioned	\$78,682 61
Balance on hand unapportioned	\$207 62

MARCH 3, 1908.

Total number of High Schools entitled to receive State aid June 30, 1907	171
Total average daily attendance June 30, 1907	21,209
Rate per school on one-third basis	\$297 21
Rate per child on average daily attendance	\$4 79
Amount apportioned on one-third basis	\$50,822 91
Amount apportioned on attendance basis	\$101,591 11
Total amount apportioned	\$152,414 02
Balance on hand unapportioned	\$58 67

The second installment of taxes is not delinquent till the last Monday in April. The regular time for apportioning this part of the tax is about the tenth of July.

JULY 7, 1908.

Total number of High Schools entitled to receive State aid June 30, 1907	171
Total average daily attendance June 30, 1907	21,209
Rate per school on one-third basis	\$201 29
Rate per pupil on average daily attendance basis	\$3 24
Amount apportioned on one-third basis	\$34,420 59
Amount apportioned on attendance basis	\$68,717 16
Total amount apportioned	\$103,137 75
Balance unapportioned	\$127 45

NOTE.—The total apportionment to the High Schools of the State for the school year has been as follows:

January 7, 1908, on school basis, \$153 78; on attendance basis, \$2 47	
March 3, 1908, on school basis, 297 21; on attendance basis, 4 79	
July 7, 1908, on school basis, 201 29; on attendance basis, 3 24	
Total on school basis, \$652 28; on attendance basis, \$10 50

STATE TEXT-BOOKS.

Text-books for the pupils of the grammar schools of California are selected through the State Text-Book Committee, which consists of the Governor of California, the Superintendent of Public Instruction, and one member of the State Board of Education. The action of the committee is ratified by the State Board of Education, which enters into a contract for a period of from four to eight years with the firms owning the plates of the books desired, at a certain specified royalty per book sold. The books are printed in the State Printing Office and are supplied to the pupils of the State at the cost of production, which includes the cost of manufacture and the royalty, plus the cost of postage on the book.

The books are sold throughout the State by regular book dealers who have filed with the Superintendent of Public Instruction an affidavit agreeing to supply the books at the price fixed by the State Board of Education. There are something over four hundred dealers who handle State text-books. The price of the State text-books is fixed by the State Board just prior to the close of each fiscal year.

During all the years prior to July 1, 1904, there were sold 4,052,327 books, amounting to \$1,429,297.52. The number of each kind sold and the amount of money received for them, as well as the royalty paid for the use of plates of certain books, is as follows:

Name of Book.	Number.	Amount.	School Book Fund.	Royalty Fund.
Revised First Reader	340,594	\$54,495 04	\$54,495 04	-----

STATE OF CALIFORNIA
OFFICE SUPERINTENDENT PUBLIC INSTRUCTION

SCHOOL ARCHITECTURE

AND

SCHOOL IMPROVEMENT

FROM THE

TWENTY-THIRD BIENNIAL REPORT

EDWARD HYATT

SUPERINTENDENT OF PUBLIC INSTRUCTION

PREPARED AT THE REQUEST

OF THE

TAHOE CONVENTION OF SUPERINTENDENTS

SACRAMENTO, CALIFORNIA

1909

Printed at the State Printing Office, Sacramento, Cal.
W. W. SHANNON, Superintendent

INTRODUCTORY.

TO THE SCHOOL TRUSTEES OF CALIFORNIA:

Ladies and gentlemen, in your hands lie the purse strings of the public schools in all this great State. Therefore, to you must be addressed any plea for the future improvement of our school property, as a whole. You and your successors are the only ones who can translate good ideas into good schoolhouses and beautiful school grounds as time goes on.

If I had you all together, so that I could talk to you face to face. I should try to say very earnestly something like this:

"My friends, it is almost as cheap to build a beautiful schoolhouse as an ugly one—if we know how. California, like old Greece, is a land of beautiful things. Sun and sea and mountain, streams and trees and flowers conspire to make it a place delightful to mankind, inspiring to the painter, the poet, the musician, attractive to all the world. This beauty is a practical asset of vast importance to the State. Our California landscapes must become famous for their tasteful and harmonious schools, everywhere, and not outraged by dreary stables for schoolhouses, slovenly barnyards for school grounds. Prosperous people find it profitable to have tidy and well kept houses, fences and grounds. Our schools, supported by the public, should certainly carry an air of prosperity. We must not allow our little girls to absorb slatternly lessons at the school. We must not allow broken windows and unkempt surroundings at the school to infect our little boys and make them grow up shiftless, ne'er-do-weels."

I am anxious for every school trustee in the State to get this message in one way or another. We have many examples of splendid schools up and down the State; but there is many a one yet of the other kind, that needs to be born again. The responsibility rests with the School Trustees. Teachers, parents, and people can help the thing along by creating good public sentiment; and certainly they should study, talk, write,

work, to that end without ceasing. But finally it all comes up against the Trustees; without their interest, their active, intelligent, self-sacrificing work, it can come to naught.

Therefore, we have tried to get together some material that will be helpful and encouraging to you who wish to add to the glory of the Golden State by improving the public school. I hope it will interest you to see some of the latest ideas of our best school architects, some thoughts from enterprising superintendents, some idea of the best modern school buildings, some feeling for the adornment of school grounds. I beg you everyone to read all this, think about it, and try to find the best way for you to help in the work of making our public schools really worthy of California.

Very truly yours,

EDWARD HYATT

This is to record a full measure of gratitude to the superintendents, architects and other persons who have helped to write this book. No one has received a penny for his service, and each has made it a labor of love. And it is to record no less of appreciation and gratitude to the officers and workmen of the State Printing Office, without whose careful and artistic craftsmanship all would have come to naught. Mr. Shannon, Mr. Alexander, Mr. Cuthbert, Mr. Mauricio, Mr. Burns, Mr. Galvin, Mr. Atkins, Mr. Sullivan, Mr. Higgins, and the workmen under their direction, have been assiduous and untiring in their efforts to produce the best possible results.

SCHOOL ARCHITECTURE.

An original article prepared for this purpose by F. S. Allen, a school architect of Pasadena. The pictures illustrate some of his own work. Observe his idea of a large opening in the ceiling or near the ceiling to draw off the hot air in warm climates. The attic into which this opening leads should be freely open to the outer air through screens under the eaves.

The colored outside cover of this book, designed by C. A. Rothe of Sacramento, shows a bit of Mr. Allen's work, the high school at National City, in San Diego county, one of the best examples in the State of the pure Mission style. Doesn't it have a fine, distinctive, California flavor?

MY DEAR SIR:

Replying to yours of recent date would say that in my opinion the first thing to be done for any school, whether in city or country, is to procure large grounds, never less than one acre, while five acres are preferable.

Grounds.—The grounds should be high and rolling, so that a student can rise up a slight incline on approaching and *look up* to his seat of learning. Large grounds afford space for ample playgrounds, lawns, gardens, etc. All these things come in time to a school in an advancing community.

Large grounds afford a chance for one-story schools, avoiding the climbing of stairs. In cities where High Schools have to accommodate from 1,000 to 1,500 students, they should never be more than two stories high, with the first floor not over three feet from the ground—basements are not the place to educate the next generation.

Size of rooms.—The ordinary grade room, 24 by 30 feet, contains 720 square feet of floor space and will seat 48 High School pupils at single desks, allowing 15 square feet per pupil. If they are built larger, they will sooner or later be overcrowded, to the injustice of the pupil, teacher, and taxpayer. In a 10 or 12 room school one or two rooms might be made large enough for 60 or 65 pupils in emergency cases—but better not.

In High Schools the recitation rooms should vary from 16 by 20 to 24 by 30; about one half being 20 by 24. Rooms that are used for such special work as bookkeeping, drawing, domestic science, manual arts and science laboratories must of course be larger, and should vary in size according to the size of the school.

Lighting.—The lighting should always be from the left side of the pupil, and the window nearest the teacher should be about eight feet from the end, while the last window at the other end might come as near

the rear wall as practicable. This rule, however, can not always be followed rigidly without seriously affecting the external design.

In the ordinary one-room school often found in the country districts, with three windows on each side and perhaps two in the rear, the defect in lighting can be remedied fairly well by painting the glass of the windows on the pupils' right and rear a solid black, thus receiving all of the light from the pupil's left. If this is insufficient, the light can be increased by the introduction of prismatic glass in the upper sash of the

CLOISTERS.

Mr. Allen highly recommends cloisters for California schools, tempering the light and affording sheltered places for play.

windows at a very small cost. If still more light is needed, leave the black paint off the rear window nearest the left side and cover it with a white Holland shade, which diffuses the glare of light from the window.

Where fan ventilation is used all rooms would be best lighted from the north, but where there is no means of mechanical ventilation, the windows should be so placed as to admit sunlight into all rooms at some time of the day.

The best light for a schoolroom is north; next best, northeast; then south, then east, and lastly, west.

In schoolrooms lighted from one side only there should be two or three high transom panels on the opposite side above the blackboards, which could be opened for direct ventilation across the top of the room, in hot weather, when the windows must be open. These panels should be hinged at the bottom and be of wood or very dark glass that would admit no light.

Never put any windows in the rear of the room—they only throw the shadow of the pupil's head and shoulders on his desk and make a strong glare in the teacher's eyes. The bottom of the windows should be three or four feet from the floor, and the top as near the ceiling as possible. The proper amount of glass surface in the windows in relation to the floor space often varies according to the height and width of the room, but from 20 to 25 per cent is usual in a well-lighted room.

School at Claremont, built in the California style.

Venetian blinds are the best window shade to equalize the light; they should always be clear down and tilted at such an angle as to exclude the sun's rays only—then they will reflect the light on to the ceiling, which will re-reflect it to the far side of the room. They catch dust, it is true, but if let alone by the pupils and teacher, as they should be, this is no objection as they can be easily cleaned by the janitor.

The windows should never be opened when the ventilating fan is running, except by the engineer or janitor who has charge of the ventilating plant. No ventilating plant will ventilate all out of doors.

Ventilation.—In cold climates gravity ventilation works fairly well, but its efficiency is always more or less affected by the varying outside temperature and winds.

In mild climates, such as the southern part of California and the coast country, mechanical ventilation is absolutely necessary. This is accom-

plished best by a fan to drive the fresh air into the rooms. The fresh air inlet of a room should always be about one fourth larger than the foul air outlet; this keeps a slight pressure of air in the rooms and more or less goes out through window and door cracks, which prevents their letting in cold air. All foul air flues should take the air from the floor of the schoolroom, but in warm climates they should also have a large opening near the ceiling, which should be opened only in hot weather, to take off the hot air of the room. The ventilating fans may be driven

Entrance of Claremont School.

by steam or gas engines, electric or water motors, electricity being preferable.

Heating.—The heating may be done by anything that will raise the temperature of the fresh air taken from outside to the proper degree of heat, steam or hot water coils, cast iron or sheet steel furnaces. But this heat-radiating surface should always be placed in the heating chamber, which is usually in the basement, but could as well be on a level with the schoolrooms where mechanical ventilation is used.

In the small one or two-room country school, where mechanical ventilation is not feasible, very good results can be obtained by a large cast iron stove with a sheet iron inclosure, say 3 or 3½ feet in diameter, and extending from the floor to a point about seven feet high. There should be a fresh air duct with a damper, 12 by 24 inches, from the outside,

passing under the floor and opening around the bottom of the stove, thus affording fresh heated air to the rooms. There should also be a foul air duct about one foot in size built into the wall near the stove, with an opening at the floor; this duct, however, should be provided

Towers of the San Diego High School.

with a damper that could at times be closed to prevent back draughts when the fire is low.

The foul air flues from the schoolrooms can exhaust into the attic providing it is well ventilated, or can be run out through the top of the roof with practically equal results.

Wardrobes.—The wardrobes for grade schools are often arranged in different ways, but one of the best systems is to place them in the rear of the room in sections about two feet deep and five feet wide, with a rolling front to each, and leave a few small openings in the wardrobe ceiling so that some of the air from the room may pass out to a vent flue or the attic. This will dry the wet clothing when the fronts are closed to within an inch or two of the floor. These rolling fronts can be had with blackboard surface so as not to decrease the amount of blackboard in the room.

This type of wardrobe, while being ventilated, also takes less space than any other, is always under the teacher's eye, and avoids the temptation of thieving.

Blackboards.—A schoolroom should have blackboard space on all sides and be from three to four feet high for pupils and five feet for teachers. For the first and second grades it should not be over 18 or 20 inches from the floor, but for the seventh and eighth grades about 30 inches is best.

Regarding the kind: there is a very good kind of liquid slated paper or wood fibre brand that comes under various names from the factory, in sections about twelve feet long, and is tacked or glued upon the wall on a board back. It is very good for cheap or temporary buildings, but owing to its absorbent nature it often swells away from the wall in damp weather, or when placed upon a brick wall in a new building which contains more or less moisture. The most expensive blackboard is made of natural slate, and if it could be had equal to the samples shown would be very desirable, except for the joints which must occur and the bad spots which often come in part of the slabs. A good cheap board is made by glueing two or three thicknesses of a good quality of Manila paper upon a smooth plastered wall, and giving it two or three coats of liquid slating. Some artificial blackboards are made of ground slate, sand, cement and steel filings mixed into a mortar pulp and put on about one-eighth of an inch thick with a trowel. But this board, while it has no joints, is not satisfactory unless put on by an expert who can get a soft velvet surface to it.

There is a wide difference of opinion among teachers as to the best color for a blackboard—black, gray, green or brown. Plate glass, sand blasted on one side, is sometimes used; secured to the wall the same as natural slate and backed with any desired color of paint.

Tinting of Walls.—The walls and ceilings of a schoolroom should be colored in very soft tints—the creams are the easiest on the eyes, using nearly white for the ceiling, a darker shade for the walls, and a light tan for the wainscoting. Great care should be observed in using blue or

green that they be not very strong, and never get a dark color above a lighter one.

Plastering.—The plastering should always be a very fine sand finish that will not reflect a glare of light, but if the plaster is a smooth troweled finish the tinting or painting of the walls should be done in flat colors to obtain this result.

A schoolroom should not have wood wainscoting or baseboard; they should be of hard plaster or cement, troweled smooth and painted in flat colors or enamel, and may be marked off for tile if desired.

Drinking Fountains.—There is one made, known as the artesian fountain, that has a small stream constantly flowing upward where one can, by placing the mouth over the stream, soon learn to drink easily without using a cup which is likely to be contaminated by disease. The State law should enforce their use. There should be drinking fountains placed in the halls and playgrounds, easy of access.

Toilets.—The toilet rooms are a very important feature of schoolhouse construction and had best be outside when there is no means of mechanical ventilation. The best plan is not to supply them with fresh air, but to have an ample foul air flue in which is placed a small electric fan, with the switch governing same located in the janitor's room, thus giving them positive ventilation even when the ventilating plant is not running. This foul air flue should extend up through the roof and have no other connection—the supply of fresh air will then leak into the toilet room from the rest of the building. Individual water-closet bowls are the best but quite expensive. The long range are largely used, but are disgusting. The dry closet has been used quite successfully when well ventilated, but is not desirable owing to the likelihood of being neglected. The dry earth closet is not desirable, where largely used, owing to the great amount of unpleasant work connected with it.

Where water and sewerage are available it is a good plan to have a "service" room two or three feet wide behind the toilet stalls in which all of the flush tanks and pipes can be placed entirely out of sight and reach of the pupils. A small register, say six inches square, placed in the wall behind each bowl will take all foul odors of the toilet room into the service room where the foul air flue and electric fan draw the air from the latter. It is desirable to keep the windows and outside doors of toilet rooms always closed, so that the fan will have to draw its supply of air from the school building proper as it passes through the toilets.

Urinals are the hardest things in the world to keep sweet and clean, but there are some makes of patented urinals that are very satisfactory. However, a great deal of the success of any kind largely depends upon the janitor in keeping them clean. The secret of ventilating them is to

take the foul air off at the floor, either through the trough at the bottom or through ventilators at the ends, into a service room or ventilating flue supplied with an electric fan and connected with the flue from the toilets. Never try to ventilate a toilet room from any place but at the floor line.

Toilet rooms should have a smooth cement floor, walls and ceiling, and as little wood work as possible. The stall partitions should be made of cement plaster; each stall should have a 2 by 4 foot double acting door, but no lock. The walls and ceilings should be given five or six coats of white enamel—and then kept clean. Never paint and sand a toilet room. The janitor should stay about the toilet rooms when they are most in use and see that they are properly treated. A child should be taught to take the same care of the school toilet room as he would take of the one at home.

Baths.—Every school should be supplied with one or more shower baths, both for boys and girls; they can be built at little expense and can be located in the same room with the toilets or in separate rooms. They should have two small dressing rooms, 3 by 5 feet, to each bath, and should be built and finished the same as above described for toilet stalls.

Very truly yours,

F. S. ALLEN.

Oak tree in the middle of the road.

See this fine old tree, that has been preserved in spite of the march of improvement. It does not damage the appearance of this beautiful boulevard, but adorns it and adds to its charm. There is a lesson in this to hustling boomers who are eager to dig out trees to make room for sidewalks, gutters, curbs, fences, buildings. The trees are of more value than the improvements. Build around the trees, not through them; and they will give distinction to your neighborhood. Beautiful surroundings are an asset and they have a cash value that grows greater as time goes on.

HOW TO HIDE UGLY THINGS.

Here is a hint for screening the stables and outbuildings of a school. These two pictures show a shed on the grounds of the California Poly-

technic School at San Luis Obispo before and after it was covered by a wonderful growth of the Australian pea vine. This vine is a perennial,

with evergreen foliage and clusters of rose-pink blossoms. Young plants may be secured around the base of the old ones by layering, or they may be grown from seed. The growth shown in the picture is four years old and it is still a thing of grace and beauty.

THE INTERIOR DECORATIONS OF SCHOOLS.

This keen and scholarly article is by Walter J. Kenyon, a California schoolmaster. It is taken from the *School Review*, November, 1906.

Our graded school requires of its pupils a classroom attendance of eight thousand hours. This is a heavy tribute to levy upon the period of childhood, and it may well purchase other things for the pupil than an acquisition merely of those weapons of traffic dear to the utilitarian's heart—the so-called rudiments. It is the present purpose to discuss some of those silent influences which, without interference with the traditional purpose of the school, make for a richer childhood and a better community.

The first of these concerns the color effects of the classroom. When a competent architect plans a schoolhouse, he presumes of course that, given due time for drying out, the plaster walls will be appropriately tinted or papered, and in such tones as will give a harmonious color unity to the whole room. It is noticeable, however, that in the average American schoolhouse this ideal is seldom consummated. We rush our furnishings in, and the painters and plasterers have hardly packed up their tools before the classes are settled in an established school routine. And as for those glaring white walls, we "first endure, then pity, then embrace," finally forgetting that the plan was ever otherwise.

There are reasons, however, beyond a mere æsthetic preference, why the schoolroom walls should not be left white. It is the common testimony of physicians that the glaring whitewash aggravates nervous afflictions and injures the eyes. Many a mother diagnoses her girl's nervous headache as a case of overstudy, when it is in reality a product of five hours' exposure to the harsh, blinding glare of the schoolroom walls. And many a boy is condemned as a wickedly disposed nuisance, when he merely exhibits a nervous irritation which a proper color scheme will abate. A well-known Massachusetts physician, Dr. Myles Standish, of Boston, says:

I have often seen children immediately and permanently recover from a persistent recurring diseased condition of the eyes when removed from a schoolroom with white walls, and sent elsewhere to school or kept at home, where the walls are tinted. The principal color of the walls should be of an even tone, so that the amount of light

reflected will be the same from all parts of the surface, as waving or clouded effects are very trying to sensitive eyes. Any color may be placed in its proper position with regard to its safety for schoolroom walls by remembering the general rule with regard to the sensitiveness of the eye to the colors of the spectrum, which is, that the nearer the color is to the red end of the spectrum, the more irritating it is to the eyes; and the nearer the color is to the blue end of the spectrum, the easier it is to the eyes, with the single exception that the extreme violet rays also are irritating.

From this it will be seen that red and all its derivatives should be rigidly excluded, and orange also is nearly as bad, while yellow should never be taken by preference. Greens and blues are absolutely safe colors, and it is not at all necessary that the colors should be pronounced; the depth of the color should be made dependent upon the amount of light coming in at the windows, and upon its quality, as, for instance, whether the windows have a northern or southern exposure, whether the sun's rays can come directly into the room when the sun sinks low in the heavens in the middle of a winter afternoon, and other surrounding circumstances of each individual room.

The color of the ceiling of a schoolroom is fully as important as the color of the walls, particularly when there is any amount of reflected light.

All I have said with regard to the color of the walls is doubly true when applied to the window shades, and this fact should always be taken into consideration in furnishing and decorating a schoolroom.

Medical science is constantly finding new and positive evidence of the pathological effects of color. And it rests with any of us to make simple experiments which will show conclusively the influence of color upon the emotions. Look through a blue glass, and we see a sad, unhopeful prospect, in the midst of which only the utmost exertion of will-power can sustain a cheerful mood. Look through a red glass, and the reverse feeling is aroused. The outlook is one of exaggerated sunshine, which stimulates the imagination, induces a sanguine mood, and suggests action. The blue-glass craze of the seventies was an incident which foreshadowed the wide employment of color as a remedial agent.

We are thus in possession of a more or less definite knowledge of the pathology of color. We know that red is stimulating, irritating, unrestful. We know that blue is quieting, but also depressing. Since the pupil of the elementary school spends eight thousand hours in actual attendance in the classroom, it is of the highest importance to give him a color environment which will not, on the one hand, be a source of depression and melancholy, nor, on the other, an agent of excessive nervous stimulation.

We have such a color in green of the quieter sort. There is a whole gamut of greens, running from light apple down through the stone-greens, or "dried pea," to the deep, rich olives. This series is perfectly adapted to the requirements of interior tinting, either for home or for school. The distinction is often made between a north and south room, reddish buffs and terra-cottas being recommended for the former. This distinction is not vital, however, and we always approach the danger line as we move toward the red end of the spectrum. One of the most delightful school buildings it has been my good fortune to visit is tinted throughout, north and south rooms alike, in low stone-green. Another

building in the same city is tinted in blue (!)—the relic of a former régime—and the effect is so depressing that one experiences a sensible feeling of relief and renewed joy on once more regaining the outer air.

A combination beyond further desire is to be had by coloring the wainscoting and woodwork a deep olive, the walls up to the molding a middle sage-green, and, above that, the walls and ceiling a lighter and neutral stone-green; this combination, of course, with the real slate board. It goes without saying that this coloring shall be “dull finish.”

A striking fact is to be noted just here. The blackboard, the recipient of endless obloquy at the hands of the æsthetic, ceases to offend where the walls are rightly tinted. Indeed, the real slate “blackboard” is never black at all, but a pleasing, quiet gray that has no quarrels. It is only a glaring white wall that thrusts the blackboard into undue prominence, and thus makes it a scapegoat for a fault not its own. Speaking of blackboards, the various experiments in tinting the board have proved anything but satisfactory. The logical and satisfactory combination is a tinted wall and a board of natural slate-gray. A room thus finished is fundamentally beautiful, and is not in urgent need of any further decoration. Speaking generally, we may say that a room properly tinted is nine tenths decorated.

I remember one school particularly, in Andover, when George E. Johnson was in charge. It had not exactly the “dim religious light,” but a quality of air and color which one’s home has, if he has a home. Its rooms were as cool as the aisles of the woods, and as mellow; rooms that seemed to have, in themselves, a personality, and to be sociable when empty. I used to think that not even a Jukes would play truant from such a school as that; and that no teacher, be she ever so mediocre, could quite annul the beneficence to the pupil of such a surrounding.

Regrettably, in the much-discussed topic of school decoration, this matter of wall-tinting has been rather slighted, the emphasis falling more upon pictures. This is partly due to the mad overproduction of the penny prints. With many a teacher the problem of law decoration seems to lie in how many penny pictures she can arrange on her white plaster wall, in friezes and borders, diamonds and circles. There is a principle in composition, very easily understood, which will serve us as a guide upon this point. It is that an aggregation of small, unrelated spots is distressful to the eye and scattering to the attention. It would be disastrous to one’s equanimity to try to listen to a score of people, all shouting at once messages of unlike import. The nerve-racking effect of such a babel is precisely comparable to that produced by a motley collection of picture spots, scattering over the wall in a “promiscuous arrangement,” as an old text-book writer used to say. In composing his picture, an artist is governed by certain principles of composition,

the chief of which is what Ruskin calls "principality," whereby all the elements of the sketch fall into an obedient relation to one dominant feature. The minor color spots in the composition do not exist for and in themselves, but rather as organic parts of the entire sketch. In a very rough and general way, we are to conceive our wall just as the artist does his sketch, and every picture that goes upon it is to be subordinated in an arrangement having in view the appearance of the entire wall.

The first step in this direction is to gather up most of the small pictures and set them together in panels of two or three, instead of hanging them singly, each competing with all the rest. Three penny prints which are merely a vexation to the spirit when pinned up separately, become a genuine contribution to the decorative scheme of the room when they are grouped upon a single panel of mounting-board, first having their margins cut away.* And even in the grouping of these separate pieces on their mount we are yet answerable to the laws of composition. The intervals between the pictures must be less than the margins around them. Otherwise a centrifugal effect is had, and that is weak composition.

If now we have two or three panels of the sort just described, together with a larger print or two of a kind referred to later, we have ample material for our wall decoration. By all means refrain from overcrowding your walls. Remember that, while in a salon exhibit the problem is to get all the pictures up, ours is a distinctly different one. It is to regard our wall as a unit, whose hangings must only confirm its unity. And let us rid ourselves, at the outset, of the prevailing didactical idea that we are "decorating" for the purpose of instruction. Nothing can be more ruinous to the decorative scheme than to start out with this purpose uppermost. The underlying need is that the pictorial embellishment of the wall shall present a few simple and well-asserted claims upon our attention, rather than many and divergent ones. A scattered rabble of small claimants results in a dissipated attention, and this means nervous headaches and kindred things. It is a common experience to leave an art gallery with a backache or headache, or both; associated with aching feet and a general nervous depression. And this condition is not a mere physical fatigue resultant upon walking, but a nerve exhaustion following upon a sustained attention to a great number of hangings, diverse in size, shape, color, and subject, and having no mutual reference.

The subject of frames is not so easily traversed. We may say, however, that, for school purposes at least, it is safest to avoid gaudy and heavily gilded frames. The small passe partout framing is all that is

* For these mounts a material called "cover paper" is to be had at the wholesale paper houses. It costs about two cents a sheet (22 x 28), and offering every variety of delicate gray, neutral green, etc., is both cheaper and better than the regular mounting-board.

needed for prints and for most color pieces. And there is the argument for economy in its favor in that it may easily be done by the teacher herself, or by the more skillful pupils.

As to frames and mats in general, it is well to remember, with Ruskin, that the frame is "a little space of silence"—between the picture and the wall behind it. Where the wall presents one uniform tint it is not really so necessary that the frame should be neutral and "silent" as in cases where patterned wall-paper is used. But the general rule is to be held in mind that the frame is subservient to its picture and should not be too clamorous in its own right. Those ornate golden halos that are given away with pounds of tea are by all means to be avoided. The frame, in all ordinary cases (such as ours), should be exceedingly quiet and say little for itself, remembering that it is but frame, after all.

We are now confronted with the problem of the selection of our picture. First of all we perceive the danger of hanging colored chromos, or paintings. Because only cheap ones are within our means, they are tolerably certain to be bad. And, good or bad, their color schemes will more likely than not quarrel viciously with our wall tint. Thus limiting ourselves mainly to black and white, we may go a step farther and say: Throw out the half-tones, as far as we can afford. A half-tone is the style of print seen in the penny pictures and in most of the ten-cent magazines. It is just what its name implies—it is a print that has lost half of its tone, or virility of light and dark, in the process of reproduction. Examine any penny print under a hand-glass, and we perceive it to be cut up into microscopic dots. Compare it now with an etching, a photogravure, or a pen-and-ink, and this loss of tone is instantly appreciated.

Fortunately there are better things within the reach of the poorest of us. Most of the big art publishers issue, under various names, photogravure-like prints of the world's finest pictures. These are large, fine productions, generally on plates 22 by 28 inches, and they have all the depth and richness of tone of the photogravure. They are had in either black or sepia at the remarkably low price of fifty cents apiece. Such a picture, with its white border cut away and suitably matted, even in passe partout, is good hanging for the king's audience chamber. The generous size of these productions makes them especially appropriate for the schoolroom wall. One or two such pieces, well selected as to subject and reinforced by half a dozen smaller things, etchings or pen-and-ink drawings preferably, are enough for any classroom. By all means avoid overloading your wall and making the onlooker strabismic with a motley display.

But the most important consideration of all is as to the subjects we select. Let us avoid reading our own preferences too unreservedly into

the children, and becoming their self-appointed proxies. The children have not that sense of historical values which is always in danger of giving their seniors a bias. We have not quite learned to distinguish between that which is imposing, from the art curator's standpoint, and that which is inherently beautiful, regardless of its niche in the lore of art. It is one thing to stock a museum of art with the conspicuous milestones of art history. It is quite another to decorate a children's room with things intrinsically beautiful—and beautiful *from the child's viewpoint*. Imagine, for instance, dutifully hanging "Mona Lisa" in a grade-room, simply because Leonardo did it! The pedagogical rush for Italian women, particularly madonnas, has developed into a craze, on the perfectly logical basis that the mother-and-child sentiment is appropriate to our purpose. We have merely been guilty of a little oversight in not directly perceiving that the mature and more or less ascetic conceptions of the Renaissance Italians, catering directly to the churchly ideals of that period, are not very well calculated to provide acceptable mamma pictures for twentieth-century American babies. A sentiment of mother-love—yes, but it must be a mother-love that he can recognize. He draws a keen line between sanctity in a niche and a genuine, unposeful motherhood. And so I say again, if our purpose is decorative rather than didactic, let us gather intrinsic, and, if necessary, unsigned, beauty, rather than the *mélange* of the art museum.

Then again, the masters, who spoke first of all in color, can not be represented in the remotest degree by printer's ink—particularly in the half-tone; and all this bowing and scraping before "penny prints of the masters" is about as near the real spirit of art as idol-worship is to genuine religion. Supervisors of art and students of any sort who address themselves to the educational problem are fearfully apt to mix up their academic acquirements with their native appreciation until they mistake one for the other, and so disqualify themselves for the work in hand. A while ago an inquiry was sent to several dozen artists, teachers, presidents of civic clubs, etc.—men and women who presumably had the matter most at heart—as to what pictures they would recommend for school decoration. The answers, invariably cordial and enthusiastic, almost with one voice placed the "Sistine Madonna" at the head of the list! No stronger evidence could be presented of the incubus of hopelessly academic bias under which the subject rests. "The best in art is none too good for the children," wrote Dr. Klemm. While everybody must agree heartily with this sentiment, what a curious miscarriage of ideas it is to set up the subjective and subtle as the one antithesis to the mediocre! Mr. Vickery, of San Francisco, sounded a hopeful note in declaring that "a good poster is infinitely better than a mediocre engraving." Ellen Gates Starr said: "Almost anything of Millet's is good;" and then, endorsing the mother-and-child sentiment for primary rooms,

she shortly mentioned Millet's "First Step," where others had chosen the "Sistine Madonna."

If we must have madonnas, why may we not take those three or four in which the mothers are in love with their babies and the babies themselves are kissable? Name over Feruzzi, Murillo (that one in the Pitt Gallery), Froschl, and, above them all, Courtois, and, I take it, we have about finished the list. And yet, of these incomparable painters of mother and child, three out of the four are unheard of in the levels where they would win their deserved appreciation if introduced. Add St. Anthony, with his strong natural appeal to adults and children alike, and the rest of our wall we need for less exalted subjects.

If we can once bolster up our common-sense with enough moral courage to leave off this indiscriminate goose-marching after madonnas, even the penny prints, which have come in for such ill-usage in this writing, will have their uses. Just think of Millet, Breton, and Dupré, with their fine realities; Adan and Meyer von Bremen, with their rollicking German sunshine, a ten minutes' bath in which is as good as a day in the country; Sir John Millais and Sir Joshua Reynolds with their galaxy of matchless little maids; and finally Jacques with his sheep, and Barber, Carter, and Adam with their household pets. Think of this diverse and all-satisfying company being put out of countenance and being thrust against the wall, so to speak, by an undifferentiated group of pallid and poseful madonnas, scarce a quartet of whom could either love or be loved, by the most amiable stretch of the imagination! Rather let us be at once exoteric and generous, and give the madonnas over to the sophisticated and tempered academician, to have and to hold for his very own.

Summarizing, let us leave out the mawkish pictures, on the one hand, and the too subtly religious ones, on the other, and make our choice among the sane, joyous, lovable things that are so readily to be had. The principles which nowadays guide us in the selection of children's literature have only to be applied in this question of children's art.

In every schoolroom there are jogs in the wall, narrow intervals between windows, etc., which are not adapted for the hanging of pictures, but are just right for the placing of plaster casts. Since these, even of the Della Robbia order (which have always been chosen with the madonnas), do not carry a particularly emotional significance, as do pictures, we shall have to base our selection upon somewhat different values. Their first utility is purely decorative, having in view the general scheme of the room; so that the shape, size, and general appearance of the piece have perhaps as much to do with our selection as the subject itself. The beautiful "Flying Mercury," for instance, is altogether too fragile to introduce into any schoolhouse. And any statuary for the classroom, however robust in its lines, should invariably be placed above

the six-foot level. Busts of authors and statesmen are as suitable as any others, not with the idea that many children will exhibit an intelligent affection for them, but that they will pleasantly finish the appointments and the color scheme of the room. To do this these casts must, of course, have the ivory finish, which costs no more. Nothing (save a blue wall) is quite so persistently ugly as a plain plaster cast. Even the inevitable dust of seasons does not soften its harsh unfriendliness; and, on the other hand, there are few color spots in the room more grateful to the eye than the embalmed sunshine of a bit of ivory-finished statuary.

Vying in importance with the pictures in the schoolroom are the plants. A sage-green room with a table full of growing things by the window is an abode of joy, pictures left out of the question. And the effect is greatly enhanced if there be, beside the plants, or embowered among them, a little aquarium with a goldfish dawdling in it.

A clever device for the purpose is in use in Stockton. The potted plants are set upon an ordinary cheap table, except that the top is zinc-lined and sunk in for an inch; or, in other words, the edges of the top are raised that inch, making a shallow, zinc-lined trough. The flowers can thus be watered without any danger of leakage, or of unsightly, warped table-tops.

Draperies in the schoolroom—except window curtains, periodically washed—are universally condemned by all who have given the matter thought.

There is some diversity of opinion concerning animals in the schoolroom. Much is urged against caged life before the children. A correspondent covers the question thus: "I object to having animals confined for *entertainment* of young or old, at home or at school. But this allows us some latitude, inasmuch as we may have much animal life about which is not, in a strict sense, confined. It requires an overwrought imagination to commiserate a well-tended canary, for example." A letter on the subject refers pleasantly to "a tame, comfortable kind of animal, or goldfish in a globe, in which is a water plant growing." I knew one class in which a dog or two were in fairly good attendance. They were orderly in deportment, and gave silent and continuous approbation to the whole programme. True enough, the teacher, in her frequent rounds, had to step over an occasional barrier, but I do not recall any schoolroom, before or since, where the spirit was more homelike, wholesome, and perfectly conducive to study.

To School Teachers:

Have you ever talked with your pupils about keeping the schoolroom neat and clean and the grounds attractive? Are there any pictures on the walls of your schoolroom? Does the floor need scrubbing? Are there any piles of rubbish in the yard?

ROOF PLAYGROUNDS.

The crowded misery of our cities grows still more crowded as time goes on. It is becoming more necessary all the time to utilize every opportunity for getting a little more sun and air for the children. City schools are coming to be built so as to use the house tops. Roof gardens and roof playgrounds are coming in vogue.

In New York City, during the summer vacation of 1907, there were eleven roof playgrounds which were open every evening save Sunday. In her report to Superintendent Maxwell, Miss E. E. Whitney, the

"Say, mister, can't you give us a chance?"

Department Superintendent in charge, says, "A competent director clothed with a schoolmaster's authority was in charge of each roof, and but little disturbance occurred. Parents and children alike were welcomed, but when there appeared any danger of overcrowding, the masculine element was excluded; this rule always applied to the class designated as 'toughs.' With rarely an exception, these guests were of foreign birth (many could not speak a word of English), and it was a pleasure to watch their sad faces grow bright under the influences of fresh air and good music. The following program is a typical one of the entertainment provided:

1. Star Spangled Banner.
2. March—Old Faithful (Holzman)
3. Folk Dances.
4. Waltz—Loveland (Holzman)
5. Folk Dances—Concert.
6. Overture—Apollo (Laurendeau)
7. Cornet Solo—Holy City (Adams)
8. Selection—Bohemian Girl (Balfe)
9. Folk Dances.
10. Polka—Tata (Laurendeau)
11. Folk Dances.
12. Selection—Mlle. Modiste (Herbert)
13. Lanciers.
14. March—Dress Parade (Lantz)
15. Finale—America.

Commenting upon the influence of this work upon the young people Miss Whitney makes the following very significant statements: "A marked improvement was noticeable in the behavior of the young women; there was less boisterousness and more regard for the rights of others. A large percentage of girls attending roof playgrounds, work either in sweat shops or at some kind of drudgery; they come to these playgrounds for change of scene and thought, and no old country maidens on the village greens enjoyed dancing more than did these girls under the starry skies. They certainly carry a great deal of good cheer to their homes, doubtless dispelling gloom that otherwise might merge into crime. As the years pass by, the conviction deepens that happiness is a safeguard which can not be ignored." (Ninth Annual Report of City Superintendent of Schools to the Board of Education of the City of New York. 1907, p. 522*f*.)

To School Trustees:

How many years have elapsed since your schoolhouse has had a coat of paint? Is the building a credit to your community? Do you know that it does not cost a very large sum to paint the ordinary country schoolhouse?

WORK-ROOM FOR RURAL SCHOOLS.

Here is a good idea, from the Report of State Superintendent Stetson of Maine.

In every rural schoolhouse there should be a room about nine feet wide and twelve feet long, in which should be placed a small workbench and a few of the common tools used by carpenters. There should also be a limited supply of lumber suitable for making the implements, utensils and apparatus needed in the home, on the farm and in the school.

The room should also be provided with a small cook stove, a few of the utensils used in the ordinary kitchen, a sewing table and such other apparatus as are needed in making the plainer articles of wearing apparel.

This room should be furnished by the people of the community in which the school is located.

The teacher should encourage the children to make use of this work-room in constructing the material needed in the school and the home, and in preparing simple articles of food and in making some of the garments worn by the school children.

It will be much better if the teacher does not attempt to be severely scientific or technical. Most of the teachers do not and many of them

can not act as expert instructors in this work, but they may give general directions and, to an extent, oversee what is done. There will always be members of the school who will have an aptitude for the things in which the teacher has no special skill.

Let it be distinctly understood, from the start, that the teacher is not an instructor in manual training and does not pretend to be; but that she and the children, working together, can provide many necessary articles.

Many blunders will be made and much material will be wasted, but neither of these items should be discouraging. Perhaps there is no better way of learning how to do a thing than by the mistakes one makes in doing it. The knowledge and skill thus acquired develop taste, judgment, ability to meet emergencies and at the same time stimulate originality and invention. Best of all, these activities furnish an opportunity for the children to train their hands while they are using their heads. They also develop self-reliance, independence and love of manual labor and a desire to be physically useful in the world.

A room provided with the material described above and used by intelligent teachers and ambitious pupils will help to give us a student body that will be industrious, enterprising, skillful, self-supporting. It will help solve not a few industrial problems and will furnish a satisfactory answer to many troublesome moral and intellectual questions. It will help to keep the boys and girls in school and aid them in becoming intelligent and worthy citizens when they leave school.

There is a great opportunity for usefulness in this work and it is sincerely hoped that parents, school officials and teachers will appreciate the situation and make use of the advantages which such training will surely give.

To the County Superintendent:

Do you stand up for the Children when a new school is being built, even when you make an enemy of the contractor and run counter to an influential trustee? Do you refuse to allow windows wrongly placed, insufficient light, ineffective ventilation, improper heating? Do you make a study of these things, so that you can guard the Children's interests?

All that is part of your job.

THE GENERAL ARRANGEMENT AND REQUIREMENTS OF MODERN PUBLIC SCHOOL BUILDINGS.

An original article by Louis S. Stone, of the firm of Stone & Smith, school architects, San Francisco. Some of the finest school buildings of California have been planned by this veteran firm.

The Site.—The first consideration on the part of the school board should be to secure an ample site for their new building; one that is elevated sufficiently to insure good drainage, and so situated that the building can get the best facings for light.

Lighting.—In California it has been considered by authorities on light, that the easterly exposure for classrooms is the best. It has also been satisfactorily proved in practical work that school buildings facing

High School at Berkeley.

east or west can be more economically built than ones facing north or south if it is desired to obtain the east or west light.

The new school buildings in Oakland, recently completed, all face west, with a majority of their classrooms on the east side of the building, thereby obtaining what is considered the best lighting.

Arrangement of Windows.—The windows should be arranged on the long side of the room to the left of the pupil and massed together with very narrow mullions. The whole group of windows should start close to the rear wall, and should not come closer to the front wall of the schoolroom than seven feet, the window sills being from three and one half to four feet above the floor, and window heads as close to the ceiling as construction will permit. The heads of the windows should be square. There is quite a tendency on the part of architects to put in arched and round-headed windows to conform to some architectural effect desired

on the exterior. While it is desirable to have the exterior architecturally a thing of beauty, it is much more important to obtain correct lighting first. The round headed or arched windows invariably interfere with the best light and should not be permitted. These windows should be devoid of transoms, as the transom bar and additional space is an interruption to the full and complete lighting of the room. Sometimes for architectural effect it is advisable to place windows in the wall at the rear of the pupil. This is permissible, provided that the windows are

County High School at Sonora, Tuolumne County.

kept above the blackboard and provided with heavy shades, but they should never be placed in the wall facing the pupils.

Prismatic glass which increases the light 25 per cent and diffuses it evenly has been used very successfully, but unless there is some exterior interruption to the admission of the light, or if the rooms are much wider than the ordinary width of 24 by 26 feet, prismatic glass will not be necessary.

Doors.—There is a simple rule that classroom doors should open out, but this rule is very often broken. Care should be taken in planning to show the swing of the doors and see that when the door is open fully

it does not interfere with other doors, projections or run into the stairway. In the designing of the schoolroom doors a very great improvement has been made in the use of either single panel doors or flush doors, the latter having absolutely smooth surface without mouldings or projections of any kind. This door collects practically no dust and simplifies the work of the janitor very materially. If single doors are used they should be not less than three and one half feet wide. If there is a tendency toward darkness in the halls, it is permissible to put transoms over the doors, but transoms are not necessary in the modern school

High School at Richmond, Contra Costa County.

buildings to help light or ventilate the schoolroom, in fact they are rather a detriment in these matters.

Heating and Ventilation.—There is only one thoroughly successful modern system of heating and ventilating, and that is the modern plenum blower system which insures an absolute supply of fresh air, warmed to the desired temperature and giving perfect ventilation. It is not always practical to put this system in smaller buildings only on account of the matter of cost.

A modern plenum system of heating and ventilating means that the heating plant is placed at a central point in the basement or in a separate building outside. Large heavy cast iron furnaces or steam coils are installed to heat the air. Then a blower of sufficient capacity to operate it at not over two hundred revolutions per minute blows the air from the fresh air room through individual ducts to each classroom,

the air coming in about eight feet above the floor. Similar ducts allow the egress of the air from the base of the room, and a continual inflow and outflow of fresh air is the result, if the ducts are properly proportioned. This can be obtained without any inconvenience of draughts. To complete a plenum system, automatic temperature control should be installed which regulates the temperature of each room without the aid of the teacher.

Where ventilation is not desired, a system of direct steam heating is probably the next best thing. This means the placing of steam radiators in the classrooms and will warm the air more evenly than any other cheap system, but for ventilation the windows will have to be depended upon.

Plumbing.—Too much care can not be given the proper sanitary appliances for school buildings. With a modern self-flushing and ventilated type of closets, similar to the "Morgan System" or the "Lewis & Kitchen Range System" or the "Individual Lewis & Kitchen Self-Acting Closet," placed in the basement of a building with a large ventilating stack furnished with a stack heater or electric exhaust fans, to induce good ventilation, no difficulty should arise from sanitary appliances. All of these methods mentioned are absolutely successful and require very little care. The stationary tank closet that is put in private residences should not be used in public school buildings, as there is no ventilating system attached to them and they get out of order too easily.

Sanitary drinking fountains are used very successfully in modern school buildings. These should be placed in convenient places and can be so regulated that a continual water jet is obtained from which the pupil drinks without a cup. Another kind has a foot valve which requires to be pressed down to obtain the water jet. These sanitary fountains do away with the necessity of cups, and lessen the danger from infection in school buildings very much.

Arrangement of Classrooms.—It has been already stated that the easterly light is considered the best. A good size for a classroom in a grammar school is 26 by 32 feet. This can be cut down to 24 feet in width. The standard size adopted by the new schools in Oakland is 24 by 32 feet. In grammar schools each classroom should have an individual hat and coat room at one end of the room opening only into the classroom, with a door at each side. These hat rooms should be five feet wide and as long as the width of the classroom, and should have an outside window. Where a modern plenum system of heating and ventilating is installed the outlet of the air from the classroom should be through the hat and coat room, thus preventing contamination of the air from the coat room to the classroom.

In the finishing of the interior of the schoolroom, greens for the walls have been found very satisfactorily used, with cream colored ceilings. If Oregon pine finish is used a very pleasing effect can be obtained by staining the wood work brown oak, and finishing with a dull wax finish.

The floors of school buildings should be of maple, which will cost considerably more than Oregon pine flooring, but will save money in five years to the department, in additional wearing qualities.

Every classroom should be equipped with a bookcase built in the walls. The best location for this bookcase is on the outer wall between the group of windows and the front wall of the room. This space is the least available for blackboards.

Regarding the blackboards, there is a great difference of opinion. The author has found green Hyloplate blackboard very satisfactory, after ten years use, and then again where the Hyloplate has been poorly put up there has been trouble.

In every school building there should be a retiring room for each sex, placed on the first and second story and a room for the teacher, independent of the principal's office.

Every two-story school building should have at least two broad staircases, broken by landings considerably wider than the staircase. These staircases should be well separated so as to give the best opportunity for use in case of fire.

There are a great many other features about modern school buildings which the author has met in his experience, but the points touched upon in this article cover the principal features that should be closely looked after to obtain a successful plan.

I will say in conclusion that it is just as necessary for a one classroom school building to be arranged properly for light and heat, as a fifty room building.

In many cases the small cost of the building is an excuse for perpetuating mistakes which are absolutely unnecessary.

To the Teacher:

Is your school library fit for a visitor to see it? Is the trash cleared out and burned? Are the books neatly arranged? Or is it a wilderness of torn charts, dog-eared books, ragged maps, kindling wood, dictionary holders, feather dusters, broken desks, all tossed into inextricable confusion?

SCHOOL GARDENS IN LOS ANGELES.

School gardens probably produce their greatest results in the crowded life of the cities. It is of wonderful interest to the children of the slums to see things grow. It stirs within them new instincts of life and beauty. These photographs illustrate some of the work done in the Utah Street School in the city of Los Angeles.

Result of school garden upon a home in the slum districts.

Prize winners in raising flowers.

To the School Trustees:

What do you see when you visit the school? Are the floors and walls unclean? Is the furniture old, worn, ink splotted, unvarnished? Are the curtains and maps raggedly flapping in the wind? Is the stove propped up by a brick? Does the stovepipe sag hopelessly? Is the plastering falling off?

If so, how long, O Lord, how long?

Prize winners in raising vegetables.

Working in the school garden.

To Any One who visits the School:

Do the windows extend up to the ceiling? Are the windows all to the left of the pupils? Is there a space of at least 8 feet in front of the pupils without windows entirely? Is there any way for fresh air to get in? Is there any way for foul air to get out?

If not, there is something rotten in Denmark.

SCHOOL PLAYGROUNDS.

This is an original article, prepared for this purpose by J. H. Reed, the Tree Warden of Riverside. Mr. Reed has spent a long and useful life in the teaching of schools and in the adornment of a beautiful city by the culture of countless thousands of trees.

A Place for Larger Playground.

There is a lot of outdoor room in this country yet, and our boys and girls, housed five or six hours a day in the schoolroom, should have their fair share of it, for their playgrounds. The equipment in physical strength and general health, after the real battle of life commences, as well as while this mental furnishing is going on, to say nothing of the good times due these children in the mean time, is certainly of equal importance with the mental equipment being sought for. And during this school day portion of life, the facilities and management of the school playground may have *very much* to do with this physical equipment.

The scientific gymnastic training or formal exercise that may be carried on in limited space does not serve the purpose for boys and girls. It is frolic and fun-producing games, requiring plenty of room, that they demand and their needs require.

To turn several hundred children on to a patch of ground so limited that as many score would barely find room for their games, their fun and frolic, is as serious a wrong as to overcrowd their study and classrooms.

Our country schools of one or two departments, should have at least an acre for the playground, and not but a little patch for the school building, the children being forced to the street or adjoining fields for their games and frolic.

In many of our young, rapidly growing towns, a location for the school building is selected, with grounds barely adequate for the needs of the few score of children to be first provided for. In a few years an addition to the building is required for increased numbers. New conditions prohibiting extending the grounds, save at large expense, the original ground is often made to serve several times the number for which it was first intended. Either the playground should be increased in proportion to the increased capacity of the building, or a new building where ample grounds are available should be provided in place of an addition to the old. Even at material increase of cost, and even convenience of location.

The additional few thousand dollars and some inconvenience can not be set off against the health and physical building of the succeeding sets of hundreds of children, as they come and go during the many years the building will be occupied.

No better investment can be made by a town than the money spent in providing ample playgrounds for the successive generations of children, to whom they will minister health, strength and gladness.

Playground Supervision.

Should there be some appreciative direction of sports, games, and conduct on the school playground, or should the children be let loose like a lot of young colts in their corral to have their fun out in their own wild way? Certainly there should be no formal rules or harsh strictures that would repress the freedom of the sports of the children. But it seems

A corner of the grounds at the Victoria School, in Riverside County. Surely it is better for little children to breathe and grow in such a place as this than mid scenes of squalid desolation. James Mills is the school clerk who is responsible for these beautiful grounds.

to me some judicious direction may be given to games and frolic, if done wisely, by one thoroughly in sympathy with fun-loving children, and whose business it is to look after this part of their education.

Among boys and girls, as well as men and women, there are always masterful spirits who insist on ruling, often in an overbearing way. Then there are the timid spirits and physically weak, who need the benefit of cheerful play the most. A wise supervision that would hold the former in check, and encourage and urge on the latter, from day to day, week in and week out, I am sure would be of real and great value.

Besides, there is the opportunity of suggesting new or improved games and exercises, and in a quiet way of encouraging fair play.

I believe the average boy and average girl, when starting to school, is honest-minded and well-intentioned, but we well know that in large companies there are exceptions, whose evil influence is gradually insinuated into the minds of the naturally good, like a poison. Much of this baneful influence on the playground I think may be prevented if it is somebody's business to be advised of these bad characters, and discreetly manage to prevent the contamination.

It seems to me that some wise supervision on the playground, beyond what is practicable for the teachers to give, may accomplish much for both the health and morals of the children, especially when assembled in large numbers. In the country and other isolated and comparatively small schools, the teachers can manage the matter very well, but in our large town schools it seems to me that this department of school work is of sufficient importance to demand special service—a professor or directress of playgrounds, if you please—chosen with direct reference to his or her special fitness for the delicate and important duties.

The School Playground Should be Beautified.

I recently visited one of our southern California towns somewhat noted for its beauty, because in the "well to do" portion the streets margins and residence frontages are adorned with trees, flowers and well-kept lawns, with a beautiful little park near by where visitors go and exclaim, "What a beautiful city." In another part of the town, where the work-a-day people live, where most of the children are raised, I found street after street with scarcely a tree to relieve their barrenness, with but here and there a cheerful frontage with lawn and flowers. In the midst of this dreary section I found a children's playground—a good-sized lot, surrounded by a homely board fence, utterly unrelieved by tree, shrub or flower. It reminded me more of a corral where mules are kept over night rather than what a children's playground should be.

It is in such neighborhoods that the school grounds should be made bright and attractive by plant and tree adornment—so easily secured in our California climate. The lack of this on so many school grounds has no little to do with the bare, uninviting surroundings of so many of the homes made by the grown up scholars when their school days are over. The taste for the beautiful things nature has so lavishly provided for us, and which should be a joy and inspiration through life, needs to be cultivated during the school years.

These playgrounds may be adorned without interfering with their special purpose. The trees should be chosen intelligently with reference to their adaptation to this special use. Short-lived trees should not be planted, nor such as require special care.

The margins of the grounds may be planted to tall growing trees. Where not too cold some of the eucalyptus family serve well for this purpose. Farther north some conifers make beautiful borders; the *Cedrus deodar* serves the purpose especially well where the lower branches can remain.

Small clumps of shrubs or small growing trees may be placed in corners or on division lines between playgrounds. Some of the acacias do well for this purpose. There are spots in all reasonably large grounds where

A fine pepper tree near the Victoria School, in Riverside County. The pepper is the best school tree wherever it will grow. It stands drouth and forgives neglect; and if it has half a chance, it grows into a magnificent old tree, that weaves itself into the landscape and into the traditions of the school.

single trees can be placed without interfering with games—some of our native trees, as the Sequoia or the common redwood, a beautiful tree when young, and stately when grown—can be placed to advantage. Then there are trees that will bear pruning high that can be grown on any part of the grounds, giving grateful, shady resting places without interfering with play. Of these the pepper, our most graceful, beautiful shade tree of the south, should be utilized. It will quickly grow up out of the way and in a brief time protect a large space from the hot sun. Farther north the slower growing oak can be used for this purpose. Where climatic conditions allow some of the poplars should find room in some of the out of the way spots.

The playgrounds should by no means be cumbered with trees. But a few properly selected and wisely placed will wonderfully transform the appearance of the ordinary bare school playgrounds, without, to any material degree, interfering with children's sports.

The bare feature parts of the school grounds should not reach to the building. A narrow border of grass, a bed of flowers, or low growing shrubs should surround the house except at the entrances.

Outhouses and sheds should be covered with some sort of climbing plant.

A little intelligent effort, with a very moderate expense, will give attractive premises for the children's play hours, and add to their pleasure when these glad days are but a memory.

AN OLD-FASHIONED SCHOOL.

Old-fashioned, yes; but how cosy and comfortable it looks. The children who grew up here will look back at their old school with pleasure and delight. Some one has been **caring** for it. It has a homelike atmosphere, making strong contrast to the forsaken, barnlike aspect of so many rural schools.

All public-spirited and intelligent people will agree with Dr. Draper, in his plea for more beautiful schoolhouses and school grounds, when he says: "If we see a building that is attractive, with trees about it, and with some green sod and flower beds in the summer time, and with a whole and bright American flag floating over it, we shall be likely to find that things are about as they should be inside. If the buildings look ugly and the grounds unkempt and the flag ragged, we shall be likely to find that the schoolhouse is dirty and unhealthful. We shall also be likely to find that the teacher is lazy and the pupils listless and the work of little account." (See *Youth's Companion* for February 14, 1901.)

SMALL SCHOOL BUILDINGS.

By WALTER H. PARKER, 244 Kearney street, San Francisco, Cal.

Mr. Parker is a School Architect of San Francisco. He has been kind enough to prepare this article with its illustrations for this special purpose.

Apparent disagreements may possibly be detected in the articles by the various architects and school men who have written for this volume. This is quite natural. Different individuals have different viewpoints and varying opinions. The book does not undertake to prescribe some arbitrary and dogmatic set of rules, but rather to show the present ideas of some of our people who ought to know.

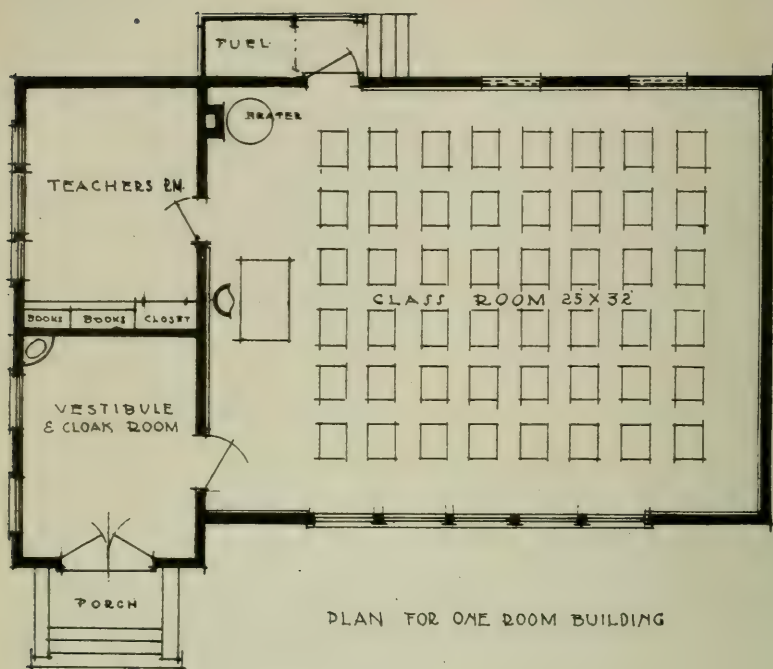

Any building, especially a public building, should indicate the use for which it is intended. It should be an example of good taste to the community, and by combining utility and beauty of design should have

Frame building, one-room school.

an educational effect upon all who enter it. School trustees often say: "We can not afford a building combining those qualities," but the fact is that good proportion and good lines in a building do not depend on cost. It may harmonize with its surroundings, yet be built with the most available material. It may be attractive without being expensive. Wood, the most common building material, is the most natural one for a rural school on account of low cost and ease of obtaining it, and in using it even rough boards may be put together practically and gracefully. In some localities stone, brick, plaster, and cement may be used cheaply and made very effective, if properly handled.

One of the important problems of school boards is the planning of a new building, and mistakes are often made, both in the external appearance and by bad lighting, heating, and sanitation. This may be

PLAN FOR ONE ROOM BUILDING

A two-room building.

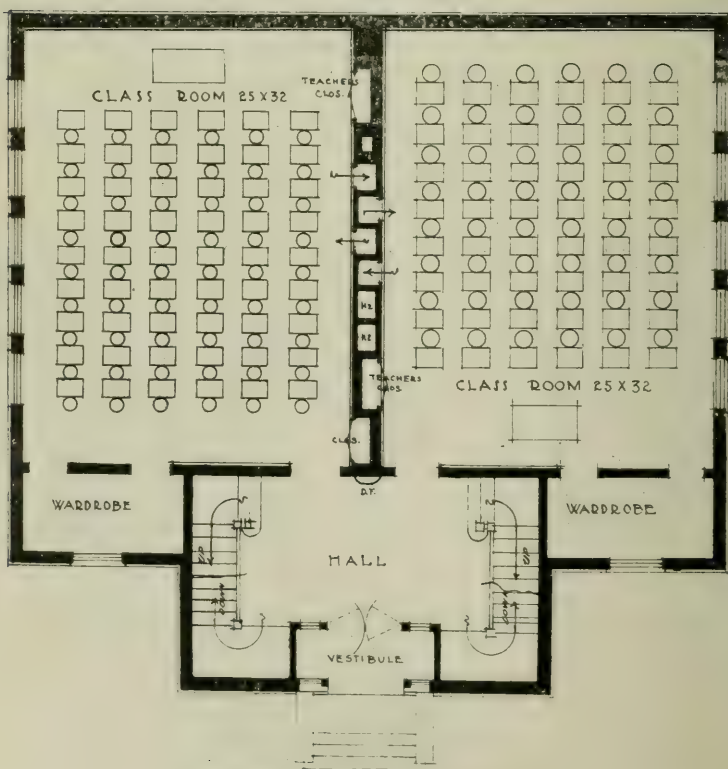

A building in the Mission style, always one-story.

A good type for a three-room school.

A four-room building.

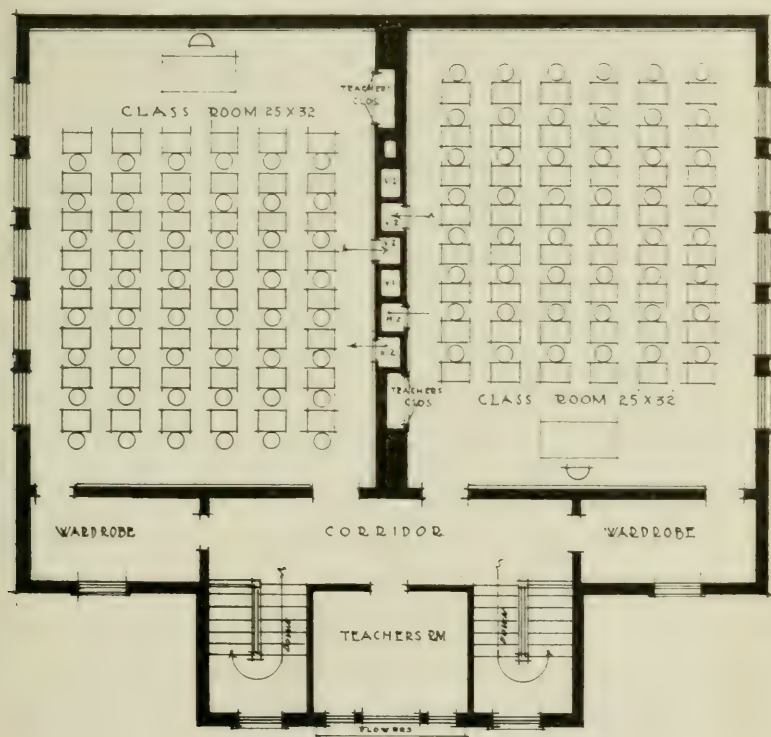

First floor plan, four-room school.

due to financial limitations, but is more often through lack of knowledge of the rules and principles of modern school construction.

In choosing a site, the selection should be made with a view to natural drainage, east and south exposure if possible, and ready accessibility from the main thoroughfare. If there are trees on the ground, so much the better, but they should not be allowed to obstruct the windows, as the great factor in any hygienic room, "good light," also often means "good air." Having secured a suitable site, the building is the next problem.

In a one-room school, a good arrangement may be found in the above plan, which has a combination entry and cloakroom. In addition to the schoolroom proper, there should be a small teacher's room. In any com-

Second floor plan, four-room school.

mon school building, the classroom should be twenty-five feet wide and thirty-two feet long. A greater length is undesirable as being too far for the voice to carry readily, or to read writing on the blackboard with ease. The width of twenty-five feet is not too great to interfere with proper lighting of the side of the room farthest from the windows. This size, 25 by 32, makes a room large enough to seat forty-eight pupils in the grammar grades (eight rows of seats, six in each row), or fifty-four

primary pupils (nine rows, six in each row), all that one teacher can properly handle. If the room is built with a $12\frac{1}{2}$ foot ceiling, this size allows $16\frac{2}{3}$ cubic feet for space to each pupil, with forty-eight in the room, or 14.8 cubic feet, with fifty-four pupils. Aisles should be eighteen inches wide.

In the economical expenditure of public funds for education, the physical welfare of the children should be considered a matter of importance. Defective lighting of a schoolroom, which may impair the eyesight of a number of pupils, should not be tolerated for a moment in this enlightened era. Authorities agree that the light should come over the left shoulder of the pupil, and that the glass area should equal, approximately, one fifth the floor space. Windows should not be located with view to the exterior architectural effect, but should be closely grouped, forming as nearly as possible one large window. Occasionally windows are placed elsewhere than on the left side of the room, but in such cases their use is not to supply light for the pupils, but to be used in flushing the room with sunlight and air when the pupils are outside.

The requirements for a two-room building are similar to those for a one-room building, as described above. It will be found desirable to arrange the floor plan so as to locate the teacher's room between the two classrooms. The furnace and fuel room can be in the basement, which need not be large.

The accompanying plan for a three-room building is suitable for localities where the climate is hot during the school year. The cloistered court provides ready communication between all the rooms, and allows the best ventilation, as well as adding to the looks of the building.

Blackboards should be slate, where possible. If for any reason composition boards are used, the preparation should be put over a well-seasoned board backing, and no time should be wasted with manufacturers who will not guarantee their boards for at least two years. A dull black is the best color.

Windows should be about three feet from the floor and extend to within one foot of the ceiling, where possible. Transoms are not desirable, though sometimes introduced for architectural effect.

In a four-room school, a two-story building makes for economy in construction, and basement playgrounds for inclement weather may be included in the plan.

The rooms should have a sand finish, with cove ceilings. The walls should be tinted a light color, and the woodwork stained in natural color, or light brown, with dull finish. The floor will wear better and be most easily kept clean if oiled or coated with floor preparation.

Toilets are not usually placed in a rural school building, though they may be, by putting a storage tank in the attic, or a pneumatic tank underground, near the building. If used, they should be of some first-

class make, with good plumbing installed throughout. A cesspool or septic tank for sewage disposal in rural districts may be cheaply installed and give good results.

A simple and inexpensive heating system will provide admirably for a small school. The use of heaters having an intake of air piped from the outside is recommended. Such an intake should be sheltered from strong winds, which otherwise will interfere with the uniform working of the draft.

In planning the building, the surroundings should be well considered, and the final general appearance of the whole held to be of greatest importance. A lawn in front of the school always adds a pleasing feature, and is entirely practical if sufficient acreage has been secured for ample playgrounds. As a final word, the author makes a plea for better buildings, as he frankly believes their influence for good is greater than the average citizen realizes.

JUDGING SCHOOLHOUSE PLANS.

An original article by Superintendent Mark Keppel of Los Angeles County. If superintendents will carefully read this and put it in practice and **STICK TO IT**—the schoolhouses of the State will grow better.

In considering plans for schoolhouses I consider, first, the relative areas of the building and of the total inside area of the schoolrooms. If the total inside area of the schoolrooms is not above 50 per cent of the entire area of the schoolhouse I refuse to approve the plans.

Second, I consider the size and shape of the schoolrooms. The smallest acceptable schoolroom should have an inside floor area of 750 square feet and the largest rooms should have 864 square feet. The preferable dimensions for the smaller rooms are 25 by 30 feet inside, and for the larger rooms 27 by 32 feet inside.

Buildings of two or more rooms may have an equal number of rooms containing 750 and 864 square feet of floor space.

Third, I consider the lighting of the rooms. I insist upon having windows upon the left side and at the rear of the room. I realize that this rule is out of harmony with the views of many teachers, and contrary to the practice of many architects. However, I believe that eventually architects and teachers will revert to the bilateral system of lighting. Except for rooms with a northern exposure, unilateral lighting seems difficult to justify. The windows serve the two purposes of lighting and ventilating.

Rooms having any exposure except the north one, receive the full flood of the sunlight at some hour of the day. At that time the admission of light from that particular exposure is impossible, if comfort is to be considered.

If the room has a side and a rear battery of windows, a full flood of high light can be had from side or rear at every hour of the day, and a wise use of window shades will protect the pupils from the direct rays of the sun as it journeys past the first and second rows of windows. The ventilation of schoolrooms is seldom satisfactory except when attained by a forced draught system, or by having the windows open on two sides of the room.

The forced draught system is necessary in cold or stormy weather, and the window system is most highly desirable whenever the weather permits.

The position of the windows is vital. Each row should be grouped as nearly solid as is possible. The piece of wall between two windows should not exceed twelve inches in width and a less width is better.

The rear battery of windows should be placed equidistant from the side walls. The side battery of windows should begin within two feet of the rear wall and should not approach nearer the front wall than eight feet, and the front wall, *i. e.*, the wall which the children are to face, should not have windows, transoms or glass doors. The children should face the softest light of the room. The windows should be high, preferably without transoms, but if transoms are used each of these should not exceed one foot in total width.

Fourth, I consider the sanitation of the building by sunlight, and insist that as far as is *possible* every *closet, hallway, room and office* shall be open to direct sunlight at least once daily.

Fifth, I consider the heating plans. The furnace must not be under exits unless the furnace is in a fireproof chamber. The furnace arms must be short and direct and should never exceed 50 feet in length. If greater length is necessary more furnaces is the only safe remedy.

Sixth, I consider the provisions for the school's right-hand, the district library. It must have adequate space, good ventilation and lighting and heating facilities, and should be easily accessible.

Seventh, I consider the provisions for the comfort of the teachers and of the public in dealing with the school and wish for an office, a rest room, etc.

Eighth, I consider the plans for the toilets and refuse to approve any plans until the toilet plans are satisfactory. This is necessary even for a house of one room. The reason for much of the vicious condition which prevails in school toilets is due to the uninviting, even sinister, influence of the toilets themselves. These seem to say to their users, "evil conditions are desired here, be sure you do your part in making conditions worse."

Ninth, I consider the question of beauty with regard to the building. Other things being right, the more beautiful the building, the more its

chance of being approved. However, I refuse absolutely to sacrifice the purpose of the house, *i. e.*, the work of a school, the life, the comfort, the happiness of its children and teachers, to any so-called law of symmetry or insistent plan of so-called beauty.

GOOD USE OF PUBLIC MONEY.

It is perfectly legitimate to use school money in helping little children to play. Their *plays* are quite as important to their future as their

studies—probably more so. Do not hesitate to fix swings, teeter boards, tennis courts, ball grounds and everything else that will encourage the children to play, not because it pleases them, but because it is necessary to their health and development. The above is a view of a school ground in Napa County.

To the Parent:

Do you look at the water-closets of your school? Are they well kept, wholesome places, fit for modest and decent children to use? If not, go right after the Trustees and the Janitor and the Teacher and ask why.

SUGGESTION FROM THE DESERT.

A teacher from the Colorado Desert makes the following recommendation.

You ask in the December Journal for hints on the construction of schoolhouses. I have but a small one to make, but one I should like very much to see tried. Wherever blackboards corner in a schoolroom, there should be set diagonally across the corner a plate-glass mirror, such as was formerly seen in the Pasadena electric cars, about ten inches across, and the height of the blackboard. It would serve two purposes. It would contribute much to neatness of person among pupils, by allowing them to see their reflection frequently, and most important of all, it would allow a teacher, who might desire to work a little at the board, an opportunity to see almost any part of his room without turning around. It would also be a handsome ornament to the schoolroom.

F. S. HAFFORD.

PRELIMINARY OUTLINES.

City Superintendent James A. Barr of Stockton makes some good suggestions for cities having schoolhouses to build and school grounds to improve; and then goes on to illustrate them, as below. This will be of interest and value to city school boards. He says:

My experience leads me to believe that in calling for schoolhouse plans it is well to submit to competing architects a carefully drawn outline giving a definite idea of just what is wanted. This standardizes the competition, places all architects on the same basis, relieves the school officials from going over matters in detail with each architect and secures better results.

I enclose such an outline that has been used in Stockton with very good effect.

OFFICE OF THE SECRETARY OF THE BOARD OF EDUCATION
OF THE CITY OF STOCKTON, MARCH 1, 1900.

The Board of Education of the city of Stockton, desiring to erect a building for the accommodation of pupils in the First ward of said city, invites architects to submit competitive plans, specifications and estimates for the erection of said building in strict accordance with the following conditions:

A one-story building with the Spanish-Mission architecture throughout, including tile roof, is desired.

The building to be erected on the southeast quarter of block M west, said quarter block having a frontage of 151½ feet on Monroe street (facing east) and of 151½ feet on Washington street (facing south).

The drawings of the floor plans and elevations to be upon white paper or tracing cloth, to be rendered in black ink at a scale of one eighth ($\frac{1}{8}$) of an inch to the foot, and to be only in straight lines, the drawings to consist of the following:

- (1) Front elevation.
- (2) Side elevation.
- (3) Perspective showing front and side elevations (to be taken from the southeast corner).
- (4) Basement plan.
- (5) Floor plan.
- (6) Longitudinal section.

The lettering of the plans to enumerate only the dimensions and names of the various rooms and apparatus and names of architects.

The specifications to describe in outline the materials to be used in the construction of the building, and the apparatus to be made a part of the building, which apparatus must include a system of sanitary water closets and urinals, and a full modern system of heating and ventilating the entire building, including playrooms in the basement.

The specifications to be accompanied by an estimate of the cost of the building complete.

The building is to be constructed of brick. The inside finish to be in natural wood, so finished as to be without shining and reflecting surfaces.

The basement is to be $8\frac{1}{2}$ or 9 feet in the clear above grade level of yard (which is to be graded, approximately, 2 feet above street grade). The basement to contain all the necessary water closets and urinals, the heating apparatus, fresh air room or rooms, fuel room or rooms, lavatories, small room for janitor's supplies, and two rooms to be used as lunch and play rooms.

The building to contain four classrooms, each 27 by 36 feet. Each classroom to contain (in the walls) a closet for specimens to be so arranged, in part with sliding glass doors, as to have a pleasing effect in the room. Each classroom to be provided with a teacher's wardrobe, having a floor space of about twenty square feet and furnished with a stationary wash basin and with a closet in the wall for supplies and books. Each wardrobe is to be provided with a window for outside lighting. Each classroom to be provided with picture molding.

Each classroom to be lighted (*a*) from the long side and as much to the rear as possible, or (*b*) from the long side (and toward the rear) and back (and to the left); in either case in such a manner that the light will fall over the left shoulders of the pupils. The windows to extend to as near the ceiling as construction will permit. The bottoms of windows to be not less than three feet from the floor. The window surface to be not less than one fifth of the floor surface.

All classrooms, offices, halls, recitation rooms, wardrobes and closets

throughout the building (including basement) to be provided with a "cove" ceiling.

The building to be provided with an office for the principal. Principal's office to contain ample closet room for supplies for building, for general library of building, for school exhibit and for collections, and to be well lighted, so that it may be used as a reading room.

The building to be provided with cloakrooms, which must be well lighted, heated and ventilated.

The halls and stairways to be broad, ample and well lighted. The main hallway should be at least 12 feet in width. Entrances from basement to main hall are desired. Risers should not exceed five and one half inches.

Blackboard (kind to be approved by the board) to occupy all available space around classrooms, the vertical width to be not less than 48 inches, provided that on the side of the room behind the teacher's desk the board shall be 72 inches wide.

While architects must keep the cost of the proposed building within the prescribed limit, and while the conditions laid down must be followed, they are to have full liberty in planning and in adding such conveniences as they may desire.

The building ready for occupancy, complete in every particular, including all necessary heating apparatus, water closets, sanitary and other appointments throughout, with the exception of movable furniture, must not exceed in cost the sum of \$15,000, excluding the architect's commission and cost of superintending the construction of said building.

The author of the plans, specifications and estimates first in merit (if any such be so considered by the board) shall be paid the sum of \$150, which, in the event of the plans, specifications and estimates not being used, shall be final payment for the same, the said plans and specifications to become the property of the board.

The author of the plans, specifications and estimates second in merit (if any such be so considered by the board) shall receive the sum of \$100.

If any of the plans be used at any time in the construction of a building in the city of Stockton the architect shall be paid the usual commission of $3\frac{1}{2}$ per cent for working plans and complete specifications and detail drawings, or 5 per cent for complete services, including supervision, if the successful architect be selected by the board to supervise the construction of the building; in either case less the amount previously paid, providing, however, that no additional compensation shall be allowed the architect if the lowest and best bid for the construction of the building complete exceeds the sum of \$15,000.

The Board of Education reserves the right to reject any and all plans, specifications and estimates submitted.

The Board of Education reserves the right to employ a superintendent of construction.

All plans, specifications and estimates submitted will be received by the Board of Education, room I, High School Building, up to 7:30 o'clock P. M., April 19, 1900.

THE PROBLEM OF THE RURAL SCHOOL.

An original article prepared for this purpose by Prof. I. P. Roberts, who was for thirty years Dean of the College of Agriculture in Cornell University. He is now professor emeritus of Cornell, and resides in California.

As one visits the rural schools of California he is at once struck by the youthful appearance of those who attend them. The teachers are generally young ladies of tender years, often just trying their pinions to see if they can fly; the pupils, few in number, are almost always very young, and the lads and lasses of middle youth are conspicuous by their absence. Wherever the income of the farmer will permit the adolescents have been sent to the higher schools in the cities and villages; where it will not they are often at home at work because their services are necessary to help secure the family living. But not infrequently they have dropped out because of lack of interest, and sometimes they have even learned to hate the schoolroom actively just at the most critical period of their lives. This is not surprising, for the rural schoolhouses are generally unattractive, their surroundings barren and depressing, and the young people, unconsciously craving something more inspiring than the routine grammar school studies, are discouraged and repelled by what is offered them.

To discover the cause of this condition of things we do not need to go far afield. The income of the farmer in a large majority of cases is so small—especially of those engaged in raising cereals—that their natural interest in education is obliterated by the never-ending struggle to keep the farm from the sheriff and food on the table. In 1900 the average yield of wheat in California was a little less than fourteen bushels per acre and the average price a trifle over fifty-five cents, which yields an average income per acre of seven dollars and seventy-three cents. The yield per acre has probably not increased since 1900, but the average price per bushel has increased about ten per cent. This would make the average income from an acre of wheat in this State about eight dollars and a half at the present time.

The other cereals and hay make scarcely a better showing. Although those engaged in growing fruits, berries and nuts received a far more liberal reward for their labor and investment, their total product in 1900 constituted only about one quarter of the value of all farm produce; while the cereals and hay yielded more than 40 per cent of the total value of all farm crops. The fruit-growers are to a very large extent a suburban class and are able to send their older children into town to school; but the children of the general farmer and of families in the mining and lumbering regions must get their mental training and stimulus from the district school.

It is evident, therefore, that the support of the country schools, not only by taxation, but by the interest and intelligence of the parents, will depend chiefly on the profits of those engaged in producing hay and cereals. If the farmers were sufficiently prosperous and intelligent they would settle their own school question by demanding and securing more experienced teachers, a better equipment and a more rational curriculum. That a large section of them can not be prosperous is clear when we remember that eight dollars and a half is an average income per acre and therefore one half of the acreage must yield less than this.

They have robbed and are robbing the land of its productive power. While those lands which still retain much of their pristine productiveness are yielding forty bushels per acre over large areas, the average of the State is less than fourteen bushels—that is, one half of this acreage is yielding much less than fourteen bushels. This is, in fact, starvation: the crops are starved and inevitably the population on the land is starving too. These people may not be facing physical hunger as do the desperate poor in the cities—for the farm can always be made to yield the last necessary shelter and food—but since there is no margin of profit they must lack many of the ordinary comforts of life and be starving for the deeper necessities of the mind and spirit.

This state of a considerable section of the rural population in California is the direct result of a lack of knowledge of the fundamental principles of successful agriculture. Thus we have a fatal round: ignorance has led the farmer to rob the soil of its fertility; waning productiveness has made him poorer and poorer; and poverty prevents his children from going to school and the farmer from taking that vital and intelligent interest in the rural schools which would keep them up to the standard of the progressive town school. In such a dilemma there seems to be only one practicable remedy: the Government should come to the aid of the rural school as it came to the assistance of the institutions of higher learning forty-five years ago. The Universities and colleges did not and could not then provide instruction in agriculture, the mechanic arts and allied technical subjects. Under the Morrill land grant state agricultural and engineering colleges have been established.

either as separate institutions or in connection with state universities already in existence, and the result has been a marvelous development of the higher scientific education.

By some such state or Federal aid the rural school may be reorganized and revived so that it will hold the country children at home instead of letting them drift away to the congested centers of population, and—what is of even greater importance—so that it can keep the interest of the youth who are now dropping out because of uninspiring methods and the lack of application of the things which they learn to the vital practical problems about them.

A second remedy, which may be applied in some measure at once, is the broadening of the ideal of the country school until it shall become the social center of the whole countryside. In my dreams I see this rural center housed in a large, plain, attractive building, fitted with kitchen and assembly hall for public meetings—social, recreative, educational and religious; a building which will furnish conveniences for carrying on all those activities which the country people desire and need; a place in which any one who has anything to say or do which will improve any phase of rural life or which might stimulate to noble endeavor, should find a rostrum and a welcome; a central meeting place, perhaps for two or more districts, where agriculture will be taught the young and old, and where handicrafts and domestic economy will be taught alongside the three R's.

The social schoolhouse will be located in an ample area, with sheds for teams, with trees and flowers, with athletic grounds, with a kitchen garden, and with good roads leading to it from every part of the district. This center will be presided over by a graduate of one of the agricultural colleges who will give all his time and energies to the public welfare and who will be the leader in all things helpful. He must receive a living salary and his position will be a permanent one, for he should live near by in a cottage set in the midst of a small holding where he can illustrate some of the methods and the value of the subjects taught.

It has taken forty years to establish firmly the agricultural and engineering colleges, but it should not take so long to revive and socialize the rural schools. Certainly the solution of the country school question is not in sending country children long distances to the town schools, but in making the district schools as good as the city schools; their course of study more applicable to the problems of country life; and in making the farmer himself prosperous and intelligent, so that he can keep abreast of modern educational progress.

CALIFORNIA SCHOOL NECESSITIES.

Shade to play in, seats to eat lunches on, swings and playthings—they are *necessities* to children nowadays, no less than books and desks. The picture above shows the grounds of the Longfellow School in Riverside County.

Sometimes a stingy or a narrow man will say, “What’s the use of all

Seats and Shade Trees at the School.

this fuss about the school? The school grounds are as good as at any home in the district, and that’s good enough. It’s better than the place I went to school in, and I’ve got along all right.”

This is bad argument. There’s nothing in it. The community builds the schoolhouse, and it should build as an example of prosperity and right conditions to the future, not revert to the misery of the past. It is a great opportunity for a community to advance.

THE ARRANGEMENT OF WINDOWS.

We have attempted to show, in part, by the following cuts, some defects in the lighting of schoolhouses, and how the windows are arranged to get the best results. Both good and bad are printed, in order that these points may be brought out with emphasis, by the contrast. The criticisms were written by a competent architect, who prefers not to have his name printed as a public critic of his competitors, but who has written with impartial judgment. It should also be noted that these cuts of exteriors can show only the lighting arrangement, and possibly some of the examples of good lighting shown here may have badly planned interiors.

Public school, No. 153, New York. C. B. J. Snyder, Supt. of School Buildings.

This is one of the best arrangements of windows. Note that the light enters from only one side of a room, and the windows are so close together that the piers between them do not cast heavy shadows.

Public school, No. 127, Brooklyn, N. Y. C. B. J. Snyder, Supt. of School Buildings.

Another good piece of work by the same man. A well-lighted building. A pity it is so high. Stairways are a curse to growing girls.

Tenth Ward School, Milwaukee, Wis. Van Ryn & De Gelleke, Architects.

An excellent example of bad lighting. The windows are simply holes punched in all sides of the building, at regular intervals. This sort of a thing is not by any means confined to Milwaukee, however.

Too high. We should afford enough land in America for our children to get sunshine and air space. Ought to have a roof playground.

New Thirteenth Ward School, Oshkosh, Wis. E. E. Stevens & Co., Architects, Oshkosh.

In the same class as the preceding one. Bad, very bad!

It will be comforting for rural trustees to observe that the architects sometimes fall into the same errors found in the little red schoolhouse with equidistant windows on four sides.

Longfellow School, Boise, Idaho. Wayland & Fennell, Architects.

Ideal; light from the left side only, and as little space as possible between the windows.

South Boston High School, Boston, Mass. Herbert D. Hale, Architect.

Abominable for study purposes, and too high, too many stairs to climb. Big city schools that can't afford room for children to live healthfully, that find it necessary to pile up so many stories, they should sell their high-priced land and go further out where the sun shines and where a decent space may be obtained.

New Interlake School, Seattle, Wash. James Stephen, Architect.

This shows that the architect knew how to arrange his light. It is fine. Observe the blank wall. When the skilled architect of a great city school is not afraid of blank walls, why should the rest of us shy off at the idea?

New Cascade School, Seattle, Wash. James Stephen, Architect.

Another splendid one by the same man. See how he avoids the fault pointed out on page 57. A magnificent roof garden, for gymnasiums or playgrounds, could have been made on this huge building.

New High School, Plainview, Minn. Chandler & Park, Architects, Racine, Wis.

This arrangement is very good indeed, but would have been improved by leaving off the small high windows at the rear of the room, and would have been about perfect had the side windows been placed as close together as in the buildings shown on opposite page.

New High School, Berlin, Wis. Van Ryn & De Gelleke, Architects.

This is in the same class as the preceding one ; perhaps a little worse.

The Hazelton School, Flint, Mich. Clark & Munger, Architects, Bay City, Mich.

This picture indicates that neither the architect nor the school board had ever heard of the right way to light a schoolroom.

Saginaw Street School, Flint, Mich. Clark & Munger, Architects, Bay City, Mich.

Exactly similar to the one shown above. Avoid these types as you would a pestilence.

New Public School, No. 61, Buffalo, N. Y. Howard L. Beck, Architect.

This has the light from one side only, but has large piers in the center, which cast big shadows. Compare this with the cuts on page 56. and notice how the defect could have been obviated.

New Grammar School, Pasadena, Calif. Stone & Smith, Architects, San Francisco, Calif.

A good California example. More and more the Mission style is coming into use. It is usually one story; and is well adapted to California landscape and climate.

Fifth District Primary School, Milwaukee, Wis. Ferry & Clas, Architects.

This would be improved if the windows were closer together. Heavy shadows are cast by the large piers between. Notice the blank wall. Why shouldn't it be blank if no light is needed there?

WATER-CLOSETS IN RURAL SCHOOLS.

To improve a thing we must reform its worst points. Unquestionably, the worst point about the rural school is its water-closets. As a rule, these closets, particularly those of the boys, are in a filthy and shameless condition—and for a very good reason—because they are not cleaned and inspected properly. It seems to be a self-perpetuating nuisance—the boys of to-day continually see these buildings in a wet, unwholesome condition, marked by every obscene device and thought that can be made by knife or pencil or chalk. They become familiar with these things and *expect* them to be so—and they *are* so, and continue so when the boys grow to be the men.

It is a bad thing for our small children to come in constant contact with uncleanness and immorality on their school grounds. This condition is not found at the homes; why should we tolerate it at the school? If we can clean up the school closets and keep them clean, it will be a fine piece of work, one that we shall have a right to be proud of—no less praiseworthy than floating the American flag from the schoolhouse or planting it about with trees.

The way to accomplish this reform is this :

First, put the closets into thoroughly good condition—clean, new, brightly painted, with no suggestion of their old rottenness to be seen at all. Hinged seats should be provided, or urinals of wood or iron. Sanded walls are a good thing, too. Everything should be made of double strength, so that rough and heavy use can not damage it.

Second, turn the clean closets over to the teacher and janitor, and insist upon their having the same attention as other school property—daily sweeping and scrubbing when necessary and constant watchfulness. The teacher will be able to manage the children if she is held responsible for it; and if outside trespassers offend, bring them to justice if possible, but let the school *repair the injury at once*. Furnish the janitor with paint, disinfectants, tools, when he needs them. Have a distinct understanding with the janitor as to the things to be done. Let the trustee inspect the closets whenever he goes near, and make somebody smoke for every neglect—and they will stay clean!

Some of the leading superintendents of the State have been asked to briefly reply to the question “What kind of a water-closet do you advise for a rural school?”

Their answers follow herewith. Observe that nearly every one prescribes *inspection* and *care* as the essential points.

ADVICE FROM COUNTY SUPERINTENDENTS.

A closet in the country school district should be of sufficient size to accommodate the needs of the school, neat in appearance, well ventilated, thoroughly painted and most important of all regularly cleansed and disinfected.

Yours very truly,

FRANK C. WELLS,
Of Calaveras County.

I advise an ordinary water-closet six feet by six feet, and seven feet high. There should be not more than two openings, with a bar or board just above them to prevent boys from getting on the seat with their feet. There should be a galvanized-iron or porcelain lined urinal in one corner of the boys' closet.

But no closet will long remain in a decent condition unless the teacher will constantly inspect the place. I urge constant and close inspection.

F. E. DARKE,
Of San Luis Obispo County.

Walls of monolithic concrete, rough.

Dry vault.

Cottage roof, eighteen inches above walls thus providing light and ventilation.

Sunk urinal for boys; opening into vault directly.
Seats slanting from small to large.
Seats sloping to prevent standing on them.
Building proportioned to size of school.

S. B. WILSON,
Of El Dorado County.

A water-closet with pit, or vault, and no means of drainage, should have no door, but rather a screen, extending across the opening, and perhaps around the corners of the building, far enough away to leave a reasonably wide passageway. At the rear of the building, a ventilating tube should lead from the pit up through the roof, projecting far enough to carry away all gases. All this tends to free ventilation and the admission of sunlight.

W. B. PHILLIBER,
Of Lassen County.

The best water-closet for a country school, where a flush-tank and good cesspool are not available, is a dry earth closet. The seat should be built over a large box partly filled with loose earth and supplied with stout wheels. The equipment of the building, which should be of a fair size and well ventilated, would be the school ash can and an iron shovel. The children should be instructed to spread a liberal shovelful of ashes over the excrescence.

The contents of the box must be buried at least once every two weeks and at each removal fresh earth should replace the old. The closet must be swept frequently. This sort of a closet is sanitary and it will be found to be remarkably free from odors.

ROY W. CLOUD,
Of San Mateo County.

One of the most satisfactory toilets for rural schools is the self-evaporating, built on the same lines as the ordinary toilet, with the exception of a flue extending from about ten feet above the roof to the vault below, so arranged that most all the effete matter evaporates; all that is necessary to keep it perfectly sanitary is to put some disinfectant in the vault about once a month.

Toilets for the boys and the girls should be as far apart as possible, and if possible there should be a toilet for the smaller boys and one for the larger. I believe that the unclean, unkept toilet is one of the greatest sources of evil in the schools.

W. H. GREENHALGH,
Of Amador County.

The matter of a suitable water-closet for rural schools is to-day one of the most serious problems that present themselves to school people. The fact that everywhere there is so little attention paid to the proper sanitary conditions, as well as an almost utter neglect of the coarse, immoral tone that surrounds nearly all water-closets, demand from school officials earnest thought and very close attention. For the betterment of the present conditions, I would recommend that in all cases of old buildings made unsightly by the use of knife and pencil that the structure be destroyed entirely and in its place a new, substantial, well arranged building be erected. This structure should be made of corrugated iron, something to resist the small boy with the knife. Every year this building should receive a coat of paint—the very effort to keep it fresh and sightly would command respect. The old buildings, if not destroyed, should be papered and painted; then plant trees and vines around them so as to lend some degree of privacy. As for vaults, let them be deep; and, to improve the sanitary conditions, let them receive a liberal sprinkling of lime, ashes, or dust from the road, every week, or better, each day. Add to these conditions regular, thoughtful supervision on the part of the teacher, and the serious difficulties surrounding water-closets of the rural schools will fade away.

L. W. BABCOCK,
Of Mendocino County.

The location, construction and care of the water-closet, in rural districts, are matters that should receive much more consideration than is usually given them by either boards of trustees or the public generally.

Too often this building is placed in some conspicuous part of the school yard, the entrance in full view, not only of every child on the grounds, but often also of passersby along the road. Not one thought of the child's right to privacy has been shown. We expect the children to grow up modest and pure, and yet we compel them, by our thoughtlessness and carelessness, to action that must blunt the sense of modesty of the most refined among them.

The water-closet is often built to accommodate but two persons when it should be built for ten. In some cases, on the boys' side of the yard, no separate urinal has been constructed. Such conditions can but educate in habits of filthiness. The smooth white walls are an invitation for the expression of vulgar, and, oftentimes, vile thoughts.

Now for ideal conditions. Two buildings, one in each of the remotest corners of the yard, of ample room to accommodate the children.

No expense should be considered too great in insuring privacy on the way to and in the building. Walls covered with a preparation that will resist knife, pencil, or chalk. On the boys' side, a urinal that will absolutely serve the purpose for which it was constructed.

With a little care, in most rural districts, arbors of vines could be constructed leading to the closets, the closets themselves being screened by a lattice covered with vines.

If, then, the closets are kept supplied with a generous amount of chloride of lime, conditions would be more nearly ideal.

E. W. LINDSAY,
Of Fresno County.

I advise the best possible type of water-closet obtainable. I prefer toilets which flush automatically. However, I presume the discussion is to apply to the really rural school, where only one schoolroom is used and the water supply is insufficient. For such schools I advise simple wooden structures built over deep cesspools. The house itself should be made of lumber of the quality used in the schoolhouse. Its frame should be made of timbers at least 3 by 4 inches in size, and should be strongly put together, so that the pranks of the wind or of boys will not wreck the building, and so that it can be moved if necessary without injury to the structure. The boys' water-closet should be provided with a urinal whose drain pipe is large enough to permit the passage through it of a baseball. Small-sized drain pipes have rendered most urinals worse than useless. The seats should be arranged so that the seat board can be taken out. The building should be ventilated scientifically, and the fumes from the cesspool should escape outside of and not through the toilet-room. The building should be well painted and should be thoroughly sanded to a height of six feet. Each outhouse should be protected by an L-shaped fence-shield six feet in height, so that the entrance to the toilet-room shall be hidden from view. The shield-fence should be well built and well painted. As soon as nature can do the work, a fast growing creeping vine should be trained over this shield-fence, thus making a beauty spot of what is usually an eyesore. If there is an ample water supply, and waste must drain into a cesspool, there should be separate cesspools for the toilets and for the waste from other sources. The cesspool abomination is often due to the oversupply of water from drinking waste and from washrooms. The matter of water-closets ought to be determined by the superintendent when he approves plans for schoolhouses.

MARK KEPPEL,
Of Los Angeles.

It is difficult to determine the kind of water-closets which should be built at rural schools. That rural schools should have better accommodations in this line all will agree.

If all rural schools were supplied with flowing water piped to the grounds flush toilets and a septic tank should be used. Most of our rural

schools, however, have no such water supply. In such districts the water-closet becomes a much harder problem to solve.

The great defects of the rural water-closet are its size, appearance, and the manner in which it is constructed. It is such an unsightly building, as a rule, that no one ever thinks of keeping up its appearance.

The water-closets at rural schools should be made much larger than they now are. They should be artistically designed and finished inside and out even better than the schoolhouse itself. The toilets within should be at least modestly located. They should be well constructed and properly adapted to the sizes of the children.

The vault is the important part of a non-flush toilet. It should be located in such a way as not to interfere with the corners or foundation of the building, should be of ample size and should extend some distance beyond the rear line of the foundation. As in the case of the septic tank or vault, it should have concrete sides or walls, and a drain pipe. The projecting surface should be closely covered or have a vent pipe or chamber, of equal sectional area and air-tight in construction, extending upward beyond the roof. The whole vault should be air-tight in its construction, allowing no air to enter excepting that which passes through the seats. Every opening or hole should have a cover so hinged that when out of use it would, by the action of gravity, be closed. A good supply of dry earth—loam or vegetable mold—should be kept in the building and freely used when necessary. These vaults should be cleaned out, through the projecting opening, every summer vacation and the contents removed from the school grounds.

One great difficulty in keeping toilets clean arises from the boys' urinal, or more properly from the absence of it. The want of a urinal results in rendering the seats unfit for use, and this in turn leads to devices which make the whole closet unfit for occupancy. Every water-closet should have a urinal constructed out of lead or enameled steel, and be connected by a lead pipe with the septic tank or the vault drain pipe.

Wherever the water supply of the school comes from, the urinal should be flushed out every night and thoroughly washed once a week.

The bad condition of water-closets is not due to bad construction alone. Much of it can be laid at the door of the school janitor, and not a little belongs to the teacher. The janitor is often a janitress—a girl or a woman. They always feel that the full round of duty is fulfilled when the floor is swept and the desks dusted and the teachers are often too modest to mention the closets.

The teachers should put the care of the closets on the first round of daily duty and see that they are kept clean and fit for use.

JAMES B. DAVIDSON,
Of Marin County.

HORIZONTAL BAR.

Every school ought to have a turning pole for the children. Here is one at the St. Helena School, in Napa County. The posts should be heavy, 4 by 6 or 6 by 6, with square holes at varying heights for the bar. The bar should not be made of iron pipe, for that is slippery and

dangerous; but of hickory wood, with square ends. It should be 6 feet long, with a diameter of $1\frac{1}{4}$ inches. The ground beneath should be spaded up now and then to keep it soft. If a foot of sawdust or coarse manure is kept under it, so much the better. That will avoid broken bones.

THE VALUE AND NEED OF LARGER SCHOOL PLAYGROUNDS.

By Dr. F. B. Dresslar, formerly of the University of California, now of the University of Alabama. The accompanying pictures are by the courtesy of the Playground Association of America.

The instinct for play is one of the most urgent demands of child nature; and the proper equipment of playgrounds is a necessary duty of all parents and school authorities. If children, and in fact, the young of all the higher animals, were not endowed with the instinct for play, were not led into a life of activity through the solicitations of this natural impulse, normal development of their physical life would be

"We like to play. Don't you?"

impossible, and the most important phases of their educational progress permanently hindered.

No gymnasium, however adequate its equipment, can take the place of ample playgrounds where children may play freely, undirected and unhindered. The gymnasium, under the wise direction of one who knows what is needed, is in the case of defectives of great importance. But the necessary restrictions of a well-ordered gymnasium are in the main uncongenial to the normal play-loving child. It is very rare indeed to find the zest and spirit of play permeating the work of gymnastics for school children, even when a full supply of apparatus is at hand. Those calisthenic exercises, which are prescribed in the lower grades of our public schools, are too frequently carried out under a silent protest and with the mark of the tedium of it in every movement

and feature of the children. About all the fun derived from this work is gotten by the mischievous boy, who makes it the occasion for clownish contortions or roguish drives at some unsuspecting neighbor.

However, it is neither my purpose nor my desire to say aught against physical culture as practiced in gymnastics, for I heartily approve of this work when it is adjusted to its proper task; but there is a desire to emphasize the fact that free, unhindered and undirected plays are more potent as exercises for normal children than any prescribed work-fun ever devised. Children who from the first have had proper opportunities for play need very little or no direction in their games; but it

"Barrels of Fun." A swimming pool in Chicago, with sand court on the margin. What a glorious thing this would be, attached to any big California school! Cost too much? Oh, no. It is impossible to spend too much on the children.

has been found that those who have been prevented from engaging regularly in free open-air games do need direction when they are later given access to playgrounds. They seem not to know what to do. They have acquired no game lore from their fellows, and hence have to be taught by some one. Some, because of the early loss of opportunity, lose the desire to play, and take to bullying. For these reasons supervision is needed. Mr. Lee of the Boston Civic League says, "The most striking fact, and the one of cardinal importance in the whole playground question, is, that apart from skating, our unsupervised city playgrounds are apt to be mere disorganized running about—different in no respect from what the boys are doing in the neighboring street—varied by shooting craps and other gambling games. In short, the unsupervised city playground has so far not been a success; and—what is especially surprising—it is the playground in the crowded districts.

where one would expect them to be of the greatest value, that have been least successful.” (See, *Constructive and Preventive Philanthropy*, by Joseph Lee; page 170. MacMillan.)

Such an anomalous condition as this seems to me to illustrate very forcibly what loss of proper play facilities will lead to; and such experiences should urge us to strive more strenuously for practical relief. This lack of play-initiative on the part of city children has been noticed in connection with practically all of the municipal playgrounds thus far established. On this point the Committee on Permanent Vacation

This is what California children should have—large playgrounds, so that they can run and play real games out of doors, in the sun and the air. Contrast this ground with the cramped city lot, covered with huddled multitudes of repressed children.

Schools and Playgrounds for Chicago said: “Perhaps it is well to explain that one of the most noticeable characteristics of all children is the entire lack of initiative in play. It is for this reason that custodians are necessary in order to endeavor to lead them into such play as they can develop themselves, to teach them, in short, what the child of the village and the country seems to know by instinct—to depend upon himself for play, to turn to materials about him to furnish him with toys and means of amusing himself. That the children very quickly respond to suggestions was rather amusingly shown in the fact that when they were being told to bring in horseshoes to play quoits a more than sufficient number was furnished by them, and they all preferred to play with these rather than with regular quoits.”

That children should not know how to play because they have had no opportunity to learn is more than pathetic. It is downright civic dishonor.

The ardent normal desire for fun of a wholesome sort is an unfailing symptom of vitality. Individuals as well as nations are in danger of decadence when they stifle and starve this inborn and essential yearning. As a counteracting or corrective impulse to the urgent sort of life Americans are gradually fastening upon themselves, there should be developed in our boys a permanent craving for healthful outdoor exercises; and for the older ones there should be preached the gospel of

Beautiful tennis courts at Hartford, Connecticut. A suggestion for large schools in California.

fun. In our intense desire for the education of our children we are likely to forget that our chief duty consists in furnishing natural and wholesome opportunities and then of keeping out of the way. We are in these latter days in danger of giving too much theoretical and manufactured direction.

It seems to be a very difficult matter to get parents to realize how important to the comfort, pleasure, and welfare of the children are large and well-situated school grounds. They can readily see that cattle and horses will not thrive and remain healthy when kept in small inclosures, but somehow they do not extend the same consideration to their children. Hundreds of towns and villages, and even many larger cities, could have large school grounds well located instead of cramped quarters in the midst of noise and dust if the people could be persuaded that

the hardship that would be imposed on children in walking a longer distance to school is far less serious than that of being housed in buildings situated on small lots hemmed in by other buildings and immersed in foul air, much dust, and the din of the hurrying multitudes. The small children in the primary classes could be accommodated closer in with some show of reason, but those in the intermediate classes and high schools would be almost invariably better and more rationally cared for, even at the expense of a long walk, if upon arrival at the school-house they had before them a day's work uninterrupted by outside life, and a purer atmosphere from every point of view.

An outdoor gymnasium in Chicago. Under the clear skies of California a gymnasium is better outdoors than in. Make it strong and rough, so that the elements nor hard usage can seriously damage it. It is good to have such things as this in a sheltered space on a school ground, where the children can climb and jump and swing. It gives them more courage and strength, deeper lungs, better muscles. Observe the poor physical condition of the boys in the front row above. Whose fault is it?

In addition to the physical well-being resulting from open-air sports, it must never be forgotten that the playground furnishes a most proficient exercise for that sense of justice, fair play, and unselfishness absolutely necessary in any worthy character. It is my observation that there is here afforded a very considerable part of that drill in democratic ways of thinking and acting essential to the proper training of every American boy. Class distinctions on the playground grow out of cleverness and courage, not the financial or social standing of a boy's

father. There the guiding spirit is he who inspires fair play and succeeds best under the limitations thus agreed upon. Then, too, "team work" is vital in this country, and those who participate in the prevailing games at school are early impressed with the fact that if a team is to be successful there must be coöperation and unified action. Here, as elsewhere, unequal endowments and skill lead to inequality of power; but perhaps under no other condition do boys of the same age meet on more common ground than they do when physical prowess and endurance represent the talents in question. Those boys who are mentally handicapped, or those who have been deprived of the proper early advantages, and consequently make an inferior showing in their studies, on the playground have a more equal opportunity to shine before their fellows and win that stimulating recognition which brings

Here is a larger and more ambitious outdoor gymnasium in the city of New York. What a fine adjunct a spacious enclosure like this would be to any large city school. How it would add to the strength and ability of future citizens.

a feeling of worth and higher self-respect. The leveling process here, as in all kinds of education, is not due to the degradation of those above, but to the elevation of those below.

A large and well-equipped playground with many tennis courts, hand-ball courts, baseball diamonds, running tracks, and opportunities for all sorts of well-established field games is a necessary and a vital equipment for the natural and normal education of our children. For every thousand children ten acres of playground is not too much. No trainer of horses would be satisfied with even this relative amount of space.

You say "this is impossible in cities." Then transport all the children above the fourth grade into the country and back each day, free of charge, and see that it is made possible. One hour each day, whenever the weather permits, should be spent at play, and all children to take part as in their lesson work. Of course, I know the objection will be made immediately that this is a visionary and impossible scheme. I reply that child nature and its nurture demand nothing less, and all objections must be set over against our values of children. *No normal child has ever existed who did not crave opportunity for free play, and no child to whom it is denied will ever grow into the fullness of his normal possibility.* If Groos is right when he says "childhood is for play," then this emphasis is not only just, but vitally necessary.

The other day some high school lads of California were warned by a board of education to keep away from cigar stores and billiard halls during intermissions, for it was urged that they would certainly acquire bad habits in such places. The leader retorted by saying: "Where shall we go? You give us no playground, we are not allowed any freedom in the schoolhouse, and we are in serious need of some unhampered fun and fellowship with each other. Tell us of a better place." The school authorities felt for the first time, I think, something of the significance of this almost inhuman treatment of vigorous boyhood in our cities. If they had dared to answer honestly, they would have been obliged to say: "It is the people's fault, not yours."

I therefore insist that if you call this plan for providing larger grounds visionary and impossible you do so because you undervalue our children. Play is not simply for fun and health; it is demanded by nature as the most natural and helpful process looking toward physical and spiritual enlargement and unification.

But I am sure Mr. Barnes of Kansas hit the nail on the head when he said: "I long ago discovered that the real reason why they (school grounds) are not made more attractive is their limited area. Our people in the West, notwithstanding the low value of land, brought with them the idea that a quarter-acre or half-acre was enough land to waste (?) around a schoolhouse. Outdoor exercise is an essential part of an education. * * * In the West, where the land is cheap, we should have taken five acres for grounds (make it ten) about each schoolhouse."

We have not yet developed the habit, as have the English people, of making due provision for sports a necessary part of the equipment of even our secondary schools. And it will require much effort on the part of those who appreciate the national significance of sports to awaken the public mind to a realization of their importance. In making this assertion I am not unmindful of the great whoop-and-hurrah of modern college athletics. But it must be remembered that there are more than one hundred and fifty children in the elementary schools,

where there is one young person in college. Besides, it should not be forgotten that even in colleges usually not one student in ten takes any active and direct part in college athletics. The "rooters" are much more numerous than the runners.

It is to be feared that many of our school boards would conclude that the authorities of Eton College are poor business managers, were they to wander over the forty-acre cricket field of that famous English public school, and see the opportunity for hundreds of boys to play simultaneously. But against such a possible conclusion could be marshaled the testimony and enthusiasm of the rulers of England. Wellington's well known remark that Waterloo was won on the playing fields of Eton expresses the belief in the value of games held by most Britishers. Moreover, our school boards might get a new idea of the practical if they knew and considered the fact that, in order to get a place in this school for his boy, a father must make an application years in advance of the date when he expects his son to enter. Of course, there is no desire to make it appear that this long waiting list is due alone to the opportunities offered for athletics, but Eton's record in this particular is no small element in her great popularity. The large majority of the masters serving in the great public schools of England owe their positions to their athletic cleverness as well as to their attainments in lines of scholarship.

There was a time in the development of our country, as has been said, when almost every village and town had in immediate proximity "commons," "fields," or vacant lots where boys met, and where "three old cat," "town ball," "bull pen," and many other spunk-begetting games were engaged in; but the conditions have changed, until in most of our cities nothing remains worthy of the name of a playing field.

From a study of the measurements made by the principals of the various schools of San Francisco, as they existed before the fire, I have found that the average amount of playground furnished per child in that city was 17.3 square feet. This means that if all united into one common ground, and all of the children had attempted to play on it at the same time, they would each have had less room than all authorities agree should be furnished per pupil *inside a schoolroom*. A closer study of the data thus secured reveals the fact that 91 per cent of all the children then in the San Francisco schools had access to playgrounds, which, if combined, would have allowed but 14.5 square feet of space to each child. The same degree of crowding in a schoolroom 24 by 32 would allow an average attendance of fifty-three children; a condition which ought not to be tolerated in any intelligent community. The last statements are made possible by reason of the fact that large schools in the most populous districts had less space to devote to play-

grounds than the smaller outlying schools. There was here then not only the suggestion of continued encroachment, but also the plain truth that those children who have the least opportunity for outdoor sports at home are also those who are denied it most effectually at school. The figures given, while actually stating the average allowance of space to each pupil, exaggerated the usefulness of such grounds; for the measurements included not only the playgrounds proper, but all of the space in the school lots outside of the buildings. It must be held in mind, therefore, that a considerable amount of this space represented narrow passageways and unused corners where children can not play with any degree of earnestness. These facts concerning conditions as they existed in San Francisco have been presented not for the purpose of finding fault, but for the sake of illustration. It is my impression that San Francisco was better off in this particular than most cities of her class in our country. And, although she made a very sorry showing before the fire, the immediate future will probably see worse conditions.

Recently the writer tried his best to join unreservedly into the sports of some school boys who were eagerly trying to have fun in a school lot of the prevailing size; but he soon found his attention so distracted with balls flying in all directions and often in such close proximity to his head that he could not develop enough interest in his part of the game to do it with any zest. And he noticed that most of the boys played in a guarded way. The fact is, had they allowed themselves any sort of abandon, neighboring windows and many small boys would have suffered, and then the teachers would have stopped the game.

For the most part, these boys were unconscious of what they were missing, for they had never had room to let themselves out. The street or some unwholesome alleyway had furnished them their only playground, and consequently their play had never been free, easy, and complete. At many schools nowadays, the boys are permitted to use in the school grounds no other ball than the soft gas ones originally made for the nursery. Neither are they allowed the use of a bat with which to strike the ball, but must content themselves by striking it with their half-closed hands. Not long since I watched a game of baseball played in this way, and, during my observation, the ball was not handed (I was about to say batted) at any time more than forty feet from the striker, despite the fact that many supposedly vigorous hits were made. As I looked on, I could not help wondering how much more those boys would love their school, and how much greater would be their sense of personal power, could they be allowed to scatter out properly on a level turf, and with a shapely ash club do their unhindered best to knock the very cover off a real boy's ball.

I venture to say that no normal boy can ever reach his highest and most fortunate development whose life is denied the invigorating stim-

ulus and corrective guidance of the playing fields and the associations of his fellow playmates. Parents and teachers need to look upon play as nature's exalted method of preparing body and soul to enter upon the sterner duties of life without fear, but with faith and eagerness. All this football and baseball and tennis and cricket and hunting, so dear to the hearts of our youth, are unmistakable blessings, and the only sorrow to me about it all is that we are too neglectful of the great majority, and put too much stress on the overtraining of a few. Have you heard that digging in the garden is better exercise for youth than tennis or football? Then know that such a statement emanates from one who has lost the joy of youth, and whose wisdom is thereby limited to a partial view of life as it really exists. All good things can be endangered by intemperance. But we are told that "wisdom resteth in the heart of him who hath understanding." No one can understand a boy and direct him wisely who forgets what fun is, or who would make this world all over to toil and serious demeanor.

The heartfelt and vigorous development of the basal and fundamental motor power is of great value to the future health of our young people; and there is nothing that will give us poise and steadiness of control if back of it all there are flabby, undeveloped muscles, and the hearts of weaklings. You can not cure children of the fidgets or give them a safe and sane grip on themselves unless you base your training on the strength and steadiness which comes from the proper development of the body.

It is but a reasonable service for us to make better provisions for our children's education than we received at the hands of our fathers. Anything short of this would be a necessary failure. A community dominated with any other notion will in the long run prove an unsafe dwelling place. If, as Mr. Carnegie has said, "an honest day's work well performed, is not a bad sort of prayer," then wholesome and life-giving recreation after toil is not a bad sort of thanksgiving.

To the Busy Man:

Have you no time to visit your school?

But you owe that to the future. You can afford to put aside such playthings as stores, factories, and farms for a day to go and assure yourself that a more important matter—the training of the children of your neighborhood—is in good condition. Indifference on the part of the people makes for a slovenly, neglected school.

TO IMPROVE THE NEIGHBORHOOD SCHOOL.

BY EDWARD HYATT.

Every working superintendent knows a dozen schools or more where the growing children of the neighborhood are *steeped* in slovenliness, filth, and immorality during a large part of their waking hours.

Now *there's* a dragon worth our fighting—slovenliness, filth, and immorality are foes to progress, to civilization. Do they seem like strong words to apply to our beloved schools?

But look! Can't you put your finger on a schoolhouse that is a *fright*, unpainted, desolate, a blot on the landscape, fences smashed, windows broken, stove-pipe wabby? Well, that's *slovenliness*, and it's bad because it tends to make the men of the future satisfied with such conditions.

And look! Don't you know schoolhouses in your bailiwick where the transoms are whiskered with cobwebs, the windows plastered with fly-specks? Where the floors have not been scrubbed for a year, the wood-work not washed for five years, the desks cleaned and varnished, never? That's *filth*, and it's bad because it tends to make slatterns and poor housekeepers of the girls who breathe that atmosphere.

And look once more! Don't you know some school water-closet that you are ashamed to enter? Where the floors are wet and filthy, the air pollution, the walls putrid with every obscene device that can be made with knife and pencil and chalk? That's *immorality*. It's bad, bad for the modesty and the morals of the little children who must frequent them.

Would you dismiss all this with a shrug, as something hallowed by time and endeared by tradition as a necessary feature of the American rural school?

But it *isn't* a necessary feature. People don't want their children raised in such conditions. They will support the man who gets out and bangs away earnestly at the solar plexus of this dragon. A superintendent can do the world more good by going out among these actual abuses in his schools than he can by sitting at his desk writing letters. He is, or ought to be, too valuable a man to be cooped in an office. Typewriters are only worth twenty or thirty dollars a month.

To go directly to the heart of the matter, how shall a school *improve* its bad condition? Of course, when just the right man gets to be the leading trustee, and stays so for a term of years, the thing adjusts itself without any trouble to any one else. But there are not enough of "just the right men" to go around—men of intelligence and determination who have time and energy to spare for the school.

And I'm not sure, even if there were enough such men, that that would be the best solution of the difficulty. It is worth while, if we can so work around as to have the improvement come from the heart of the people of the district rather than from one man. It is not well for the people to put in a trustee and then wash their hands of the whole business. Indifference is worse than active crime. For the whole neighborhood to think about school improvement and learn about it and do some of it is far better than for one strong man to do a great deal more in a shorter time amid the indifference, or perhaps the opposition, of the others. That strong man will do a better thing, a more lasting thing, to work up public sentiment for the improvement of his

BEFORE IMPROVEMENT.

Isn't this desolation and hopelessness? Look at the closets! What kind of children would you expect to raise in such a place as this?

school, to get everybody interested in it, to let everybody have a hand in it. Man is a gregarious animal—he likes to do what the others are doing—a popular enthusiasm has wonderful power in doing work and in overcoming obstacles. There is no limit to what may be accomplished by it. Moreover, when you stir up a healthy public sentiment among the people, it lasts—there is always some one among children and grown folks to insist on things being kept up to the standard, always some one who doesn't want things to drop back, always plenty of people interested and watching the school property afterward. It is accounted more skillful, more powerful, more worthy of human ingenuity, to harness the wind or the cloud or the lightning when we have great loads to lift, rather than to tug at them with our own unassisted strength. Hercules was a foolish fellow when he took the Augean stable job not

to talk it up among all his neighbors and have some help—and the stables wouldn't have been dirty so quick in future.

Well, you see my idea. Go out among the people and talk it up. Have public meetings. Send out circular letters. Get the interest and the help of the neighborhood leaders. Appoint a day for a grand Improvement Bee at the schoolhouse, to be attended and taken part in by all the people and all the children of the district.

Get a committee of the thriftiest and most energetic men of the neighborhood to see what is wrong with the grounds, to determine how to remedy it and *to* remedy it. The men and boys can bring teams and plows and scrapers and wagons—and picks and shovels, hammers and

AFTER IMPROVEMENT.

This is the same schoolhouse, but it has been born again. Who will say that these improved outward conditions will not make inward changes in the children who must frequent these grounds?

nails. Probably there will be a carpenter and a painter and a paper hanger among them. Certainly the school can afford some money to buy materials. Surely people would be at hand pleased and proud to donate trees, shrubs, flowers, seeds. What a transformation could be wrought by a dozen or a score of willing workers in a day! Fences built or straightened up, repaired, painted. Trees pruned, replaced, cultivated. Grounds graded, tennis court or croquet ground laid out. Foul outhouses torn away and replaced by new, clean, and wholesome ones. Walls papered, desks stained and varnished, ceilings calcimined. Steps repaired, hitching posts put in. A flagstaff put up and a fine flag floated to the breeze. Window panes put in, weeds chopped down, trash

gathered and burned. Not all of these in one year, perhaps, but some of them.

And similarly have a committee of the best housewives of the district, and see if they don't have some ideas about the interior of the school-house that they can express with cogency and effect. They can come with their daughters and hired girls, and soap, hot water, scrubbing brushes, and brooms—and what a change in one day will come o'er the spirit of that doleful schoolroom! Cleanliness is next to godliness. It is positively criminal to allow the waking hours of childhood to be spent mid dirt, untidiness, filthy neglect.

Probably the occasion would be graced by a picnic dinner, and the

GOOD SCHOOL CONDITIONS.

This is a photograph of a California school, with orderly, attentive children, tasteful decorations, and well-kept equipment. Which is the better atmosphere for young people to breathe?

children would have a program, and the minister or the trustee or the teacher or the solid farmer would give a talk. It could be made a great day in the history of the district. The people would go home pleased and proud—nothing pleases people better than to do some self-sacrificing thing and to be appreciated for it. Even if they have to be dragged into it, they will be delighted over it afterward. And all the people will feel a sense of proprietorship in that school afterward, and will be easier to rouse for a similar occasion next year. They will watch the school and raise a row about it if the new closets are not cared for or the trees are allowed to die or the house is allowed to get dirty. There will be a public spirit behind the trustees and teacher that will make

them more active and vigilant than before. Every year the people could meet in this way. Every year they would read more, observe more, talk more about the care and adornment of school property. Every year they would add some new feature and bring the old ones up to fine condition. And what would be the natural result, sure and certain?

Wouldn't that school premises be famous all over the country? Indeed it would. Travelers would look at it with admiration. It would have the best natural situation afforded by the district, a gentle slope overlooking the country round. Tall trees standing in groups around the

POOR SCHOOL CONDITIONS.

Another school, with broken blackboard, ragged blinds, sagging stovepipe, general disorder. See the teacher struggling for attention, and how much attention she gets!

outside boundary, making large shaded areas for the quieter games of the children and for social gathering of the neighborhood—nothing is so fine as the grateful shade of big trees—it is a benediction to all who come that way. These trees are grouped to conceal unsightly things and yet to let the finest and widest prospects show through. Strong benches and seats are built among the trees, and perhaps there is a swing or two. Within the lines of trees are clumps of roses and lilacs—and probably a garden of showy annuals in full bloom, all divided off in little beds and each bed cared for by one of the children. One corner of the school-house is sheltered by a honeysuckle or jessamine, or a moon-vine has

climbed to the gable. A neat fence or hedge or border is in front, and perhaps the entrance to the grounds is over a rustic bridge across a stream of water. Somewhere there is a shed for horses, and a long row of hitching posts and a water trough—with shade near by.

Why, this will be the center of the social life of the community—every picnic from far and near will be there—Fourth of July, Washington's Birthday, big meetings of the people will gather there—it will be the rural *park* for all to go and recreate themselves. Passers-by will say: "This must be a good neighborhood. I'd like to live here. I wonder what's the price of land?" And in the course of twenty years what would be the effect of all this on the people? Would it not have a strong tendency to improve the *homes* of the neighborhood? Would not a superior lot of young folks be growing up and passing out into the community? Would not these young people go away to distant lands and leaven many a sodden lump?

Could not a good teacher do better work with children in such surroundings as these, rather than mid poverty, desolation, and dirt? Would it not be a good thing from every point of view? Could any one be the worse for such an effort in the district? It could be worked up and managed in a neighborhood perhaps by a teacher or a trustee or a citizen; but the one, *par excellence*, to do it is your county superintendent. His are the fingers closest to the pulse of the schools. He can press the button in more ways than any one else. He knows the whole country, he can use the printing press, he is listened to with attention, the newspapers help him. He has a great opportunity. Why shouldn't a vigorous superintendent appoint a day for school improvement all over his county, and use all his energy, his knowledge of human nature, his friends in making it go? His official visits can be made a powerful auxiliary. A regular, formal inspection of school property with results made known to teachers, pupils, and people; little talks to schools and school officers; inquiries and comments, praise and disapproval; these things will make it go!

Oh, yes; in some districts you'd accomplish nothing, perhaps, because some chronic wet-blanket lives there, or some soured political friend teaches there. But what of that? Do you want the earth? Wouldn't it be reward enough to see even one ugly, desolate, God-forsaken school blossom out into something of grace? To see even one tight-fisted, narrow-minded community grow, willing to give its children pictures and shade trees? Well, you'll do more than that. You'll see your worst schools come up to the line as years go on, and your best ones forge ahead as models of taste and beauty. You'll see filth and indecency becoming rarer, and better ideas of architecture and landscape gardening growing up among the people. And you'll know more yourself. And the world will be a little better for your efforts.

A BEAUTIFUL SCHOOL.

The house shown in the picture is located at Sierra Madre, in Los Angeles County. It is a one-story five-room house, situated on the slope of a hill overlooking the San Gabriel Valley and with the Sierra Madre Mountains looking in at its north windows.

The five rooms are each 27 by 32 feet, inside dimensions, and form an E, with the fifth room in the middle. The five rooms open on to a

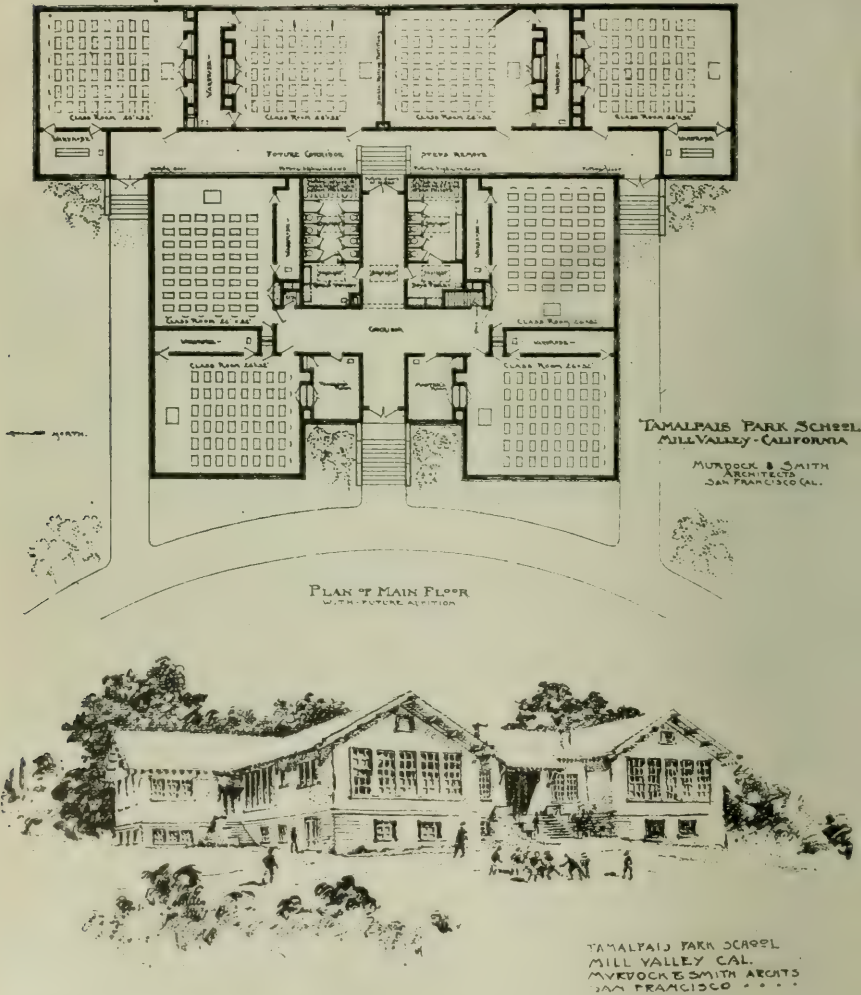

court, with a cement floor and a fountain in the center and a beamed structure overhead. The beams are being covered with growing vines and in a short time the school will pass through a court fairly well shaded by the vines. Each of the five rooms has a separateness and independence that is delightful, and yet each dismisses its children into one general assembly, thus making the yard supervision problem an easy one.

The windows are shaded by Venetian blinds. This house is considered one of the model schoolhouses of Los Angeles County.

THE BEST SCHOOL IN MARIN COUNTY.

Superintendent Jas. B. Davidson sends a picture and floor plan of the Tamalpais Park School, with the following remarks:

It is a good, substantial building of eight rooms. Only four of the

rooms will be built, furnished and equipped at present. The remainder will follow as soon as increase of population demands. The rooms are large, commodious and well lighted, heated and ventilated. Each room has, as part of its construction, a large wardrobe and a bookcase. The

building is one-story, with an eight-foot basement, hence all the rooms are on the same floor. The toilet is located on either side of the shorter hall, opposite the teachers' rooms. It is well constructed and well ventilated to the roof and the untrammelled air beyond. It will be, when completed, the best building in the county in point of convenience and condition affecting the well-being of its inmates.

MONTEREY COUNTY.

Superintendent Duncan Stirling sends this picture of the Old and the New ideas of school architecture in Soledad District. Observe the difference in the arrangement of windows and the insufficient lighting of the old building. Note that Architect Weeks was not afraid of a blank wall in the handsome new Mission building. This book will have been printed in vain if any one who reads it ever permits a schoolhouse to be built in his district with windows scattered on all four sides or even three sides of the schoolroom. A blank wall is beautiful when it is necessary.

FRESNO COUNTY.

This is a picture of a school of different type—a Parental School, in the city of Fresno. It is built as a home and a detention place as well as a school. The teacher and his family live in it, and it contains one or two strong-rooms with iron barred windows in case of need. It cost about \$10,000. It is provided with several acres of land for gardening and farming purposes. It would be a good plan to extend the scope of this school to include the whole county. It is a most interesting and useful enterprise—profitable, too—saves money on jails!

Fresno Parental School.

Of course this school is doing its greatest good when it is nearly or quite empty. When all its inmates have been so brought up to grade in their studies and so improved in moral attitude that they can be put into the regular classes again, conditions are ideal. But right there is where the narrow man, the unthinking man, will register his kick, raising a mighty uproar about maintaining a school when he can hardly see the pupils.

But remember that if this school saved only one boy from a criminal career, that alone would more than pay the whole cost of the building to the people!

THE KERN COUNTY HIGH SCHOOL.

This is a view of a very fine example of the modern type of school building—the County High School at Bakersfield, Kern County. It was sent by Superintendent R. L. Stockton. The schoolhouse is built of white sand bricks.

How different this, from the traditional schoolhouse, with tall towers and equidistant windows.

It is better to put money into classrooms and equipment than into great, useless towers. A schoolhouse is sometimes a monument to a prominent trustee or a boom for the town rather than a convenient, healthful place for children to live in and to study in. Ornamental chimneys, turrets, spires and minarets are a danger when built of heavy masonry.

To the Janitor:

How do your school grounds look to-day? They **SHOULD** look as if somebody cared for them. The woodpile doesn't look prosperous when distributed all over the front yard. Sticks, weeds, old papers, tin cans, broken boxes, brickbats are not cheerful or decorative in general effect on a school ground.

A SPLENDID GRAMMAR SCHOOL IN SAN DIEGO.

Superintendent Duncan McKinnon furnishes the following pictures and descriptions of a twenty-roomed school building in San Diego.

The Board of Education of San Diego has just completed for the sum of \$87,000.00 a schoolhouse, designed by John C. Austin, Los Angeles, California, that in all its appointments, in their opinion, is as near perfection as it is possible to build.

First-floor plan, San Diego Grammar School.

It is situated on a block of ground, at the corner of Twelfth and E streets. It is classical in design, the Doric order of architecture having been used. All of the walls are of either brick or concrete. The basement story is built entirely of reënforced concrete, and all of the walls above that point are faced up with pressed brick of a light cream color and artificial stone of a deep buff.

All of the stairways on the interior of the building are of reënforced concrete, the only wood that is used in connection with the stairway being the hand rail. The first story porch floor and the balcony on the

second story are of reënforced concrete. The rooms containing all of the machinery and heaters are absolutely fireproof, the walls and ceilings being of reënforced concrete.

Front view. San Diego Grammar School.

Rear view. San Diego Grammar School.

The building contains twenty classrooms, each classroom being 24 feet by 32 feet in the clear. There is an assembly room capable of seating seven hundred people, in addition to those that can be accommodated on the stage. On each side of the stage there is a dressing room accessible from the corridors and from the stage. There are rest rooms and teachers' rooms on first and second stories, also lavatories. In the basement (which is not really a basement, as it is three feet above the natural ground in the rear of the building and only extends into the ground two feet in the front) on the southeast corner of the building there is a large kindergarten room complete in itself, having toilet accommodations especially adapted for this branch of the school work.

In addition to the kindergarten in the basement there is a manual training room, domestic science room, separate lunch rooms for girls and boys, lavatories for girls and lavatories for boys, janitor's room, two bicycle rooms, engine and boiler rooms, fresh air rooms and fan room. All of the stalls for toilets and urinals are of selected pink Tennessee marble. The wash basins and drinking fountains are of cast iron with porcelain linings.

The blackboards are of real slate one quarter of an inch thick.

The heating is by an indirect steam system—using distillate as a fuel. The classrooms are kept at a uniform temperature of seventy degrees by an automatic heat-regulating device. The fan driven by a five-horsepower motor completely changes the air in each room every eight minutes.

DON'T FORGET THE FLAG.

Let us not forget that the laws of California require the United States flag to be displayed at every schoolhouse every day. A flagstaff in the yard is easier to manage and is better for ceremonies and public occasions than one on the top of the building. The summit of the building is a more impressive location as seen from a distance, perhaps; but the flagstaff racks the building in a gale and the roofs are often injured by people's tramping over them while adjusting the flag.

Of course, we will use common sense in complying with the statute above referred to. The law does not expect the flag to be kept out night and day, nor to be allowed to whip itself to rags in a storm. A ceremonial hoisting and lowering of the flag, intelligently and reverently done, complies with the spirit of the law better than to fly it at the beginning of the term and then never look at it again until it wears

A FIVE-ROOMED SCHOOL IN LOS ANGELES COUNTY.

From Superintendent MARK KEPPEL.

The building shown here is the Sixth Street School at Glendale. The house contains five rooms, all on one floor, and arranged for massing or separating the children when passing. Two rooms occupy each end,

one occupies the center, and the office and library room oppose the room in the center.

The center room, which faces the north, has unilateral lighting, the other rooms are lighted from rear and left. This five-room house is the pride of its patrons and one of the show schoolhouses of Los Angeles County. It is as good as the five-room house at Sierra Madre, and is of a different type.

A community should not be satisfied with a schoolhouse as good as the homes of the district—it should be *better* than the homes, so that the homes may have an example and a model for future improvement. A silent example exerts a wonderful influence.

A RURAL HIGH SCHOOL IN THE NORTH.

This fine building is in the midst of a lovely orange grove. Ripe fruit can be seen through the windows and fragrant blossoms perfume

the breezes that blow over the studious youngsters. Although it is a two-story building, it is ingeniously arranged to avoid any long flight of stairs. It is built of stone and brick. It is the county high school at Colusa.

What a fine thing it is for any community to have a good building like this, with an auditorium, to use as a neighborhood center for social and educational work. It should be a common tie, to draw people together. In union there is strength.

A GOOD SCHOOL IN COLUSA COUNTY.

From County Superintendent LILLIE L. LAUGENOUR.

The Williams schoolhouse is located in a block surrounded by a fence. The entrance to the grounds is over a cement stile from which leads a cement walk to the porch.

The east side of the yard is given to the boys for their playgrounds and their baseball diamond; the west, to the girls and their basket-ball

grounds. A buggy shed and barn are in the northeast corner of the yard for the protection of the vehicles and horses used by the pupils who come from the country, and nearby is the woodshed.

In the school yard are growing walnut trees, some of which have been grafted with English walnuts; eucalyptus, umbrella, orange, and olive trees. The grounds and schoolhouse are supplied with water from a large tank filled by a windmill.

This one-story house of four recitation rooms was substituted for a two-story building with the same number of schoolrooms. The trustees, after spending some thought upon the subject, called to see the Superintendent of Schools before any definite plans had been drawn. During a discussion of several hours each one expressed himself quite freely

from his own particular view-point. This consultation ended by the trustees arranging to visit some school buildings, one of which had four recitation rooms on the same floor. After this tour of inspection, the plan was discussed again. It was finally decided to build a one-story building of brick on a cement foundation. The schoolhouse has four rooms and a hall running through the building. The floor of the hall is cement and in the center of it is an octagon court, which extends to the top of the building. In this octagon court is the library which is well lighted by the double glass doors at each end of the hall and the eight windows at the top of the octagon.

Each classroom has two entrances from the hall, one door being near the teacher's desk, the other near the rear of the room leading from a large anteroom which is fitted up as a lavatory and a place for coats and hats. There is an outside window in each anteroom. There is a large sized closet opening off of each schoolroom for the teacher's exclusive use. The windows are high and grouped so the light can come from the rear.

In addition to the doors and windows, patented ventilators are used for ventilating the building. Air-tight stoves are the only means for heating the rooms.

A TWO-ROOMED SCHOOL IN AMADOR COUNTY.

Superintendent Greenhalge sends this picture of the Oneida schoolhouse. It is built of stone, plastered on the outside, and cost \$5,000. It is located on a beautiful slope covered with oaks, and is the handsomest school in the county.

TWO-ROOMED RURAL SCHOOL IN LOS ANGELES COUNTY.

From Superintendent MARK KEPPEL.

Laguna schoolhouse is a structure of two rooms, each 27 by 32 feet, inside dimensions, and has its cloakrooms at the front and its library at the rear. The two schoolrooms are separated by rolling partitions. The windows shown in the picture are those of the cloakrooms and of

the classroom in the foreground. In that room the children face toward the rear of the building and get light from the front two windows, or from the left five windows.

The windows for the second room are arranged precisely as in the first room, and are located at the rear and left of that room, so that the second room has no windows in front. This arrangement seats the children facing the front of the second room, and when the two rooms are thrown together the sets of desks face in opposite directions. This is taken care of by screwing or bolting the desks in groups of three to strips of wood $1\frac{1}{2}$ by 4 inches in thickness and width, and of the necessary length for the particular size of desks, instead of bolting the desk to the floor. It is a matter of only a few moments to rearrange the seats

in one or both rooms. The steps for the approaches to this house are made of cement and the risers are low.

If the vestibule in front had been omitted, the fact that there are two windows on one side of the entrance, at the front of the house, and not any windows on the other side would be very prominent, but as it is, that lack of symmetry is not obtrusive. This house cost less than four thousand dollars all complete, including the windmill and tank and two pavilions.

MODEL SCHOOL IN ORANGE COUNTY.

Superintendent R. P. Mitchell sends a picture of the Garden Grove School, an eight-room building costing \$15,000. The grounds have since been planted and adorned.

To the School Clerk:

Are your school grounds neat and tidy, free from weeds and trash, suitably adorned by trees, well improved and well kept, so that little children will absorb lessons of thrift and care while they are young?

If not, why not?

IDEAL FOR RURAL SCHOOLS OF PLACER COUNTY.

C. N. Shane of Placer County, a practical, working superintendent, gives his ideas of the right kind of rural schools for a foothill region in the following way. When a superintendent has a definite, clear-cut notion of what a school ought to be, his ideal will in time shape the schools of his county.

My experience in school architecture has been mostly along the line of one-room schoolhouses, and therefore I will confine myself to these largely.

Lighting.—The lighting is from six windows, 3 by 7, placed close together on the east side of the room when possible, and well to the rear of the room. They are placed about $4\frac{1}{2}$ feet from the floor. Light space is to floor space as 1 to 3 or 4 square feet. Each window has four panes of glass. Common roller window shades, two to each window, one in the middle and one at the bottom.

Doors.—Main outer doors, double, opening outward. Inside doors, common wooden doors, all to swing outward as far as possible.

Stoves.—Placed at the rear of the room, and pipe running overhead to the front of room over the teacher's desk. This enables the cold air coming from the outside through the doors to pass over the heated part of the room and thus mellows it.

Ventilation.—Mainly through the windows and doors. Windows lowered from the top. In some cases patent ventilators, placed at top and bottom of same side of room. The ones letting in the cold air as near as possible to the stove.

Floor Plan Rock Springs
School House, Placer County.

Water.—Supplied from springs, wells, and the South Yuba Ditch Company. The latter is far preferable in the lower part of the county, while in the central and northern parts the springs are best. When possible, we try to have a jet of water thrown up and have the children drink from that. Some carry individual drinking cups. Most, however, use a common drinking cup. The drainage, as a rule, in a foothill and mountainous country is a simple matter.

Closets.—Always two, and as far as possible from the schoolhouse, and if possible in among some bushes or trees for the purpose of being more secluded. Usually good deep vaults. In the Placer County High School, Auburn Grammar School and in the Lincoln School there are patent closets. Where vaults are used, they are disinfected with ashes, lime, and in some instances prepared disinfectants.

Walls.—Generally ceiled with oiled paper and painted a soft gray, yellow or light brown. The soft yellow with a tinge of green seems to be best. Ceiling from 11 feet to 14 feet in height.

Blackboards.—Slate preferable. Hyloplate, green, is giving good satisfaction. Should be low enough to accommodate the smaller children in the room. Chalk trough should be plenty big enough to keep erasers from dropping to the floor.

Cloakrooms.—To accommodate 20 children should be two at least, 6 feet by 8 feet, one for boys and one for girls. Should each have at least one window and two doors. Should be placed on each side of main entrance.

Grounds.—Get all the grounds possible. Land is cheap now. House should be set so that there is drainage all around if possible. At least there should be good natural drainage. Let the ground be long and narrow. The playground at the back, and a pleasant spot in front for the cultivation of flowers, shrubs, grass, etc. Have some natural trees when possible.

Rooms.—Should be long and not too wide. Be sure that the sun's direct rays get into the room for quite a good part of a half-day at least. Germs don't like sunlight. No raised platform for a teacher's throne. Every schoolroom should have a little private room for the teacher, that she can have for her own individual use. There should be a good big porch when possible. And when it can be afforded, a good large shed for rainy days; a shed for horses, and a woodshed.

Decoration.—This can be overdone. A few choice pictures on the wall, and some groups of small instructive ones, are far better than a thousand chromos that have neither moral nor æsthetic value. Well chosen shrubbery, boughs, flowers, bunches of long grass, etc., tastily displayed, but not overdone, will add greatly to the general appearance of any schoolroom.

SCHOOL GROUND IN MENDOCINO COUNTY.

Superintendent L. W. Babcock sends a picture of a six-roomed Ukiah grammar school set in the center of a TEN-ACRE LOT. Natural shade trees and shrubbery abound here, oak and madroña; while wild flowers bloom in wonderful variety and profusion. This large playground helps very much to give ideal conditions to the young people of a liberal and public-spirited town. Observe! Ten acres! Compare that generous domain with the constricted, pinched, and stingy location that so many communities put up with for their schools in this land of sunshine and fresh air.

SAN BERNARDINO COUNTY.

Here is a school afar on the desert, at Needles, in San Bernardino County. It was built for the High School, together with the lower grades. It cost \$21,000, is made of brown sandstone and brick, and is thoroughly up-to-date in its equipment.

RURAL SCHOOL IN SHASTA COUNTY.

The Superintendent of Shasta County is Lulu E. White. She regards the Lone Pine School as the ideal rural building, and sends the archi-

tect's sketch of it. It was built in 1908 at a cost of \$2,300. The furniture cost \$700 additional.

A CLEARING HOUSE.

The office of the county superintendent of schools should be a clearing house for good ideas about school buildings and school grounds. There should be a table there, covered with plans, drawings, and photographs. When trustees think of building, they should go and talk the thing all over with the superintendent at length. They should find in his office photographs showing what other schools are doing and what is possible to be done. They should find sample plans and specifications. They should find out who are the reliable architects and contractors of the county. They should get sound notions of heating, lighting, ventilating a schoolroom. Of course, all this entails some work, some alertness, some responsibility on the superintendent; but that is fairly a part of his job.

IMPROVEMENT UNDER DIFFICULTIES.

The Dunbar School, in Sonoma County, is perched on top of a steep, bare, and rocky hill. At the base of the hill flows a nice stream, with beautiful trees along its course. One picture shows the "Water Line"—

The water line.

the children of the school carrying water for the shrubs and plants that grow with difficulty in the stony soil of the schoolyard. The other shows a flower bed among the rocks, that has been made possible by the labors of the water line.

These pictures are

sent by Miss Novilla Davidson, the enthusiastic teacher of the school. The moral of this is that where there's a will there's always a way.

The teacher who can undertake and carry out such an enterprise

with her school—something requiring real work and lasting a long time — teaches a very valuable lesson. It is genuine experience. It requires the highest gifts of leadership. In some such way as this a great teacher gets a deep hold on his pupils, teaches

Result from water line.

them morals and manners and real religion, affects their characters for all time.

No teacher can do this kind of work by staying only a single year in the school. A good teacher's influence is not an annual plant. It

requires several years to bloom. When trustees find just the right teacher they can afford to pay any sum necessary to keep her. When a teacher really wishes to serve a community well, she should stay long enough to see the results of her work.

SONOMA COUNTY SCHOOL.

What an artistic picture, this beautiful California school, in its setting of natural trees! It is the Windsor School, in Sonoma County, and has just been completed. It has three rooms, and cost \$9,000. Its

Windsor three-room school.

exterior is shingled. The grounds are adorned by fourteen splendid oak trees. Not one of them should ever be disturbed. A big tree should never be destroyed because it is "in the way" of some "improvement." Walks, roads, sidewalks, buildings, should give way to the trees, go around them, not through them. Trees like this lend themselves to the landscape and link themselves into the traditions of the school and the community. Here the little children have their little games; here the older ones assemble beneath the cooling shade. The building itself could be spared as well as the trees, almost.

JACKETING STOVES.

Every school trustee in the State of California should have an intelligent idea of the jacketing of stoves, how it is done and why it is done. There is a widespread idea nowadays that the only proper way to heat a schoolroom is by means of a furnace in the basement. Nearly every new school of more than one room, in the country, as well as the city, installs a furnace as a necessary improvement. But as I travel about the land, I find the rural school people dissatisfied with their furnaces. The rural janitor usually is no mechanic—and he can not attend to it all the time. When it gets out of order, it is difficult to have it repaired. When it is broken, there is no plumber within reach. It is expensive in its use of fuel. It does not work well in unusual weather. It is suited to city conditions, not to the country. It is a chronic nuisance.

Wherefore, the rural school will usually do better to pin its faith to the plain, old-fashioned stove. A well-known authority on schools said to me the other day, "*Every rural school of six rooms or under should use stoves, not furnaces.*"

But these stoves should always be *jacketed*—that is, they should be surrounded by a sheet or plate of some kind, set a few inches from the stove; so that the air between the stove and jacket may be heated to make it rise and circulate through the room instead of scorching the faces of the youngsters who sit nearest.

This jacket may be a wooden frame covered with sheets of asbestos; it may be of tin or galvanized iron. It may be put around any stove, no matter what its size and shape, and may be done by a tinner, a carpenter, a blacksmith or any ordinary handy man. It is very greatly improved when a hole is cut through the floor under the stove, so as to draw in fresh air from out of doors to pass up between the stove and the jacket. This hole should be large, and should be controlled by a slide or register of some kind.

Smith Ventilating Stove. Observe perpendicular pipe open a few inches above the floor, to draw off foul air.

When connected with the outdoor air in this way, the jacketed stove is a ventilating as well as a heating device, bringing in fresh air, warming it, and distributing through the room. It should be balanced by providing a large outlet for foul air, at the floor level and near the stove. This foul air outlet may be a small fireplace. Or, a large pipe going into the chimney and up the chimney; thus it is surrounded and heated by the smoke from the stove, which produces an upward suction in the pipe, drawing off bad air from the room below.

Waterman-Waterbury Ventilating Stove. Observe pipes for fresh air, for foul air, and for smoke.

A number of patented devices are manufactured for schools, using the principle of the jacketed stove. The Waterbury is made at Minneapolis, Minn.; the Smith at Indianapolis, Ind.; and the Grossius is at Cincinnati, Ohio. These cost something less than \$100 apiece and are apparently a very good thing. Catalogues on application. But an ordinary stove with a jacket can be made to give entirely satisfactory results. The essential features are: (1) A jacket. (2) A connection between the pure outdoor air and the inside of jacket; and (3) a vent that will draw off the foul air.

Outside and inside views of the Grossius Ventilating Heater.

The proper heating and satisfactory ventilation of the school building, together with ample lighting, are items of first importance in school architecture. The ability of the teacher to manage and instruct, and of the pupil to observe proper deportment and to study are influenced greatly by the temperature and purity of the air and the clearness of the light in which they must work. An English authority has estimated that good ventilation, heating and lighting will add to the capacity of attention of pupils at least one fifth as compared with that of pupils in imperfectly constructed schoolrooms. Not only are the mental capacity of the pupil and efficiency of the teacher lessened by improper heating and ventilation, but the health of both is impaired, and the power to resist disease is weakened by living or working in impure air or in a temperature too high or too low, while many, if not most, of the cases of defective vision are due to imperfect lighting.

HIGH SCHOOL ARCHITECTURE.

Good common sense from the pen of Professor T. L. Heaton, reprinted from the *Western Journal of Education*, April, 1900.

Your letter making inquiry regarding high school organization and the plan for a new building has been received, and its contents carefully considered. I send you sketches of plans and such suggestions as I think may be of value to you.

Ventilating and heating should be combined in the same system, so that warm fresh air is supplied to the rooms. If hot water or steam coils are placed in the rooms, they simply warm the air that is there already, but do not in any manner purify it. If cold air is then introduced from outside for ventilation, it must unduly chill some parts of the room before it can come in contact with the coils and be warmed. Warm, fresh air may be supplied to the rooms by a warm air furnace, or by passing fresh air over hot water or steam coils in the basement. Hot, or super-heated air should never be used. Of these three methods, the warm air furnace is cheapest in the end; hot water or steam soon rusts out iron pipes. Furnace or furnaces should be of sufficient size to supply a large amount of moderately heated air. At least thirty cubic feet per minute is needed for each occupant of the room. This should enter above the blackboard from a register at least two by three feet; being lighter than the air of the room it will rise to the ceiling and disperse over the entire room, and make its exit at the foul air duct below.

There should be two fresh air shafts for each furnace. These should come from opposite directions and be supplied with "shut-off," so that the one may be used which gives the best results for the wind prevailing at the time. If there is but one duct and a strong wind is blowing into it, so great is the draught forced through the heating apparatus that cold air will be furnished to the rooms. But if there are two ducts, open the one away from the wind, a sufficient quantity of warm air will be supplied.

The difference in weight between warm air and cold air will generally give enough ventilation with such a furnace. Yet there will always be some days when direction of wind, or other causes, will interfere with air currents. For such occasions a fan (plenum system) should be used to drive the air. This fan can be run by an electric motor at small cost. It will as often be needed in warm weather as in cold. In hot weather the air in the schoolroom is about the same weight as that out-

side, so that little change will take place on account of gravity. If there is a good breeze, ventilating will be effected by doors and windows, but on a still day the air in crowded rooms will become very impure, even with all the windows open. On such days the fan will force a draught. If the fresh air room in the basement is divided by a burlap screen, kept moist by a perforated water pipe, the air drawn through this by the fan will be cooled, moistened, and freed from dust. The rooms will thus be supplied with air several degrees lower in temperature than that outside.

The cloakrooms need ventilating as well as warming. Damp wraps should be dried and the odors from them carried out of the building. Halls should be warmed from registers in the floor, so that children, especially girls, may dry damp feet or clothing.

The light should be from the left of the children and from the long side of the room. If on dark days still more light is needed, it should be admitted from the rear. Windows should extend as nearly as possible to the ceiling, and window area should be one fifth the floor space. In your climate, canvas awnings should be put on all windows facing east, south and west. They shut out the glare of the sun, but permit windows to be opened so as to get the benefit of the breeze that may be blowing. Inside blinds, in shutting out the glare of the sun, shut out too much light; at the same time prevent ventilation by open windows. Windows should be supplied with translucent shades, running up and down from about one third the height of the window. The shade, thus divided, permits the lower portion to be pulled down so as to moderate the light for those near the window, while those sitting farther off get sufficient light from the upper portion of the window. Window shades should never be drawn past an opening of the window, as the wind soon whips the shade to pieces. Translucent shades should be light green. Windows are sometimes put into a building for the architectural effect which are not ordinarily needed for lighting. Such windows should be provided with heavy opaque shades, and draped with heavy cloth curtains, thus shutting out all the light. On a few very dark days, such windows may be needed for the lighting of the school-room. In the sketches here given the barred windows are to be so darkened.

Walls should never be pure white, but of a light shade of gray, blue, or green, rough finish is better than smooth. Wood work should not be varnished, as reflection from such surface is nearly as bad on the eyes as strong light from windows. School desks, also, should have a dead finish.

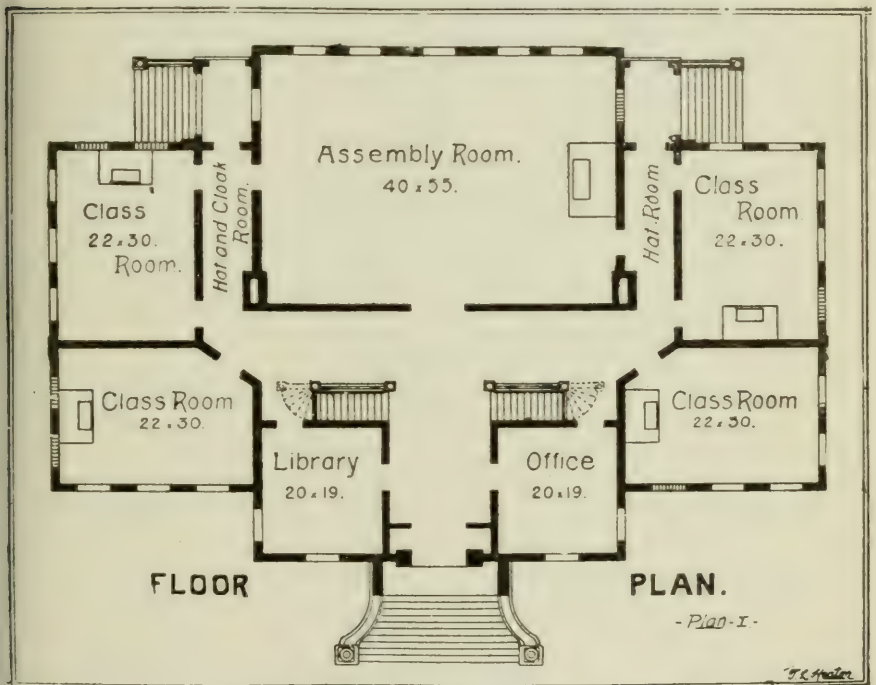

I should recommend the assembly room for a small high school. In this room each pupil has a separate desk where he keeps his books and

does his studying. From this room classes are sent out to smaller rooms for recitations. At the close of recitation they again return to the assembly room. This passing of classes gives a little relaxation and fits them for taking up the next work. If a school is arranged on the assembly room plan the classrooms may be rather small, as they are needed for recitations only. They should, however, be provided with desks, as written work is often an essential. An assembly room is particularly important in the management of the school. Here the principal may talk to all at once, arouse in them a proper pride in their school, and develop the esprit de corps, which is the most important factor in government. The morning exercises, consisting of singing, remarks by the principal, or reading of some choice selection of literature, puts the pupils in proper spirit for the day's work. All general exercises, such as lectures, rhetorical, and debates, will be conducted in the assembly room. With a school of four or more teachers, the program may be so arranged that one will always have a vacant period to take charge of study in the assembly room. With fewer teachers some of the smaller classes will be heard in the assembly room. As far as possible, however, this room should be quiet for study. A room forty by fifty-five feet will be sufficient to seat one hundred and sixty pupils, and leave space for reference table and book shelves. Here should be kept all that portion of the library which the pupils will consult during school hours. These books are then used only under the eye of the teacher. The assembly room should be fifteen to twenty feet high and face the north, as this gives the best light for study. The windows in this room should extend to the ceiling, as the high light carries farthest. It is doubtful if an assembly room can be successfully used for study in a large high school. Such room, however, may be compactly seated and used for those occasions when it is desirable to bring the whole school together in a body.

The recitation rooms should be so placed as to consume the least time in the passing of classes. For hygienic reasons, as well as for economy of time, it is best to have the assembly room and recitation rooms on the same floor. The walls between the rooms should be so deadened as to prevent the passing of sound. There should be abundance of blackboard in the classrooms, and windows so grouped as not to waste blackboard space. Stone slate makes the best blackboards, requires no repair, improves with each year of use, will last as long as the brick wall, and costs but little more than imitations. It should have uniformly smooth surface, and be not less than three eighths of an inch in thickness.

The laboratories may be in the basement or in a small building outside, connected to the main building by a covered walk. There is per-

haps less danger of fire if the chemistry laboratory is outside the main building. This danger is, however, largely removed if the laboratory has cement or bitumen floor, and the gas for the laboratory is so arranged that it can be shut off at the close of each day's work. The greater danger of fire here is that the blue flame of the Bunsen burner is easily overlooked and a jet may be left burning, in time heating the burner, melting off the rubber tube, and then setting fire to adjacent wood work. The laboratories should be large and tables arranged around the sides next the windows. The chemical laboratory should

Suggested floor plan for high school of 160 pupils.

have raised seats for recitation purposes, and a supply room. A dark room is a great convenience. Each two students should be provided with water, and a small ventilating hood. In addition there should be a large ventilating hood under which to perform experiments producing noxious fumes. The physical laboratory should be supplied with water and gas. The lecture room should have raised seats facing the teacher's demonstration table, and contain cases of apparatus not used in the laboratory. This room should have solid inside blinds, or very heavy shades, so that it may be darkened. It should be provided with gas, water and electricity. There should be blackboards in the lecture room and chemical laboratory.

With good sewer system the closets may be in the basement of the building. The vault of the closet should be ventilated with a down draught, and the upper part of the vault connected with a flue containing a small heater. When there is fire in the heater, all the odors will be drawn up the flue. The vault should be made of cement, and either self-flushing, or be flushed noon and night by the janitor.

The central portion of the building being higher than the wings, will admit of two good rooms being built above the office, library and hall. The inner hall is lighted by a skylight. This building will accommodate one hundred and sixty pupils and five or six teachers. In a small high

Suggested basement plan for high school of 160 pupils.

school chemistry and physics may be taught to the two upper classes alternate years. Plan II is a much smaller high school, all on one floor. There is but one laboratory, and chemistry and physics should alternate. This building may be heated by jacketed or ventilating stoves. Plan II will accommodate one hundred students and three or four teachers. An additional classroom would be secured by having a separate building for the laboratory.

In calling for plans, issue full instructions to architects, telling what size and arrangement of rooms will be required, the material for construction, the site of the building, cost, manner in which plans are to

be prepared, and all necessary information in regard to heat, light, and ventilation.

A schoolhouse should be planned from within, out; not from without,

Front elevation for high school for 160 pupils.

Suggested floor plan for small high school of 100 pupils.

in. Inside, the building should be arranged for school use and school hygiene. Outside, it should please the eye by good proportions, and not offend the taste by extravagant and superfluous ornamentation.

THE OUTDOOR GYMNASIUM.

The right place for a gymnasium is out of doors. There are great possibilities in this direction in California. This picture shows a class

It is common nowadays to emphasize the value of plays and sports rather than the more formal gymnastic work. It is well to remember, however, that the exercises of the gymnasium have their place, too. Spontaneous play, for instance, does not straighten stooped shoulders, give habits of good breathing or correct particular bodily defects. Some such drills as that above are splendid things for young people. The occupations of civilized life seem all conspiring to hamper and contract the *lungs*. To dig, to study, to read, to wash dishes, to nurse babes, to keep books, to write, to do almost anything, we must droop the shoulders and shrink the chest. Unused organs grow weak and invite disease. Consumption is the disease of civilization. One in seven of us die of it. How necessary, then, for the schools to do all they can against this condition. What a valuable thing for a young person to acquire the habit of deep breathing. How important it is for every teacher to give breathing exercises and to use every other device he can that will broaden the chests, expand the lungs, increase the breathing capacity and form good habits in regard to these things.

of boys going through their exercises outside the Polytechnic High School at Los Angeles. An outdoor gymnasium does not cost much—a smooth piece of ground and some simple apparatus is all that is necessary. No physical training is so beneficial as that done outdoors.

CONSOLIDATION OF SCHOOLS AS A MEANS OF SECURING BETTER SCHOOL BUILDINGS.

An original article, prepared for this use by Prof. Ellwood P. Cubberley, of Stanford University.

Closely related to any effort to improve rural and village school architecture is the problem of the consolidation of schools in order to secure larger schools and more effective instruction and supervision. Rural school architecture is only a part of a larger problem,—that of improving the rural school itself and of improving the conditions under

Consolidated school starting for home.

which rural school work is done. The past forty years have seen wonderful changes in American education, and in these changes the rural school has been left far behind. In the cities the concentration of wealth has made it possible and the concentration of population has made it necessary that a class of schools should be developed capable of meeting greater exigencies and more advanced needs than those in the country. It has accordingly happened that the cities have provided better and more liberally for their schools. They have built larger and better school buildings, paid salaries that would draw the best teachers from the surrounding districts, developed supervision and paid liberally for it, organized high schools, provided equipment for laboratory instruction, organized kindergartens, added manual training, cooking,

drawing and nature study, and provided for the supervision of the instruction in these subjects, and done many other things which have made city schools attractive to parents who are solicitous as to the education of their children. Cities of ten to fifteen thousand inhabitants have made similar progress, and even the village has a graded school and often a high school, good teachers, a system of supervision, teaching equipment, a course of study which includes some of the special branches, and a social spirit pervading the school which is of fine quality and of the first importance in the education of children.

The country school, on the contrary, is little ahead of where it was forty years ago. In many states it has been graded, to be sure, and uniform text-books and a uniform course of study have been introduced.

School wagon made by the Delphi Wagon Works at Delphi, Indiana. These wagons cost from one to two hundred dollars.

With the better preparation of the teachers in general the quality of the country teacher has been improved. But, even in our own State, where we pay good salaries, comparatively speaking, and where we have, thanks to a wise law, probably the best rural schools in the United States,—even here we must admit that, except in a few instances, the country school is poor compared with a good town school, and this due to its numerous classes, its overburdened program, its lack of equipment, its lack of any adequate supervision, and, above all, to its isolation and to the lack of that stimulus that comes only from numbers. In most schools the average daily attendance is small, say fifteen or twenty. The children come from the same locality and have the same interests. A majority are from the same or related families. They bring no new

interests to the school, there is little impulse to activity of any kind, and the school suffers from lack of new ideas and impulses to action. What the school is it is because of the teacher and in spite of its limitations. In less favored states the country school, lacking financial support, is in a most pitiable condition. No wonder parents are willing to live by miscellaneous day labor in a town or city rather than on the farm in order that their children may have the advantages of a better education.

Typical one-teacher school.

Typical one-teacher school. Such schools suffer from isolation, lack of numbers, lack of enthusiasm, and lack of impulses to action.

It will probably always be true that the city will attract the ablest men which a community produces. The prizes worth working for are larger there,—are much more worthy of the energy of a man who feels within himself the ability to do and to master large things. The opportunities, too, are greater for the man of ability, though the struggle for existence is much more fierce. But, while the town and city may be

the best places for men of brains and energy, they are not the best places in which to educate the great majority of the children of a future generation of our people, and the premium ought not to be on that side, as it is now. Whatever can be done legitimately should be done to encourage people to remain in the country.

The last decade has witnessed the introduction of many new things which have tended to make country life more attractive. Rural postal

Wagon used in Springfield Township, Clark County, Ohio, for transporting children to school. Good weather dress. Route of this wagon, 6 miles; time, 1 hour 10 minutes; capacity, 28; transport, 18. The township owns the wagon, which was built for the township by the National Wagon Works, Chillicothe, Ohio. Cost for transportation, \$1.66 2-3 per day.

The same wagon in stormy weather.

routes, daily rural paper routes, the general introduction of the bicycle, suburban trolley lines, lines traversing the country carrying cheap electric light and power, barbed-wire telephones, rural delivery routes of many kinds, bringing to the homes of the rural residents the products of hundreds of labor-saving machines,—these and many other things have tended to make country life more desirable and to free the farmer from much of the drudgery of life. Even a few of these comforts and conveniences have made their way into communities somewhat sparsely settled and somewhat remote from centers of civilization.

But, despite all of these changes, the little country school continues about as it used to be. An attempt has been made to enrich the course of study, but this has only increased the burdens of the teacher and decreased the time given to the individual classes. The schools have been graded and the uniform examination introduced as a test of efficiency, but this has too often served as a temptation to the teacher to neglect the younger children for the sake of the older ones.

Whenever the number of children has risen to a number sufficient to make possible the employment of two teachers the desire to have "a school close to home" has led to the division of the district into two.

The quality of the teacher has been improved, but even the best of teachers can make little progress against such tremendous odds, and the good teachers leave at the first opportunity. Under present conditions the country school realizes but a small per cent of its possibilities.

In regions where it is possible to change this condition there is no longer any excuse for failure to do so. The remedy is to concentrate a number of these small, scattered, inefficient schools into a three or four room union school, provide a good principal, good teachers, and transport the children from their homes each morning and to their homes each night, paying the expense for transportation out of the district funds. The remedy is neither new nor untried. One half of the states of the Union already have such a permissive law. In Massachusetts, Connecticut, Ohio, Indiana, Wisconsin, and Iowa the plan has been tried for some time with great success. The plan, in brief, is as follows: Two, three, four, five or more existing school districts, acting on the advice of the county superintendent, a teacher, or a group of residents, vote to unite their schools into a union school. A three or four-room schoolhouse, built on modern lines and well heated, lighted and ventilated, is erected at a central location. The old schoolhouses and sites are disposed of. Arrangements are made for the transportation of all children living at a distance. One of the teachers is usually a person of some experience, often a man, and is designated as supervising principal. Often three or four of these union schools unite in employing a superintendent, who devotes such time to each school as may seem necessary, and is paid in proportion by each union. In a number of places the stimulus to better schools has been such that the same unions which have united to employ a superintendent have united to form a union high school, thus providing higher education for all the children of the region. The result has been the perfecting of a city school system in the country, consisting of a high school, graded elementary schools, superintendent, principals, teachers, and janitors. Instead of a city school system on a small area it is a city spread out,—a city on a large scale. The graded schools of the small towns of the Santa Clara and the

San Gabriel valleys, with their well arranged and often artistic school-houses, their supervising principal, their graded school system, and their favorable school conditions, are types of the schools which might be formed here and there in each of the valleys of the State by the union of a number of adjoining rural schools; while the school system of that large area known as the city of Riverside, with its scattered elementary schools, its central high school, and its city superintendent, with an area to supervise almost as large as an Eastern county, is a type of what might be developed in twenty or thirty different rural districts in this State.

Of course such unions can not be formed everywhere. Schools in mountain districts, or where the roads are impassable, or where the population is very sparse, can not well be united. These will have to remain about as they are until conditions change. But in all the valleys there are certain natural concentrating centers, and what is needed is the formation of a few of these unions so that they may demonstrate their efficiency to the people of the county and to the school men of the State. The future will then take care of itself. If the present law is too cumbersome and too difficult to put into operation, which I am inclined to believe it is, then let us revise and simplify it so as to make it workable. Coöperation of communities for greater effectiveness is the central principle, and the advantages are those which come from organized coöperation. The new element which makes this coöperation possible is transportation,—the carrying of the child to the school. This is only an old idea in a new form. For sixty years we have maintained that it is the duty of the State to provide each child with the opportunity to secure an education. In doing this we have carried the school to the child. This has led to the division of districts and the multiplication of small schools and poor schoolhouses. Such schools have been found to be expensive and inefficient. We now propose to reverse the principle and carry the child to the school,—even more, to carry the child some distance to a much better school. While doing this we will save him the exhaustion of a long walk, protect his health, eliminate tardiness, increase his attendance at school, and provide him with better school facilities and a better school building in which to go to school.

Now what are some of the advantages of and objections to such a plan. The first and most important point in its favor is that such concentration means better schools. Fewer teachers will be needed, but better ones will be demanded and can be retained. The union school will be such as to offer many inducements to good teachers. With two or three grades to a room far better teaching can be done than with eight or nine. Primary children need not be neglected that older ones may be

prepared for the annual examination. Due to the larger number of pupils in each grade, there will be present in the recitation work that stimulus that comes only from numbers. Due to the large number of pupils in the school as a whole and the new interests which this larger number will bring, there will be a social spirit present on the playground and in the school which will contribute greatly to the value of the education given. Due to the presence of a number of teachers in the school there will be a professional enthusiasm which is almost unknown to the isolated country school to-day. Finally, due to the presence of the supervising principal and eventually an effective rural superintendent, there will be a close and a careful supervision of the work which will be most valuable for all.

A second advantage will be a partial equalization of opportunities and advantages as between the boy in the city and the boy in the country by bringing an approach to a well organized city school within reach of the boy on the farm. The division of labor in such a school will make possible the introduction of lines of special work which will make the instruction more suited to the needs of the country child. This, in connection with the other improvements in rural life which I have previously mentioned, will do much toward making the country a more desirable place in which to live.

A third advantage is that such a combination of schools for greater effectiveness is also cheaper, though this of course can not be made a chief argument for the union. The experience of every Eastern state has been that, in general, a better quality of education and a longer term of school, as well as transportation, can be provided at no greater expense than the aggregate cost of maintenance of a number of separate, inefficient schools. In many unions a decided saving has been effected, even after providing a better school. But let me repeat that greater efficiency, not saving in money, is the real argument for the union.

Another great advantage of the plan is the greatly increased interest taken in the school by the people of the union district. The larger and better school develops a broader and a better educational spirit. More interest is taken in the larger school, better men are selected as trustees, and the attitude of the community toward it is changed. The school becomes a matter of community pride, instead of community indifference. The testimony on this point is almost universal. The oft repeated question of how to improve the school trustee may receive a partial answer here.

In districts where the plan has not been tried it is often bitterly opposed, while districts which have given the plan a fair trial are strong in its support. In Massachusetts, Connecticut, Ohio, and Illinois the most vigorous opponents of the plan at the time of its introduction are now often among its strongest supporters.

Let us consider a few of the objections advanced. It is argued that the plan is impracticable; the experience of a dozen states disproves this. Some parents dislike to send children "so far away from home," but what difference does it make whether the distance is one mile or five miles, if the children are well cared for? The ride is objected to by some, but is it not better to take the child from his door and deliver him at the schoolhouse in the morning and return him each night, safe, protected from the wind and rain, and with dry feet and clothes, than to have him walk a mile each way and miss school whenever the weather is bad? The argument that the exercise is good for him is no argument; we all know that the country child has more than enough exercise at home. A common argument against the plan is that the removal of the little local schoolhouse causes a depreciation of farm property in the immediate neighborhood, with a corresponding increase in the value of property about the concentrating center. This is a hard argument to answer, as it appeals to local jealousy and touches the pocketbook. Once get this idea started in the community and it takes hard work to eradicate it. Experience elsewhere, though, is all on the other side. A schoolhouse on the farm does not necessarily make land valuable. What is wanted is that the opportunity of attending a good school be within easy reach of the children, and the better the school which may be attended the more it adds to the value of the farm. A good school six miles away with transportation will add more to the value of a farm than a poor school brought to within a quarter of a mile. Such, at least, is the experience of every Eastern state.

The newness of the idea is to many an objection. Many communities think and move slowly. They are those which are content with things as they are, and are willing to live and die without an effort at improvement. With many there is a certain amount of sentiment connected with the little old country schoolhouse, and they object to its removal even though they get a better one. All such people need education, and no amount of argument is so effective as a successful union in an adjoining section. In northern Ohio the first centralized schools were hard to start, and the movement began slowly; now centralization is in process throughout the entire region.

The country school problem of to-day is, How to materially increase the efficiency of the schools and develop a better school spirit in the community, without unnecessarily increasing the cost of the schools. Any increase in the efficiency of the rural schools means an increase in the desirability of the country as opposed to town or city life. For sparsely settled or mountainous districts there is as yet no remedy, but for the valley regions of our State the remedy lies in centralization and transportation. The great success of the plan elsewhere should warrant the formation of more such union schools in California.

A few such unions have been formed in California, but the number could be counted on the fingers of one hand. The people seem to be afraid of the idea; the apportionment of trustees has been an obstacle when it has been proposed to unite with a town; and doubts as to the legality of such unions have been raised by some. These difficulties are purely local, are capable of remedy, and are not inherent in the plan itself, which has been tried and tested. Our law probably needs revision and simplification to adapt it better to local conditions.

To illustrate the possibilities of such a union of districts I reproduce a drawing and some figures made for a possible union in Riverside County, and published in 1903. The figures as to funds are no longer exact, due to changes in the apportionment law and in the local school census, but the amounts are sufficiently accurate to illustrate the method of calculation and to show what might be done in many places in California by a consolidation of properly situated groups of local schools.

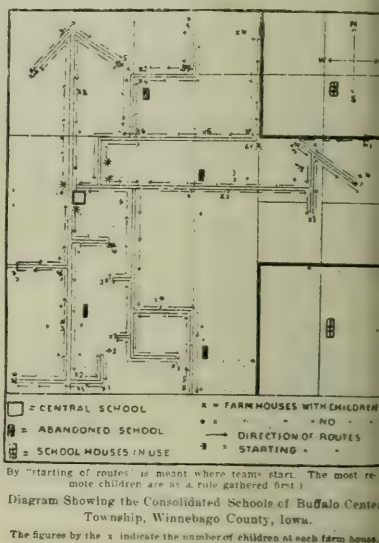

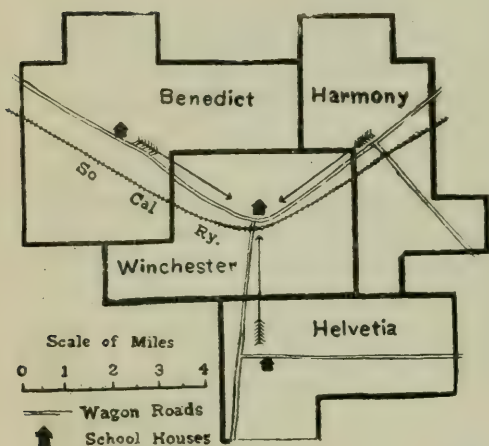

TYPE OF A POSSIBLE UNION.

This illustration shows a group of four districts suitably situated for consolidation. The region is comparatively flat and level, and the schools are only about three miles apart. Winchester is a natural concentrating center. The appended table shows the financial status of the schools as they were at the time the calculation was made.

ITEMS.	Benedict.	Winches- ter.	Harmony.	Helvetia	Totals.
School census	13	21	19	24	77
Total enrollment	11	19	23	24	77
Average daily attendance	7.5	18	14.5	16	56
Length of term	8 mos.	8 mos.	8 mos.	8 mos.
Apportionment on census [1903]	\$400 00	\$500 00	\$400 00	\$500 00	\$1,800 00
Apportionment on average daily attendance	75 00	180 00	145 00	160 00	560 00
Total apportionment	\$475 00	\$680 00	\$545 00	\$660 00	\$2,360 00
Teachers' salaries per month...	\$50 00	\$55 00	\$55 00	\$50 00
Teachers' salaries per year....	\$400 00	\$440 00	\$440 00	\$400 00	\$1,680 00
Library fund	10 00	15 00	10 00	15 00	50 00
Repairs, census, fuel, etc.	65 00	50 00	95 00	161 00	371 00
Total expense for year....	\$475 00	\$505 00	\$545 00	\$576 00	\$2,101 00

If these four schools were to unite to form a union a great economy could be effected, as well as a great increase in the efficiency of the school secured. The school could be managed with two teachers if confined to the primary and grammar grades only, but as there is no financial reason why this need be done, it would be best to put in as a third

teacher a strong person who could act as principal of the school and teach some ninth and tenth grade work to those boys and girls who want to go farther than the grammar grades. Such a school ought to do the first year of high-school work well, sending the pupils on to the larger central high schools for further work. With three teachers, one teacher would teach the first, second and third grades; another would teach the fourth, fifth, and sixth grades; and the principal would teach all grades from the seventh up. This would permit a degree of specialization in

the work which would be of great benefit to all the children of the school. Instead of schools of from seven to eighteen pupils, there would be a school of about seventy, with from twenty to thirty in each room; and instead of classes of one or two there would be classes of from six to ten. The recitation periods could be made three times as long as at present, and the increased interest in school and the stimulus to action which would come from the increased numbers in the school and in each class would be an educational factor of great importance.

The better school would keep pupils in it longer than at present. At present only about two thirds of the enrollment is in average daily attendance. With a strong union school and transportation of pupils the average daily attendance ought to be increased from 56 to at least 70. This increase of fourteen in the average daily attendance would have meant an increase of \$140 in income for the union school.

Let us now see what would be the financial aspect of such a union:

INCOME.

Total apportionment [1903]	\$2,360 00
Increase for 14 in average daily attendance	140 00
Total income after consolidation.....	<u>\$2,500 00</u>

EXPENSE.

One principal at \$70.00 for 8 months.....	\$560 00
Two teachers at \$55.00 for 8 months.....	880 00
Library fund as at present.....	50 00
Repairs, census, fuel, etc.	<u>210 00</u>
Total expense of maintenance.....	<u>\$1,700 00</u>
Left for transportation of pupils.....	<u>\$800 00</u>

Four o'clock at a consolidated school.

After maintaining a far better school, with better-paid teachers, better teaching, better supervision, with the first year of high-school instruction provided for free, there still remains \$800 to provide for the transportation of the children. Three different routes would be required. Judging by prices paid elsewhere, this ought to be sufficient, though transportation is likely to cost more the first year than ever afterward. The distances are short, and the maximum number to be transported would 11, 23, and 24—a total of 58 if all enrolled attended. Considering the short distance, the good roads and the dry climate, it ought to be possible to get each route contracted for at a rate of \$30 a month; this would be a total of \$720 for the year for the three routes. This would leave a net surplus of \$80 for other purposes.

These four districts are types of many other possible unions which might be formed in this State, with great gain in the quality and quantity of the education provided for the children of these favorably situated districts, and with no additional expense to the taxpayers of the districts.

The improvement in school architecture that would result would be no small advantage of the plan. In place of the usual wooden box, a good, modern, well-planned schoolhouse would be found at the central point, and the provision of such a schoolhouse would be an important element in the education of our children.

SAMPLE CONTRACT FOR THE TRANSPORTATION OF PUPILS.

The following sample contract, bond, and rules for transporting pupils in an Ohio consolidated school will perhaps be of interest, since our law now authorizes transportation.

THIS AGREEMENT made by and between the Board of Trustees of.....
....., party of the first part, and
....., party of the second part.

WITNESSETH, That said party of the second part agrees to transport the pupils to and from district hereinafter specified for the full school year, in accordance with the specifications which form a part of this contract for the sum of \$....., payable bi-monthly, which sum said party of the first part agrees to pay for services well and truly rendered in accordance with the specifications of this contract.

SPECIFICATIONS.

1. Said party of the second part agrees to transport all pupils of district to

2. To furnish a good covered spring wagon or vehicle which can be closed or open at sides and end as the weather requires, and with sufficient seating capacity to accommodate the pupils of said district without crowding. Conveyance to be acceptable to the Board of Trustees.

3. To furnish the necessary robes or blankets to keep the children comfortable, and, in very cold weather, shall provide an oil stove or soapstones to heat the interior of the vehicle.

4. To provide a good team of horses to haul said vehicle and children. Said team must be gentle and not afraid of the cars, and must be driven by the contractor or a good trusty person of adult age, said team and driver to be acceptable to said Board of Trustees, and said driver shall have full control of the children while under his charge, and shall be responsible for their conduct. No profane or immoral language, quarreling or improper conduct shall be allowed in the conveyance.

5. To cause conveyance with pupils to arrive at the schoolhouse in district not earlier than 8:45 A. M., nor later than 8:55 A. M. (sun time).

6. To collect pupils on the following described route:

....., President of Board.
....., Clerk of Board.

BOND.

KNOW ALL MEN BY THESE PRESENTS that we,, as principal, and and as sureties, are held and firmly bound unto the Board of Trustees of in the sum of one hundred dollars, for the payment of which we jointly and severally bind ourselves.

The condition of the above obligation is this: That the said contractor has this day entered into above contract to transport pupils from to Now, if the said contractor shall well and truly perform the conditions of said contract on his part to be performed, then this obligation shall be void; otherwise it shall remain in full force and virtue in law.

Bond approved this day of, 190..., A. D.
....., Clerk. Surety.
..... President. Surety.

RULES AND REGULATIONS.

1. All pupils shall be ready in the morning at the usual time for the hack to arrive at their respective homes or at the place of meeting, if hack does not pass their home. Drivers shall reach said homes and meeting places the same time each day and shall not be required to wait more than two minutes for pupils.
 2. The first to enter the hack in the morning shall be seated in front and the others next, in the order in which they enter, and shall occupy the same places in the hack at night in order that there may be no confusion in entering and leaving the hack.
 3. There shall be no profane or immoral language, quarreling or improper conduct in the hack.
 4. Pupils shall not be saucy or disrespectful to the driver of the hack or those whom they may meet while riding in the hack.
 5. The right of pupils to ride in the hacks is conditioned on their good behavior and the observance of the above rules and regulations, and the drivers of the hacks are hereby respectively authorized and empowered to enforce the same.
 6. If any pupil persist in disobeying any of the above rules, the driver shall notify said pupil's parents or guardian of his or her conduct and the result of the same if continued, and if the same be not corrected at once the driver shall thereupon forbid such disobedient pupil the privilege of riding in the hack until such a time as the matter can be brought before the Board of Trustees.
 7. A copy of these rules and regulations shall be posted in each hack and also in the several school buildings to which pupils are transported.
- By order of the Board of Trustees of District.
Adopted

Equipment for a class in cooking at the California Polytechnic School.

THE SAN JOSE HIGH SCHOOL.

From City Superintendent ALEXANDER SHERRIFFS of San Jose.

The San Jose High School is constructed on the university plan. It consists of five separate and distinct buildings so grouped and connected as to form one general whole. The Administration Building, with its massive towers, is the central feature; on either side are the Classical and Science buildings; at the rear of these are the Domestic Science and Manual Arts buildings. They are all of the same type of architecture, with rough cement plaster exteriors and red tile roofs, and are connected by three cloisters. One of these runs through the towers between the east and west entrances and is crossed by the other two,

San Jose High School.

which extend from the Classical and Science buildings to the rear end of the group. Each of these two side cloisters lead to the side entrances of the Assembly Hall in the main building. The east cloister also passes an open court around which are located the various departments of the Manual Arts Building.

In the Science Building the first floor contains the departments of Biology and Physiography, with their aquarium and bivalve troughs, herbarium cases, windows arranged with darkening curtains, and electric connections for lantern work, and metrological recording instruments, connected by cables with the weather vane on the tower, the thermometer, barometer, and rain gauge. The Chemistry and Physics departments are located on the second floor, where there is also a large science lecture hall. The demonstrator's tables in these three rooms are equipped with all the various forms of electrical energy, water, gas, and compressed and vacuum air for experimental purposes. The students' chemistry tables are each provided with glass closets ventilated by an

electric fan in the attic. The laboratory also contains one large fume closet for long time experiments; a large steam still with a distilled water reservoir, and an electrical hot plate for slow evaporation. The students' physics tables are supplied with gas, compressed aid and electrical connection. In the instructor's laboratory there is an electric transformer. The plate glass switch board in the physics department is 5 by 6 feet in size and one inch thick; and has the advantage of showing clearly all the electrical connections and apparatus and their operation.

The Manual Arts department has a room thoroughly equipped for woodworking, with benches, turning lathes, a circular saw, a band saw, a planer, and a grindstone, all operated by electric power. Another room in this department is being equipped for arts and crafts work. The Domestic Science Department has a circular table equipped for twenty-four students, and has a kitchen, pantry, storeroom, and dining-room attached. The Commercial Department is equipped with the most modern furniture suitable for this class of work.

The building has electric program clocks and telephones in each room, the latter operated by a telephone exchange. There are shower baths for both boys and girls, and a steel locker for each student. The Assembly Hall is seated with opera chairs and will hold 1,200 students.

How the whole theory of our schools is changing! Here is a class engaged in making grape cuttings at the California Polytechnic School in San Luis Obispo.

BUILDINGS FOR SCHOOLS.

An original article prepared for this handbook by J. W. McClymonds, the veteran City Superintendent at Oakland. The schools of Oakland under his management have taken high rank among the cities of the State. It will be of interest to every one to read his latest ideas on school buildings, after twenty years of activity in running the schools of a big California city. The article was prepared in 1909, so that it is up to date.

Modern education is more and more recognizing the value of the playground. Just how many square feet or rods should be allowed for each child is largely to be determined by the funds available and the price of the land. The cities are more in need of extensive grounds for schools than is the country. It is a wise precaution in every center of increasing population to provide extensive grounds for each school. These grounds should be selected carefully in reference to drainage and with regard to the points of the compass. The school buildings, wherever possible, should be placed on the west frontage of the grounds so as to place the playgrounds in the warm and sheltered section of the yard. This will give an eastern exposure to more classrooms, this being especially desirable in the bay region.

In selecting grounds in thickly populated districts, care should be taken that they be removed from the noise of lines of travel (noise being one of the greatest drawbacks to successful school effort), and yet the grounds must be easy of access.

Building Materials.—In my judgment only two types of buildings should be considered for school purposes—one a first-class wooden structure, the other a strictly class A building. If the buildings are to be constructed from the proceeds of the sale of bonds, the type erected should be largely determined by the date of maturity of the bond issue. That is, if the bonds are to run for forty years, class A buildings should be considered. It is not honest to posterity to construct wooden buildings with the proceeds of forty-year bonds.

The Schoolroom Unit.—Whether a school building is to contain one, two, or more rooms, the classroom unit should be approximately the same in each. The length of a classroom is determined by the distance at which ordinary sized figures or writing on the blackboard may be read by the average eye. The extreme width of the room is determined by the distance that light will extend into the room. It has been found that 32 feet is the extreme length of the room, and with the ordinary height of the ceiling 12 feet 6 inches, 24 feet is the greatest width of the classroom. The best authorities agree that light should enter the schoolroom from the side at the left of the children, and as near the rear of the room as possible.

There should not be less than one square foot of glass surface for each five square feet of floor surface—the glass at the left of the pupils only being considered (for it may be necessary sometimes, for the sake of outside appearances of the building, to place the windows on two sides of the room; but the windows on the one side should always be darkened when the room is occupied by the pupils).

Schoolrooms should be grouped in a building so that the length of the room is exposed to the light.

For a room 24 by 32, the window space, exclusive of mullions, should be about 8 feet by 20 feet. The windows should be placed about $3\frac{1}{2}$ feet from the floor, and should extend to within 4 or 6 inches of the ceiling. This will give a window 8 feet in length. The windows should be grouped with as narrow mullions as possible between them, and indeed the mullion should be so constructed as to throw as little shadow as possible inside the room. The glass should be perfectly clear, and should be set in large panes. The space through which the light comes should be as near the rear of the room as possible—say within 3 feet of the rear. The window space, including the mullions, will occupy about 22 feet of the length of the room, thus leaving a space of about nine feet in the front of the room without any window opening. This will give, in the front of the room where the teacher works, a restful light for the eyes of the pupils.

The window casings should be designed for the purpose of hanging window shades. Each shade should lap at least three inches on the window casings so as to prevent any light from entering when the shades are drawn. In my estimation the light is best governed by translucent shades, two, placed about one third of the way up from the bottom, being used for each window.

The wood finish of the room should be plain and so designed as to catch the least possible amount of dust. No unnecessary woodwork should be put in the room.

The chalk rail for primary pupils should be not less than 30 inches from the floor, and for grammar grade pupils not less than 36 inches.

Connected with the classroom should be a cloakroom at least 6 by 24, from which there should be a window opening to the outside. The cloakroom should not be connected directly with the corridors. Entrance to and from the cloakrooms should be made through the schoolroom. The cloakroom should be placed as far as possible back of the teacher. The exit from the schoolroom to the corridors should be made through a door 4 feet wide, this door being located as near the teacher's desk as possible. Even if it is necessary to place the cloakroom at the rear of the classroom, and it sometimes will be for the sake of exterior effect, I would insist that the exit from the schoolroom be made at or near the

front of the room. This will give the teacher better control of her class at all times.

Blackboards.—All available wall space should be covered with blackboards at least 4 feet in width, the blackboard back of the teacher's desk being at least 6 feet in width.

In large school buildings, in order to make the corridors light, the space above the blackboard in the corridor walls should be filled with prism glass. For purposes of ventilation two large transoms should be placed in this glass at each end of the room. I think it a serious mistake to place glass in any door connected with a school building.

Each schoolroom should be provided with a teacher's locker. Wherever possible, this locker should be large enough to contain a desk, and should serve as a small office for the teacher. In no case should the locker project into the schoolroom. Where a heating and ventilating apparatus is used, the air should be taken into the room at the center of the partition between the cloakroom and the schoolroom, and about eight feet from the floor. Openings, covered with iron grills, should be made in the bottom of the doors leading to the cloakroom, to allow of the free exit of foul air. The cloakroom then becomes a part of the ventilating system, the air passing from the schoolroom to the cloakroom, and through the cloakroom to the outside. Of course the exit from the cloakroom to the outside should be at the ceiling of the cloakroom.

The teacher's desk should be located in the center of the front wall of the schoolroom, or to the left of the center. Never to the right, as this would throw the light of the windows too much in the eyes of the pupils.

We have now given in detail the schoolroom. Success in planning a school building rests largely in the arrangement of these schoolroom units so as to get the best sunlight and air, and in providing in the best possible way for the incoming and outgoing of the pupils with safety and with the greatest economy of time.

The corridors of the schoolroom, especially where rooms are to be placed on either side, should be at least 14 feet wide, and should be free from obstruction.

Two stairways in different parts of the building should be provided for in two-story school buildings, and should the number of pupils housed in the upper story of any school building exceed two hundred, then an additional stairway should be provided for each additional one hundred pupils.

In my judgment the safest stairway is the one that turns on a platform at the center. The platform should be at least one and a half times the width of the stairs. Authorities somewhat disagree in reference to the width of the stairs in school buildings. Personally I am

a believer in a good wide stairway, but a stairway over 6 feet in width should have a handrail in the center. Every stairway leading from a school building should have a handrail on either side. As stairways in school buildings are for the use of children, care should be taken that no risers exceed $5\frac{1}{2}$ inches. For economy in getting children in and out of the building, it is well to have at least $33\frac{1}{3}$ per cent more stairway leading from the ground to the first story than from the first story to the second.

Doors.—All doors should open outward and should contain no glass. Each door should swing in its own frame. Locks for outside doors should be of a type that can not be locked from the inside, so that every door in the school building at all times is free for exit.

In addition to the regular classrooms for ordinary school purposes, the school building should contain rooms for manual training, rooms for kindergarten classes, an assembly room to be used by the pupils, and at times for general meetings of the neighborhood.

School buildings are now becoming the centers of neighborhood activity. Consequently, in each building there should be provision made for a room to be used for neighborhood meetings exclusively.

In many cities a public bath is considered an essential, and provision is made in the school buildings for the same.

All lavatory conveniences in school buildings are to be used by children, and should be constructed with this end in view. In many school buildings no thought has been taken of the children, these conveniences being arranged for adults.

Heating and Ventilating.—Pure air is an essential for every schoolroom. It costs something to provide pure air, but it is not nearly so expensive as it is to attempt to educate and develop children in rooms containing vitiated air. At least thirty cubic feet of air per minute should be provided for each pupil. This will necessitate the furnishing of from 1,400 to 1,600 cubic feet of air per minute for each classroom. This can be done only by the plenum system.

The cheapest method of regulating temperature is by an automatic heat regulation. There are two or three successful systems now in use. The air may be heated by steam, hot water, or by air warmers. The air warmer will be found much more economical in climates like that of California.

Plastered Walls.—The walls and ceilings of school buildings should be covered with a smooth coat of hard plaster, finished. No sand coat finish should be used in schoolrooms. The hard wall coats should be tinted to some soft color, and being hard walls, it will be possible to wash these when the next coat of tint is necessary; whereas, with the sand coat, the washing is impossible. For hygienic reasons the sand coat should be condemned.

A PRACTICAL SCHOOL.

The Arroyo Grande School, in San Luis Obispo County, has done a practical and interesting thing. The trustees have planted some fine walnut trees about the grounds, and these are now in full bearing. The windfall nuts belong to the children; but at stated intervals the trees are shaken and the resulting product is carefully cured and

Walnut trees at Arroyo Grande School

Handsome front yard at Arroyo Grande.

marketed. Last year the trees yielded \$30 profit in this way. This was spent for baseball materials and for graveling the walks.

This calls to mind the courthouse grounds at Merced, which were planted to orange trees. The supervisors distributed the crop each year to the schools of the county. Two or three boxes of luscious oranges make a nice present for a school of real youngsters, with earthly appetites.

SAN JOSE GRAMMAR SCHOOLS.

The schools at San Jose are fine types of modern school architecture. They are built according to a comprehensive plan, and are all new, having been built since 1906. Trustees who have building to do will do well to take a day or two in examining these splendid buildings. It is well worth while to travel about among some of the progressive cities of California before deciding upon your own schoolhouse. This picture and its description is from City Superintendent Alexander Sherriffs.

San Jose has recently constructed four new grammar schools costing \$55,000 each. The inside plan of all the buildings is practically the same, the exterior being "Mission," though representing different

Lowell School at San Jose.

Mission types. Each school has 16 classrooms besides an assembly hall seating 600, a Manual Arts room and a Domestic Science room. The teachers have a room fitted up as elaborately as is the principal's office, and is provided with a dining table, a kitchen, wardrobe, etc. The classrooms are 24 by 30 feet in dimensions, and are provided with artificial slate blackboards, and, except on the north side of the buildings, with Venetian blinds. The assembly hall and four classrooms can be darkened, and are provided with electric connections for lantern work. In the seventh and eighth grades the rooms are fitted up for the special lines of departmental work. For example, one room is fitted for draw-

ing, one for music, one for arithmetic, and so on. Each building, like the High School, is heated by hot air pumped in by fans, and each room is provided with an automatic device which keeps the temperature at 68 degrees all the time, while not diminishing the amount of air. Fire apparatus, fire escapes, and drinking fountains are also provided, and in all, the buildings are quite suitable for school purposes.

A HOMELIKE SCHOOL.

The Bryant School.

Here is a picture of a regular, graded city school, the Bryant School in Riverside. But see what a "homey" look it has. It might be the handsome residence of a prosperous business man so far as appearance goes. None of the conventional school earmarks are visible. Notice also that blank wall; it is there because it needs to be there. The building contains four rooms and cost about \$14,000. When it becomes crowded, wings will be added, separated from the main building by cloisters.

There is a danger in erecting buildings that can be readily doubled or quadrupled when the need arises: the danger of insufficient grounds and overcrowding. A generous piece of land becomes stingy and disgraceful when we put four times as many children on it.

A GENEROUS CALIFORNIA SCHOOL.

The following description of the Polytechnic Elementary School at Pasadena was written by Mr. Hunt, the architect:

“There is little that can be said about the scheme that is not obvious on the face of the plan. It is well adapted to the warm climate of California. Its picturesqueness and the flexibility of the parts making it possible to add to the school as it grows seem to be features that might be of interest to school boards having a similar problem.”

This plan ought to be usable in many parts of California where a school of moderate size starts under conditions that indicate a possible future growth. You can easily see that the advantage of having sunlight in all rooms and having the entire building on the first floor is worth considering. The actual working out of the system in the school for the past two years has been a great success. When we have some money we just add another room. The broad covered porches make a place for the children to play in rainy weather, stuffy corridors are eliminated. We are having no trouble at all in heating the building, using a system of forced air. The whole thing as it stands cost less than \$25,000. We figure that it cost about \$1,000 per room, everything included, and no doubt could be done for less if it were simplified.

The building is in every way adapted to ideal school conditions in this climate. It is of one-story in the so-called California style. A unique feature of the arrangement is the extension of the broad cement-floored colonnade which surrounds the front or north patio entirely through the building as a sort of hall and around two sides of a patio on the south. This leaves the assembly room, which is in the center of the building surrounded on three sides by roofed out-of-door passageways upon which the classrooms open.

These broad open air passageways hum with the life of the children. They play there whenever they wish; and thus, the colonnade is the scene of much of the social life of the school.

The lines of the building are broad and simple. The interior is finished in Oregon pine; and various tones of brown provide the color scheme.

A large brick fireplace is one of the beautiful features of the assembly room, and a cheerful wood fire is kindled there on dark days.

The building contains ten classrooms in addition to the assembly room, offices, dressing rooms, janitor's room and storerooms.

The rooms are planned to admit as much light and fresh air as possible. The windows, of which there are an unusual number, are broad, and the sunlight penetrates to every corner of the building.

Special attention is paid to the heating and ventilation of the rooms. The whole building is heated by hot air furnaces with a forced draught.

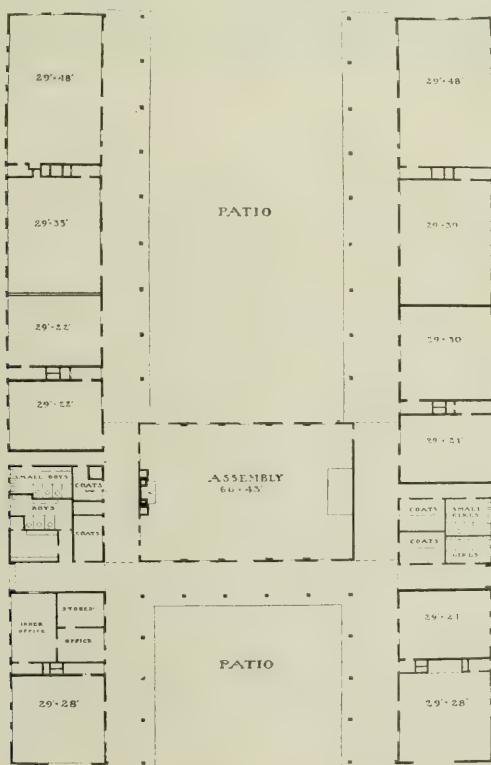

POLYTECHNIC ELEMENTARY SCHOOL AT PASADENA.

Every one should study this plan and picture of the Polytechnic Elementary School at Pasadena. It has California flavor. It is generous and wide-minded. A good conception of it can not but be helpful to any one concerned in the future building of schoolhouses. Note that it is all on one floor—there is plenty of room in California. Stairways are a barbarity. Consider the broad and comfortable porches, the lack of gingerbread, the simple appropriateness of it all. It was designed by Myron Hunt, of Hunt & Grey, school architects, Los Angeles.

Assembly Room, Pasadena Elementary School. Note the fireplace, the roomy, comfortable aspect of it all.

THE OLD ONE

NEW SCHOOL

Nothing could better illustrate the passing of the old and the coming of the new than these two photographs of successive schoolhouses in the village of Fowler, in Fresno County. The old one was considered a splendid building when it was built, fewer than a score of years ago. But how our ideas have changed! Observe the windows in the old school, equidistant and far apart. Note the waste of materials in building a cupola—a useless appendage.

See how different in idea, in type, is the new building just completed. It cost \$30,000. The architect was E. Mathewson, of Fresno.

It is in the poor, dilapidated, dust begrimed, filthy schoolrooms that the spirit of vandalism asserts itself, for there is nothing there to command the respect of the children. We believe it is as much the duty of the school to cultivate the æsthetic side of the child as it is to teach the multiplication table, or the single rule of three.

AND THE NEW.

AT FOWLER.

Old school at Fowler.

COUNTRY SCHOOLHOUSES.

An original article prepared for this manual by Henry F. Starbuck, School Architect, No. 4 McDonough Building, Oakland. Mr. Starbuck has had a long experience in building schoolhouses, both in northern and in southern California.

Perhaps no branch of school architecture has been so much neglected in California as that of the rural or country district schoolhouse. This is not surprising when one realizes the general conditions which exist in the case of such buildings, usually located at long distances from the business centers, and in many cases without convenient facilities for getting materials of suitable character to even make the building modern in detail, to say nothing of the difficulty of procuring anything ornamental, which in an ordinary neighborhood would be considered a necessary adjunct to the building. Then, too, the good citizens to whom are intrusted the care of these buildings, are generally of the busy, practical, hard working class, whose education has been along the lines of other requirements, and who are not in touch with the artistic side of life. Buildings of the class I describe are very rarely designed by an architect, or even copied from such designs, and few architects of any ability could afford to give the time and trouble to look after them, unless actuated by a philanthropic public spirit. I have often thought, as I pass through the State and see the rude and ungainly structures which have been built to supply the demand for a small and inexpensive school building, that I would gladly offer my services to assist in starting a line of buildings which should express something of an architectural idea to the young child, whose first impulse in this direction may come from the building in which he learns the rudiments of his future education. Coming, as many of these children do, from homes barren of the least suggestion of art or architecture, how full of inspiration would be a school building neat, artistic, comely, and attractive. I believe it should be the duty of those having the general charge of schools to insist on these features as not only proper, but absolutely necessary to the best interests of the children of the State. That they should be authorized to see to it that these buildings are made monuments of education, and to impress on the local school trustees that a liberal allowance for this feature is money as well and as properly invested as if spent for apparatus or school books.

What an educator for the fathers and mothers of the district would such a building be, if designed on lines both practical and architectural. for true architecture is a silent, but a persistent teacher, and never sleeps, and it is a surprising fact that a truly architectural building is an inspiration even among the uneducated.

Take the working classes of the old world; surrounded by artistic monuments of all kinds, as they grow to manhood they are unconsciously

educated by their surroundings, and while as citizens they do not approach our working classes in this country, as workmen they excel in all matters calling for artistic rendering or finish.

In designing the class of buildings required for the rural districts there is a great range of ideas which can be adapted. In the first place, the location should be considered. California contains within her borders every kind of climate and all kinds of country. The architect can properly use in some place every style of architecture which has appealed to the artistic sense of the student. And in the country school, where we are not likely to be handicapped by want of room, and where we may allow the fancy some play, we can design with free hand, keeping always within the line of practical common sense. And *architecture* is always common sense.

The next feature of this class of buildings to be developed is the material. All kinds of material offer themselves to the true architect. In our mountainous sections, what better or more architectural material than the stone which abounds on every hand. If the demand were created men could be found who would build such work so that it would be scarcely more expensive than ordinary wood construction. Under the direction of some intelligent master workman much of this work could be done by the people of the district, and thus a general interest be aroused which would be the beginning of better things.

In the redwood districts, what would be more truly architectural than a log cabin effect of natural logs. I can imagine the most pleasing results from this line of suggestion. In fact, it is the only real American style of architecture, and is worth developing for general reasons.

In other locations, the broad bungalow effect is suitable, and it is somewhat strange that this style has not been more generally adopted. It is peculiarly adapted to California, and is economical in construction and attractive in effect.

For the portions above the reach of the hands of mischievous pupils a most excellent finish for the exterior is cement plaster, on either wood or metal lath; the latter preferably in locations at a distance from the ocean. In the vicinity of the coast it is short lived, and has been known to rust out entirely in a short time.

In the matter of technical detail, the same rules should be followed as in the larger city buildings, and in this article it is not necessary to go into this fully. I am not a faddist in matters of light, heat, and ventilation, but these should be considered with careful study, having in mind the means at hand available for the purpose.

Light should be plenty, and on both left and rear, the greater amount on the side. While unilateral light is very strongly advocated by many, I do not believe it the best for the average rural school building. The location, however, may determine this to some extent, and if the amount

is sufficient it may be the best in some cases. My own observation is that the main point is to have *plenty* of light, and, of course, not in the face of the pupils.

Ventilation is a most important point, also, but in the small buildings of the outside districts it is not always possible to have anything like

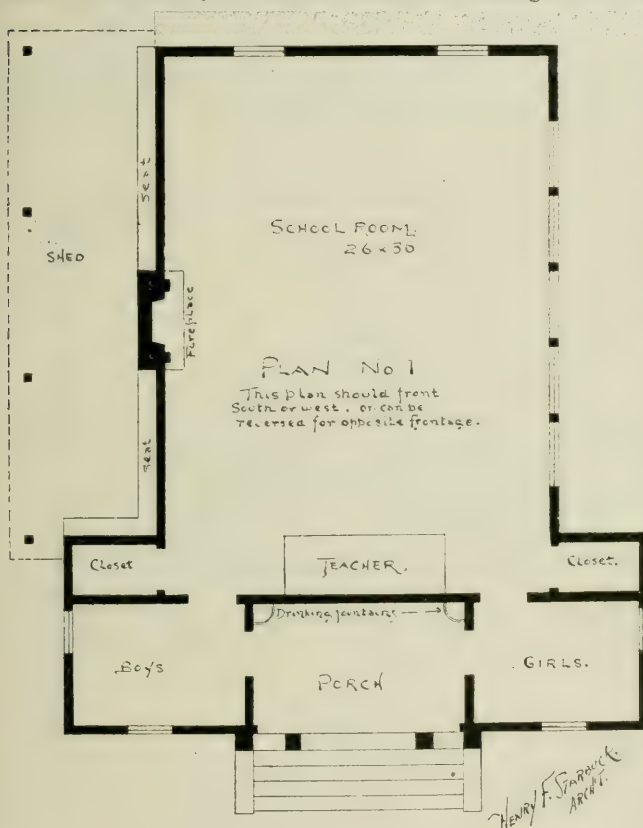

a ventilating system or apparatus, consequently the only thing to do is to make such provision as can be without too much expense.

Probably the best and simplest plan in a building of this sort is the open fire. Of course it has its objections, but in the localities where it is not too cold, the room can be well heated before the pupils assemble, and a moderate fire after school is opened will keep up the heat, and the ventilation from a good fireplace is one of the best systems known. This may sound heretical, but I think it can be proven. In the open country,

where the air is uncontaminated, there is nothing better than the pure outside air, and I make use of casement windows which open outward in both directions, thus enabling the air to be drawn out or injected, as the sash are opened toward the wind or opposite.

Where the cost can be afforded the best and most effective mode of heating these small buildings is a hot air furnace, which in a pit under the building can be made to heat thoroughly all the rooms, and as the heat is carried by a flow of warm air through the furnace, ventilation

is also furnished by the influx of this into the room, which can be allowed to pass out by the windows, or through openings prepared for the purpose.

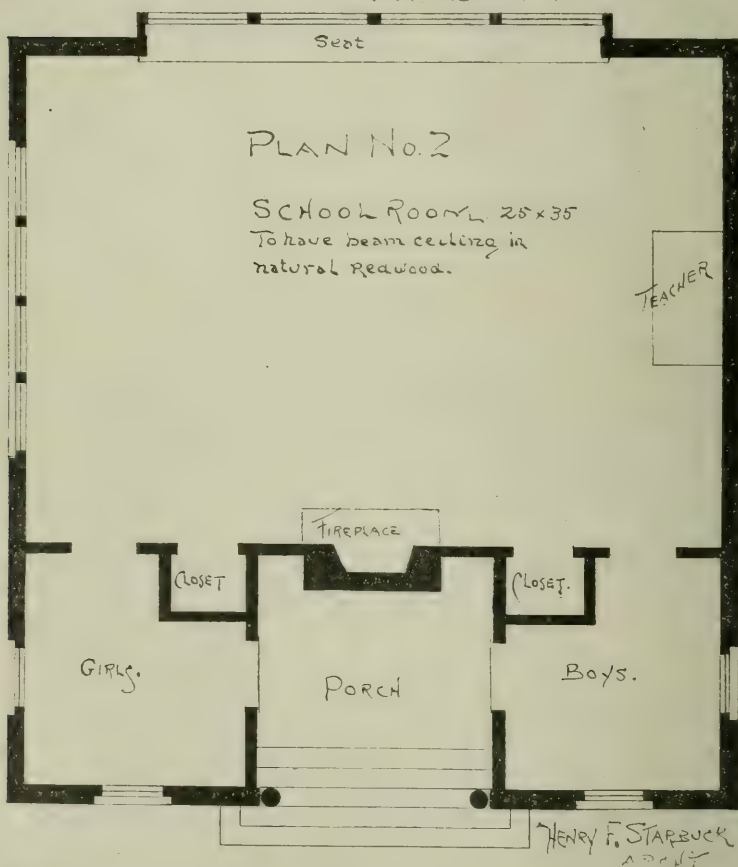

I have in this paper made suggestions only. The local conditions, the amount of money available, and the particular requirements of the case, determine many of the points under consideration and what I have laid down

is open to these modifications. This applies as well to the sketches of buildings which accompany the article, and which are not intended to be perfect or complete plans, but only to form a basis for exemplifying the above ideas.

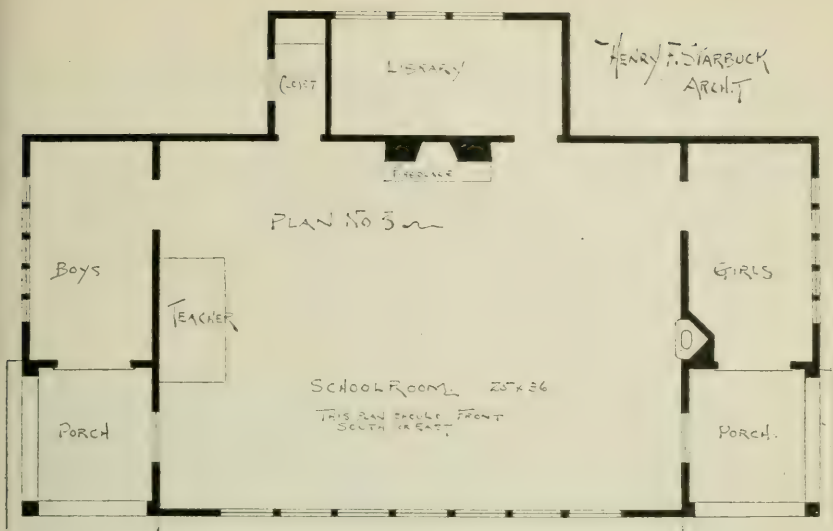

As such they will explain themselves. I have shown as one of the designs for Plan No. 1 a conventional style, which would be appropriate in a village or small town, and a rustic design in which I have introduced the local stone and shingle finish more suitable for a rougher country, and peculiarly adapted to the mountainous sections.

PERSPECTIVE. PLAN No. 2.

Plan No. 2 shows what could be done in the redwood country, and if neatly finished in a similar style on the interior would be appropriate and artistic. I would suggest the roof to be of the local "shakes," as adding to the architectural effect.

Plan No. 3 is in the simple bungalow style, and is appropriate for any of the flat country of the State. The broad eaves give a sheltered effect, and are practical in the protection of the windows from the strong sunlight, and the simple lines of construction make the design one which will give the greatest value for the cost of building.

This handbook belongs to the public school. It should be catalogued and stamped as belonging to the district library, and should be kept and issued in the same way as other library books. It will be needed as a book of reference by Trustees in the future as well as by those of the present. Therefore, since it will soon be out of print and impossible to duplicate, this copy should be preserved and carried on the school records.

REMODELING FAULTY BUILDINGS.

Often it is possible to remodel a faulty building so as to get rid of its worst features at small expense. County Superintendent Stirling of Monterey County has been working on this problem along with Architect Weeks, and has produced some excellent results, at expenditures ranging from \$200 to \$600. For instance, the Jolon School, a typical rural building, has been regenerated by shifting the windows and doors,

Jolon School, remodeled. Originally it was similar to the ordinary rural type shown at the top of page 148.

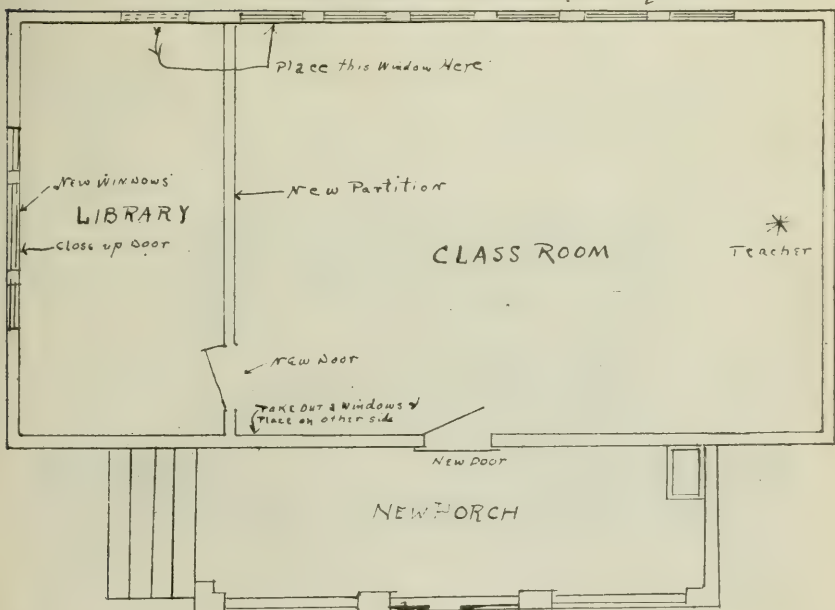

adding a partition and a good porch, into quite a smart and hygienic school. The floor plan before and after remodeling is given, and an outside view of the remodeled building. Observe particularly the improvement in the lighting, and the added comfort of the roomy porch.

Superintendent Baldwin, of San Diego County, reports that he has had good success in improving the lighting of rural schools by changing windows, at small expense.

Jolon School, before remodeling

Jolon School after remodeling

REMODELING IN MISSOURI.

The following pictures and plans are from a pamphlet on school building issued by Superintendent Gass of Missouri.

Picture of the ordinary schoolhouse of the older type—windows all around at regular intervals.

Same building remodeled, with windows banked on one side. See floor plans on opposite page for detailed changes.

PLAN OF ORDINARY ONE ROOM SCHOOL BUILDING

SAME PLAN REMODELED.

The old building has been turned around and a small addition has been placed on one side for cloakrooms, closets, etc.

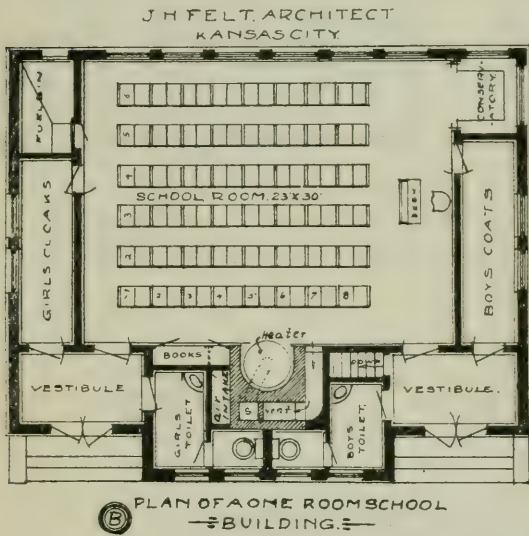

MODEL RURAL FLOOR PLAN.

This floor plan and the remarks accompanying it are from a pamphlet on school-building issued lately by H. A. Gass, the State Superintendent of Missouri. Note the reference to supplying water from a pressure tank in the basement. By this plan the pressure is obtained through a force pump, operated nights or mornings by the janitor. This compresses the air in the tank to any desired force; and this, in turn, sends the water through the pipes. It seems to be a better thing than a windmill in climates where the water pipes freeze in winter.

The plan shows a one-room school building laid out along modern lines, and is given as a suggestion. It will be noticed, first, that there are separate entrances for the boys and girls. Opening off of each vestibule is a cloakroom and toilet room, thus completely separating the sexes. There is a built-in bookcase with spaces for storage of supplies below, and also a receptacle for the coal scuttle, so it can be set out of the way and not be kicked about the room. In front of the pupils, and in front of the teacher is a conservatory, with ample glass surface, for flowers and plants. The fuel room is so arranged that the fuel can be put in from the rear of the building, and by means of slats on the inside the coal can be taken out at the bottom, and thus prevented from

scattering about the room. The schoolroom proper is 23 feet by 30 feet, and seats forty-eight pupils in single desks, with ample aisle space between and all around the desks. The light is brought from the left of the pupils only, the windows being set within about 6 inches of the ceiling. The heater is set in a brick receptacle, and immediately back of it is the smoke flue and vent flue. The air intake marked just to the left of this flue is supplied with fresh air through the circular lower windows in the gables, thus insuring pure air at all times. It is taken down under the heater and exhausted directly across the room towards the cooling surface, which is the windows, and by means of the vent flue the lower strata of air is constantly being taken out at the floor line and exhausted out above the roof, thus causing the pure warm air to descend

equally all over the room. It will be noticed that the toilet rooms have outside windows opening directly into them, and that one waste and supply pipe do for both toilets. One great advantage of this arrangement, in addition to separate entrances for the sexes, is the fact that there is but one exposure of the schoolroom to the weather, and that is on the rear where the light is brought in, as the cloakrooms, vesti-

bules, etc., protect the schoolroom on three sides. This will make the room very much easier to heat in severe weather and effect a very great saving in fuel. The stairway opening into the boys' vestibule goes down to a small basement which contains the compressed air tank which furnishes the water supply for the plumbing. Should it be desired to have a small manual training room, it could be easily accomplished by lengthening the building, thus enlarging the cloakrooms, one of which could then be used as a manual training room, and the other one divided and used for the two cloakrooms. Whether this building is built of brick or wood, the heater should be set as shown by the plan, in a brick receptacle, which very much lessens the danger of fire.

A PROPHECY.

Here is a picture of a special school car that is run on one of the suburban electric roads in northern Ohio, near Cleveland. It is a shadow forecasting the future in our own State. The time is coming when all California will be a gridiron of electric roads, operated by the power from our Sierran streams. Consolidated schools and rural high schools will be made populous and powerful by reason of convenient universal transportation. A new law has just been put on our statute books authorizing trustees of rural schools to arrange for the transportation of their children. Our schools must keep pace with the great economic changes or be left behind in the procession.

Special school trolley car.

And now, hark ye. If the people who are here when all these myriad future railroads are projected will attend to business and look into the future, they can confer a wonderful blessing upon generations of California children as yet unborn.

Let them grant no franchise in all the future that does not contain a vigorous proviso for all children on their way to school to be forever carried free!

Does this seem strange?

But it is *right*. Why shouldn't a public service corporation, seeking a great privilege from the people, agree to help in this way to educate the children of the State? Why should a boy or girl ever be kept out of school for lack of railroad fare? The thing has been tried, too; and it works all right. There is an idea here for every one to think about, to spread abroad, to act upon—for a hundred years to come!

THE PLAYGROUND MOVEMENT.

One of the great educational movements of the day is that for free playgrounds in our big cities. The congested centers of population are finding it necessary to provide safety valves at any cost—to let in sun and air, to provide recreation places, breathing places, even when it is necessary to spend millions in clearing away big buildings, destroying property that yields fortunes in rentals. It is cheaper to do this at once, before property grows too valuable.

Chicago is the leader in this great movement. Los Angeles has done more than any other Pacific city. The accompanying picture shows a view of the Echo Park playground, with the children at their games. The recreation center, or neighborhood center, is shown in the rear.

Echo Park playground at Los Angeles.

Space forbids going into details of the matter here, but any one interested in the training of the young will find it a most interesting and comprehensive thing to investigate.

Luther H. Gulick, president of the Playgrounds Association of America, says: "A fundamental condition for the permanent development of a free people is that they shall in childhood learn to govern themselves. Self-government is to be learned as an experience, rather than taught as a theory. Hence in a permanent democracy adequate playgrounds for all the children are a necessity."

Elmer E. Brown, United States Commissioner of Education, and a former Californian, says: "Nothing will take the place of a playground near at hand to which the children can run on short notice, and from which they can quickly return, so the playground becomes part of the daily life.

OFFICE OF THE STATE BUREAU OF LABOR STATISTICS,
FERRY BUILDING.
SAN FRANCISCO, CAL., October 24, 1908.

To His Excellency, JAMES N. GILLETT,
Governor of California.

SIR: I have the honor to submit herewith the Thirteenth Biennial
Report of this Bureau.

Respectfully yours,

J. D. MACKENZIE,
Commissioner.

INTRODUCTION.

In presenting the Thirteenth Biennial Report, it is our aim to render an account of our stewardship and to state the policy or lines followed, and the reasons in brief therefor.

The Bureau was originally created in 1883 as one of labor statistics. The act is very broad and comprehensive, and permits of a wide range or field for investigation. There have been added to the duties of the Commissioner from time to time, the enforcement of laws regulating the sanitation and ventilation of factories and workshops, for the protection of the physical welfare of women, the regulation and control of employment agencies, the child labor law, the law regulating the hours and labor of druggists' employes, and also an act requiring the gathering of social statistics.

It will be seen that the work of the Bureau is of a dual nature, that of gathering and preparing statistical work and factory inspection, and law enforcing, or the virtual exercise of police powers. These dual functions can be performed by the Bureau because of their close association and relation, with mutual advantage to both.

Either one of these added duties would require more than our present force of special agents and a much larger allowance for traveling expenses, and police power (which power the officers of this Bureau are not clothed with) to properly enforce them.

With all these additional duties, this Bureau has not been allowed by the legislature a commensurate increase in the number of assistants, nor in the amount available for contingent expenses. The proper enforcement of the Child Labor Law in the city of San Francisco alone would require several times our present force of special agents devoting their entire time thereto.

For the fiscal year of 1906-07 there was available for all expenses, exclusive of the printing and rent funds, and the salaries of the Commissioner and Deputy Commissioner, the sum of \$291.60 per month. With the commencement of the fiscal year 1907-08, this amount was increased to \$375 per month. After the necessary deductions of the salary of stenographer, office and incidental expenses, including postage, stationery (not furnished through the printing fund), telephone, needed office equipment, and the further necessity of creating a fund for the additional work required in the compilation of this report, there

remained a net amount available for salaries and traveling expenses of special agents for all work of the Bureau the sum of, approximately, \$225 per month. This was during the period when most of the work of gathering statistics was carried on. The work of the special agents and their time was so apportioned as to give as nearly equal weight as possible to each branch or division.

In carrying on the statistical work of the Bureau, lines laid down by former Commissioner Stafford have, in general, been followed. The excellent work begun with his administration has been continued. Some modifications have been necessary, and new work has been undertaken along lines that suggested themselves in the carrying on of the statistical work and in the enforcement of the labor laws. Further changes will of necessity have to be made, both in the present plan of the gathering of statistics and the material sought. But with the departures from the existing lines of carrying on our work, extreme care will be taken so that all data available from past reports may be utilized as a foundation for comparative studies, which will be further developed and become a prominent feature in future reports. The results of some work along these lines are presented in this report.

Blank forms will be designed and printed covering all of the various industrial enterprises in the State. Related industries will be grouped together. These blanks will be either special or composite, and will show in detail all the data required in the respective fields and will greatly facilitate this work, and will more readily enable corporations or individuals from whom the information is ought to comply with our requests. And it is also believed that it will overcome in a great measure the present hesitancy on the part of corporations and manufacturers in furnishing information and data, they deeming the same to be of a personal nature and a seeming intent on the part of the State to pry into their private affairs. We believe that with the full realization of the methods of handling this statistical data, wherein all identity is lost and the personal interests are protected in conformity to the law, that all information sought will be readily and cheerfully furnished.

A summary of the work performed during the period covered by this report includes principally the gathering of statistical data relative to stores and factories, covering all the more important manufacturing, commercial and industrial activities in the various centers of population in the State; and agriculture in all its branches and divisions, including that of horticulture, viticulture, seed farming, and stock raising, embracing the large valleys and districts devoted to these lines; transportation on water, and a thorough investigation of the shipping of the port of San Francisco; land systems of transportation, including steam and electric railways; labor organizations; employment agencies; child labor; orientals, including Chinese and Japanese.

These investigations show the numbers of persons employed, sex, adults, minors, wages, hours of labor; numbers of persons furnished employment, together with the fees paid, nature of employment and destination; the sanitary conditions of workrooms and other detailed information, representing upwards of 3,500 personal inspections, covering 120,000 individuals, excluding data on steam railroads, labor organizations and employment agencies. These personal inspections have been supplemented by extensive individual and personal correspondence. Personal opinions have been sought in many of the various subjects enumerated. The data gathered is very exhaustive and complete in all details. The work of compiling and tabulating was carried on with extreme care and precision. Totalizing has been followed throughout in all of the tables. Condensing was absolutely necessary, the numbers of tables being minimized, and only as many as were essential to present all the information of value were utilized, the amount available in our printing fund placing limitations. Graphic charts have been introduced to show tendencies, and only such deductions have been drawn and presented on the various subject-matters treated as the extent of our data would warrant.

While carrying on the work of gathering data special care and attention was given to enforcing the child labor and other laws. All infractions or violations were required to be corrected, and special work was done during this period on sanitation in San Francisco. Special attention was given to the enforcement of the Child Labor Law. Extensive correspondence was had with city and county officials and with the general employing public, complaints investigated, and when possible frequent inspections were made.

Rigid enforcement of the Child Labor Law was required in all cases coming to the attention of the Bureau and absolute compliance required in all detail.

The act regulating employment agencies occupied a large part of the time of our officers and special agents. During the period covered by this report, many hundreds of complaints were investigated, and where violations were obvious compliance with the law was compelled. This is one of the most difficult of laws to enforce.

In handling complaints of violations of these various laws, a policy of warning has governed this Bureau, and only when a salutary effect was desired has the Bureau resorted to the extreme measures of prosecuting. The slow workings of our lower criminal courts, due in a large measure to the tendency of postponement, and the excessive time consumed when necessarily so engaged, and consequent slighting of other important work, made the cost of prosecutions rise to a prohibitive figure. This is especially true of points distant from San Francisco,

where there are added other elements—those of railroad fares and the cost of maintenance of our agents. Expediency required this line of policy, but the future work of this Bureau along these lines will not necessarily be governed by this attitude. With an increased number of special agents, more time will be devoted to this work, the importance of which we fully realize. The purpose of the original act creating the Bureau was constantly kept uppermost.

Investigations covering the important industries of lumbering and mining were of necessity omitted. Their centers of activity are located at great distances from San Francisco and cover a wide area. The element of cost would rise to a prohibitive figure and personal investigations were, therefore, impossible. We hope to include these industries in our next biennial report.

It will be the aim of the Bureau in its future work in the field of agriculture to widen materially the scope, to investigate most thoroughly the many problems connected with that important industry, bearing on its various branches and the relations of labor thereto, using as a basis a minimum of 2,000 units (individual farms, orchards, vineyards, and stock ranches).

I desire to call the especial attention of the reader to the chapter devoted to social statistics. This work is very full and complete and contains many new ideas and thoughts. The work has been carried on mainly by personal correspondence, thus minimizing the cost. The data and information for this article has been drawn from many sources, including officers of the State prisons and reformatories, county sheriffs, county clerks, probation officers, and police officials in the larger cities and towns of the State.

Numbers are valuable primarily for the tendencies they show. In addition to the numerous tables presented, we have introduced charts which show graphically these tendencies. Some new and original lines of research are presented. We believe that there is a close relation existing between crime (especially juvenile, in the more serious offenses), lack of education (due in a large measure to the indifferent or nonenforcement of the Compulsory Education Act), and child labor in early youth. Additional information will be sought to carry on this investigation, as part of our future work in this branch. A careful analysis of crime committed in the State, especially felonies (adults and juvenile), will be made to determine, among many points, the percentage having its origin and growth or development within the confines of the State, and due, therefore, to existing social and economic conditions, and that coming to us from other states and countries. In this regard we will coöperate with the officials of the United States Immigration Commission.

All of the work in connection with social statistics will be done with the view that the data may be used as the foundation for possible future corrective legislation.

In conclusion, I desire to express my thanks for the consideration shown the Bureau by the heads of corporations, firms, companies, and individuals, who have furnished the information upon which this report, in a large measure, is based. To the officers of State institutions, county, and city and county officials, who have so willingly and cheerfully responded to our requests. To Prof. Carl C. Plehn, Department of Economics of the University of California, for the many acts of kindness and consideration shown the Bureau. I also desire to thank Mr. J. C. Astredo, Probation Officer of the Juvenile Court for the City and County of San Francisco, for the data and information furnished this Bureau.

To Mr. H. A. Scheel, who has acted as statistician during the period of compilation, I am particularly indebted for his valuable aid and services. Mr. Scheel is a graduate of the Department of Economics of the University of California, and to his natural adaptability and talents, aided by his technical training, is due in a large measure the success of this volume. During the major portion of the time, Mr. Scheel was ably assisted by Messrs. R. W. Bush and P. M. Scott, also graduates of the University of California. To Messrs. D. McLennan and P. H. Maloney, special agents, for their painstaking and efficient services in connection with the work of the Bureau. To Miss Katherine Kelly, the stenographer, upon whom fell the burden in a large measure of the many details in connection with the work of the Bureau, for her most efficient services rendered.

To my Deputy, Mr. F. C. Jones, for his aid and coöperation with me in this work, my sincere thanks. Whatever merit there may be in this report is largely due to my assistants, without whose aid and support this report would not have been possible.

FINANCIAL STATEMENT.

For the Fifty-eighth Fiscal Year ending June 30, 1907, and the Fifty-ninth Fiscal Year ending June 30, 1908.

FIFTY-EIGHTH FISCAL YEAR.

Appropriations.

Salary of Commissioner.....	\$3,000 00
Salary of Deputy Commissioner.....	1,800 00
Contingent Fund.....	3,500 00
Printing	1,250 00
Office rent	600 00
Deficiency bill *	750 00
Balance from Printing Fund (fifty-seventh fiscal year).....	841 25

Total amount available..... \$11,741 25

Disbursements.

Salary of Commissioner.....	\$3,000 00
Salary of Deputy Commissioner.....	1,800 00
Salaries of special agents (Contingent Fund).....	2,373 00
Contingent and traveling expenses as per bills rendered (Contingent Fund).....	1,877 00
Printing Biennial Report, stationery, etc.....	2,091 25
Office rent.....	600 00

Total disbursements \$11,741 25

FIFTY-NINTH FISCAL YEAR.

Appropriations.

Salary of Commissioner.....	\$3,000 00
Salary of Deputy Commissioner.....	1,800 00
Contingent Fund	4,500 00
Printing	1,500 00
Office rent.....	600 00

Total amount available..... \$11,400 00

Disbursements.

Salary of Commissioner.....	\$3,000 00
Salary of Deputy Commissioner.....	1,800 00
Salaries of special agents (Contingent Fund).....	3,161 00
Contingent and traveling expenses as per bills rendered (Contingent Fund)	1,160 00
Printing, stationery, etc.....	325 25
Office rent.....	600 00

Total disbursements \$10,046 25

† Balance \$1,353 75

* Amount allowed by the Legislature of 1907 for refurnishing, etc., after the destruction of office and contents, during April, 1906.

† Includes balance in Contingent Fund of \$179.00; balance in Printing Fund of \$1,174.75. Total, \$1,353.75.

Balance to be used in printing this Thirteenth Biennial Report and other expenses connected therewith.

INDUSTRIAL STATISTICS

WAGES IN STORES AND FACTORIES.

In the presentation of data on wages paid employes in stores and factories throughout the State of California we have followed to a great extent the classification and arrangement used in the Twelfth Biennial Report of this Bureau. This was done on account of the way in which the data was gathered, and for purposes of comparison. The divisions have been made with a view of bringing together, as nearly as possible, all the employes of related crafts under one group.

The division "Building Trades," which was used in the last report, has been omitted for the reason that a great deal of the work under that head is of but a temporary nature, in that the men employed were constantly shifting from one place to another. It is also very difficult to obtain data from contractors employing men on buildings, and when obtained, is generally very unreliable, owing to the tendency of contractors to merely state the union scale of wages. We have therefore decided to treat this group separately, using data furnished by the labor organizations.

We have confined our tabulation to twenty-eight divisions which are as follows:

1. Bakery and Restaurant Employes.
2. Breweries and Bottling Works.
3. Butcher Shop and Slaughter-house Employes.
4. Candy, Confectioners and Sugar Workers.
5. Cannery Employes.
6. Cigar and Tobacco Workers.
7. Clothing, Shoes, Etc.
8. Dairy Employes.
9. Electrical Workers.
10. Glass Workers.
11. Laborers, General.
12. Laundry Workers, Dyers, Etc.
13. Machine and Repair Shops, Iron and Steel Mills.
14. Metal Workers.
15. Plumbers, Pipe Fitters, Etc.
16. Printing Trades.
17. Sheet Metal Workers.

18. Ship Builders, Riggers, Etc.
19. Soap and Candle Workers.
20. Store and Office Employes.
21. Structural Iron Workers.
22. Tannery Employes.
23. Textile Workers.
24. Teamsters, Hostlers, Etc.
25. Trunks, Harness, Etc.
26. Upholsterers, Carpet Layers, Etc.
27. Woodworkers.
28. Miscellaneous.

Under these divisions have been treated all those occupations of persons actually engaged in the process of manufacturing, producing, repairing, etc.

Those engaged in clerical capacity have been treated separately under division number 20, "Store and Office Employes." Those engaged in transportation have been treated under division number 24, "Teamsters, Hostlers, Etc." A separate division, number 28, "Miscellaneous," contains such occupations as would not properly come under any of the above classifications, such as foremen, managers, superintendents, etc., and persons engaged in scattered industries, outside any of the preceding twenty-seven divisions under consideration.

Statistics on wages show the actual weekly compensation as taken from the pay rolls of the establishments investigated. When daily wages were paid, the actual earnings for a standard week of six days at the number of hours per day indicated in the column of hours were taken. Whenever the piece-work system was in vogue, the actual earnings for an average week of six days was used.

No account has been taken of the number of days employed during the year. The nature of the industry, in many instances, will determine its permanency. The canning industry, for example, lasts only through a few of the summer months. In most of the different divisions considered, the yearly earnings are practically the amount earned at the weekly rate given in the tables.

The wages of females have been kept separate. In order to distinguish them, (F) has been placed immediately after the occupation. When both males and females were engaged in the same occupation, the females are placed below the males in order that their respective hours of labor and compensation may be compared.

The investigation covers most all of the important centers of industry. On account of the large area of the State, the funds available would

not permit of carrying the investigation to all parts. Separate tables have been prepared for each of the following cities: San Francisco, Los Angeles, Oakland, Sacramento, San Jose, and Stockton. An additional table is presented covering the investigations in several of the smaller towns in the various parts of the State. Each of the above tables has been summarized for industries, and the result of all the investigations is brought together in a final summary for the entire State.

Two tables are presented showing the hours of labor and wages paid to female employes. The first covers our investigation in San Francisco, and is summarized by industries; the second covers our investigation in the entire State, and is summarized by localities.

Hours of Labor and Wages Paid in Stores and Factories in the CITY OF SAN FRANCISCO During the Fiscal Year 1907-08.

In our investigation of the hours of labor and wages paid in stores and factories in San Francisco, data was secured covering 32,288 individual cases. Of this number, 13,065, or 40.5 per cent, worked 8 hours per day; 15,512, or 48.0 per cent, worked 9 hours per day; 3,323, or 10.3 per cent, worked 10 hours per day, while 388, or 1.2 per cent, worked over 10 hours.

The wages per week ranged all the way from less than \$3 to over \$50; 5.4 per cent received under \$6 per week; 10.8 per cent over \$6 to \$9; 14.5 per cent over \$9 to \$12; 16.3 per cent over \$12 to \$15; 14.5 per cent over \$15 to \$18; 9.0 per cent over \$18 to \$21; 12.6 per cent over \$21 to \$25; while 16.9 per cent received over \$25. The largest group earned from \$12 to \$15, while 45.0 per cent of all persons considered earned from \$9 to \$18 per week.

In the division, "Store and Office Employes," 9,407 persons were considered. Of this number, 5,405, or 57.5 per cent, worked 8 hours; 3,645, or 38.8 per cent, worked 9 hours, while only 357, or 3.4 per cent, worked 10 hours. It will be noticed that over one half of the persons employed in stores and offices worked 8 hours; 5.8 per cent of the persons considered received \$6 and under; 11.9 per cent received over \$6 to \$9; 16.7 per cent received over \$9 to \$12; 15.6 per cent received over \$12 to \$15; 16.9 per cent received over \$15 to \$18; 8.3 per cent received over \$18 to \$21; 11.4 per cent received over \$21 to \$25; while 13.4 per cent received over \$25. The three groups, over \$9 to \$12; over \$12 to \$15 and over \$15 to \$18, contain about an equal number of persons, and the total represents 49.2 per cent; that is, practically one half of the persons considered received from \$9 to \$18 per week; and only 34.4 per cent received less than \$12 per week.

In our investigation of the hours of labor and wages paid in stores and factories in Los Angeles, data was secured covering 8,057 individuals. Of this number, 580, or 7.2 per cent, worked 8 hours; 5,755, or 71.4 per cent, worked 9 hours; 1,712, or 21.3 per cent, worked 10 hours, while less than one per cent worked over 10 hours.

The wages per week ranged from less than \$3 to over \$50; 18.7 per cent received \$6 and under; 21.2 per cent received over \$6 to \$9; 20.0 per cent received over \$9 to \$12; 13.9 per cent received over \$12 to \$15; 10.5 per cent received over \$15 to \$18; 7.5 per cent received over \$18 to \$21; 4.3 per cent received over \$21 to \$25, while 3.9 per cent received over \$25. The largest two groups are over \$6 to \$9; and over \$9 to \$12; practically 60.0 per cent received less than \$12.

In the division "Store and Factory Employes," 4,143 persons were considered. Of this number, 114, or 2.8 per cent, worked 8 hours; 3,694, or 89.2 per cent, worked 9 hours; while 334, or 8.0 per cent, worked 10 hours; 3.3 per cent received \$6 and under; 19.7 per cent received over \$6 to \$9; 22.4 per cent received over \$9 to \$12; 10.0 per cent received over \$12 to \$15; 9.5 per cent received over \$15 to \$18; 6.0 per cent received over \$18 to \$21; 4.4 per cent received over \$21 to \$25; while 4.7 per cent received over \$25, 65.0 per cent received less than \$12 per week.

In our investigation of the hours of labor and wages paid in stores and factories in Oakland, data was secured covering 7,159 individuals. Of this number, 14.4 per cent worked 8 hours; 5,432, or 75.9 per cent, worked 9 hours; 578, or 8.1 per cent, worked 10 hours; while 118, or 1.6 per cent, worked over 10 hours.

The wages per week ranged all the way from less than \$3 to over \$50; 9.3 per cent received \$6 and under; 14.7 per cent received over \$6 to \$9; 17.1 per cent received over \$9 to \$12; 14.0 per cent received over \$12 to \$15; 10.8 per cent received over \$15 to \$18; 11.9 per cent received over \$18 to \$21; 13.2 per cent received over \$21 to \$25; while 9 persons received over \$25. The largest group received over \$9 to \$12; the next largest groups being those receiving \$6 to \$9; and \$12 to \$15. These three groups comprise 45.8 per cent of all persons considered. 55 per cent received up to and including \$15 per week.

In the division "Store and Office Employes," 1,728 persons were considered. Of these, 199, or 11.5 per cent, worked 8 hours; 1,343, or 77.8 per cent, worked 9 hours; 153, or 8.8 per cent, worked 10 hours; and 33, or 1.9 per cent, worked 11 hours. 13.4 per cent received \$6 and under; 21.3 per cent received over \$6 to \$9; 16.4 per cent received over \$9 to \$12; 12.5 per cent received over \$12 to \$15; 11.1 per cent received over \$15 to \$18; 8.6 per cent received over \$18 to \$21; 10.2 per cent received over \$21 to \$25; while 6.5 per cent received over \$25. The largest group was that receiving over \$6 to \$9; while, approximately, one half of the total number falls on either side of \$12, 51.0 per cent receiving \$12 and under, and 49.0 per cent receiving over \$12 per week.

The preceding table shows the hours of labor and wages paid to females in stores and factories in San Francisco. Data was secured covering 8,483 individuals. Of this number 3,856, or 45.5 per cent, worked 8 hours; 3,348, or 39.5 per cent, worked 9 hours; while 1,279, or 15.1 per cent, worked 10 hours. The principal range of wages was from less than \$3 to \$30 per week, there being but 28 individuals receiving over \$30. 12.2 per cent received up to and including \$6; 30.8 per cent received over \$6 to \$9; 30.5 per cent received over \$9 to \$12; 15.7 per cent received over \$12 to \$15; 6.1 per cent received over \$15 to \$18; 2.1 per cent received over \$18 to \$21; 1.4 per cent received over \$21 to \$25; while but 0.8 per cent received over \$25. The two groups, over \$6 to \$9 and over \$9 to \$12, represent over 60.0 per cent of the total number considered; while 73.0 per cent received up to and including \$12.

In the division, "Store and Office Employes," 3,459 persons were considered. Of this number, 2,082, or 60.2 per cent, worked 8 hours; 1,327, or 38.4 per cent, worked 9 hours; and but 50, or 1.4 per cent, worked 10 hours. 4.9 per cent received up to and including \$6 per week; 23.0 per cent received over \$6 to \$9; 32.5 per cent received over \$9 to \$12; 21.5 per cent received over \$12 to \$15; 10.4 per cent received over \$15 to \$18; 3.5 per cent received over \$18 to \$21; 2.9 per cent received over \$21 to \$25; while 1.3 per cent received over \$25. The largest group, containing 32.5 per cent, received over \$9 to \$12. 77.0 per cent are represented by the groups receiving from \$6 to \$15.

FEMALE EMPLOYEES.—Hours of Labor and Wages Paid in Stores and Factories in the STATE OF CALIFORNIA During the Fiscal Year 1907-08.

A total of 19,459 female employes was included in our investigation of the hours of labor and wages paid in stores and factories throughout the State. Of this number, 8,483, or 43.6 per cent, were employed in San Francisco, and 3,846, or 19.8 per cent, in Los Angeles. The 8-hour group represents 23.6 per cent of the total in the State; 45.4 per cent in San Francisco; and but 1.5 per cent in Los Angeles. The 9-hour group represents 49.9 per cent of the total in the State; 39.5 per cent in San Francisco; and 83.8 per cent in Los Angeles; and the 10-hour group represents 23.5 per cent in the State; 15.1 per cent in San Francisco; and 14.7 per cent in Los Angeles. 3 per cent were working over 10 hours in the State. The wages were limited almost exclusively to \$21 and under, there being but 1.4 per cent receiving over \$21 in the State; 2.2 per cent in San Francisco; and 0.7 per cent in Los Angeles. Moreover, only about 10.0 per cent were receiving over \$15 per week in the State or San Francisco; and only 5.0 per cent in Los Angeles. The two groups, over \$6 to \$9 and over \$9 to \$12, contained over 60.0 per cent of the total number in the State and San Francisco; while in Los Angeles over 65.0 per cent were in groups, over \$3 to \$6 and over \$6 to \$9.

San Francisco paid her female employes wages slightly in excess of the general average for the State, while the wages in Los Angeles were lower; also the hours in San Francisco, on the whole, were shorter than the general average in the State, and longer in Los Angeles.

TRANSPORTATION—WATER.

The tables on transportation (water), showing shipping of the port of San Francisco in detail, has been compiled from a large volume of data obtained after a most exhaustive investigation. This was gathered by the personal work of our agents in the city of San Francisco. It will be the aim of the Bureau in our next biennial report to extend this work to the shipping of the ports of Eureka, San Pedro (Port of Los Angeles), and San Diego. San Francisco, the commercial metropolis of the Pacific coast, is located on one of the finest harbors in the world. The bay of San Francisco has an area of 257 square miles (shore line of 100 miles), and with San Pablo Bay, its northern arm or extension, an area of 420 square miles and a tidal range of 4.3 feet. The world-famed strait, the Golden Gate, connects the bay of San Francisco with the Pacific Ocean. It is about three miles long, its narrowest part being nearly a mile wide, with a maximum depth of 360 feet.

The total commerce of the bay of San Francisco for the fiscal year ending June 30, 1907, was in tons, 8,678,000, of which 7,678,000 was coastwise or foreign. During the year ending December 31, 1907, there was docked at the port of San Francisco, 6,900 steam vessels, of 3,895,454 tons; and 748 sailing vessels, with a tonnage of 720,149, a total of 7,648 vessels—steam and sail—with a total tonnage of 4,615,603. The value of exports and imports, as shown by the records of the customhouse, are over \$100,000,000 annually, exclusive of shipments of treasure.

Deductions have been drawn and presented in articles under the various tables.

In the folders opposite, data is presented covering 619 vessels regularly engaged in the trade of the port of San Francisco. Although a few vessels may have escaped our notice, we believe that on the whole the list is rather complete. No attempt was made to secure data on the small pleasure crafts, fishing boats, and scow schooners plying on the bay. These smaller crafts would tend to greatly increase the number of vessels, but would not materially increase the number employed, as they are mostly operated by owners.

The vessels under consideration have an aggregate gross tonnage of 696,889 tons, and the number of persons employed on them was 13,294 whites and 1,235 Orientals. The Orientals have been treated separately. Of the white employes, the largest group by far was the seamen, making

a total of 4,663, or 35.1 per cent. Following these came the mates, with a total of 1,263, or 9.5 per cent; firemen, 1,161, or 8.8 per cent; waiters, 1,051, or 7.9 per cent; engineers, 924, or 7.0 per cent; cooks, 744, or 5.6 per cent; and masters, 641, or 4.8 per cent. It will be noticed that several of the steam vessels on the bay have two masters and pilots.

The wages of masters ranged from \$100 to \$250 per month, according to the size of the vessel and trade engaged in, the largest group, or 20.7 per cent, being at \$125, although 52.0 per cent received \$150 and over. The wages of mates ranged from \$35 to \$130, 19.5 per cent receiving \$100 and over and 35.0 per cent receiving \$75 to \$100. In other words, 54.5 per cent received \$75 and over. The wages of seamen ranged from \$20 to \$70, 64.0 per cent receiving \$45 to \$50. Engineers ranged from \$50 to \$175, 65.6 per cent receiving \$100 and over. Firemen ranged from \$45 to \$80, 45.8 per cent receiving \$55. Of the total number employed in all occupations, 451, or 3.4 per cent, received from \$150 to \$250 per month; 1,122, or 8.4 per cent, from \$100 to \$150; 1,093, or 8.2 per cent, from \$75 to \$100; 4,739, or 35.7 per cent, from \$50 to \$75; while 5,889, or 44.3 per cent, received less than \$50.

It is worth noting that the total amount of wages paid to men employed on the vessels engaged in the trade of the port of San Francisco amounts to, approximately, \$10,000,000 per annum.

Wages Paid Japanese and Chinese Employees on American Vessels Engaged in the Shipping of the Port of San Francisco.
(Tabulated by Occupations.)

* Japanese and Chinese are paid in Mexican silver. Wages in this table have been reduced to equivalent in United States gold coin.

Chinese and Japanese considered in the preceding table were employed principally on vessels engaged in the Oriental trade. The Chinese, almost without exception, are aliens and are not allowed to land in an American port. They are paid in Mexican silver, which has been reduced to its equivalent in United States gold coin. The larger part of the Orientals are employed as coal passers, firemen, seamen, and waiters. The range of wages was from \$2.50 to \$25 (gold) per month. Of the total of 1,235, 127, or 10.3 per cent, received from \$10 to \$25 per month; while 1,108, or 89.7 per cent, received less than \$10. The prevailing rate of wages appears to be \$7. 60.0 per cent of the total receiving that amount.

Steam Railroads Employes in California, Fiscal Year 1907-08.

Other employes and laborers	1,376	2 11	4 04
Occupations not given	16,986		
Total	30,765		

In the fiscal year 1907-08, there were employed in steam railroads in the State of California, 30,765 persons, which shows a decrease of 10,751, or nearly one third less than the number employed in the fiscal

year 1905-06. The decrease was due primarily to the suspension of work on new construction, after the financial depression in November, 1907.

Hours of Labor and Wages Paid on Electric Street Railroads. (Tabulated by Localities.)

LOCALITY.	Occupation.	Number.	Hours.	Wages.
San Francisco and vicinity	Motormen	1,780	10	25 to 33 cts. per hour.
	Conductors			
Los Angeles and vicinity	Motormen	812	10	24 to 30 cts. per hour.
	Conductors			
Oakland and vicinity	Motormen	856	10	30 to 40 cts. per hour.
	Conductors			
Stockton and vicinity	Motormen	88	9-10	25 to 27 cts. per hour.
	Conductors			
San Jose and vicinity	Motormen	46	9	25 to 30 cts. per hour.
	Conductors			
Total		3,582		

In the preceding table are shown the wages paid to platform men on electric street railroads in various cities of the State. These men are paid by the hour, the runs being, as a rule, arranged so the men get in the full number of hours indicated in the table. The wages between the limits as shown for each locality, are regulated by the length of service. Oakland and vicinity showed the highest rate of wages, being from thirty to forty cents per hour.

*Paid 2½ to 3 cents per message delivered.

Data was secured covering a total of 832 employees of telegraph companies in the State of California. The hours range from 7 to 10 inclusive, but 47.4 per cent, or almost one half, were in the nine-hour group. The wages per month range from less than \$15 to over \$125. 13.2 per cent received \$25 and under; 29.1 per cent received over \$25 to \$50; 33.9 per cent received over \$50 to \$75; 19.6 per cent over \$75 to \$100; and 4.2 per cent over \$100. 63.0 per cent were in the groups receiving from \$25 to \$75 per month.

[illegible]

Data was secured covering a total of 4,634 individuals in the investigation of wages paid in telephone companies in the State. Of this number, 2,733, or 59.0 per cent, were females; and 1901, or 41.0 per cent, males; the females being principally employed as operators. The wages per month ranged from under \$20 to over \$125. The females represent by far the larger percentage of those in the lower wage groups, and the males those of the upper. Practically 50.0 per cent of the total employes received \$45 and under per month, and 90.0 per cent of these were females. In fact, over 90.0 per cent of all females received \$50 and under. Males made up 75.0 per cent of those receiving over \$45 per month, while 90.0 per cent of all the males received over \$50 per month. In the female employes, the largest wage group is over \$25 to \$30, containing 23.2 per cent; while in the male employes, the largest group is over \$90 to \$100, containing 34.3 per cent.

FACTORY INSPECTION.

Among the many duties coming under the scope of this Bureau is that of inspecting the sanitary condition of places where labor is employed. In carrying out this inspection, data was also obtained of the number and sex of adults, and the number, age, and sex of minors employed in the establishments inspected. All the large centers of industry were investigated. In addition, inspections were made in various isolated localities where large industries existed. The extent of our inspections was limited only by the amount of funds available for this particular work. Separate tables are submitted, showing the results of our inspections of stores and factories in San Francisco, Los Angeles, Oakland, Sacramento, San Jose, Stockton, San Diego, Berkeley, Alameda, and one table covering miscellaneous towns. In San Francisco and Oakland, separate tables are presented for stores. The sanitation of a store or factory was considered bad when it was dangerous to the health of the employes. The failure to provide a sufficient number of toilets, and separate ones, distinctly labeled, when both sexes were employed, were the commonest omissions on the part of the employers. In laying out the future work of this Bureau more specific data will be sought and presented on all violations of laws pertaining to sanitation. It will be our object to bring this particular branch of our work, namely, factory inspection, to as high a degree of efficiency as possible.

In the city of San Francisco, personal inspections were made of 1,200 establishments, employing 36,365 persons. Of this number, 27,474, or 80.3 per cent, were adult males, while 7,155, or 19.7 per cent, were adult females. Three hundred and eighty-eight, or 1.1 per cent, were minors under 16 years of age, while 1,348, or 3.7 per cent, were minors between 16 and 18 years of age, making a total of all minors employed of 1,736, or 4.8 per cent. Bag manufacturing showed the highest percentage of minors, namely 31.8 per cent, or nearly one third.

In 1,135 instances, or 94.6 per cent, the sanitation was good; in 20 instances, or 1.7 per cent, fair; while in 45 instances, or 3.7 per cent, it was bad.

Totals	202	6,576	4,823	1,126	121	126	219	161	17.1	9.5	147	38	17

In the factory inspection in Oakland, 202 establishments were visited, employing a total of 6,576 persons; 4,823, or 73.4 per cent of these, were adult males: 1,126, or 17.1 per cent, adult females; and 627, or 9.5 per cent, minors of both sexes. 247 of these minors, or 3.7 per cent of the total, were under 16 years of age; and 380, or 5.8 per cent of the total, were from 16 to 18 years of age.

The sanitation in 147, or 72.8 per cent of the 202 establishments inspected, was classed as good. In 38, or 18.8 per cent, fair; and in 17, or 8.4 per cent, bad.

Paper box manufacturing employed by far the largest percentage of minors, almost two thirds of the total employes being minors. The percentage of females is noticeably high in such industries as confectioners, canners and packers, dyers and cleaners, glove manufacturing and garment manufacturing.

Totals	77	2,468	1,963	415	10	8	50	22	16.8	3.7	70		7

Of the 2,468 persons employed in the 77 establishments inspected in Stockton, 1,963, or 79.5 per cent, were adult males; 415, or 16.8 per cent, adult females; and but 90, or 3.7 per cent, minors. The minors employed who were under 16 years amounted to less than 1.0 per cent of the total, while those between 16 and 18 years, amounted to 2.9 per cent of the total, the percentage of minors being noticeably low.

In 70 instances, or 90.9 per cent, the sanitation was considered good; while in 7 instances, or 9.1 per cent, it was considered bad.

Totals	54	12,615	8,755	2,972	124	262	251	251	23.6	7.0	43	11	

A number of large plants were inspected in various towns throughout the State. These employed 12,615 persons, of whom 8,755, or 69.4 per cent, were adult males; 2,972, or 23.6 per cent, adult females; and 888, or 7.0 per cent, minors. Minors under 16 years of age constituted 3.0 per cent of the total; while those between 16 and 18 years made up 4.0 per cent.

Sanitation in 79.6 per cent of the cases was good; and in 11, or 20.4 per cent, fair.

The large number of females employed in canneries tends to make the percentage of females high, as in only one other industry, namely laundries, is the percentage equal to that of the total.

The store and factory inspection, as summarized for the State, gives a total of 2,153 establishments, employing 80,124 persons. Of these, 54,300, or 67.7 per cent, were adult males; 20,239, or 25.3 per cent, adult females; 1,927, or 2.4 per cent, minors under 16 years of age, and 3,658, or 4.6 per cent, minors from 16 to 18 years of age.

The sanitation in 91.5 per cent of the instances was good; in 4.6 per cent, fair; and in 3.9 per cent, bad.

FARM LABOR.

The statistical data and information on agricultural labor presented is as full and complete as was possible for the Bureau to obtain. Some of the large centers of industrial activity located at extreme distances from San Francisco were of necessity omitted in the personal investigations made, the funds available not permitting the same. The time consumed in personal agricultural investigation is much greater than in store and factory inspection work in the centers of population. There is also to be added to the cost of railroad fares and hotel bills the additional item of expense, that of buggy hire, which is necessary in order to thoroughly cover the different fields. Therefore, with a view to obtaining a maximum amount of data, and to have the same as varied and as representative as possible, we selected the large valleys and centers devoted to the growing of the grape for wine and for raisins (the viticultural industry), citrus and deciduous fruit belts, the large berry and seed farm districts, and those sections where are located ranches devoted to the growing of hay and cereals, stock raising, and dairying. The towns or centers of population of these districts served as a basis from which the work was carried on. The territory covered represents the Sonoma, Napa and Vaca valleys, the Santa Clara and adjacent smaller ones, and sections of the great Sacramento and San Joaquin valleys; and the raisin and fruit centers of Fresno, Visalia, Hanford, and Porterville were thoroughly covered; also the large districts lying on the west side of the San Joaquin devoted to stock raising and dairying. In addition to personal investigations, correspondence was had with individual farmers and orchardists, and a large number of circular letters were mailed to different centers. Over 70.0 per cent of the data shown in these tables was gathered by personal work. The results obtained by correspondence or circulars were not as satisfactory as were expected or desired, only about 20.0 per cent answering our communications. Dependence for data desired and necessary can only be placed on personal solicitation and work.

This information is based on results from 390 farms, orchards, vineyards and ranches, representing over 550,000 acres, and employing 12,480 individuals. Tables are presented, grouped in counties, showing in detail the number of farms, acreage, products, number of employes—white and Oriental—number employing men with families, families so

employed, number of children in such families, number furnishing houses, number furnishing same free, bathing facilities, number employing white female or Oriental male domestic help, and preference expressed for each, and the number employing women and children in field work.

Supplementary articles are shown for tables. Some of the personal opinions obtained from farmers and orchardists are given. While these show very clearly many of the conditions existing in various parts of the State, in the main they fail to show causes or possible remedies.

The farm labor situation in some degree is due to the outgrowth of conditions which had their origin in the early history of the State. The growth and development of agriculture depends in a great measure upon an efficient and intelligent supply of white labor. The lack of available and reliable help is the most important problem that confronts those engaged in this industry, and there are, undoubtedly, many contributory causes.

The Bureau will, in its future work in this field, materially widen the scope and make an exhaustive investigation into these and many other problems in which the industry of agriculture and labor are closely related.

Those employed temporarily form 80.0 per cent approximately of all the help required when necessary. The nature of many of the products is such as to require an elastic supply in this temporary help. Investigations will be made to ascertain the period, or periods of idleness in this class in the different sections of the State; also the possibility of shifting this labor from the different centers or localities, as the various crops ripen, or products are ready to market. The elements of dependency, effectiveness, reliability and trustworthiness will be ascertained for each class and character of labor required, and to what extent the features of social life, housing and boarding enter. The opinions of farmers, orchardists and those engaged in the various branches of agriculture, will be sought, covering many important problems, especially their preference for classes and kinds of labor required. This will be in addition to a general statement. There will be used as a basis for this work a minimum of 2,000 units (individual farms, orchards, vineyards, dairies, and stock ranches).

In the investigation with regard to the conditions of farm labor in California, data was secured from 349 farms in the different sections of the State, with an aggregate acreage of 254,219. Seventy-one, or 20.4 per cent, of these farms were used for purely agricultural purposes; 198, or 56.7 per cent, for horticultural; and 80, or 22.9 per cent, for mixed products. These 349 farms employed a total of 10,650 persons, of whom 4,751, or 44.6 per cent, were whites; and 5,889, or 55.4 per cent, Orientals. Of the white employes, 61.9 per cent were temporary and 38.1 per cent permanent. Of the Orientals, 85.4 per cent were temporary and 14.6 per cent permanent. In other words, about two thirds of the white employes and over five sixths of the Orientals were temporary. Although the answers to the questions which form the headings of the columns of the rest of the table were rather unsatisfactory, the following information was extracted from them: 186, or 53.3 per cent, of the farmers employed men with families. These families were 1,019 in number, and contained 1,862 children. Sixty-nine, or 19.8 per cent, of the farmers furnished some three hundred houses, rent free, to their employes; 37.5 per cent of the farmers furnished bathing facilities of various kinds. Of those employing domestics, 72.8 per cent employed Orientals and 27.2 per cent white females; and of those expressing a preference, 85.4 per cent preferred whites and 14.6 per cent preferred Orientals. One hundred, or 28.7 per cent, of the farmers employed women in field work at some time of the year, and 89, or 25.5 per cent, employed children similarly.

Most of the women and children are employed in the hop fields, and in picking grapes and prunes in Sonoma and Napa counties.

This information was obtained from 27 different counties, representing every section of the State, but it is from personal opinions of the farmers that the best insight into conditions can be obtained. These opinions may be found in the following pages. Tables presenting data with regard to wages paid to farm labor also follow.

There were 4,751 white employes on the 349 farms from which information was received regarding the conditions of farm labor in the State; 1,829, or 38.1 per cent, of these were permanent, and 2,922, or 61.9 per cent, temporary employes; 35.5 per cent of the permanent employes were paid by the day, and 64.5 per cent by the month; 73.2 per cent received wages with board, and 26.8 per cent wages without board. Wages by the day ranged from \$1.25 to \$2, without board, with the largest group at \$1.50; and from \$1 to \$2, with board, the largest group being at \$1.25 to \$1.50. The wages by the month ranged from \$25 to over \$50, without board, the largest groups being at \$30 and \$40; and from \$25 to \$50, with board, the largest groups being at \$30 and \$35; 34.3 per cent of the temporary employes were paid by the day, and 65.7 per cent by the month; 67.8 per cent received wages with board, and 32.2 per cent wages without board. The wages per day ranged from \$1.25 to \$2.50, without board, the largest groups being at \$1.50 and \$2, with board; the largest group without board at \$1.75. Wages per month ranged from \$30 to \$50, without board, and from \$25 to \$40, with board, the largest group being at \$35.

Information was received regarding the wages of 5,889 Orientals on farms in different sections of the State. Eight hundred and sixty-four, or 14.7 per cent, of these were permanent, and 5,025, or 85.3 per cent, temporary; 61.9 per cent of the permanent employes were paid by the day, and 28.3 per cent by the month; 9.8 per cent worked on contract. Only 2.0 per cent received wages with board. The largest group were those receiving wages by the day without board, there being no instances where Orientals were paid by the day with board; 26.3 per cent received wages by the month without board, and 2.0 per cent by the month with board. Wages by the day ranged from \$1.25 to \$1.75. Wages by the month ranged from \$30 to \$50 without board, and from \$35 to \$50 with board; 97.6 per cent of the temporary employes were paid by the day. None received board with their wages. The daily wage ranged from \$1 to \$2. Monthly, from \$30 to \$45. By far the majority of all Oriental employes, permanent and temporary, were paid by the day, without board. This division represents 97.6 per cent of the temporary employes, and 83.3 per cent of all employes. Moreover, the largest group in this division, namely, 3,651 at \$1.50, not only represents 72.7 per cent of the temporary employes, but 62.1 per cent of all the Oriental employes. It seems reasonable to conclude that the majority of Oriental employes on farms received \$1.50 per day and boarded themselves.

Wages Paid to Employees on Large Ranches Devoted to Raising of Stock and Cattle.

* All wages include board.

In the investigation of farm labor in the State, data was also obtained concerning employes of large ranches devoted to the raising of stock and cattle. Information was secured from 41 ranches, having an aggregate of over 300,000 acres, and employing 1,830 persons. The various occupations have been enumerated in the table above. The wages without exception include board. Practically two thirds were employed by the day, the wages ranging from \$1 to \$6. Over 50 per cent of them received \$1 and \$1.12½ per day. Ranch hands represented 58.4 per cent of all employes, the most common wage when working by the day being \$1.12½, and when working by the month \$30.

In our investigations of conditions of farm labor, personal opinions of the leading farmers in various sections of the State were sought. In order to convey to the public the correct impression of the existing conditions, it has been considered best to present the personal opinions so obtained. The State has been divided into sections, each presenting a different phase of the subject under consideration, due to its location and agricultural productions. In addition the products of each farm are presented, in order that the opinions that follow may be made more intelligible to the reader.

SHASTA AND TEHAMA.

Representing opinions of farmers owning or controlling 58,422 acres.

Fruit, Grapes, and Cereals.

"In 1907, the condition of the labor question was somewhat aggravating, the better class having permanent employment at satisfactory wages. The transients were exacting, very unreasonable, and unreliable. Cause, too much work and high wages. Yet, with an even number of Chinese, Japanese, and white employes, I received better results from the whites, with the Chinese second. In 1908, I have, so far, more applicants than I can accommodate, because of less demand for labor from mills and mines and lower prices for our products. Yet I prefer the white employe, for the reason that I find him more intelligent, possessing a high degree of honor and more initiative, thereby not having to be driven or ordered each time to do his duty, he being independent."

Prunes and Hay.

"I have done all my fruit picking for the last three years with Japanese, and find it much more satisfactory, not because they are cheaper, for there is little difference in that, but because you can depend upon them. The main trouble with white help up here is that they won't stay more than a day or two at a time, thus putting the farmer to all kinds of loss and inconvenience."

Pears, Prunes, and Peaches.

"Wages and number employed vary. In 1907, we paid \$2 per day to men and \$1.50 per day to women, except when picking up prunes and cutting peaches by contract for drying. In the former case some families made from \$7 to \$10 per day. In the latter case it was not unusual for women and girls to make \$2 per day. We have had no experience with Orientals. Our help usually has been of a migratory class, camping out while employed, and then moving on."

Pears and Wheat.

"Labor has been very plentiful during the season of 1908; that is, whites and Japanese, but Chinese are scarce. Whites, we regret to say are the least dependable, and Japs are only half as good as Chinese."

Apricots, Peaches, Almonds, and Alfalfa.

"The season's supply of labor for 1908 has been satisfactory. I prefer Orientals for pruning orchards and harvesting fruit. For other work, I prefer white help."

BUTTE, COLUSA, AND GLENN.

Representing opinions of farmers owning or controlling 39,500 acres.

Hay and Grain.

"I find that the most unfortunate part about our common laborers is that they want to roam about, dissipate, and have no inclination to make or save money. From my experience, I find that the more wages you pay, the less time they work, finding fault with their condition, which they bring on themselves, mostly caused from drink. I find that the Japs, as a rule, take care of their money, and work steadier than the white laborer."

Sugar Beets, Wheat, Barley, and Hay.

"The labor question in California, especially Northern California, is, in my opinion, most serious. We are running at half capacity, because we can't get sufficient field labor to top the beets fast enough. A ton of beets should not cost more than seventy cents per ton to top and load. These men work so slow that it is costing from \$1.00 to \$1.90 per ton. If you ask them to work a little faster, they quit. It is as bad with white labor; they all want jobs with which there is no labor connected. I have handled labor for twenty years, but never saw anything like it in this part of the country."

Wheat and Barley.

"We need more girls for housework. I think we should induce Eastern families to come to this State, as the majority of California girls

object to washing and ironing. Therefore, we are obliged to pay girls to cook and give our laundry to Chinese."

Wheat and Barley.

"White laborers have been scarce these last two years. Chinese cooks are getting scarce on account of some of them that are in this country going back to China and none coming in. For farm work, Chinamen are the only reliable cooks we can get. In haying, we pay our farm help \$1.50 per day. In harvest, from \$2.50 to \$3.50 per day, including board."

Cattle, Grain, Corn, and Prunes.

"There are hardly any laborers with families, and very few white cooks, as they prefer to work in towns. In picking prunes by contract, the average daily earnings of the white help at the same price will only average about sixty per cent of the Oriental earnings."

Fruit, Alfalfa, and Barley.

"White labor is much more desirable than Asiatic, but at the present time it seems almost impossible to get white labor that will stand by you and help in harvesting one single crop. We use Asiatic help only in the fruit business, and then only by contract. They are very poor help to employ by the day or month."

Oranges.

"Women in packing houses average \$1.50 to \$2 per day. Men from \$2.25 to \$3 per day. Japs picking by contract average \$1.50 to \$2 per day."

Oranges, Olives, Figs, Peaches, Apples, and Pears.

"I believe that if the Greeks were more generally employed, so that they had the chance to become acquainted with our methods, they would prove to be the best help that can be had in the orchard. The trouble has been that people generally do not understand them and are not inclined to give them a chance. They are far preferable to Japanese, as far as my experience goes, for they are steady and faithful."

SUTTER AND YUBA.

Representing opinions of farmers owning or controlling 3,589 acres.

Raisins and Wine Grapes.

"During harvest time the whites get about \$1.50 per day and board. The Orientals about \$1.75 per day, but they board themselves. I find that Oriental help is best in the vineyard, but in the house white help is best."

SOLANO AND YOLO.

Representing opinions of farmers owning or controlling 25,352 acres.

Apricots, Peaches, Plums, and Prunes.

"I find it so difficult to get good help that I sell my fruit on the trees to Japanese. I have been unable to get a white girl to do housework, and I would not have Orientals about the house on account of my children."

Fruit and Vegetables.

"I have no trouble in getting help. I sell my fruit on the trees to Japanese. They pick and take care of it. I have no further trouble with my fruit. I only cultivate the orchard; the Japs do the rest."

Peaches, Pears, Apricots, and Prunes.

"I was compelled to rent my place to the Japanese because I had so much trouble with help. The present condition is more satisfactory to me. I was unable to get the white help to remain more than a few days, hence I have rented my farm."

Apricots, Peaches, Prunes, and Pears.

"I don't employ any Japs. You can not depend on them."

Fruit and Grapes.

"I have rented my orchard to Japanese. So do most of my neighbors. The fruit is shipped in my name, and after I am paid the rental out of the crop, the Japanese take the rest. From indications at present, the Japanese renter will get the short end. Several Japanese have already abandoned the orchards because of the short crop. I find good white help scarce."

Fruit, Grain, Hay, and Live Stock.

"We find it difficult to obtain white help. There is an abundant supply of Japanese; and if we could get Chinese we would employ them in preference to Japanese. Of course, the white help is preferable to either, but we can not always get them."

Fruit and Grapes.

"I have rented my ranch to the Japanese. They pay me cash, and I save lots of trouble hiring help. The Japs do not take very good care of things. Their object is to get what they can off it and then rent another place. The Japs will own this valley after a while. The restriction of Chinese immigration has worked a hardship on the producers of fruit in this valley. The Japs know it, and they are getting too independent."

Fruit and Grapes.

"The Japs have left some of the ranches they rented because they could not see any show to make anything above the rent. The owner

usually has the fruit shipped in his own name, and after he takes out the rent he gives the remainder to the renter. Mr. Jap don't see his way clear, so he wants to work for wages and let the owner take care of his interests."

Prunes, Peaches, Apricots, and Grapes.

"I find it hard to get desirable help this year. White help expect more than I can afford to pay; hence I employ Japanese principally. If I could get white help at a fair wage, I would employ them in preference to Japanese."

Cherries, Plums, and Prunes.

"I have no use for Japanese. I like the Chinese better. You can not depend on the Japs; they will strike when you are busy, and a contract with them don't amount to anything. One good white man will do as much work as two Japs at anything. If we could get white help of the proper kind, we would cut out the Japanese altogether."

Peaches, Plums, Apricots, Almonds, Prunes, and Figs.

"Because there is such a scarcity of labor the Japanese can just hold sway. As we can not get men to work on our farms, we are forced to rent to the Japs. I have employed both the Japanese and Chinese on my ranch, and find that I like the Chinese the better, for if you are exceedingly rushed a Chinaman will not strike for higher wages and leave you in the lurch, as a Jap surely does."

Hay and Grain.

"I find it difficult to obtain good white help this year. The applicants are not the desirable kind. The best white men go to the cities, where they work shorter hours and get better pay."

Pears, Peaches, Apricots, and Almonds.

"I rent my orchard to Japanese. They practically control all the orchards in this vicinity. It is difficult to learn what wages they pay. I think they work together and divide the proceeds."

Pears, Peaches, Prunes, and Almonds.

"I rent my orchard to Japanese. They pay me a cash rent. I find this system better than working the place myself because I am unable to get the right kind of white help. The desirable kind go to the cities."

Prunes, Pears, and Peaches.

"I have found it difficult to get help; consequently, I rent my orchard to Japanese. They practically control all the orchards in this vicinity."

Peaches, Plums, Prunes, and Apricots.

"I rent my place to Japs. They pay me a fair rental, and I have no further trouble with hired help. You can not get a white girl to do domestic work."

Hay, Grain, and Live Stock.

"I am in the same condition as my neighbors. I can not get help. Orientals are no account for general farm work or handling horses or machinery."

Hay, Grain, Cattle, and Hogs.

"I find white help very scarce; in fact, this year we have been running short-handed. I employ a Chinese cook because I can not get any other except Japanese, and I prefer Chinese to Japanese."

Hay, Grain, Cattle, and Horses.

"I find white help scarce. Last year's supply was short and this year (1907) is worse. There are no applications for work and we have to rustle around to find help."

Fruit, Hay, and Grain.

"I rent my orchard to Japs. They gather and ship the fruit. I find this method more satisfactory because it is so difficult to obtain desirable white help. I get one half the crop net."

Peaches, Apricots, Pears, Plums, and Almonds.

"I rent to Japanese. They pay me a share of the crop and I compel them to cultivate and prune to my satisfaction. White help is very scarce in this vicinity this year." (1907.)

Pears, Peaches, Prunes, and Apricots.

"I rent my orchard to Japs. They control nearly all the orchards in this vicinity. I have no trouble with them. They pay their rent, and I have less trouble than when I ran the place myself."

Hay and Grain.

"I would employ a white cook if I could get one. White men can get more wages at other work and white girls will not cook for any consideration."

Hay and Grain.

"I have found it difficult to get white help this year (1907); more so than other years. I pay higher wages this summer than I have for several years."

Fruit, Hay, and Grain.

"I have found it difficult to get white help, more so this year (1907) than last. The kind of white help making application for work will not stay any great length of time. They keep moving."

NAPA AND SONOMA.

Representing opinions of farmers owning or controlling 29,127 acres.

Grapes and Wine.

"The women and children who pick grapes live in the vicinity and we prefer to employ them rather than Orientals. Of course, we employ a large force of white help during the fall—making wine."

Fruit, Grain, Hay, Alfalfa, and Dairying.

"I sell my fruit on the trees to a Chinese company and have nothing to do but cultivate the orchard. I have followed this practice for several years, and find it more profitable than handling the fruit myself."

Grain, Hay, and Live Stock.

"I can not get help without chasing over the country looking for them. It is getting so that nobody will do farm work but foreigners and mules."

Peaches, Plums, Pears, and Apples.

"I have found it difficult to get the right kind of white labor. I don't care very much for Japanese, but they do to fill in. Japanese are not as good as white help for general farm work. They don't understand horses or machinery. They get along picking fruit and pruning."

Berries, Cherries, Apples, and Hops.

"I find it difficult to get good white help. I have all the Japanese I want. They give good service, but of course white help of the proper kind would suit me better."

Hops and Fruit.

"I employ a number of Indians hop picking and they give better service than either whites or Orientals. I prefer Indians to any other kind of help, and if I could get them I would not employ any others. The Japanese prune and train my hops by contract. I pay \$14 per acre and furnish cottages or bunk houses for the Japs to live in. The whites and Indians prefer to live in tents in warm weather."

Fruit and Grapes.

"Good white help is scarce alright. However, I do not think it is as scarce as it was last year (1906). If we could give permanent employment I suppose we would fare better, but we haven't steady work, and of course it would not pay for the help to remain without employment."

Grapes.

"I hear a general complaint from my neighbors about the scarcity of good white help. The young men go to the cities because they get better wages than we can afford to pay; and they also get steadier employ-

ment. If we could employ white men steady I suppose we could hold them, but as a matter of fact it would not pay. The grape and fruit crop on small farms would not give steady employment."

Grapes.

"White help of the desirable kind has been scarce alright, but large ranchers who give permanent employment don't have any trouble. They keep their help the year round. We who have small farms employ help only in the busy season—a few months at most—hence we find it difficult to get the proper kind. They seek permanent employment and stick with it."

Grapes and Fruit.

"Of course we employ both whites and Japanese. If we depended on one kind we would run shorthanded. The Japanese are not so skillful with horses and machinery as white men, but they get along with fruit and grape picking fairly well. You can not depend on the Japanese too much, however. We are always about and direct the work."

Peaches, Pears, and Prunes.

"Help was scarce earlier in the season, but now (August, 1907) there appears to be sufficient hands to do the work. We find it difficult to get steady white men. They work for a while and then go to other places. The young men usually go to the cities."

Apples, Cherries, Peaches, and Plums.

"I find it very difficult to get help this year (1907). Hence, I employ Japanese and there is not an idle Jap in the vicinity at present."

Apples and Cherries.

"I find it difficult to get help this year. I used to employ none but white help. This year I am glad to get Japs. I provide bunk houses for the Japs."

Wine Grapes.

"I find it difficult to get help this year at the old prices. I am decidedly in favor of Chinese labor. If they acquired a knowledge of correspondence, I would employ one of them as foreman and employ no other kind of help. They give me better satisfaction than white help for all purposes."

Hops.

"I have all the help I want at present (1907). There are more applicants for work than are needed. Help was somewhat scarce last year, but we are well supplied just now. I am opposed to the exclusion of Japanese. We would be in a bad fix without their help. I prefer them to the kind of white men who apply for work."

Hops.

"We have all the help we want at present (1907). The Japanese do most of the work except picking. They work by contract, and we employ families to assist in the picking."

Hops.

"We have all the help we want at present (1907). The Japanese remain after hop picking and we have to depend on them to care for the hop yards. They do most of the work by contract. About \$15 per acre is the usual price for stringing and training, together with all the handwork."

Pears, Plums, Apples, and Prunes.

"White help is pretty scarce in this vicinity (1907). The Japanese take contracts caring for orchards and it helps the growers. They don't have to bother with poor white help, who will not remain at any one place any length of time."

Pears, Plums, Apples, and Prunes.

"White help is scarce this year (1907). There are some applications for work, but they are of the kind that won't stay long. When they earn a few dollars they want to move on. The Japs remain with us all the year round."

Grapes and Hops.

"We have no particular trouble this year so far in getting help. The Japanese take contracts for pruning and training hops. They get about \$14 per acre. We pay one cent per pound for picking hops—that is the uniform rate—and persons skilled can make as high as \$3 per day. I say *skilled* because all persons can not pick hops and make that per diem."

Fruit and Grapes.

"I find good white help scarce (1907). The young men go to the cities and the applicants for work are not the industrious, intelligent kind. However, there are good men, but they are the exceptions."

Hops.

"White help is scarce this year (1907). The Japanese remain here all the year, while the whites only apply for work during hop picking. The Japanese do the pruning and training. They understand the business. White families pick. Japanese also pick."

Hops.

"We have had no trouble so far in getting all the help we want. The Japanese take care of the hopfields until picking time, at so much an acre—about \$14 is the usual rate. During the gathering of the crop

we pay families, as well as Japanese, one cent per pound. They make from \$1.50 to \$1.75 per day. Some make more, but that is the average wage."

Hops.

"I have not had any trouble so far in getting help. Of course, the Japanese do most all the work by contract—pruning and training—and we employ white help, mostly families, to pick the hops. The Japanese also pick. As a matter of fact there is work for everybody who applies at this season. We pay one cent a pound for picking and the average amount made is \$2 per day. Some make more and others less."

Hops.

"Good white help is scarce, alright. However, with the help of Japanese, who prune and train, we manage to get along. The hop gives employment—for a short time only—to several hundred persons along the Russian River, but we can not employ them permanently, and of course they return to their homes or some other place after the hops are picked, but the Japs are with us all the year."

Fruit and Hops.

"I find it difficult to get help this year (1907). I am afraid we will be unable to gather our hops in good condition. We have arranged to run an excursion *free* on the 19th of August, as an inducement to attract families from San Francisco and other cities to come and engage in picking hops. We (the farmers in Russian River Valley) have also arranged with the railroad to carry persons willing to work, at half fare, and we make good the other half."

Peaches, Plums, Apples, and Berries.

"There is a scarcity of white help this year. If I could obtain white help I would employ them. The Japanese are not thoroughly reliable."

Peaches, Plums, Pears, and Apples.

"I have found it difficult to get the right kind of white help this year. The Japanese rent the orchard and I provide a bunk house for them."

SACRAMENTO AND SAN JOAQUIN.

Representing opinions of farmers owning or controlling 1,280 acres.

Asparagus, Potatoes, Onions, and Beans.

"Much of our land is now leased on share crop rentals, and as our fields of asparagus are all young, and as they don't do much much before they are three or four years old, it is impossible to give definite figures. One point we have quite thoroughly satisfied ourselves upon, viz.: the most satisfactory farm help, except as teamsters, are the Chinese. We

employed none but white help for two years, and they will do more work for the same money, but they are not to be depended upon. They are coming and going all the time, and at the season you need them most, you can't get them. This section is not a nice place to work, being cold and rainy in the winter and dry and dusty in the summer. Chinese are the only ones who will stay with it the whole year through."

Tokay Grapes.

"It is better to pay a man a little more and have him satisfied than to attempt to save a few dollars, for in the long run your plant will be run more economically by well-paid, permanent men than by a lot of cheap, transient help."

SANTA CLARA AND SANTA CRUZ.

Representing opinions of farmers owning or controlling 19,843 acres.
Prunes.

"White help has been scarce in this vicinity. However, by employing Japanese in addition, we get along fairly well. The Japanese are alright picking fruit, but they do not understand the handling of horses or machinery. There are some cases where Japanese do general farm work and give satisfaction, but they are exceptional cases. We employ white help to care for our stock, and use the Japanese for picking fruit, and hand work in the orchard."

Prunes, Apricots, and Peaches.

"White help has been scarce for some time, and the kind of help applying for work do not appear to stick to the job very long. They keep moving. If we could get good white help we would not employ any other. The Japanese are not skillful in the handling of horses or machinery. They do fairly well picking fruit, and hoeing in and about trees and vines."

Sugar Beets.

"I rent my beet fields to Portuguese for a share of the crop, and I do not have to bother about employing help."

Wine Grapes, Prunes, Apricots, and Peaches.

"We employ Italians, who look after the crushing of grapes and the making of wine. Japanese do the picking. They work by contract at so much per box, or ton. It is difficult to hold the white help who apply for work. They work a short time and move on to some other point. I refer to the floating population, or what is commonly called the 'hobo.'"

Cattle, Horses, and Hogs.

"We have no trouble in getting all the help we want. Young white men will accept employment on a stock ranch that would not work at ordinary farm work. They like the excitement that follows the herding of cattle and riding of horses. It takes some skill to adhere to the hurricane deck of a broncho and throw the noose of a riata on the horns of a steer; hence, we are not afraid that Oriental competition is going to sidetrack the vaquero for some time at least."

Prunes.

"We employ Japanese because they take contracts and usually stick to the job until completed. White help of the proper kind do not pick fruit to any extent. They prefer to work with horses, cultivating, and hauling."

Prunes.

"Good white help has been scarce because a great many seek employment in the cities, and the white help who apply for work do not stay very long. Hence, we employ Japanese as a necessity."

Alfalfa and Dairying.

"The milking and butter-making is done by Swiss-Italians. They understand the business better than other help. That is to say, they make a specialty of milking cows and making butter. Americans will not do this class of work if they can get other employment."

Prunes.

"The Japanese pick fruit by contract—by the box or ton. We find this method the most satisfactory. We keep a couple of white men permanently. They take care of the horses and machinery."

Garden Seeds.

"I employ Japanese because white help will not stick to the work I am engaged in. Japanese understand the gathering of garden seeds better than any other class of help. This has been my experience. The wives of my Japanese also help in the field. They hoe and gather seeds along with their husbands."

Prunes.

"We employ white help in preference to others when we can get them. It is not the custom to provide board or quarters for hired help about here. They look out for themselves."

Garden Seeds and Hay.

“If we could get Portuguese we would prefer them to any other kind of help. Our greatest objection to Japanese is that they are not to be depended upon. They are liable to strike at any time, and furthermore, they take most of the money they earn out of the country. We provide comfortable quarters for all our help.”

Garden Seeds.

“I employ a Chinese foreman. He looks out for the help. I pay him \$100 per month, and in fact he looks out for everything. We furnish houses for the help to live in. They employ their own cook—Chinese, male. With the exception of two white men all the rest of the help are Chinese.”

Garden Seeds.

“We employ Japanese and they stick to the job steadily. Our business requires strict attention; hence we employ help that gives the best results. We provide quarters for our help and they look after themselves in the way of cooking, bathing, etc.”

Apricots and Prunes

“We sometimes employ Orientals and at other times white help. The Japanese do most of the picking of fruit and white help the cultivating and pruning. This work is done by men who live in the nearby towns, and we have nothing to do with providing quarters for them. We pay by the day except for picking fruit. The latter is done by the box or ton.”

Sugar Beets and Strawberries.

“I employ Japanese altogether. They give me better satisfaction than any other kind of help. The Japanese understand the topping of beets and the gathering of strawberries and give me good service. I wish we had more Japanese, then other kinds of help would be less exacting.”

Dairying and Alfalfa.

“I find it difficult to get good white help when I need them. Consequently, I hold good men when I have them. I do not work long hours. My help work mornings and evenings, and they have some leisure time at midday. I employ Swiss. They understand the business of dairying pretty thoroughly.”

Prunes.

“We are not situated so that we can give steady employment to help. Our holdings are small in this valley except in a few instances, and we

need help only for a short period. Hence, good white help can not afford to lay around all year for a few months' work. The Japanese are less exacting. They can live on less."

Nursery—Trees, Plants, etc.

"I have no trouble in getting all the help I want. I employ mixed help. They board themselves, this being the custom in this valley. The help live in nearby towns and most of them are provided with bicycles, which take them back and forth. Occasionally a farmer provides board for help, but the latter are exceptional cases."

Garden Seeds.

"Help of all kinds has been scarce this year (1907). White help will not take employment other than the driving or caring for horses. The Chinese and Japanese do all our work. They are about evenly divided, but I prefer Chinese to any other kind of help. They are more reliable. I wish we had more Chinese and less Japanese in this country."

Garden Seeds.

"We raise onion and lettuce seed and as the business needs careful attention we employ Chinese. They cook for themselves and we provide houses for them to live in. I do not think white help would care for the business of seed raising. It requires extra attention. Of course white men can do it alright, but the Orientals seem to have a monopoly on this kind of work."

Sugar Beets.

"Help has been scarce. White help will not work in the field, and we have to depend on Japanese, but Portuguese who rent on shares do their own work. Their families also help out. If we did not have Japanese in this part of the State I do not know how we would get along. I am of the opinion that Chinese are more efficient than any other class of labor. This has been my experience. The Japanese women work alongside their husbands in the field."

Prunes.

"White help has been scarce in this vicinity. There are a number of Japanese and Chinese who do orchard work in this vicinity and without them we would suffer a loss, especially during the fruit season, because we could not get sufficient white help to take care of the fruit. The great trouble with the majority of white help is that they will not remain any great length of time in any one place."

Prunes, Peaches, and Apricots.

"I have found white help scarce this year. I do not know what has become of the help. Probably they are in the cities, where they get higher wages. Young men and girls do not stay on the farm any more. They depart for the cities and join the unions when they get large and old enough to care for themselves. Farm life is too slow for this generation of Americans."

MADERA, MERCED, AND STANISLAUS.

Representing opinions of farmers owning or controlling 12,659 acres.

Fruits, Figs, and Almonds.

"We use white men for teaming; Japanese for fruit picking, hoeing, irrigating, etc.; Italians for pruning. The Japanese are by far the best orchard and vineyard help. They are temperate, clean, steady and reliable. They will take advantage if there is a scarcity of help and raise wages every opportunity. During grape season we employ more men for a short time."

Grain, Alfalfa, Grapes, and Fruit.

"Our preference has always been for white help. We find Japanese dishonest and unscrupulous. During fruit season it is almost impossible to harvest the crop without them. That is the only work we hire them for, and then it is mostly contract work."

Strawberries and Alfalfa.

"I would prefer Americans, but in the berry business it would be impossible to conduct a berry farm with white help."

FRESNO, KINGS, AND TULARE.

Representing opinions of farmers owning or controlling 22,796 acres.

Raisin Grapes and Apricots.

"I have employed Russians for the past five years, with their families, and their work is fairly satisfactory. I find no help equal to Chinamen in a raisin vineyard."

Grapes.

"I don't know what has become of all the white help. The Japanese have control of all the grape picking this year. I presume the white help are employed in packing houses and teaming. They do not apply for work picking grapes."

Grapes.

"Good white help is scarce. We have to depend on the Japanese, otherwise we would not get our grapes picked in good condition. The Japanese are getting pretty thick and they practically do all the work of picking and curing raisins."

Grapes.

"The Japanese seem to control all the picking of grapes. They take contracts and stick to the work. They make good wages. They are not so skillful as white men handling horses and machinery."

Grapes.

"White help is scarce around here (1907). Japanese do practically all the picking of grapes, as well as curing. White help is employed for cultivating and driving teams. Steady white help can always find employment at good wages."

Raisin Grapes.

"Industrious white help can always find employment in this vicinity at good wages."

Raisins and Fruit.

"By employing mixed help—whites and Japanese—we manage to get along. White persons do not stick to grape picking. The Japanese appear to like picking better than whites. The latter do the work of hauling and other work where horses are used."

Raisin Grapes.

"Japanese and Indians do the grape picking. White help do most of the handling of trays and hauling. They do not care to work in the vineyards picking grapes. White women and children are not employed at all. They can not stand the heat in the open field. They are mostly employed in and about the packing houses, where they are protected by cover or shade from the sun."

Raisin Grapes.

"White help do not care to pick grapes. Japanese do nearly all of this work. We employ white help for cultivating and for caring for horses and machinery. White help is receiving \$2.25 per day at present. This does not include board. When they are employed steady, they receive about \$35 per month, including board."

Raisin Grapes.

"White help are alright, but you can not employ them to pick grapes. 'Too hot,' they say, and as a matter of fact it is tropical at this season in

this vicinity. The Japanese and Indians stand the heat alright and make good wages at $2\frac{1}{2}$ cents per tray. Some get as high as 3 cents, but at $2\frac{1}{2}$ cents an industrious person can make \$3 and more per day."

Raisin Grapes.

"Whites do not care to pick grapes. The Japanese do practically all the gathering or picking. Whites do the hauling and care for the horses and machinery, but Japanese are also learning to handle horses and do the entire work on some farms."

Raisin Grapes.

"White help will not pick grapes, hence we have to depend on Japanese and Indians. There are about three hundred Indians engaged in picking in this vicinity. They get \$2 when working by the day (this does not include board), and $2\frac{1}{2}$ cents per tray when working by contract. It is difficult to estimate the amount earned individually. Some make \$3 to \$4 per day when working by contract. The white help get \$2.25 per day at this season. They are mostly engaged in handling and hauling and working in and about the packing houses. They board themselves."

Grapes.

"Good white help is scarce in this vicinity. There is a floating contingent, but they will not remain any great length of time. We depend on the Japanese to pick. White men do not appear to care for that kind of work, but prefer to turn trays and work with teams. We keep some help the year round, but the greater number are employed for a time only."

Grapes.

"We employ a great number in this valley during the grape picking season. Japanese are getting more numerous than in former years. The white help do not care to pick grapes. They say it is pretty hot work. However, they do the cultivating and all the work where horses are used."

Grapes.

"We find it difficult to get sufficient help to do our packing. We pay girls \$1.75 and men \$2.25 to \$3 per day. This rate does not include board. We are unable to get white men to pick grapes. The Japanese do nearly all that branch of the grape business in this vicinity. We employ white help to drive teams; also to do cultivating. We provide houses for both whites and Japanese. They live, and are engaged, separately."

Grapes.

"We employ Japanese because they are the only kind of help that give satisfaction picking grapes. The white help will not stick to the work."

Grapes.

"The Japanese do nearly all the picking of grapes. White help are engaged to some extent, but the latter prefer to work with horses and machinery."

Grapes.

"There is quite a floating population here; that is to say, white men come here and apply for work. They work until they get a few dollars and then quit. The Japanese stick to the job until completed."

Grapes.

"We employ Japanese because they appear to get along better than white pickers. We employ some white help permanently. They do the cultivating and team work."

Peaches and Prunes.

"We employ whites, as well as Japanese and Indians, and if we were to depend on any one of the races, we would be short of help indeed."

Prunes.

"We employ some help permanently, but the bulk are only engaged in picking fruit. The season lasts about three months and they move to other places. There are a number of Japanese who remain through the year."

Oranges and Lemons.

"The Japanese are getting more numerous each year. They do fairly well for picking, but they do not amount to very much where horses and machinery are concerned."

Oranges and Lemons.

"The Japanese do well for picking, but they do not compare with good white help, particularly where horses and machinery are engaged."

Oranges and Lemons.

"Our picking season is now here (September, 1907), and we get a number of persons who have completed their labor with other fruit. We employ mostly by the day in this vicinity. We provide bunk houses, but the help prefer to live in the open air at this season."

Oranges and Lemons.

"We have all the help we want at present (September, 1907). White help are alright, but they keep moving. We find it difficult to hold

them until the work they undertake is completed. The Japanese stick better, but do not give efficient service where horses or machinery are concerned."

Oranges and Lemons.

"We find that Japanese stick to the job longer than the whites. Some of the latter are permanent, but the majority quit after working a few days. If we had to depend on one class of help we would be in a bad fix alright."

Peaches and Prunes.

"We keep some of our help all the year round, and the balance seek employment elsewhere. We provide bunk houses, but we can not compel our help to occupy them unless they want to. In this climate they prefer to live in the open air at this season of the year."

Oranges.

"Help is not to say scarce, but there is always employment for industrious white men. Young men who are reliable work for a while and then get a place of their own, or are employed as foremen. The floating help do not give satisfaction. They work for a time and then lay off. Some of our help live in town. The groves are situated near the town limits. We board some of the help and others board themselves."

Oranges.

"We are fairly well supplied with help at present (1907). However, we have some trouble, principally on account of hands not remaining. There are no Japanese to speak of here. The white object to them and keep them out. Occasionally families come a distance to pick oranges. Indians also come from the Reservation, and get employment during the picking season."

Oranges and Lemons.

"We have sufficient help at present (1907). Good white help can always get employment in this vicinity. We have very few Japanese here. White help will not let them come or remain in this vicinity. The orange orchards are close to town, and a number of men who work live there with their families. They are engaged by the day more than by contract."

SANTA BARBARA AND SAN LUIS OBISPO.

Representing opinions of farmers owning or controlling 17,825 acres.

Walnuts, Prunes, and Beans.

"Help is poorer and scarcer than it was ten years ago. The Japanese are not near as good workers as the Chinese are, and are not

near as reliable. When working by contract, as long as things go their way, all is well, but if they find you in a tight place, they will squeeze you. I have been in the State fifty-six years, but the labor question is not in as good shape as when I landed. I hope some relief will come soon, as agriculture and horticulture are suffering for want of good, reliable help, and in quantity."

Grain, Hay, Olives, Persimmons, and Walnuts.

"White labor without families is mighty uncertain; one can never tell whether a man will remain a week or a month. Since the panic, men are not so restless, labor is more plentiful than for several years past."

LOS ANGELES AND VENTURA.

Representing opinions of farmers owning or controlling 23,107 acres.

Raisins and Grapes.

"I employ five Orientals or Mexicans one month for hoeing and fifteen to twenty-five Orientals and Mexicans about two months in pruning vineyard and picking crop. I find it absolutely impossible to get white labor to do this latter work, but can employ white labor to handle teams for hauling crop. In picking grapes by contract Orientals earn from \$1.75 to \$2.50 per day each."

Beans, Barley, and Hay.

"My experience with Japanese has caused me to have a desire to let them strictly alone if possible, their practice being anything but honesty. Chinese are much more desirable, being as a general thing honest, slow at labor, but what they do is done good. Whites are the best if they will leave liquor alone. This class of people as a general thing are good workers—extra good. My experience with white labor is they can not stand prosperity. After they get so much money they have to spend it. No exception here. They never look to the future. Mexicans are a go-as-you-please class and do not care for anything only enough to eat."

IMPERIAL AND SAN BERNARDINO.

Representing opinions of farmers owning or controlling 4,309 acres.

Alfalfa.

"We very much prefer Chinese for any labor they are capable of doing, such as gardening, irrigating, and, in fact, any kind of hand labor; but it is impossible, owing to the shortage of supply of Chinese, to secure them at anything like reasonable wages for outside work. If

we were able to employ Chinese at from \$25 to \$35 per month, we would not use any other common labor for hand work. They are not suitable for teamsters or heavy field work. We employ nothing but white men for this latter class of work."

Hay, Corn, Pumpkins, and Grapes.

"The labor question confronts us seriously. To say Orientals are the best help does our people an injustice, practically degrading them. A shame to us! To educate Orientals to do our work only fits them to overthrow us later. Can we not educate our own people to believe that to labor for wages where necessary is honorable and will lead to prosperity? They are the best help when shown that the interests of employer and employe are mutual and that true merit commands more pay."

Oranges.

"I prefer white help and always get white men when I can. During the year I pay about \$600 for labor. I never have hired women or children. There are times when it is hard to get good men for short periods of time."

EMPLOYMENT AGENCIES.

The legislature, session of 1903, passed an act regulating employment agencies. Certain sections that limited the amount of fee an agent might take were declared by the Supreme Court (when appeal to that court was taken) unconstitutional in *Ex parte Dickie*. To meet the objections laid down in the decision of the Supreme Court, the legislature reënacted the law in 1905, one of the sections being repealed and the others amended. The law in full will be found in the chapter devoted to laws.

During the period covered by the report, the Bureau has required all employment agencies of which a record was obtained to furnish, monthly, statements showing in detail a record of all persons given employment. Blank forms upon which to make these returns are supplied by this Bureau. These returns show date of employment, kind of work, number hired, rate of pay, amount of fee, and where sent. It has been exceedingly difficult to enforce this provision, which requires all agents to report to the Commissioner such information. This has entailed many visits and extensive correspondence. The Bureau has found it necessary to resort to prosecution in some instances to enforce this provision. A strict supervision has been maintained over all known agencies. Many hundreds of complaints have been investigated of persons who, having paid fees, failed to secure employment. Where violations were obvious, compliance with the provisions requiring the return of fee and expense to persons sent out to work where conditions were not as represented was compelled. A considerable amount of money, in fees and that expended in railroad fares, was returned to the complainants as the result of the work of our agents. Many abuses have been called to the attention of the Bureau in cases without number where workmen have been sent to distant interior points to jobs that never existed. A practice has crept into the business that has been followed by some of the employment agents of entering into an agreement with unscrupulous foremen for construction and grading companies to send men to jobs which last generally but a day or two, and in many instances but a few hours. The foremen employed those sent but a very short period, sending to the agent for another supply. Many of those seeking redress have shown pay checks calling for payment of one or two

hours only. They were discharged without any apparent reason (the work requiring no skill, only ordinary labor), their places being filled by a similar class of labor, who in turn fell victims to the same practice. This is carried on principally with common laborers, and a large majority of foreign workmen understanding but little English. The fees are divided between the employment agent and the foreman. It is almost impossible to prove in court the collusion between the agent and the latter, although known to exist. From reputable sources it has been ascertained that attempts have been made to enter into like unscrupulous agreements between some employment agencies in the cities and larger centers of the State, and those having in charge the employment of men on large construction works at distant interior points. The Bureau has taken a firm stand and has, wherever possible, compelled the return of the fee or insisted upon another job being supplied. In many instances it has been impossible to afford any relief.

Section 2, which makes it unlawful for an employment agency to receive, directly or indirectly, any money or other valuable consideration from any person seeking employment, is deemed to be one of the most important sections of the act. But for this, many abuses would ensue that would be impossible to prevent. The registration system, or that of making advance charges, which was formerly largely in vogue, has almost ceased. Under this plan persons paid a fee to register for a position, the agent agreeing to use his valuable time for a limited period in procuring a position for the applicant, which seldom ever materialized. We have compelled all who sought to use this feature to cease the practice. Many agencies styling themselves commercial bureaus, expert associations, etc., started in business in San Francisco, Los Angeles, and Oakland, particularly in Oakland, along these lines. Many schemes or devices were tried to circumvent the law. In all these cases the illegal practice was stopped. Several arrests were made, convictions secured, and fines imposed. The nature of the business is such that small capital is needed. Many enter it who have served or worked in larger agencies, and it is from this "mushroom growth," which generally operates for only short periods, that most trouble comes. The more responsible agents show a disposition to abide by the law, and have caused the Bureau little or no trouble.

The average period of duration for a job obtained at an employment agency is impossible to determine, ranging from one hour to an unknown longer period, probably nearer the hour mark than the latter limitation. In return for the large tribute paid by labor to employment agencies which, in one year in the whole State closely approximates \$300,000, the policy of the Bureau is to see that the provisions

of the act are obeyed by all engaged in the business and that labor is afforded the protection the law intended.

To better enable us to properly enforce the law, and as a prerequisite to operating an employment agency, provision for a State license should be made, requiring the same to be taken out in addition to such licenses as are now imposed in the several counties. Additional special agents are essential to effective supervision.

Tables are presented showing the number of persons furnished positions in various occupations, their wages, fees, and place of employment. These are shown for San Francisco, Los Angeles, Oakland, Stockton, and San Diego. These are for agencies supplying male labor. Tables showing the same for female employment agencies in San Francisco, and also for Oriental agencies are shown. The table for that of San Francisco covers the period of the fiscal year 1907-08, and has been compiled from a record of over 26,000 applicants. A chart has been prepared to show graphically how the law of supply and demand governs these agencies. Various deductions have been drawn in articles presented with the tables.

In the investigation of employment agencies in San Francisco, data was secured covering the period of the fiscal year 1907-08. The following folder shows a record of 26,731 individual cases, in which positions were secured through the agencies investigated, exclusive of the female and Oriental employment agencies, which are treated separately. Of this number 6,588, or 24.6 per cent, were furnished employment in the city of San Francisco, while 20,143, or 75.4 per cent, were sent to various localities outside of this city. The group, General Laborers, is by far the largest, containing 8,149 persons, or 30.5 per cent. Next come the railroad laborers with 5,558, or 20.9 per cent, and third, ranch hands, with 2,022, or 7.6 per cent. These three groups contain 15,729, or 59 per cent, of the total number of persons who were given employment.

The amount of fee paid for securing employment varied, ranging from 25 cents to over \$6. 5.0 per cent paid up to 50 cents; 24.3 per cent paid \$1; 21.3 per cent paid \$1.50; 25.6 per cent paid \$2; 7.0 per cent paid \$2.50; 10.9 per cent paid \$3, while 5.9 per cent paid over \$3. The amount paid is best shown in the following chart. The greatest number, it will be seen, paid \$2 for securing employment. The average fee paid by all persons during the fiscal year was \$1.84.

The following chart is presented to show how the amount of fee paid for securing employment fluctuates with the law of supply and demand in the labor market. Four different groups, designated by occupation, are presented on the charts. The first group, "All Occu-

pations," represents 26,731 persons of all occupations, as shown in our table on "Employment Agencies in San Francisco." The second group, "General Laborers," represents 8,149 persons, or 30.5 per cent of the total number of persons considered. The third group, "Ranch Hands," represents 2,022 persons, or 7.6 per cent; while the fourth group, "Railroad Laborers," represents 5,558 persons, or 20.9 per cent. The last three groups have been selected for the reason that they are the most important, comprising 59 per cent of the total number under consideration.

Particular attention is called to the rise in the amount of the average fee paid, from the month of October, 1907, to the month of November, 1907, during the period when the financial crisis caused large bodies of men to be thrown into the labor market. The maximum is reached in December, 1907, and in January, 1908, and then there is a general decline, with the restoration of confidence and the consequent employment of labor. It will be noticed, however, that the level maintained is still very high as compared with the starting point in July, 1907, and, no doubt, will remain so until normal conditions are restored.

From a careful examination of the data at hand, it is shown that the amount of fee paid and the degree of fluctuation is in some degree proportionate to the ignorance of the person paying the fee. The average fee for "All Occupations" rose from \$1.41 in October, 1907, to \$2.14 in November, 1907, or an increase of 5.18 per cent. It reached a maximum of \$2.30 in December, 1907, or an increase of 57.5 per cent over the average fee of \$1.46 in July, 1907.

The average fee for "General Laborers" rose from \$1.04 in October, 1907, to \$1.50 in November, 1907, or an increase of 44 per cent, and it reached a maximum of \$1.76 in December, 1907, or an increase of 67.6 per cent over the average fee of \$1.05 in July, 1907.

The average fee for "Ranch Hands" rose from \$1.19 in October, 1907, to \$1.76 in November, 1907, or an increase of 47.9 per cent. It reached a maximum of \$2.06 in January, 1908, or an increase of 62.2 per cent over the average fee of \$1.27 in July, 1907.

The average fee for "Railroad Laborers" rose from \$1.65 in October, 1907, to \$2.78 in November, 1907, or an increase of 68.5 per cent. It reached a maximum of \$4.11 in January, 1908, or an increase of 146.1 per cent over the average fee in July, 1907.

OCCUPATION.

The preceding tables on employment agencies are presented to show conditions in several of the larger cities throughout the State. As it was impossible for the Bureau to secure data covering the whole year, one month was selected, namely, April, 1908, to form a basis for comparison. Although these tables do not by any means show the exact total number of all persons securing positions through the medium of employment agencies, they do, on the whole, present an accurate statement of the prevailing conditions as to wages received and fees paid.

In Los Angeles, of the 877 persons considered, 348, or 40.0 per cent, were furnished with positions in Los Angeles, while 529, or 60.0 per cent, were sent to points outside of the city. The fees paid for these positions ranged from 50 cents to \$6 and over; 44.3 per cent paid less than \$2; while 55.7 per cent paid \$2 and over. The average fee for all occupations was \$2.16.

In Oakland, 648 persons were considered. Of this number, 241, or 37.2 per cent, were given employment in the city of Oakland, while 407, or 62.8 per cent, were given employment outside of the city. The fees paid ranged from less than \$1 to over \$6, 35.8 per cent paid less than \$2, while 64.2 per cent paid \$2 and over. The average fee was \$2.02.

In Stockton, 409 persons were considered. Of these, 38, or only 9.3 per cent, were given employment in the city of Stockton, while 371, or 90.7 per cent, were sent to outlying districts, principally to farms and orchards. The fees paid ranged from less than \$1 to over \$4, 90.0 per cent paying less than \$2, the average fee being \$1.34.

In the city of San Diego, 197 persons were considered. Of these, 86, or 43.7 per cent, were given employment in the city of San Diego, while 111, or 56.3 per cent, were sent to places outside of the city. The fees paid ranged from \$1.50 to over \$6, all of the persons with the exception of five, paying \$2 and over. The average fee for all occupations was \$3.24.

The average fees paid by persons of all occupations, during the month of April, 1908, in the various localities, are given below:

San Francisco (males)	\$2.20
San Francisco (females)	2.16
San Francisco (Orientals)	2.78
Los Angeles (males).....	2.16
Oakland (males)	2.02
Stockton (males)	1.34
San Diego (males).....	3.24

It will be noticed that the fees paid by Orientals are much higher than those paid by whites in San Francisco. The fees paid in San Diego were noticeably high, while those in Stockton were rather low, owing to the fact that ranch hands made up the bulk of occupations.

In the female employment agencies in San Francisco, 347 persons were considered, covering the month of April, 1908. The occupations are principally those of cooks, domestics, and waitresses; 240, or 69.2 per cent, were given employment in San Francisco, while 107, or 30.8 per cent, were sent to outside localities. The fees paid range from \$1 to over \$5; 261, or 75.2 per cent, paid \$2 and over. It will be noticed that in proportion to the wages received, the females paid a relatively higher fee for employment than the males. The average paid in all occupations by females was \$2.16. The above table affords a good idea of the wages paid to females engaged in domestic pursuits. The range of wages was about from \$15 to \$40 per month, practically 60.0 per cent receiving from \$25 to \$30.

Oriental Employment Agencies in San Francisco.

(Showing Number of Persons Furnished Positions in Various Occupations, their Wages and Fees, During Month of April, 1908.)

OCCUPATION.	WAGES PER WEEK.				WAGES PER MONTH.										FEES.										Number of Persons Given Employment Outside San Francisco	Number of Persons Given Employment in San Francisco
	\$5.00 and Under	Over \$5.00 to \$7.50	Over \$7.50 to \$10.00	\$10.00 and Over	\$10.00 and Under	\$15.00	\$20.00	\$25.00	\$30.00	\$35.00	\$40.00	\$45.00	\$50.00	\$60.00 and Over	\$0.25	\$0.50	\$1.00	\$1.50	\$2.00	\$2.50	\$3.00	\$3.50	\$4.00	\$5.00 and Over

Help, kitchen	16		6																1	1					13	1
Help, laundry	14		1	1		1	3	1	1	2	5	2					1	4	3	3		7			13	1
House servants	27	1	8	1		1	2	1	7	5							1	1	9	3	9	2			22	5
Pantrymen	5		2	1				1	1	1										1	1				5	
Porters	3			1					1			1													3	
School boys	18	8							1						1	1	13			3	1				17	1
Waiters	15	1	1					3	4	4	1	1			1	1	1		3	7	2	1			9	6
Totals	195	9	15	8	9	2	6	12	38	35	31	8	4	5	2	3	26	8	21	19	52	10	47	7	162	33

In the Oriental employment agencies 195 persons were considered, covering the month of April, 1908. Of this number 162, or 83.0 per cent, were furnished with employment in San Francisco, while 32, or 17.0 per cent, were sent outside the city. The fees paid ranged from 25 cents to over \$5, 80.0 per cent paying \$2 and over. In most instances the fees paid to Oriental employment agencies is 10.0 per cent of the wages received per month. The average fee paid by all persons was \$2.78. The general wage paid to Orientals in the occupations enumerated in the table was from \$30 to \$40 per month, a little higher than that paid to white females in the same occupations.

ORGANIZED LABOR.

The data and information on labor in the tables in this chapter is as full and complete as the Bureau was able to present from the material gathered and available. In San Francisco and immediate vicinity, work was done by personal solicitation. Form blanks were mailed to all labor organizations in the early part of 1907 and again in 1908, located at interior points, of which we were able to obtain a record. Many organizations failed to respond to our requests. The replies received were, on the whole, far from satisfactory. Some of those answering our communications in 1907 failed to do so in 1908. The answers returned by some of the organizations for the two years showed many discrepancies and conflicting statements, which data as furnished was valueless to the Bureau. It was our intention to present tables showing comparisons in numbers, wages, and hours of labor for the two years, 1907 and 1908. This was, however, impossible with the data incomplete.

Separate tables are presented for building trades and affiliating organizations, and organizations other than building trades in San Francisco, for January, 1906, and January, 1907, showing their membership for these periods, increase, with percentages, wages (minimum and ruling), and percentage of increase for each. A similar set of tables is shown for Oakland. Tables are also presented for building trades and affiliating organizations, and organizations other than building trades, for the State at large for 1908. These show trade, locality, membership as reported by the unions, occupation, hours per day, wages and unit of same, and the minimum and ruling rate of pay.

Deductions have been drawn and presented in articles under the various tables.

The preceding tables are presented primarily to show conditions of organized labor during the period of reconstruction, immediately following the catastrophe of April, 1906.

The membership of the building trades and affiliating organizations in San Francisco increased from 14,466 in January, 1906, to 28,459 in January, 1907, or 99.14 per cent. All trades, with the exception of four, showed an increase in the minimum rate of pay. The increase varied in the different trades, but on the whole averaged about 20.0 per cent. In the ruling rate of wages, the increase was more marked. The ruling rate of lathers increased 50.0 per cent; cement workers, 33.0 per cent, while that of carpenters increased 25.0 per cent. The average increase on the whole was over 25.0 per cent.

The organizations other than building trades in San Francisco had a membership of 39,724 in January, 1906, and 39,157 in January, 1907. Although the membership showed a slight decrease, the wages on the whole showed an increase, which increase, however, was not as high as in the cases of the building trades. The decrease in membership can be accounted for from the fact that a number of the large manufacturing industries did not resume operations for some time, and men were compelled to seek employment in other and even strange occupations. In addition, a great many of the people migrated from San Francisco to cities and towns about the bay, and affiliated themselves with organizations in these latter places. The influx of population into Oakland and the vicinity started a period of construction there that almost rivaled that in San Francisco. The membership of the building trades and affiliating organizations in Oakland and vicinity rose from 4,585 in January, 1906, to 9,160 in January, 1907, an increase of 99.8 per cent. In other words, it was doubled. None of the organizations showed a decrease in membership. The increase in the minimum and ruling rates of wages was about the same as that of San Francisco. The membership of organizations other than building trades increased from 4,686 in January, 1906, to 6,771 in January, 1907, or 23.2 per cent. This increase was, in a large measure, due to the influx of population mentioned above, and, to some extent, accounts for the decrease in the corresponding organizations in San Francisco.

In the following tables presented on building trades and affiliating organizations in the State in 1908, it will be noticed that after the financial crisis of November, 1907, the ruling and minimum rates of wages were alike in most instances. In other words, it may be stated that the effect of the crisis was to take off the premium on labor and reduce the ruling rate of wages to the level of the minimum rate set after the catastrophe of April, 1906. It must, however, be borne in mind that the minimum rate after April, 1906, was about 20.0 per cent higher than before. Owing to the unsatisfactory nature of the returns, no comparison was made as to membership.

CHILD LABOR

CHILD LABOR.

California has a most excellent Compulsory Education Law. This act to enforce the educational rights of children was passed at the session of the legislature of 1903, and was amended at the sessions of 1905 and 1907. It is very broad and comprehensive. The age limitations are fixed at 8 and 14 years. This act confers power on various boards of education and boards of trustees of school districts, provides a penalty for failure to send a child to school, provides for the appointment of attendance officers and investigations, for the establishment of parental schools and for the commitment of truant children thereto. Later amendments provide for a method of procedure for establishing these schools, and also for the establishing of joint parental schools. The enforcement of this law rests solely with the various school authorities of the State.

In 1905 a new Child Labor Law was enacted, raising the age at which children may be employed from 12 to 14 years; placing restrictions on all minors under 18 years as regards number of hours employed, and requiring certificates of all minors between 14 and 16 years; prohibiting all minors under the age of 16 from working after 10 o'clock p. m. in most occupations, and requiring school attendance of all illiterate minors up to 16 years of age.

The Child Labor Law was placed under this Bureau for enforcement, and the school authorities are made responsible for certification. It was declared constitutional by our State Supreme Court in a unanimous decision by that body. All the necessary form blanks to carry the law into effect are furnished by this Bureau for the entire State.

In 1907 the Child Labor Law was amended, the general effect being to make the act more comprehensive, and granting power to attendance officers to investigate violations. An amendment was also added defining the meaning of horticulture.

Both of these acts in full, with their amendments passed at the various sessions of the legislature, together with the decisions of the Supreme Court, will be found in this volume in the chapter devoted to laws.

The Child Labor Law is in reality a corollary of the Compulsory Education Law, as it carries the protection afforded the child, both as to its physical welfare and educational rights, to the age of 16.

During the period covered by this report, this Bureau has carried on an extensive correspondence with the school authorities throughout the State, with a view to urging upon them the vital necessity of a hearty coöperation on their part with the Bureau, looking toward the enforcement of the Child Labor Law. Their attention has also been called to the enforcement of the Compulsory Education Law. It has been urged upon them by this Bureau that the strict enforcement of this act would in itself, in a large measure, solve the problem of the Child Labor Law. It has also been especially urged upon them that, with our very limited force, and with many other duties in addition to the enforcement of this law to perform, we must in a large measure rely upon their aid and assistance in the enforcement of the Child Labor Law. This Bureau could well utilize the entire available force in the enforcement of this act, in the city of San Francisco, let alone the entire State of California, comprising, as it does, 158,000 square miles.

In the gathering of statistics relative to wages, hours of labor, etc., and in the enforcement of sanitary laws regulating factories and workshops, the agents of this Bureau have visited upwards of two thousand different establishments in the various sections of the State. While making these investigations they have made special note and kept a careful watch for violations of the Child Labor Law. In addition to this, the Bureau has devoted as much time as could be possibly spared from other duties.

The heads of commercial and industrial enterprises employing children show a desire and willingness to comply with the provisions, but their subordinates, having in charge the employment of help, in many instances show a proneness to laxity, and unless constant supervision is maintained, soon fail to heed the law. The Bureau has especially urged that extreme caution and vigilance should be exercised in the issuance of age and schooling certificates. That to make the law effective, this point should be kept in mind, that they should discourage as much as possible the tendency to issue permits to illiterate minors. This is only applicable in large centers having a night school system.

It has been the experience of the officers of this Bureau that some employers of child labor have not a very high ideal of the truth, and parents and guardians desiring to obtain certificates in order to enable minors to work are not affected with an overdose of conscientiousness. Extreme caution and vigilance must be constantly exercised to detect evasions. A large percentage of children who labor are not as well developed physically, or as well nurtured, as those who, through force of circumstances, are not compelled to work.

The Bureau has urged upon the school authorities that in the issuance of certificates, if there is a doubt as to the age of a child, that the

benefit of the doubt be given to the law rather than to the individual. This is especially necessary where persons applying for permits to enable minors to work are unable to present the necessary corroborative evidence and have nothing but their own statements as to the age of the minor for whom the application is made. It is in cases of this kind where extreme caution is necessary.

The Bureau has also urged upon the employers of labor that they also exercise extreme care when employing minors. That in all instances where there is a doubt as to the age of a child that it be required to obtain the necessary credentials from the school authorities. This then enables the school department to pass upon the educational qualifications of the child.

The Bureau has also noted in many instances that permits were granted to minors that were wholly unnecessary. If the proper investigations had been made it would have been found that the child was seeking work because of its own desire rather than of necessity; that the home conditions of the family did not necessitate the labor of the child.

As an illustration: In one county in the State of California there were issued to illiterate minors during one fiscal year, 160 certificates; this out of a total of 522, or about 30.0 per cent. This was an increase of 9.0 per cent over the preceding fiscal year. Of this total of 160 illiterate minors, 126 were issued to both sexes under the age of 15 years. While the State at large shows, for the fiscal year 1906-07, 4.0 per cent, increasing to 10.5 per cent during the fiscal year of 1907-08, excluding returns from this county, the percentage of certificates granted to illiterate minors for the fiscal year 1906-07 for the State at large falls to less than 1.0 per cent, rising to 2.8 per cent in the fiscal year 1907-08. This is traceable in a large measure to the existence in that county of one industrial enterprise. Forty per cent of all the employes of this establishment are minors under 18 years. Of this 40.0 per cent, 60.0 per cent are under 16 years of age.

We are satisfied that many of the younger minors working in this industrial plant are, in our opinion, under the minimum age limit, and that their certificates were obtained by their parents by misrepresentation, and if more care and caution had been exercised by the officials the number of these certificates issued could be materially reduced. This shows that any cessation of care in the issuance of these certificates will result in nullifying the effect of the minimum age limit provisions of this law, and would be equal, in fact, to the strict enforcement of a law with a much lesser minimum age limit.

While we know that in many instances in Eastern States employing child labor largely, that by the introduction of labor saving devices and modern machinery in the handling of commodities the number of

children employed has been materially reduced, we are not certain that if like industries are started in this State, or the industry above referred to, or similar ones, are increased in numbers, that regard for the physical welfare of the child would outweigh the monetary outlay necessary for the initial start. Or, that the cupidity of the parent, in his desire to profit by the wages earned by the child, will be less than it is now. Rigid investigations, therefore, and with the proper spirit behind them, not merely perfunctory, will bring the success desired. We also believe that it is, in a large measure, a campaign of educating the employing public.

The Bureau has had printed and widely distributed a pamphlet containing laws affecting labor and coming under this department for supervision and enforcement, and containing the Child Labor Law in full.

In the enforcement of the Child Labor Law we have followed the course of warning those found violating, and only in extreme cases has the Bureau resorted to the courts, and where it was found that drastic measures were necessary for a salutary effect for respect of this act. We have been compelled to follow this policy largely from expediency. The time consumed in prosecution is very great, and likewise the cost, especially at points distant from San Francisco, where there is added to the wages of the officers of the Bureau the cost of their maintenance, and also railroad and other incidental expenses. We have also been handicapped by lack of police powers. This, together with the many other duties of the Bureau, has made this policy necessary. We hope that in the future, with an increased appropriation, we will be able to have stationed throughout the State permanently special agents, who will not only be able to perform many duties connected with this office, but will also be in a position to give more attention to this law, and, if necessary, to prosecute. The school authorities in certain sections of the State have aided materially by independent prosecutions of their own.

With a view to ascertaining the number of age and schooling certificates issued by the various school authorities of the different counties of the State, the Bureau entered into correspondence with the county superintendents, and obtained from those officials a complete statement showing the number of age and schooling certificates issued to literate and illiterate minors—male and female, between 14 and 15, and 15 and 16 years. Complete returns were had for the fiscal year 1906-07, and for 1907-08, with the exception of three counties.

This is presented in tabulated form. It will be noted by these tables that many of the counties in their returns show the issuance of no certificates. We are satisfied that in many of these counties minors coming within the provisions of the law are at work without the necessary cre-

dentials. Labor performed by minors in canneries and packing houses, and during the long vacation periods of the schools, is not looked upon by the school authorities as seemingly in need of any restrictions. Many of the industrial enterprises employing largely minor help covering these periods of vacation have been known to work them long hours, and, in some instances, greatly in excess of the limit fixed by the Child Labor Law. A strict supervision is necessary in order to enforce compliance in this regard. The general sentiment in the interior of the State is, that the child is not a factor in labor there, but only in the larger cities of the State is it believed to exist.

Work by the different school authorities in the interior of the State in connection with the enforcement of this law, is confined generally to the period covered by the sessions of the public schools. At the commencement of the vacation period, as a rule, this work practically ceases. Some of the larger cities support a parental school. This has developed in a number of instances into a system. In some sections of the State most excellent work is being done toward enforcing the provisions of the Compulsory Education Law. Excellent work is being done by the officers of the Juvenile Courts of the various counties. We take great pleasure in commending the work of the Juvenile Court and the Probation Officer of the city of San Francisco, in that great care has been exercised in the issuance of permits to minors under 14 years to work. A table has been prepared, which shows in detail for the fiscal years 1906-07 and 1907-08, the number of permits issued, the age, period of duration, and occupation. We have been unable to obtain this data from all the counties of the State, and are, therefore, unable to present it in tabulated form.

We are also showing in the chapter under social statistics, through the kindness of Mr. J. C. Astredo, Probation Officer of San Francisco, tables in detail of the number of dependency and delinquency cases investigated by that office.

There are no serious problems in child labor in this State. Those presented for solution will readily yield to the proper treatment. The child is not the factor in this State that it is in many of the Eastern, Central, and Southern States, our manufacturing industries not being as extensive or as numerous. The ratio of the numbers of minors to adults employed, using both classes of labor, is lower in this State than in many of the more populous states. It is hoped that even with the growth and development of our manufacturing activity, child labor, or the exploitation of labor of children, will not become the serious menace to social life or reach the acute stage that it has in many of our sister states.

With the strict enforcement of our excellent compulsory education and child labor laws, we will be able to control and regulate the employment of children, direct their growth and, in a great degree, discourage

the tendency to employ. The sentiment of the people of the State is strongly in opposition to child labor. This sentiment is growing steadily, and will result in the crystallization of the now generally accepted truths regarding child labor, and which in time will, undoubtedly, be incorporated into the common social and economic faith or doctrine of the people to act as an effective barrier to any possible future abuses.

From the careful observation of the officers of this Bureau, we are of the opinion that a great many male minors under 14 years of age are at work in San Francisco, and the more populous centers of the State, selling newspapers, peddling matches, etc., and female minors under 14 years engaged in domestic work, which occupations do not come within the provisions of the Child Labor Law. These cases should be taken care of under the Compulsory Education Law, and while, as before stated, a great deal of excellent work is being done in many of the counties of the State, there still remains a great deal of work to be done along the lines of the enforcement of the Compulsory Education Law. Labor, under the restrictions and protection afforded by our Child Labor Law, is to be preferred to child idleness.

We feel that the time has arrived when the State should intervene in the matter of enforcing the Compulsory Education Law; that it should direct and supervise this enforcement, rather than leave it to the counties; that some broad, comprehensive plan should be adopted and placed under an administrative commission; that, if necessary, the law should be amended, making it mandatory on the part of the county officials to aid the State when necessary. We believe, from careful observation, that there are large numbers of children coming within the provisions of the present act that are not in school, and that have received little or no education. This is a subject of vital importance to the State, and should receive the serious consideration of its citizenship.

The growth and development of our State, the rapid increase in the population of our large cities, the utilization of our great natural resources, and the consequent industrial development and the corresponding additions to our economic wealth, have brought new conditions that require for treatment and solution the exercise by the State of powers which but a short while back were unthought of.

In this intervention, the State stands in the same relation to the counties and other political subdivisions that the Federal Government does to the several states. There are many functions which the Government and the State can best exercise in the dealing with problems in their respective spheres, rather than the states and counties.

Number of Age and Schooling Certificates Issued in the State of California, Showing the Number of Minors, Male and Female, between the Ages of 14 and 16 Years, Entitled to Work under the Provisions of the Child Labor Law, for the Fiscal Year ending June 30, 1907. (Tabulated by Counties.)

Totals	1,396	664	742	483	62	21	48	9	3,425

* Includes but six months; previous records destroyed.

In the fiscal year 1906-07, a total of 3,425 age and schooling certificates were issued in the State to minors from 14 to 16 years of age. In other words, this represents the number of minors in the State between the ages of 14 and 16 who are entitled to work under the provisions of the Child Labor Law. Of these certificates, 96.0 per cent were issued to literates; and 4.0 per cent to illiterates; males from 14 to 15 years representing 42.6 per cent of the total, 42.5 per cent of the literates, and 44.3 per cent of the illiterates; males from 15 to 16 years representing 20.0 per cent of the total, 20.2 per cent of the literates, and 15.0 per cent of the illiterates. Females from 14 to 15 years of age represented 23.1 per cent of the total, 22.6 per cent of the literates, and 34.3 per cent of the illiterates. And females from 15 to 16 years of age represented 14.3 per cent of the total; 4.7 per cent of the literates, and 6.4 per cent of the illiterates. The largest group was male literates from 14 to 15 years of age, representing 40.8 per cent of the total. This group also represented the largest of the illiterates, being 1.8 per cent of the total. Of all certificates 87.1 per cent were issued in three counties, Alameda issuing 14.3 per cent; Los Angeles, 37.7 per cent, and San Francisco, 35.1 per cent of the total. In Los Angeles County no certificates were issued to illiterates, while in Alameda County 21.4 per cent of all certificates were issued to illiterates. In San Francisco the percentage of illiterates was 2.4 per cent. It is well to remember that the number of certificates issued in Alameda County represented a record for only six months, previous records having been destroyed. If the entire data was available, the percentage of certificates issued in Alameda County would be greatly increased.

Totals	745	396	449	283	92	36	64	28	2,093

* No returns.

For the fiscal year 1907-08, a total of 2,093 age and schooling certificates were issued in the State to minors between 14 and 16 years of age. This number of minors between 14 and 16 years of age, entitled to work under the provisions of the Child Labor Law, was distinctly smaller than in the previous fiscal year. Of the certificates 89.5 per cent were issued to literates, as against 96.0 per cent in the fiscal year 1906-07; and 10. per cent to illiterates, as against 4.0 per cent in 1906-07. Males between 14 and 15 years of age represented 40.0 per cent of the total; 39.8 per cent of the literates, and 41.8 per cent of the illiterates. Males from 15 to 16 years of age represented 20.6 per cent of the total, 21.0 per cent of the literates, and 16.4 per cent of the illiterates. Females from 14 to 15 years of age represented 24.6 per cent of the total, 24.0 per cent of the literates, and 29.1 per cent of the illiterates; while females from 15 to 16 years of age represented 14.8 per cent of the total, 15.1 per cent of the literates, and 12.7 per cent of the illiterates. As in the previous fiscal year, the male literates from 14 to 15 years represented the largest group, being 35.6 per cent of the total, as against 40.8 per cent in 1906-07. This group also represents the largest of the illiterates. There is a very noticeable decrease in the number of certificates issued in Los Angeles County, namely, from 1,293 in 1906-07, to 369, in 1907-08. Certificates issued to illiterates in Alameda County amounted to 30.6 per cent of the total number issued in that county.

Minors Employed in Stores and Factories in Different Localities in California.

Totals	1,927	968	959	3,658	2,053	1,605	5,585	80,124	7.0

In our investigation of stores and factories throughout the State, a record was kept of the number and ages of minors employed. The establishments coming under the scope of our investigation employed 80,124 persons, of whom 1,927, or 2.4 per cent, were minors under 16 years of age; and 3,658, or 4.6 per cent, minors between the ages of 16 and 18 years, making a total of 5,585 minors under 18 years of age, and repre-

senting 7.0 per cent of all persons employed. Of the minors under 16 years of age, 50.2 per cent were males, while 49.8 per cent were females. In other words, there were about an equal number of male and female minors, under 16 years of age, employed in stores and factories throughout the State. Of the minors between 16 and 18 years of age, the males constituted 56.1 per cent, while the females constituted 43.9 per cent. It will be noticed that in San Francisco, the very center of industrial activity, the percentage of minors employed in factories is very low as compared with the rest of the State. This is particularly true with regard to the number of minors employed under 16 years of age which, in the factories, amounts to only 1.0 per cent. This low percentage is due in a large measure to the effective work of the officers of this Bureau in carrying out the provisions of the Child Labor Law. We regret that we were unable to make our influence felt over a wider area, but the limitation of our funds compelled us to confine our attention principally to San Francisco, where there still remains a great deal of work to be done in this direction.

Minors Employed in Selected Industries in California.

INDUSTRIES. (Selected.)	MINORS UNDER 16 YEARS.			MINORS 16 TO 18 YEARS.			Total number of minors	Total number of persons in same industries	Percentage of minors

Telegraph companies	68	67	1	85	75	10	153	832	18.4

In the preceding table are shown the minors employed in some of the more important industries in the State, where child labor exists. The minors stand out most prominently in the cotton and woolen mills, constituting 37.7 per cent, or over one third of the total number of all persons employed in such establishments. It is also worth noting that those minors under 16 years of age made up 22.0 per cent of the total; and further, that over 60.0 per cent of such minors were females. In the canneries, minors under 16 years of age constituted 7.0 per cent of the total number of employes, while those between 16 and 18 years of age constituted 7.3 per cent, making a total of minors employed of 14.3 per

cent, of whom females comprised 74.2 per cent. In the confectioneries, minors under 16 years constituted 4.2 per cent of the total employes, and those between 16 and 18 years of age 10.3 per cent, making a total of all minor employes of 14.5 per cent, of whom 78.9 per cent were females. In the department stores, minors under 16 years of age constituted 7.8 per cent of the total number of employes, and those between 16 and 18 years 7.1 per cent, making a total of all minors of both sexes of 14.9 per cent, of whom 74.8 per cent were females. In dry goods stores, minors under 16 years constituted 5.8 per cent of the total number of employes, while those between 16 and 18 years of age amounted to 7.3 per cent, making a total of minor employes of 13.1 per cent, of whom females were 47.1 per cent. In drug stores, minors under 16 years of age constituted 7.1 per cent of the total employes, and those between 16 and 18, 9.6 per cent, making a total of minor employes of 16.7 per cent, of whom 97.3 per cent were males. The minors employed in the machine industry are mostly all apprentices.

During the two fiscal years of 1906-07 and 1907-08, 83 permits granting minors between the ages of 12 and 14 years of age the right to work under certain conditions, were issued by the Juvenile Court of San Francisco. Sixty-nine, or 83.1 per cent of these permits were issued to males, and 14, or 16.9 per cent, to females. Thirty-four of the permits were issued in the fiscal year 1906-07, while 49 were issued in 1907-08. By far the greater part of the permits issued were to minors between 13 and 14 years of age, and very few were issued for a period longer than six months.

ORIENTAL STATISTICS

ORIENTAL STATISTICS.

In our estimate of the number of Japanese in California, we have used data available from previous reports of the Bureau and the United States Census Report of 1900.

The Federal census report of 1900 gives the number of Japanese in California	10,151
Japanese landed from foreign ports at San Francisco, from October, 1899, to September, 1904.....	10,524
Arrivals from Hawaiian ports, January 1, 1903, to October 1, 1903..	2,040
Arrivals from Hawaiian ports, October, 1903, to October, 1904.....	5,230
Arrivals from Victoria (by card) during 1904.....	672
Net increase of arrivals over departures, port of San Francisco, for the two years ending September 30, 1906.....	13,658
Net increase of arrivals over departures, port of San Francisco, for the two years ending September 30, 1908.....	1,213
Total.....	43,488

The above table does not include the arrivals from Hawaiian ports for the two years ending December 31, 1902, nor those from Victoria for the three years ending December 31, 1903. These arrivals, undoubtedly, offset the departures of 1900 to October 1, 1904. The Bureau has continued the work of recording all arrivals and departures of Orientals at the port of San Francisco, from and to the Hawaiian Islands and Asiatic ports. This record was commenced with October 1, 1904. The arrivals and departures of Orientals for the two years ending October 1, 1908, are presented in another table, with their respective increase and decrease. No records are available of arrivals from Victoria or Puget Sound ports by water, or overland by rail, from January, 1905, to October 1, 1908, nor is there any data as to the number of Chinese and Japanese entering the United States illegally over the Mexican border.

From various Japanese sources of information, the estimates of the number of Japanese in California are placed at not less than 50,000. We would, after careful consideration of all available data, estimate the Japanese population in California at not less than 45,000. This number is distributed through the State, approximately, as follows:

San Francisco and vicinity, including the cities of Oakland, Alameda, and Berkeley	12,000
Los Angeles	6,000
Sacramento and vicinity	6,000
Fresno and vicinity	3,000
All other parts of the State	18,000
Total.....	45,000

The Twelfth Biennial Report of this Bureau shows the number of Chinese in California, October 1, 1904, as 40,000, since which period there has been a steady decline, as shown by the arrivals and departures at the port of San Francisco, the departures exceeding the arrivals during the four years covering the period to October 1, 1908, by 10,255. The Chinese population at present would, therefore, be somewhat less than 30,000, due to the return of the older men of this race to China, and the Exclusion Law, which prevents any influx of the younger generation.

The Japanese show the same tendency as in the past to increase as a factor in labor in all lines or branches of work engaged in throughout the State, and especially in San Francisco, Los Angeles, and the larger centers of population. In these centers they are increasing in industrial activity, and constantly adding new lines, bringing to their aid improved machinery and methods of doing business.

The Chinese population seems to be gradually leaving the agricultural fields and turning toward the cities and towns. Since the conflagration of April, 1906, the Chinese quarter in San Francisco has been almost completely rehabilitated. Most of the former Chinese residents have returned to reside and conduct their business. All of the new buildings and structures have been built along the most improved sanitary and other lines, and there has been a marked improvement from an architectural standpoint.

Separate tables are presented for San Francisco and Oakland, showing the hours of labor and wages paid to Japanese by Japanese employers in stores and factories. Similar tables are presented for San Francisco and Oakland, showing the hours of labor and wages paid to Chinese by Chinese employers. Separate tables are also presented for the State, showing the hours of labor and wages paid to Japanese by white employers; and the hours of labor and wages paid to Chinese by white employers. Tables are also shown in the chapter devoted to farm labor, containing wages paid to Orientals. Also table of inspection of Chinese stores and factories in San Francisco, showing the condition of work rooms and number and sex of employes. A similar table is presented on Japanese stores and factories in San Francisco, and one for Chinese and Japanese stores and factories in the city of Oakland. These latter represent 298 inspections in San Francisco and Oakland, employing 2,046 individuals. The statistical data on wages and hours of labor is based on a record of 9,158 individuals, including those engaged in labor in agricultural fields.

There is presented, in the chapter devoted to employment agencies, a table showing occupation and wages paid, as reported by Oriental employment agencies in San Francisco. We are also presenting, in the article on farm labor, the opinions of 132 farmers, fruit-growers, and

others engaged in the various branches of agriculture. These opinions were selected from over 300, obtained by the Bureau in the work on farm labor. They are very representative, and show clearly the existing conditions.

Attention is also directed to the article on shipping, showing the wages paid to Orientals employed on vessels plying between San Francisco and Asiatic ports. These are principally aliens, or non-residents of the State.

Various deductions have been drawn and are shown in articles under the different tables.

Arrivals and Departures of Orientals, Port of San Francisco, During the Two Years ending September 30, 1908.

* 8 hours per day. † Includes found, except in *Newspapers and Printing.* ‡ Paid by the hour, 25c, 30c, 35c.

A total of 650 individuals was considered in the investigation of hours of labor and wages paid to Japanese by Japanese employers in the stores and factories in San Francisco. 263 employees of house-cleaning establishments worked by the hour, and are not considered in the percentages. Of the remaining, 74, all employed in newspaper and printing establishments, worked 8 hours; 70, or 18.1 per cent, worked 9 hours; 213, or 55.5 per cent, worked 10 hours, while 26, or 6.7 per cent, worked 12 hours. Copartnership seems by no means to be the general form of proprietorship it is with the Chinese, for but 25, or 3.8 per cent of the 650 workers, were copartners. These, though included in the hours, are not in wages. In the 56 establishments investigated, 257 Japanese were employed as house cleaners. Their wages were regulated by a sliding scale, as follows: 35 cents per hour when the work lasted but one hour; 30 cents per hour if the work was for a period varying from 2 hours to one half a day; and 25 cents per hour for any longer period. Of the remaining 368 wage-earners, 67, or 18.2 per cent, were paid by the week; and 301, or 81.8 per cent, by the month. The weekly wage ranged from \$3 to over \$18; 20.9 per cent of those paid by the week received \$9 and under, 29.8 per cent over \$9 to \$15, and 49.3 per cent, over \$15. The largest group is the highest one, over \$18, 31.3 per cent being in that group. The monthly wage ranged from less than \$25 to over \$70, and included found in practically every case. 51, or 16.9 per cent, received \$30 and under; 101, or 33.5 per cent, over \$30 to \$40; 60, or 20.0 per cent, over \$40 to \$50; 50, or 16.6 per cent, over \$50 to 60; and 39, or 13.0 per cent, over \$60.

The two largest groups are those receiving from \$30 to \$35, and from \$35 to \$40. It will be noticed that the wages are uniformly high as compared with those received by the Chinese.

* Wages include found.

In Oakland, there were 286 Chinese employes in the establishments visited in the investigation. None of these worked less than 10 hours. 222, or 77.6 per cent, worked 10 hours; 31, or 10.8 per cent, worked 11 hours; and 33, or 11.5 per cent, worked 12 hours and over. The prevalence of copartnerships in Chinese establishments is borne out by the fact that 111, or 38.8 per cent of the 286 workers, were members of copartnerships, this percentage being considerably higher than that of 28.1 per cent in San Francisco. The percentage of copartnerships in stores is especially high.

Of the 175 wage-earners, 84, or 48.0 per cent, were paid by the week. The great bulk of these received from over \$6 to \$12, only 6.0 per cent receiving \$6 and under; and 12.0 per cent receiving over \$12. 91, or 52.0 per cent of the wage-earners, were paid by the month, and their wages uniformly included found. The wages ranged from \$25 to \$60 and over. 30, or 33.0 per cent, received \$35 and under; 47, or 51.6 per cent, over \$35 to \$45; and 14, or 15.4 per cent, received over \$45. The largest group were those receiving between \$40 and \$45.

Data was secured on 246 individuals in the investigation of hours of labor and wages paid to Japanese by Japanese employers in Oakland. 53, or 21.5 per cent of these, worked 9 hours; 165, or 67.1 per cent, worked 10 hours; 20, or 8.1 per cent, worked 11 hours; and 8, or 3.3 per cent, worked 12 hours and over. Conditions in Oakland quite bore out the statement based on conditions in San Francisco, that the copartnership was a far less popular form of enterprise with the Japanese than with the Chinese. But 20, or 8.1 per cent of the 246 workers in Oakland, were members of copartnerships. By far the majority of wage-earners were paid by the month, including found, and only a record of monthly wages was kept. These wages ranged from \$15 to over \$70. 41, or 18.2 per cent, received \$25 and under; 73, or 27.9 per cent, received over \$25 to \$35; 84, or 37.2 per cent, received over \$35 to \$45; and 38, or 16.7 per cent, received over \$45; the largest group being those receiving from \$35 to \$40.

In the investigation of the wages paid by white employers throughout the State, a record was kept of the hours of labor and wages paid Chinese and Japanese by such employers. The data on Chinese is classified in the preceding table. Of the 517 Chinese recorded, 317, or over 60.0 per cent, were employed in powder works. 67, or 12.9 per cent of the total, worked 9 hours; 446, or 86.3 per cent, worked 10 hours; while only 4, or 0.8 per cent, worked 12 hours and over. It is evident that the Chinese, as a rule, have a 10-hour working day, whether working for one of his own race or for a white man. The wages ranged from \$4 to \$16 per week. 129, or 24.9 per cent, received \$10 and under; 348, or 67.3 per cent, received \$10 to \$12; and 40, or 7.7 per cent, received over \$12. The group earning \$10 to \$12 per week was by far the largest, representing 67.3 per cent of the total.

As indicated in the preceding table, a record was also kept of Japanese employed by white employers in the State, from whom data was secured concerning white employees. Of the 278 Japanese, concerning whom such data was secured, by far the majority, 219, or 78.8 per cent, worked 10 hours, while 56, or 20.1 per cent, worked 9 hours. It is evident that the Japanese, as well as the Chinese, as a rule, have a 10-hour working day, whether working for white or Oriental employers.

The wages ranged from \$4 to over \$22 per week. 28, or 10.1 per cent of the employees, received \$8 and under; 107, or 38.5 per cent, received over \$8 to \$10; 91, or 32.7 per cent, received \$10 to \$16; and 52, or 18.7 per cent, received over \$16. The largest group were those receiving from \$8 to \$10, being 38.5 per cent of the total. Cannery employees made up over 50.0 per cent of the total considered. The range of wages in the canneries was very large, being from the lowest to the highest groups considered. All the wage-earners who received over \$16 per week were employed in the canneries.

In the inspection of Chinese stores and factories in San Francisco, 140 establishments were visited, with a total of 1,286 employees. All of these employees were adult males. As compared with similar establishments maintained by whites, this is a very unusual state of affairs. It represents, however, the general condition in Chinese stores and factories, for the Chinese seldom employ minors or females.

In the majority of cases the sanitation was classed as fair, for while the conditions were not sufficiently unsanitary to class them as bad, neither were they good. In 90, or 64.3 per cent of the establishments, the sanitation was fair; in 46, or 32.8 per cent, good; and in 4, or 2.9 per cent, bad.

Totals	87	561	540	21	53	32	2

Additional data concerning Japanese stores and factories in San Francisco was received too late to classify in the above table on factory inspection. It covered 5 printing establishments, employing 80 persons, all of whom were males; and 8 tailoring establishments, employing 46 persons, all of whom were males, making a total of 13 establishments, employing 126 persons. This, with the data in the above table, makes a total of 100 establishments inspected, employing 687 individuals. Much the same conditions exist with regard to minors and females as in the case of the Chinese, no minors being reported, and very few females, all being employed in bazaars or laundries. Of the total, 666, or 96.9 per cent, were males; and but 21, or 3.1 per cent, females. Females formed 30.0 per cent of the employees in the Japanese bazaars.

The sanitary conditions were just the reverse of those in the Chinese establishments. 65.0 per cent were classed as good, 33.0 per cent as fair, and 2.0 per cent as bad.

* Japanese; others Chinese.

In the 71 establishments inspected in Oakland, 559 Chinese and Japanese were employed. Of these establishments, 14 laundries with 216 employes, 5 restaurants with 27 employes, and 2 miscellaneous establishments with 13 employes, were Japanese. In other words, there were 21 Japanese establishments, employing 256 individuals, and 50 Chinese establishments, employing 203 individuals. There were no minors employed, and of the adults 539, or 96.4 per cent, were males; and 20, or 3.6 per cent, were females. These females were all Japanese. The figures correspond closely with those for Chinese and Japanese in San Francisco.

In 20, or 28.2 per cent of the establishments, the sanitation was good; in 46, or 64.8 per cent, fair; and in 5, or 7.0 per cent, bad.

SOCIAL STATISTICS

SOCIAL STATISTICS.

This chapter is very full and complete and contains many new ideas and thoughts. The work has been carried on mainly by personal correspondence, thus minimizing the cost, the principal item being that of compilation and tabulation. The data and information for this article has been drawn from many sources, including officers of the State prisons and reformatories, county sheriffs, county clerks, probation officers and police officials in the larger cities and towns of the State.

Tables are presented showing in detail the total number of felonies and misdemeanors for the two fiscal years ending June 30, 1908. These tables have been tabulated by counties and show the various occupations, ages, degrees of crime and periods of sentence or fines imposed, for each fiscal year.

Tables are also presented showing the total number of final decrees of divorce granted in the State for the two fiscal years 1906-07 and 1907-08. These have been tabulated by counties and show, in addition to the divorces, the total number of marriages for the above period, and also the percentage of divorce to marriage.

Numbers show tendencies. Charts have been introduced to graphically present these tendencies. Special deductions have been drawn and presented in each table. In the continuance of the work of the Bureau on social statistics, some new and original lines of research will be followed. With a view to ascertaining the relationship which we believe exists between crime (especially juvenile in the more serious offenses), lack of education and child labor in early youth, additional information will be sought to carry on this investigation as part of our future work.

A careful analysis of crime committed within the State, especially felonies (adults and juvenile), will be made to determine, among many points, the percentage having its origin and growth or development within the confines of the State, and due, therefore, to existing social and economic conditions, and that coming to us from other states and countries. The Bureau will coöperate with the officials of the United States Immigration Commission in this regard. All of the work in connection with social statistics will be done with the object that the data may be used as the foundation for possible future corrective legislation.

*Includes all of the city of Los Angeles, no record having been kept of ages of persons convicted of misdemeanors.

During the fiscal year ending June 30, 1907, 53,400 convictions for misdemeanors in the State were reported. Complete data on ages and sex, however, were only furnished in 23,249 instances. In drawing our percentages, this latter number has been used as a basis. The column "Unknown" contains all of the cases in which no data on ages was furnished. It is, however, with the exception of Los Angeles, made up principally of persons convicted of drunkenness. In fact, in most counties, no record of persons convicted of drunkenness is kept, outside of numbers. In the city of Los Angeles, no record was kept of the ages of any persons convicted of misdemeanors. From careful study of the data available, we are safe to state that the ages of persons convicted of drunkenness would only tend to increase the percentage in the older age groups, that is over 30 years. Of the total number considered, 63, or 0.3 per cent, were under 15 years of age; 1,197, or 5.1 per cent, were between 15 and 20 years of age; 6,823, or 29.3 per cent, were between 20 and 30 years of age; 6,320, or 27.2 per cent, were between 30 and 40 years of age; 4,859, or 20.9 per cent, were between 40 and 50 years of age; while 3,987, or 17.2 per cent, were 50 years and over. Females constituted 7.3 per cent of the total convictions in which complete data was secured.

* Includes all of the city of Los Angeles, no record having been kept of occupations of persons convicted of misdemeanors.

In the preceding table the occupations of persons convicted of misdemeanors during the fiscal year 1906-07 are shown. Of the 53,400 convictions reported, data on occupations was secured in 23,539 instances. This latter figure is used as a basis for drawing percentages, the "Unknown" column being made up principally of persons convicted of drunkenness, with the exception of the city of Los Angeles, where no records were kept. Of the number considered, 8,948, or 38.0 per cent, gave their occupations as laborers; 1,129, or 4.8 per cent, as teamsters; 1,073, or 4.6 per cent, had no occupations. Then following in order of importance came cooks, 4.1 per cent; carpenters, 3.0 per cent; sailors, 2.9 per cent; clerks, 2.3 per cent; housewives, 2.3 per cent; domestics, 1.9 per cent; painters, 1.9 per cent; miners, 1.7 per cent; waiters, 1.5 per cent; machinists, 1.4 per cent; and merchants, 1.0 per cent. These fourteen occupations comprise 71.4 per cent of the total; 28.6 per cent being distributed over the remaining 136 occupations.

Nature of Offense Committed by Persons Convicted of Misdemeanors in California During the Fiscal Year ending June 30, 1907. (Tabulated by Counties.)

The data on nature of offense committed by persons convicted of misdemeanors, during the fiscal year 1906-07, covering a record of 53,400 persons is complete. 34,750, or over 65.0 per cent, were convicted of drunkenness. Practically 65.0 per cent of all the convictions for drunkenness were in the three centers of population, namely, San Francisco, Los Angeles, and Oakland. 3,799 persons, or 7.1 per cent, were convicted of vagrancy; 3,380, or 6.3 per cent, were convicted of disturbing the peace. (In most instances, this is merely a more serious charge of drunkenness. In fact, several of the interior counties apply this charge to all convictions for drunkenness.) 1,657, or 3.1 per cent, were convicted of petit larceny; 1,504, or 2.8 per cent, for gambling; 985, or 1.9 per cent, for battery. The preceding six offenses constitute 86.2 per cent of the total number of convictions for misdemeanors.

*Includes all of the city of Los Angeles, no data having been obtained on sentences.

Outside the city of Los Angeles, data was secured showing sentences imposed upon persons convicted of misdemeanors, during the fiscal year 1906-07. The total number of convictions in the city of Los Angeles, namely, 15,289, has been deducted for the purpose of presenting percentages.

For the State, exclusive of the city of Los Angeles, 4.8 per cent of the persons convicted were sentenced to serve three days and under; 2.0 per cent served 4 to 5 days; 4.6 per cent from 6 to 10 days; 6.8 per cent from 11 to 30 days; 2.1 per cent from 31 to 60 days; and 3.7 per cent over 60 days; 8.9 per cent were fined, while 11.0 per cent forfeited their bail. In 56.0 per cent of the cases, principally all charged with drunkenness, the sentence was suspended, which amounted to practically keeping them in jail over night and administering a reprimand the following day.

*Includes all of the city of Los Angeles, no record having been kept of ages of persons convicted of misdemeanors.

During the fiscal year ending June 30, 1908, 59,744 convictions of misdemeanors in the State were reported. Complete data on ages and sex, however, were only furnished in 30,862 instances. In drawing our percentages this latter number has been used as a basis. The column "Unknown" contains all the cases in which no data on ages was furnished. With the exception of the city of Los Angeles, this is made up principally of persons convicted of drunkenness. In many counties, no record outside of numbers was kept for convictions of drunkenness. In the city of Los Angeles no records were furnished of the ages, occupations or sentences of persons convicted of misdemeanors. We believe, from a careful investigation of our material, that the following deductions can be safely made. If the complete data on ages of all convictions for drunkenness were available, it would only increase the percentage in the older age groups, that is over 30 years, and thus tend to emphasize more strongly the comparison of ages of persons convicted of felonies and misdemeanors, which are presented further on. Of the total number of convictions considered, 66, or 0.2 per cent, were under 15 years of age; 1,504, or 4.9 per cent, were between 15 and 20 years of age; 9,913, or 32.1 per cent, were between 20 and 30 years of age, thus making the total of 37.2 per cent of persons under 30 years of age. 8,174, or 26.5 per cent, were between 30 and 40 years of age; 5,973, or 19.3 per cent, were between 40 and 50 years of age, while 5,232, or 17.0 per cent, were 50 years and over. Females constituted 5.8 per cent of the total number of convictions for which complete data was secured.

Occupations of Persons Convicted of Misdemeanors in California During the Fiscal Year ending June 30, 1908. (Tabulated by Counties.)

*Includes all of the city of Los Angeles, no record having been kept of occupations of persons convicted of misdemeanors.

In the preceding table are shown the occupations of persons convicted of misdemeanors, during the fiscal year 1907-08. Of the 59,744 convictions reported, data on occupations was secured in 32,020 instances. As stated, in the deduction on ages, the "Unknown" column is made up principally of persons convicted of drunkenness, with the exception of the city of Los Angeles, where no records were kept, and is not considered in forming a basis for percentages. Of the total number considered 11,920, or 37.2 per cent, gave their occupations as laborers; 1,406, or 4.4 per cent, as teamsters; 1,291, or 4.1 per cent, had no occupation. Then following in order of importance came sailors, 3.6 per cent; clerks, 2.8 per cent; cooks, 2.7 per cent; carpenters, 2.6 per cent; housewives, 2.4 per cent; painters, 1.9 per cent; merchants, 1.8 per cent; miners, 1.6 per cent; machinists, 1.8 per cent; domestics, 1.4 per cent; and waiters, 1.4 per cent. These fourteen occupations comprise 69.7 per cent of the total.

Totals	336	204	2,895	90	72	6	2,002	68	44	268	8	5,531	52

The preceding table presents a complete record, covering 59,744 convictions of offenses committed by persons convicted of misdemeanors during the fiscal year 1907-08. 34,907, or 58.5 per cent, were convicted of drunkenness. Practically 65.0 per cent of all convictions for drunkenness were in the three centers of population, namely, San Francisco, Los Angeles, and Oakland. 5,531, or 9.3 per cent, were convicted of vagrancy; 4,027, or 6.7 per cent, were convicted of disturbing the peace, which as previously stated, in most instances is merely a more serious charge of drunkenness; 2,002, or 3.4 per cent, were convicted of petit larceny; 1,296, or 2.2 per cent, of gambling; and 917, or 1.6 per cent, of battery. The preceding six offenses constitute 81.7 per cent of the total number of convictions; 1,590, or 2.6 per cent, were convicted of violating the automobile speed limit; and 745, or 1.3 per cent, for cruelty to animals.

* Includes all of the city of Los Angeles, no data having been obtained on sentences.

Outside of the city of Los Angeles, data was secured showing sentences imposed upon persons convicted of misdemeanors, during the fiscal years 1907-08. The total number of convictions in the city of Los Angeles, namely, 17,136, has been deducted for the purpose of presenting percentages. For the State, exclusive of the city of Los Angeles, 1,176, or 2.8 per cent, were sentenced to serve 3 days and under; 907, or 2.1 per cent, from 4 to 5 days; 2,614, or 6.1 per cent, from 6 to 10 days; 3,323, or 7.8 per cent, from 11 to 30 days; 851, or 2.0 per cent, from 31 to 60 days; and 1,636, or 3.8 per cent, over 60 days. 6,525, or 15.3 per cent, were fined, while 2,827, or 6.6 per cent, forfeited their bail. In 53.2 per cent of the cases considered, practically all charged with drunkenness, the sentence was suspended.

Some interesting conclusions can be drawn from a comparison of the tables presented on misdemeanors for the past two fiscal years. The larger part of the persons convicted of misdemeanors had passed the thirty-year mark. Those over thirty years constituted 65.3 per cent of the total, during the fiscal year 1906-07; and 62.8 per cent during the fiscal year 1907-08. The large number of persons convicted who were 50 years of age and over is very noticeable. In 1906-07 it amounted to 17.2 per cent; and in 1907-08, to 17.0 per cent. Laborers by far constituted the largest group of persons convicted, or 38.0 per cent of the total in 1906-07; and 37.2 per cent in 1907-08. The 16 occupations, namely, laborers, teamsters, those having no occupation, cooks, carpenters, sailors, clerks, housewives, domestics, painters, miners, waiters, machinists, chauffeurs and peddlers, stand out most prominently, making up 72.6 per cent of the total number convicted in 1906-07; and 72.3 per cent in 1907-08.

The most common offenses were drunkenness, vagrancy, disturbing the peace, petit larceny, gambling, and battery. These six offenses constituted 86.2 per cent of the total in 1906-07; and 87.7 per cent in 1907-08. It is worth noting that vagrancy increased from 7.1 per cent in 1906-07 to 9.3 per cent in 1907-08. This increase was due in a large measure to the great number of unemployed during the period following the financial crisis in November, 1907. The most prominent of all misdemeanor offenses by far was drunkenness. In 1906-07, this misdemeanor constituted 65.0 per cent of the total, while in 1907-08 it constituted 58.0 per cent.

Attention is called to the falling off in the number of convictions for this offense in Alameda County, namely, from 7,255 in 1906-07, to 4,492 in 1907-08, and the increase in San Francisco, namely, from 7,819 to

9,057, during the same period. Some explanation may be found for this in the return of a large part of the wayward element which migrated across the bay after the catastrophe of April, 1906. The two centers of population, namely San Francisco and Los Angeles, show over 50.0 per cent of the total number of convictions for drunkenness, in each of the fiscal years. The chart following is presented to show the cause of this large percentage. It will be noticed that commencing in the month of August, with the approach of the end of the harvesting season in the interior of the State, the number of convictions rises steadily as the floating population gradually gravitates toward the two large cities, reaching its maximum in the month of December, and then gradually decreases as operations in the interior are resumed. The low starting point in the fiscal year 1906-07 is due to the fact that saloons were not allowed to open in San Francisco until after July 5, 1906.

Totals	733	12	97	277	177	58	38	74	9

* Exclusive of probationers.

During the fiscal year ending June 30, 1907, 733 convictions for felonies were reported. With the exception of probations in San Francisco, which information arrived too late to classify, the data is complete. Returns from San Francisco, showing probations, will be found at the end of the chapter on felonies.

Of the total number of persons considered, 12, or 1.8 per cent, were under 15 years of age; 97, or 14.7 per cent, were between 15 and 20 years of age; 277, or 42.0 per cent, were between 20 and 30 years of age, making a total of 58.5 per cent under the age of 30 years. 177, or 26.9 per cent, were between 30 and 40 years; 58, or 8.8 per cent, between 40 and 50 years; while 38, or 5.8 per cent, were 50 years and over. Of the total number considered, females constitute 1.4 per cent.

Totals	1	1	4	1	2	2	1	7	4	28	1	2	59	26	3

In the preceding table are shown the occupations of persons convicted of felonies, during the fiscal year 1906-07. As in the misdemeanors, it will be noted that the laborers stand out prominently, constituting 39.3 per cent of the total number convicted. Next come those having no occupation, representing 4.9 per cent; and a like number giving their occupations as cooks. 4.2 per cent gave their occupations as teamsters; 3.9 per cent as waiters; 3.1 per cent as clerks; 3.0 per cent as carpenters; 2.7 per cent as miners; 2.1 per cent as sailors; 1.9 per cent as painters; and a like number as machinists. The 11 occupations make up 71.9 per cent of the total.

* Data on probations received too late to classify; will be treated separately.

During the fiscal year ending June 30, 1908, 942 convictions for felonies were reported. This number does not include the probations in San Francisco, which arrived too late to classify. Of the total number of persons under consideration, 15, or 1.7 per cent, were less than 15 years of age; 143, or 16.2 per cent, were between 15 and 20 years of age; 340, or 38.5 per cent, were between 20 and 30 years of age; making a total of 56.2 per cent under 30 years of age. 221, or 25.0 per cent, were between 30 and 40 years of age; 90, or 10.2 per cent, between 40 and 50 years of age, while 74, or 8.4 per cent, were over 50 years of age. Of the total number considered, females constituted 1.6 per cent.

In the occupations, laborers stand out even more prominently than in the previous year, constituting 45.9 per cent of the total number of persons convicted. Second came those having no occupation, with 6.4 per cent; and third, cooks, with 4.4 per cent. 3.1 per cent gave their occupations as teamsters; and a like number as carpenters; 2.5 per cent as waiters; 2.3 per cent as sailors; 1.9 per cent as miners; 1.8 per cent as painters; and 1.4 per cent as machinists. Persons having these 11 occupations constituted 74.9 per cent of the total number convicted.

As in the preceding year, the most common felony offense was burglary. 354 persons, or 37.6 per cent of the total, being convicted of this crime. 168, or 17.8 per cent, were convicted of grand larceny; 109, or 11.6 per cent, of forgery; 55, or 5.8 per cent, of assault; and a like number, of robbery; 47, or 4.9 per cent, of murder; and 32, or 3.4 per cent, of rape. These seven offenses constituted 86.9 per cent of the total number of convictions.

Of the persons convicted, 23.1 per cent were sentenced to serve less than two years; 40.8 per cent to serve from 2 to 5 years; 13.3 per cent, to serve from 6 to 10 years; 4.5 per cent, to serve from 11 to 20 years; 19 persons were given life sentence; and 7 condemned to death. 85 were sent to reform schools; and 45 (exclusive of the county of San Francisco) were admitted to probation.

The following table shows the persons convicted of felonies in the county of San Francisco and admitted to probation, during the past two fiscal years.

Persons Convicted of Felonies in the County of San Francisco and Admitted to Probation.

Offense.	Fiscal Year 1906-07.	Fiscal Year 1907-08.
Assault with deadly weapon		1
Burglary	11	28
Embezzlement		5
Felony not stated		3
Forgery		6
Grand larceny		*13
Passing fictitious check	1	1
Rape	3	
Receiving stolen property		1
Robbery	3	10
Totals	18	68

* Includes 2 females.

During the fiscal year 1907-08, 68 persons were admitted to probation, as against 18 in the previous year, almost a fourfold increase. It is worth noting that in the fiscal year 1906-07, probations constituted about 15.0 per cent of the convictions for felonies, in the county of San Francisco, while in the fiscal year 1907-08, they constituted 33.0 per cent. Probations granted in San Francisco during the fiscal year 1907-08, were one and one half times as many as in all the counties of the State combined, although the number of convictions in this county were less than one quarter of the total for the State.

A comparison between the persons convicted of felonies during the past two fiscal years, discloses certain interesting facts. In the first place, the larger part of the persons convicted were under 30 years of age. In the fiscal year 1906-07, this group constituted 58.5 per cent of the total, while in the fiscal year 1907-08, it amounted to 56.2 per cent. A very small percentage of the felonies were committed by persons who had passed the 50-year mark, or about 6.0 per cent, in 1906-07, and about 8.0 per cent in 1907-08. Females constituted a very small part of the persons convicted of felonies, being about 1.4 per cent in 1906-07, and about 1.6 per cent in 1907-08.

Laborers form by far the largest group of persons convicted, being 39.3 per cent of the total in 1906-07, and 45.9 per cent in 1907-08. 11 occupations, namely, laborers, persons having no occupation, cooks, teamsters, waiters, clerks, carpenters, miners, sailors, painters, and machinists, made up 71.9 per cent of the total in 1906-07, and 74.9 per cent in 1907-08. In other words, about three fourths of the crimes were committed in these 11 groups of occupations in each of the fiscal years.

Burglary and grand larceny were by far the most common of the felony offenses, comprising 54.7 per cent of all the offenses in 1906-07, and 55.4 per cent in 1907-08. In other words, they constituted over one half of the crimes committed. The seven crimes, burglary, grand larceny, forgery, assault, robbery, murder, and rape, made up a total of 86.3 per cent of all the crimes for which convictions were had in 1906-07, and 86.9 per cent in 1907-08. Particular attention is called to the marked similarity between all the percentages in both the fiscal years. This seems to suggest that there is probably some general relation between the ages of the persons, their occupations, and the nature of the crimes committed. Comparison between the persons convicted of felonies and those convicted of misdemeanors also discloses some interesting facts. The same occupations, namely, laborers, cooks, teamsters, waiters, clerks, carpenters, miners, sailors, painters, and machinists, in each instance constitute the bulk of the persons convicted. There is, however, a wide difference in the percentage of females convicted. In misdemeanors, this amounts to about 6.0 per cent, while in felonies, to a little over 1.0 per cent. The most noticeable difference is that in the ages of persons convicted. Youth predominates in the commission of the more serious crimes. Of the persons convicted of felonies, 58.5 per cent were under 30 years of age in 1906-07; and 56.2 per cent in 1907-08. Of those convicted of misdemeanors, only 34.7 per cent were under 30 years of age in 1906-07; and only 37.2 per cent in 1907-08.

In felonies, it will be seen that the greater part of the persons convicted are under 30 years of age, while in misdemeanors, the greater part are over 30 years of age. To more clearly bring out these comparisons, the chart following has been prepared. Particular attention is called to

the marked degree of similarity between the columns representing the same groups in the two fiscal years under consideration. The columns representing persons convicted of misdemeanors are placed alongside and preceding those convicted of felonies. It will be noticed how prominently felonies stand out in the first two columns which represent, respectively, persons under 20 years of age, and persons between 20 and 30 years of age, and how rapidly they drop after the 30-year mark has been passed as compared with misdemeanors, which persist during the older age groups.

Another fact clearly brought out in the chart, is that the period when the greatest number of offenses are committed, both in felonies and misdemeanors, is from 20 to 30 years of age, being particularly so in the cases of felonies.

One of the points suggested by our investigation of crime was that there apparently existed no relation between the number of crimes committed and the population. In order to arrive at more definite conclusions, an investigation was made into the number of commitments to State penitentiaries, covering a period of 18 years. A similar investigation was made of commitments to State reform schools, from the time of their inception to the present year. Tables have been submitted presenting data obtained. It will be noticed in both tables that the total number of yearly commitments in the entire State fluctuates considerably. These fluctuations are even more marked in the counties. In order to more clearly present the data in the preceding table, the chart following has been prepared.

The curve of population and the curve showing the number of commitments to State penitentiaries have been plotted to a proportional scale. If any relation existed between these two curves, the one representing the number of commitments should follow closely along the curve of population. However, a wide discrepancy is very noticeable in the chart. Some very interesting conclusions are brought out by a study of the curves in this chart. If we are correct in assuming that the number of commitments is in a fair way proportional to the number of crimes committed, we must conclude that no relation exists between the crimes committed and the population, but rather, that there are periodic or spasmodic waves of crime; and further, that crime has decreased in proportion to population.

Commitments to State Penitentiaries 1890-1907

JUVENILE CRIME.

In our investigation of felonies, it was found that a very large part of the persons convicted were of tender age. In order to aid in the prosecution of our investigation, data was secured from the two State Reform Schools, at Ione and Whittier. The tables following covering commitments for the two fiscal years, 1906-07 and 1907-08, were compiled from this information:

Table of Juvenile Crimes, Showing Ages and Condition of Offenders Committed to Preston and Whittier Schools for the Fiscal Year ending June 30, 1907.

County.	Age.	Sex.	Offense.	History, Occupation, Etc.
Alameda	17	Male	Grand larceny	Laborer.

Totals	1,336	901	139	79	86	91	17	20	2	1	23	40	231	247	795

A total of 1,336 delinquency cases in San Francisco was reported by the probation officer, for the two fiscal years 1906-07 and 1907-08. 1,220, or 91.3 per cent, of these were boys; and 116, or 8.7 per cent, girls. The ages of the boys ranged from 5 to 15 years, almost 50.0 per cent being 14 and 15 years of age; over 70.0 per cent were from 12 to 15 years; about 18.0 per cent under 12 years; and 10.0 per cent over 15 years of age.

In 64.7 per cent of the cases, the charge against the boys was the general one, of conduct which would eventually send them to public institutions. In 61.5 per cent of the cases the charges were dismissed. In 15.6 per cent, there was commitment to an institution; and in 19.5 per cent, the boys were admitted to probation.

The ages of the girls ranged from 11 to 18 years, 66.4 per cent being 14 and 15 years of age; 8.6 per cent were under 14 years; and 25.0 per cent over 15 years.

In 95.0 per cent of the cases, the charge against the girls was "public institution." In 38.8 per cent, the cases were dismissed; in 39.6 per cent, the girls were committed to an institution; and in 7.8 per cent, they were admitted to probation. 13.8 per cent were given into the care of private persons.

Dependency Cases in San Francisco During the Fiscal Years 1906-07 and 1907-08.
(As reported by the Probation Officer.)

Causes of Dependency.		Per cent.
Drunkenness, on part of father	10.97	
Drunkenness, on part of mother	15.09	
Drunkenness, on part of both parents	8.40	
Inability of one parent to provide or care for		34.46
Abandoned children		11.83
Desertion, on part of father	9.43	
Desertion, on part of mother	1.89	
		11.32
Incorrigible children		5.32
Immorality, on part of mother		3.95
Sickness		3.95
Unfit and improper parent		3.95
Orphan children		3.77
Truancy		3.43
Insanity (in every case the mother)		2.92
Parents separated		1.89
Failure to provide, by parents		.86
Cruelty of parents		.69
Unfit and improper home		.34
Total		100.00

Disposition of Cases.	
Committed to individuals	137
Committed to institutions	631
Probation	7
Parental school	1
Dismissed	373
Total	1,149

A total of 1,149 dependency cases in San Francisco for the two fiscal years, 1906-07 and 1907-08, were reported by the probation officer. The causes for such dependency and their respective percentages are given in the table above. Particular attention, however, is called to the fact that 34.46 per cent, or over one third of the total number of cases of dependency, were caused by drunkenness on the part of either parent, or both.

In 137 instances, or 11.9 per cent, the children were committed to individuals; 631, or 54.9 per cent, were committed to institutions; 373, or 32.5 per cent, of the cases were dismissed, while 7 children were admitted to probation, and 1 sent to a parental school. In other words, in over one half the cases, children were sent to some institution, and in practically one third of the cases they were dismissed.

DIVORCES.

In presenting data on divorces, only final decrees were considered, no account being taken of interlocutory decrees.

In the fiscal year, ending June 30, 1907, there were 22,734 marriages in the State of California. During the same period, there were 2,177 final decrees of divorce granted, the percentage of divorce to marriage being 9.6 per cent. In other words, practically one divorce to every ten marriages. In the county of San Francisco, the percentage was 12.9, or practically one divorce to every eight marriages. In Los Angeles County, the percentage was 10.9, or practically one divorce in every nine marriages. Alameda County showed a very low percentage, namely, 5.7, or about one divorce to every eighteen marriages. El Dorado County showed the highest per cent, namely, 35.7, or about one divorce to every three marriages, while Alpine, Inyo, Madera, Mono, and Sierra counties, held the enviable records of no divorces.

In the State, husbands were plaintiffs in 642 instances, representing 29.5 per cent, while wives were plaintiffs in 1,535 instances, or 70.5 per cent. In other words, wives were plaintiffs in over two thirds of the instances where divorces were granted. In the larger counties, practically the same ratio prevailed. For example: In San Francisco County, husband, plaintiff, 30.4; wife, 69.6 per cent. Los Angeles County, husband, plaintiff, 29.5; wife, 71.5 per cent. Alameda County, husband, plaintiff, 25.8; wife, 74.2 per cent.

Out of the total number of divorces, 1,455, or 66.9 per cent, were granted to couples married in California; 654, or 30.0 per cent to couples married in the United States outside of California; and 68, or 3.1 per cent, to couples married in foreign countries.

In the county of San Francisco, 71.8 per cent were married in California; 25.8 per cent in the United States outside of California, and 2.4 per cent in foreign countries.

In the county of Los Angeles, 48.9 per cent were married in California, and about an equal number, or 48.7 per cent, were married in the United States outside of California, while 2.4 per cent were married in foreign countries. This wide disparity between San Francisco, with a ratio of about three couples married in California to one outside, and Los Angeles, with an equal number of persons married in California as outside, is very evident when the complexion of the population of the two counties is considered.

Alameda County shows, respectively, 74.7 per cent; 19.8 per cent; and 5.5 per cent.

Divorces were granted to couples married less than 5 years in 435 instances; to couples married 5 to 10 years, in 738 instances; to couples married 11 to 20 years, in 716 instances; and to couples married over 20 years, in 288 instances, representing 20.0, 34.0, 32.8, and 13.2 per cent, respectively. Of couples married 10 years and under, the State shows 54.0 per cent; the county of San Francisco 62.0, the county of Los Angeles 50.2, and the county of Alameda 55.0 per cent; the marriages in San Francisco county apparently being of the shortest duration.

Ninety-two divorces, or 4.2 per cent, were granted on the grounds of adultery; 572, or 26.3 per cent, for extreme cruelty; 1,045, or 48.0 per cent, for willful desertion; 345, or 15.8 per cent, for neglect and failure to provide; 111, or 5.1 per cent, for intemperance; and 12, or 0.6 per cent, for conviction of felony.

Of the total number of divorces, 1,140 families were without children. In other words, 52.3 per cent, or over one half. In the county of San Francisco, 54.6 per cent were without children; in the county of Los Angeles, 60.0 per cent; and in Alameda County, 46.2 per cent. In the State there were about 8 children to every 10 divorces; in San Francisco and Alameda counties, about 7 children to every 10 divorces; while in Los Angeles County, there were only 6 children to every 10 divorces.

There were 1,742 minor children affected by the granting of divorces. Of this number, 417, or 23.9 per cent, were less than 5 years old; 637, or 36.6 per cent, were from 5 to 10 years old; while 582, or 33.4 per cent, were over 10 years old. In 106 instances, or 6.1 per cent, the ages could not be obtained.

Final Decrees of Divorce Granted in the State of California for the Fiscal Year ending June 30, 1907, Showing Percentages to Number of Marriages, Plaintiffs, where Married and Length of Time Married. (Tabulated by Counties.)

DIVORCES—FISCAL YEAR 1907-08.

During the fiscal year ending June 30, 1908, there were 22,238 marriages in the State of California. During the same period, there were granted 2,783 final decrees of divorce, the percentage of divorce to marriage being 12.5. In other words, practically one divorce to every eight marriages.

In San Francisco County, there were 4,128 marriages and 113 divorces, the percentage of divorce to marriage being 17.3, or over one divorce to every six marriages. In Los Angeles County, there were 4,551 marriages and 676 divorces, the percentage of divorce to marriage being 14.9, or practically one divorce to every seven marriages. In Alameda County, there were 2,793 marriages and 245 divorces, a percentage of 8.8, or practically one divorce to every 12 marriages. Calaveras County showed the highest percentage of divorces, namely, 45.0, or almost one divorce to every two marriages. In the counties of Alpine, Imperial, Inyo, Mono, Sierra, and Trinity, no divorces were granted. Although the counties of San Francisco, Los Angeles, and Alameda, only contain about half the population of the State, almost 60.0 per cent of the total number of divorces were granted in them.

In the State, the husband was plaintiff in 758 instances, representing 27.2 per cent, while in 2,025 instances, or 72.8 per cent, the wife was plaintiff. In other words, wives were plaintiffs in over two thirds of the instances where divorces were granted. In San Francisco and Alameda counties, practically the same ratio prevails, while in Los Angeles County, wives were plaintiffs in three fourths of the instances.

Of the total number of divorces, 1,809, or 65.0 per cent, were granted to couples married in California; 885, or 31.8 per cent, to couples married in the United States outside of California; and 89, or 3.2 per cent, to couples married in foreign countries. In other words, in one third of the instances where divorces were granted, the parties were married outside of this State. In the county of San Francisco, 66.5 per cent were married in California; 28.5 per cent in the United States outside of California; and 5.0 per cent in foreign countries. In the county of Los Angeles, 47.3 per cent were married in California; 50.0 per cent in the United States outside of California; and 1.7 per cent in foreign countries. In other words, over one half of the divorces granted in Los Angeles County were to parties married outside of California. In Alameda County, 80.4 per cent were married in California; 18.0 per cent in the United States outside of California; and 1.6 per cent in foreign countries.

Divorces were granted to couples married less than 5 years in 466 instances, representing 16.8 per cent. To couples married from 5 to 10

years in 1,087 instances, representing 39.0 per cent. To couples married from 11 to 20 years in 836 instances, representing 30.0 per cent; while in 394 instances, or 14.2 per cent, couples were married over 20 years. Of couples married 10 years and under, the State shows 55.8 per cent: the county of San Francisco, 60.2 per cent; the county of Los Angeles, 54.5 per cent; and the county of Alameda, 55.1 per cent, the marriages in San Francisco being of the shortest duration.

In the State, 132 divorces, or 4.8 per cent, were granted on the grounds of adultery; 572, or 27.9 per cent, for extreme cruelty; 1,269, or 45.6 per cent, for willful desertion; 454, or 21.7 per cent, for neglect and failure to provide; 112, or 4.0 per cent, for intemperance; and 39, or 1.4 per cent, for conviction of felony.

In 1,632 instances, or 58.6 per cent, in which divorces were granted, families were without children. In the county of San Francisco, 64.2 per cent were without children. In the county of Los Angeles, 64.5 per cent, and in Alameda County, 56.0 per cent. In the State, there were about 7 children to every 10 divorces. In San Francisco and Los Angeles counties, about 6 children to every 10 divorces, while in Alameda County there were about 8 children to every 10 divorces.

There were 1,955 minor children affected by the granting of divorces. Of this number, 469, or 24.0 per cent, were less than 5 years old. 743, or 38.0 per cent, were between 5 and 10 years, while 630, or 32.2 per cent, were over 10 years of age. In 113 instances, or 5.8 per cent, no record of the ages of the children could be obtained.

Final Decrees of Divorce Granted in the State of California for the Fiscal Year ending June 30, 1908, Showing Percentages to Number of Marriages, Plaintiffs, where Married and Length of Time Married. (Tabulated by Counties.)

In comparing tables presented on divorce for the past two fiscal years, some very interesting facts are brought out. The number of divorces granted in the State increased from 2,177, during the fiscal year 1906-07, to 2,783, or 27.8 per cent, during the fiscal year 1907-08, while the number of marriages during the same period decreased from 22,734 to 22,238, or 2.2 per cent. The percentage of divorce to marriage increased from 9.6 per cent to 12.5 per cent. In other words, there was about one divorce to every 11 marriages in 1906-07; and one divorce to every 8 marriages in 1907-08. This ratio is very high, when compared with the recent report of the United States Bureau of the Census, which shows one divorce to every 12 marriages throughout the United States. The increase in the number of divorces granted in San Francisco is very noticeable in 1906-07, when 500 divorces were granted, whereas, in 1907-08, there were 713, or an increase of 42.6 per cent. The number of marriages increased during the same period from 3,865 to 4,128, or 6.8 per cent. The percentage of divorce to marriage in San Francisco increased from 12.9 per cent, or practically one divorce to every 8 marriages, to 17.3 per cent, or practically one divorce to every 6 marriages. In Los Angeles County, the number of divorces granted increased from 530 to 766, or 27.5 per cent, while the number of marriages decreased from 4,864 to 4,541, or 6.6 per cent. In Alameda County, the number of divorces granted increased from 182 to 245, or 34.6 per cent, while the number of marriages decreased from 3,166 to 2,793, or 11.8 per cent. It is worth noting that while the State, as a whole, showed a decrease of 2.2 per cent in the number of marriages over the preceding fiscal year, San Francisco showed an increase of 6.8 per cent. Los Angeles and Alameda counties showed decreases of 6.6 per cent, and 11.8 per cent, respectively. In proportion to the population, Los Angeles County stands first in both the number of divorces and number of marriages.

Of the divorces granted during the fiscal year 1906-07, husbands were plaintiffs in 29.5 per cent of the cases, while wives were plaintiffs in 70.5 per cent. The percentage of husband plaintiffs decreased to 27.2 per cent during the fiscal year 1907-08, while the wife plaintiffs correspondingly increased to 72.8 per cent. The number of families having no children increased from 52.3 per cent to 58.6 per cent. These points are more clearly shown in the chart following.

A chart is also presented showing the length of time couples had been married when divorces were granted. The results are shown for the past three fiscal years. Particular attention is called to the decrease in the first column in each of the three fiscal years under consideration. The first column, as indicated, shows those married less than 5 years. The result of this gradual decrease is best appreciated in the last year, namely, 1907-08, where the first column closely approaches in size the last one, or, in other words, of the number of couples divorced, almost as many were married over 20 years as under 5 years. In all three fiscal years it is plainly shown that the bulk of the persons divorced were married from 5 to 20 years. These facts just brought out seem to refute the opinion generally held, that a tendency to obtain divorces after short periods of marriage exists; also, the opinion held by some, that this tendency is growing.

LAWS

LAWS.

LAW CREATING THE BUREAU.

An act to establish and support a Bureau of Labor Statistics.

[Approved March 3, 1883, Stats. 1883, p. 27.]

The people of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. As soon as possible after the passage of this act, and every four years thereafter, the Governor of the State shall appoint a suitable person to act as Commissioner of a Bureau of Labor Statistics. The headquarters of said Bureau shall be located in the City and County of San Francisco: said Commissioner to serve for four (4) years, and until his successor is appointed and qualified. Commis-
sioner.

SEC. 2. The Commissioner of the Bureau, before entering upon the duties of his office, must execute an official bond in the sum of five thousand (5,000) dollars, and take the oath of office, all as prescribed by the Political Code for State officers in general. Official
bond.

SEC. 3. The duties of the Commissioner shall be to collect, assort, systematize, and present, in biennial reports to the Legislature, statistical details, relating to all departments of labor in the State, such as the hours and wages of labor, cost of living, amount of labor required, estimated number of persons depending on daily labor for their support, the probable chances of all being employed, the operation of labor-saving machinery in its relation to hand labor, etc. Said statistics may be classified as follows: Duties.

First—In agriculture.

Second—In mechanical and manufacturing industries.

Third—In mining.

Fourth—In transportation on land and water.

Fifth—In clerical and all other skilled and unskilled labor not above enumerated.

Sixth—The amount of cash capital invested in lands, buildings, machinery, material, and means of production and distribution generally.

Seventh—The number, age, sex, and condition of persons employed; the nature of their employment; the extent to which the apprentice system prevails in the various skilled indus-

Classes of
statistics.

Classes of
Statistics.

tries; the number of hours of labor per day; the average length of time employed per annum, and the net wages received in each of the industries and employments enumerated.

Eighth—The number and condition of the unemployed, their age, sex, and nationality, together with the cause of their idleness.

Ninth—The sanitary condition of lands, workshops, dwellings; the number and size of rooms occupied by the poor, etc.; the cost of rent, fuel, food, clothing, and water in each locality of the State; also the extent to which labor-saving processes are employed to the displacement of hand labor.

Tenth—The number and condition of the Chinese in the State; their social and sanitary habits; number of married and of single; the number employed, and the nature of their employment; the average wages per day at each employment, and the gross amount yearly; the amounts expended by them in rent, food, and clothing, and in what proportion such amounts are expended for foreign and home productions, respectively; to what extent their employment comes in competition with the white industrial classes of the State.

Eleventh—The number, condition, and nature of the employment of the inmates of the State prisons, county jails, and reformatory institutions, and to what extent their employment comes in competition with the labor of mechanics, artisans and laborers outside of these institutions.

Twelfth—All such other information in relation to labor as the Commissioner may deem essential to further the object sought to be obtained by this statute, together with such strictures on the condition of labor and the probable future of the same as he may deem good and salutary to insert in his biennial reports.

Duties of
State
officers.

SEC. 4. It shall be the duty of all officers of State departments, and the assessors of the various counties of the State, to furnish, upon the written request of the Commissioner, all the information in their power necessary to assist in carrying out the objects of this act; and all printing required by the Bureau in the discharge of its duty shall be performed by the State Printing Department, and at least three thousand (3,000) copies of the printed report shall be furnished the Commissioner for free distribution to the public.

Hindering
Com-
missioner.

SEC. 5. Any person who willfully impedes or prevents the Commissioner, or his deputy, in the full and free performance of his or their duty, shall be guilty of a misdemeanor, and upon conviction of the same shall be fined not less than ten (10) nor more than fifty (50) dollars, or imprisoned not less than seven (7) nor more than thirty (30) days in the county jail, or both.

Informa-
tion to be
furnished.

SEC. 6. The office of the Bureau shall be open for business from nine (9) o'clock a. m. until five (5) o'clock p. m. every day except non-judicial days, and the officers thereof shall give to all persons requesting it all needed information which they may possess.

SEC. 7. (As amended, Stats. 1889, p. 6.) The Commissioner shall have power to send for persons and papers whenever in his opinion it is necessary, and he may examine witnesses under oath, being hereby qualified to administer the same in the performance of his duty, and the testimony so taken must be filed and preserved in the office of said Commissioner. He shall have free access to all places and works of labor, and any principal, owner, operator, manager, or lessee of any mine, factory, workshop, warehouse, manufacturing or mercantile establishment, or any agent or employé of such principal, owner, operator, manager, or lessee who shall refuse to said Commissioner, or his duly authorized representative, admission therein, or who shall, when requested by him, willfully neglect or refuse to furnish to him any statistics or information, pertaining to his lawful duties, which may be in the possession or under the control of said principal, owner, operator, lessee, manager or agent thereof, shall be punished by a fine of not less than fifty nor more than two hundred dollars.

Access to
factories.

SEC. 8. (As amended, Stats. 1889, p. 7.) No use shall be made in the reports of the Bureau of the names of individuals, firms, or corporations supplying the information called for by this act, such information being deemed confidential, and not for the purpose of disclosing any person's affairs; and any agent or employé of said Bureau violating this provision shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine not to exceed five hundred dollars or by imprisonment in the county jail not to exceed six months.

Informa-
tion confi-
dential.

SEC. 9. (As amended, Stats. 1889, p. 7; 1907, pp. 306, 307.) Deputy. The Commissioner shall appoint a deputy, who shall have the same powers as the said Commissioner, and such agents or assistants, not exceeding six, as he may from time to time require, at such a rate of wages as he may prescribe, but said rate must not exceed four dollars per day and actual traveling expenses for each person while employed; he shall procure rooms necessary for offices, at a rent not to exceed one hundred dollars per month.

SEC. 10. (As amended, Stats. 1889, p. 7; 1907, pp. 306, 307.) The salary of the Commissioner shall be three thousand dollars per annum, and the salary of the Deputy Commissioner shall be eighteen hundred dollars per annum, to be audited by the Controller and paid by the State Treasurer, in the same manner as other State officers; there shall also be allowed a sum not to exceed nine thousand dollars per annum for the salaries of agents or assistants, for traveling expenses, and for other contingent expenses of the Bureau.

Salaries.

SEC. 12. (As amended, Stats. 1901, p. 12.) Whenever complaint is made to the Commissioner that the scaffolding, or the slings, hangers, blocks, pulleys, stays, braces, ladders, irons, or ropes of any swinging or stationary scaffolding used in the construction, alteration, repairing, painting, cleaning, or paint-

Inspection
of scaf-
folding.

Inspection
of scaf-
folding.

ing of a building are unsafe or liable to prove dangerous to the life or limb of any person, such Commissioner shall immediately cause an inspection to be made of such scaffolding, or the slings, hangers, blocks, pulleys, stays, braces, ladders, iron, or other parts connected therewith. If after examination such scaffolding or any of such parts is found dangerous to life or limb, the Commissioner shall prohibit the use thereof, and require the same to be altered and reconstructed so as to avoid such danger. The Commissioner, Deputy Commissioner, or agent or assistant making the examination shall attach a certificate to the scaffolding, or the slings, hangers, irons, ropes, or other parts thereof, examined by him, stating that he has made such examination and that he found it safe or unsafe as the case may be. If he declared it unsafe, he shall at once, in writing, notify the person responsible for its erection of the fact and warn him against the use thereof. Such notice may be served personally upon the person responsible for its erection or by conspicuously affixing to the scaffolding or the part thereof declared to be unsafe. After such notice has been so served or affixed the person responsible therefor shall immediately remove such scaffolding or part thereof and alter or strengthen it in such a manner as to render it safe, in the discretion of the officer who has examined it or of his superiors. The Commissioner, his deputy, and any duly authorized representative whose duty it is to examine or test any scaffolding or part thereof as required by this section, shall have free access, at all reasonable hours, to any building or premises containing them or where they may be in use. All swinging and stationary scaffolding shall be so constructed as to bear four times the maximum weight required to be dependent therefrom and placed thereon, when in use, and not more than four men shall be allowed on any swinging scaffolding at one time.

This act shall take effect immediately.

CHILD LABOR LAW.

An act regulating the employment and hours of labor of children—prohibiting the employment of minors under certain ages—prohibiting the employment of certain illiterate minors—providing for the enforcement hereof by the Commissioner of the Bureau of Labor Statistics and providing penalties for the violation hereof.

[Approved February 20, 1905.]

The people of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. No minor under the age of eighteen shall be employed in laboring in any manufacturing, mechanical, or mercantile establishment, or other place of labor, more than nine hours in one day, except when it is necessary to make repairs to prevent the interruption of the ordinary running of the machinery, or when a different apportionment of the hours of labor is made for the sole purpose of making a shorter day's work for one day of the week; and in no case shall the hours of labor exceed fifty-four hours in a week.

Employment
minors
under 18
years age.

SEC. 2. (As amended, Stats. 1907, pp. 978, 979.) No minor under the age of sixteen years shall be employed or permitted to work in any mercantile institution, office, laundry, manufacturing establishment, or workshop, between the hours of ten o'clock in the evening and six o'clock in the morning.

Minors
under 16.

Hours em-
ployment.

No child under fourteen years of age shall be employed in any mercantile institution, office, laundry, manufacturing establishment, workshop, place of amusement, restaurant, hotel, apartment house, or in the distribution or transmission of merchandise or messages.

Forbid-
ding em-
ployment
minors
under 14.

Provided, that the judge of the juvenile court of the county, or city and county, or in any county or city and county in which there is no juvenile court, then any judge of the superior court of the county or city and county in which such child resides shall have authority to issue a permit to work to any such child over the age of twelve years, upon a sworn statement being made to him by the parent of such child that such child is past the age of twelve years, that the parents or parent of such child are incapacitated for labor through illness, and after investigation by a probation officer or truant officer of the city, or city and county, in which such child resides, or in cities and counties where there are no probation or truant

Issuance of
permits
to minors.

officers, then by such other competent person as the judge may designate for this purpose. The permit so issued shall specify the kind of labor and the time for which it is issued, and shall in no case be issued for a longer period than shall seem necessary to the judge issuing such permit. Such permit shall be kept on file by the person, firm, or corporation employing the child therein designated, during the term of said employment, and shall be given up to said child upon his quitting such employment. Such certificate shall be always open to the inspection of the truant and probation officers of the city and county, city or county, in which the place of employment is situated, or of the officers of the State Bureau of Labor Statistics;

Inspection
of permits.

Inspection
by at-
tendance
officers.

And provided, that the attendance officer of any county, city and county, or school district in which any place of employment, in this section named, is situated, shall have the right and authority, at all times to enter into any such place of employment for the purpose of investigating violations of the provisions of this act, or violations of the provisions of an act entitled "An act to enforce the educational rights of children and providing penalties for violations of the act," approved March 24, 1903, and amended March 20, 1905; *provided, however*, that if such attendance officer is denied entrance to such place of employment, any magistrate may, upon the filing of an affidavit by such attendance officer setting forth the fact that he has good cause to believe that the provisions of this act, or the act hereinbefore referred to, are being violated in such place of employment, issue an order directing such attendance officer to enter said place of employment for the purpose of making such investigations;

Minors
over 12.

Permits
to work
during
regular
vacations.

And provided, that any such child, over the age of twelve years, may be employed at any of the occupations mentioned in this act during the regular vacation of the public schools of the city, county, or city and county in which the place of employment is situated, upon the production of a permit signed by the principal of the school which such child has attended during the term next preceding any such vacation. Such permit shall contain the name and age of the child to whom it is issued, and the date of the termination of the vacation for which it is issued, and shall be kept on file by the employer during the period of employment, and at the termination of such employment shall be returned to the child to whom it was issued.

Educa-
tional
require-
ments
minors
under 16.

No minor who is under sixteen years of age shall be employed or permitted to work at any gainful occupation during the hours that the public schools of the city, town or school district in which his place of employment is situated are in sessions, unless he or she can read English at sight and can write legibly and correctly simple English sentences, or unless he or she is a regular attendant for the then current term at a regularly conducted night school. A certificate of the principal of such school shall be held to be sufficient evidence of such attendance.

SEC. 3. Every person, firm, or corporation employing minors under eighteen years of age, in any manufacturing establishment, shall post, and keep posted, in a conspicuous place in every room where such help is employed, a written or printed notice stating the number of hours per day for each day of the week required of such persons.

Posting
printed or
written
notices.

Every person, firm, or corporation, agent or officer of a firm or corporation employing or permitting minors under sixteen years and over fourteen years of age to work in any mercantile institution, office, laundry, manufacturing establishment, workshop, restaurant, hotel, apartment house, or in the distribution or transmission of merchandise or messages, shall keep a record of the names, ages, and places of residence of such minors, and shall have on file a certificate of age and schooling, as provided in this act, for every such minor so employed, said record and certificate to be open at all times to the inspection of those whose duty it is to enforce the provisions of the act.

Employers
to keep
record
minors
14 to 16.

Certifi-
cates
required.
Inspection
of records
and cer-
tificates.

An age and schooling certificate shall be approved only by the superintendent of schools of the city or city and county, or by a person authorized by him, in writing, or where there is no city or city and county superintendent of schools, by a person authorized by the local school trustees; *provided*, that the superintendent or principal of any school of recognized standing shall have the right to approve an age and schooling certificate, and shall have the same rights and powers as the superintendent of public schools to issue the certificate herein provided, for children attending such schools. The persons authorized to issue age and schooling certificates shall have the authority to administer the oaths necessary for carrying out the provisions of this Act, but no fees shall be charged for issuing such certificates.

Authority
to issue
certificates
of age and
schooling.

An age and schooling certificate shall not be approved unless satisfactory evidence is furnished by the last school census, the certificate of birth or baptism of such child, the public register of birth of such child, or in some other manner, that such child is of the age stated in the certificate.

Evidence
required.

A duplicate copy of each age and schooling certificate granted under the provisions of this act shall be kept by the person issuing such certificate, such copy to be filed with the county superintendent of schools in the county where the certificate was issued; *provided*, that all such copies of certificates issued between June 25th and December 25th of any year shall be filed not later than December 31st of such year, and those issued between December 25th and June 25th of the ensuing year shall be filed not later than June 30th of each year. Such certificate shall be substantially in the following form, to wit:

Duplicate
copy.

Age and Schooling Certificate.—This certifies that I am the (father, mother, or guardian) of (name of child), and that (he or she) was born at (name of town or city), in the county of (name of county) (if known) and State (or country) of (name), on the (day and year of birth), and is now (number of years and of months) old.

Age and
schooling
certificate.
form of.

Signature as provided in this act.

Town or city, and date.

There personally appeared before me the above-named (name of person signing) and made oath that the foregoing certificate by (him or her) signed is true to the best of (his or her) knowledge and belief.

I hereby approve the foregoing certificate of (name of child) height (feet and inches), complexion (fair or dark), hair (color), having no sufficient reason to doubt that (he or she) is of the age therein certified, and I hereby certify that (he or she) can or can not read English at sight, and can or can not write legibly simple sentences in the English language.

Signature of the person authorized to sign, with his official character and authority.

Town or city, and date.

This certificate belongs to the person in whose behalf it is drawn, and it shall be surrendered to (him or her) whenever (he or she) leaves the service of the person, firm, or corporation holding the same.

The certificate as to the birthplace and age of the minor under sixteen and over fourteen years of age shall be signed by his father, his mother, or his guardian; if a child has no father, mother, or guardian living in the same city or town, his own signature to the certificate may be accepted by the person authorized to approve the same.

Penalty for
false
issuance
of permits.

Every person authorized to sign the certificate prescribed by this act, who knowingly certifies to any false statement therein, is guilty of a misdemeanor and upon conviction thereof shall be fined not less than five nor more than fifty dollars, or imprisonment not more than thirty days, or by both such fine and imprisonment.

Liability of
employer.

Penalty.

SEC. 4. Any person, firm, corporation, agent, or officer of a firm or corporation that violates or omits to comply with any of the foregoing provisions of this act, or that employs, or suffers, or permits any minor to be employed in violation thereof, is guilty of a misdemeanor and shall, on conviction thereof, be punished by a fine of not less than fifty dollars or more than two hundred dollars, or by imprisonment for not more than sixty days, or by both such fine and imprisonment, for each and every offense. A failure to produce any age and schooling certificate or permit, or to post any notice required by this act, shall be prima facie evidence of the illegal employment of any person whose age and schooling certificate or permit is not produced, or whose name is not so posted. Any fine collected under the provisions of this act shall be paid into the school funds of the county, or city and county, in which the offense occurred.

Fines,
disposi-
tion of.

Exemp-
tions.

SEC. 5. (As amended, Stats. 1907, p. 598.) Nothing in this act shall be construed to prohibit the employment of minors at agricultural, horticultural, viticultural, or domestic labor, during the time the public schools are not in session, or during other than school hours. For the purpose of this

act, horticulture shall be understood to include the curing and drying, but not the canning, of all varieties of fruit.

Defining
horti-
culture.

SEC. 6. It shall be the duty of the Commissioner of the Bureau of Labor Statistics to enforce the provisions of this act. But any person may lay an information before a magistrate of the commission of any public offense defined in this act.

Enforce-
ment.

SEC. 7. This act shall take effect sixty days after its passage.

The foregoing statute was declared constitutional in a unanimous opinion of the State Supreme Court in the case of *Ex parte Spencer*, decided July 9, 1906.

DECISIONS OF SUPREME COURT AFFECTING CHILD LABOR LAWS.

The litigation concerning the validity of the Child Labor Law and section 273 of the Penal Code, in which cases the prosecution was carried on by this Bureau, led to two decisions in the Supreme Court, *Ex parte Spencer* on the Child Labor Law and *Ex parte Weber* on section 273, upholding these statutes in every particular. The decisions are considered of sufficient interest to warrant their publication.

In Bank. Crim. No. 1332.

IN THE MATTER OF THE APPLICATION OF J. M. SPENCER } FOR A WRIT OF HABEAS CORPUS. }

Decisions
of supreme
court
affecting
child labor
laws.

The petitioner was arrested and confined upon a charge of violating sections 2 and 4 of the act of February 20, 1905, regulating the employment and hours of labor of children and prohibiting the employment of illiterate minors and of minors under certain ages. (Stats. 1905, p. 11.) The return to the preliminary writ shows that the petitioner was arrested and taken into custody upon four several complaints, relating to four different children, each complaint charging him with employing a child under fourteen years of age in the workshop and boiler-room of a steamer, the child not then having a permit to work from the judge of the juvenile court of the county, and the time of such employment not being the time of the vacation of the public schools.

The second clause of section 2 of the act provides that no child under fourteen years of age shall be employed in any mercantile institution, office, laundry, manufactory, workshop, restaurant, hotel, or apartment house, or in the distribution or transmission of merchandise or messages; provided, that upon the sworn statement of the parent that the child is over twelve years of age and that the parent or parents are unable, from sickness, to labor, the judge of the juvenile court, in his discretion, may issue a permit allowing such child to work for a specific time; and provided further, that during the time of the regular vacation of the public schools of the city or county, any child over twelve years of age may work at any of the prohibited occupations, upon a permit from the principal of the school attended by the child during the immediately preceding term. Section 4 of the act declares that a violation of any of the provisions of the act shall be a misdemeanor. The complaints charge violation of these provisions.

Decisions
of supreme
court
affecting
child labor
laws.

Several objections on constitutional grounds are made to the validity of the act. It is claimed that it is special law for the punishment of crime, where a general law could be made applicable, and therefore, contrary to sections 2 and 33 of article IV of the Constitution of California; that it is not of uniform operation, but is discriminatory; and hence in conflict with sections 11 and 21 of article I; and that it would deprive persons of the right to acquire and possess property, thus violating section 1 of article I of the State Constitution and the Fourteenth Amendment to the Constitution of the United States.

The presumption always is that an act of the Legislature is constitutional, and when this depends on the existence, or non-existence, of some fact, or state of facts, the determination thereof is primarily for the Legislature, and the courts will acquiesce in its decision, unless the error clearly appears. (*Bourland vs. Hildreth*, 26 Cal. 184; *University vs. Bernard*, 57 Cal. 612; *In re Madera Irr. Dist.*, 92 Cal. 310; *Sinking Fund Cases*, 99 U. S. 718; *Tiedman on Police Power*, Vol. I, p. 10, note; *Cooley, Const. Lim.*, 7th ed., 228.)

"Every possible presumption is in favor of the validity of a statute, and this continues until the contrary is shown beyond a rational doubt. One branch of the government can not encroach on the domain of another without danger. The safety of our institutions depends in no small degree on a strict observance of this salutary rule." (*Sinking Fund Cases*, *supra*.)

"The delicate act of declaring an act of the Legislature unconstitutional and void should never be exercised unless there is a clear repugnancy between the statute and the organic law. * * * In a doubtful case the benefit of the doubt is to be given to the Legislature; but it is to be remembered that the doubt to which this rule of construction refers is a reasonable doubt as distinguished from vague conjecture or misgivings." (*Bourland vs. Hildreth*, *supra*.)

From their tender years, immature growth, and lack of experience and knowledge, minors are more subject to injury from excessive exertion and less capable of self-protection than adults. They are therefore peculiarly entitled to legislative protection, and form a class to which legislation may be exclusively directed without falling under the constitutional prohibitions of special legislation and unfair discrimination.

The first objection to the validity of the part of the section above stated is that it is discriminatory and special because it does not prohibit such employment of minors in all occupations, but only in those specifically mentioned; that work at other places, of which saloons, barbershops, railroads, ferries, and warehouses are specified by counsel as instances, would be equally injurious, and that in order to be general and uniform they should be included in the prohibition. The objection is twofold: first, that the legislation constitutes an unfair discrimination against the particular trades mentioned; second,

Decisions
of supreme
court
affecting
child labor
laws.

that it unduly and without reasonable cause restricts the right of minors to work at any and every occupation in which they may wish to engage. There is nothing in the act to indicate a purpose on the part of the Legislature to make use of the laudable object of protecting children as a mere pretense under which to impose burdens upon some occupations or trades and favor others. It appears to have been framed in good faith and for the purpose of promoting the general welfare by protecting minors from injury by overwork and facilitating their attendance at schools. The Legislature may undoubtedly forbid the employment of children under the age of fourteen years at any regular occupation if the interests of the children and the general welfare of society will be thereby secured and promoted. The power to forbid their employment in certain occupations and not in all depends on the question whether or not any appreciable number of children are employed in the callings not forbidden, and whether or not those callings are injurious to them, or less injurious than those forbidden. If certain occupations are especially harmful to young children and others are not so, there can be no serious doubt that it is within the power of the Legislature to forbid their employment in one class and permit it in the other. The difference in the results would justify the classification with a view to the difference in the legislation. Also, if children are employed in certain occupations to their injury and are not employed at all in others, or so infrequently that the number is inappreciable and insignificant, the occupations regularly employing them have no ground to complain of discrimination. They compose the entire class to which the legislation is directed, the class which causes the injury to be prevented. And upon the facts assumed neither the children engaged in the occupation in which they are employed nor the persons would be affected by the prohibition as to other occupations. The preliminary questions as to the effect of the specified occupations on the children and the number of children engaged therein, are questions of fact for the Legislature to ascertain and determine. It has determined that the facts exist to authorize the particular legislation. If any rational doubt exists as to the soundness of the legislative judgment upon the existence of the facts, that doubt must be resolved in favor of the legislative action and the law must accordingly be held to be valid in these respects. The specifications of forbidden callings are broad and comprehensive. Even if these, which as counsel assert, are omitted from the classification, we can not say that a saloon is not a "mercantile institution," it being a place where merchandise is sold; nor that a barbershop is not a "workshop," it being a place where a handicraft is carried on; nor that ferries and railroads are not engaged in the "distribution or transmission of merchandise or messages." At all events, in view of the rule that a statute must be liberally construed to the end that it may be declared constitutional rather than unconstitutional (*People vs. Hayne*, 83 Cal. 117; 26 Am.

& *Eng. Encyc. of Law*, 640), we would not give the description of forbidden occupations this narrow construction in order to make the law invalid. The decision of the Legislature that the specified occupations are more injurious to children than others not mentioned and hence the subject of special regulation, and that they constitute practically all the injurious occupations in which children are employed at all, and therefore the only cases in which regulation is needed, is not so manifestly incorrect, not so beclouded with doubt concerning its accuracy, as to justify the court in declaring it unfounded and the law, consequently, invalid.

Decisions
of supreme
court
affecting
child labor
laws.

There is a proviso to this clause of the section, to the effect that if either parent of such child makes a sworn statement to the judge of the juvenile court of the county, that the child is over twelve years of age, and that the parent or parents are unable, from sickness, to labor, such judge, in his discretion, may issue a permit allowing such child to work for a time to be specified therein. There is no force to the objection that this discriminates against orphans and abandoned children. The exception allowed by the proviso is not made for the direct benefit of the child, but for the sick parent. It is a burden put upon the child because of the special necessity of his case which justifies the different provision respecting him. The Legislature deems the necessity of allowing the child to work to aid in the support of the sick parent, sufficient to outweigh the benefits which would otherwise accrue from the education and protection of the child during such inability. If there are no parents whose necessities the child's labor could alleviate, the reason for this exception is wanting. The provision seems a reasonable one in view of the conditions upon which, alone, it can apply.

There is a further proviso or exception, to the effect that any child over twelve years old may work at the prohibited occupations during the time of the regular vacations of the public schools of the city or county, upon a permit from the principal of the school attended by the child during the term next preceeding such vacation. This does not, as counsel contends, give the principals of the public schools the exclusive power to give the contemplated permits. Its true meaning is that the permit is to be given by the principal of the school which the child has attended, whether the school is public or private, but that it can extend only to the time of the public school vacation. This act was approved February 20, 1905. Its provisions relating to attendance upon schools, and those of section 1 of the act of March 24, 1903 (Stats. 1903, 388), with the amendment of March 20, 1905 (Stats. 1905, 388), to said section 1 must be considered together. The act of 1903, in effect, requires all children to attend, either the public schools, or a private school, during at least five months of the time of the sessions of the public schools. The amendment of March 20, 1905, extends the time of such compulsory attendance so as to embrace the whole period of the public school

court
affecting
child labor
laws.

session. Therefore, if the parents, guardians, or custodians of a child choose to send it to a private school, it must attend thereon at least during the time the public schools are in session. A permit may then be obtained for it to work during the vacation of the public schools, if its interests or necessities so require, without subjecting it to conditions substantially different from those affecting the children attending the public schools. There is no discrimination. The Legislature has the power to make such reasonable regulations as these with respect to the time of the vacations of schools, whether public or private, in the interest of the public welfare and the welfare of the children.

A third clause of section 2 declares that no child under sixteen years of age shall work at any gainful occupation during the hours that the public schools are in session, unless such child can read English at sight and write simple English sentences, or is attending night school. The first clause of section 2 provides that no minor under sixteen shall work in any mercantile institution, office, laundry, manufacturing establishment, or workshop, between ten o'clock in the evening and six o'clock in the morning. Section 5 of the act further provides that nothing in the act is to be construed to prevent the employment of minors at agricultural, viticultural, horticultural or domestic labor, during the time the public schools are not in session, or during other than school hours. The petitioner's contention with respect to the first and last clause of section 2 is that they constitute such important parts of the statute that it can not be presumed that the Legislature would have adopted the other parts thereof if it had been aware of the invalidity of these particular provisions and hence the whole act must fall. We can not accede to this proposition. They are separable and independent provisions and are not so important to the entire scheme as to justify us in concluding that the Legislature would have refused to adopt the other parts without these, and thereby to declare the entire statute invalid.

Nor can it be conceded that these provisions are invalid. The principles already discussed apply with equal force to the first clause of the section. The proviso concerning illiterate children is a reasonable regulation to prevent those having control of such children from working them to such an extent as to hinder them from acquiring, or endeavoring to acquire, at least the beginning of an education before arriving at the age of sixteen years. The exemption of domestic labor and the several kinds of farming from the operation of the act is not an unreasonable discrimination. Such work is generally carried on at the home and as a part of that general home industry which should not be too much discouraged, and it is usually under the immediate care and supervision of the parents or those occupying the place of parents, and hence is not liable to cause so much injury. These circumstances distinguish them from the prohibited industries and is a sufficient reason for the exemption.

We find no reasonable ground for declaring the law invalid. The petition is denied and the petitioner remanded to the custody of the officer.

McFARLAND, J., *concurring*:

I concur in the judgment, and in what is said by Mr. Justice Shaw in his opinion; but I do not concur in some of the quotations which he makes from other cases, and particularly in that quotation in which it is stated that the presumption in favor of the validity of a statute "continues until the contrary is shown beyond a rational doubt." That is, in my opinion, too strong a statement of a rule.

McFARLAND, J.

In Bank. Crim. No. 1331.

IN THE MATTER OF THE
APPLICATION OF HENRY WEBER }
FOR A WRIT OF HABEAS CORPUS.

The petitioner was arrested and confined for an alleged violation of section 273 of the Penal Code. The return shows that he is in custody upon separate complaints relating to different children. Each complaint charges that the defendant did willfully and unlawfully take, receive, hire, employ and use a certain male child, naming him, under the age of sixteen years, in the business of scaling the boilers of a steamer, the said business being then and there dangerous to the life and limb of said child. The petition for a writ of habeas corpus is based upon the proposition that the law under which the complaint was made is unconstitutional and void. Section 273 refers to the preceding section 272, and it is necessary to state the substance, at least, of both sections.

Section 272, so far as material, is as follows: "Any person * * * having the care, custody, or control of any child under the age of sixteen years, who exhibits, uses, or employs, or in any manner, or under any pretense, sells, apprentices, gives away, lets out, or disposes of any such child to any person, * * * for or in any business, exhibition, or vocation, injurious to the health, or dangerous to the life or limb of such child, or in or for the vocation, occupation, service, or purpose of singing, playing on musical instruments, rope or wire walking, dancing, begging, or peddling, or as a gymnast, acrobat, contortionist, or rider, in any place whatsoever, or for or in any obscene, indecent or immoral purposes, exhibition or practice whatsoever, or for or in any mendicant or wandering business whatsoever, or who causes, procures, or encourages such child to engage therein, is guilty of a misdemeanor. * * * Nothing in this section contained applies to or

Decisions

child labor
laws.

affects the employment or use of any such child, as a singer or musician in any church, school, or academy, or the teaching or learning of the science or practice of music; or the employment of any child as a musician at any concert or other musical entertainment, on the written consent of the mayor of the city or president of the board of trustees of the city or town where such concert or entertainment takes place." (Stats. 1905, p. 759.)

Section 273 is as follows: "Every person who takes, receives, hires, employs, uses, exhibits, or has in custody, any child under the age, and for any of the purposes mentioned in the preceding section, is guilty of a like offense and punishable by a like punishment as therein provided. (Stats. 1905, p. 759.)

The contention of the petitioner is that these provisions contain an arbitrary and unreasonable classification, and, consequently, not of uniform operation, and that it constitutes a special law for the punishment of crimes, where a general law could be made applicable. It is said that only a certain portion of the minor children of the State are affected by the act, namely, those who are under sixteen years of age, and that this is an arbitrary discrimination between those who are over that age and those who are under that age; that any child over the age may enjoy his natural privilege of working for his own support as he pleases, while those under that age are prohibited therefrom. There is no sound reason for any such criticism. The same reasoning might be applied to a large number of laws which are universally conceded to be valid and constitutional. The law providing that a male person under twenty-one years of age is a minor, subject to the legal disabilities of minority, might be rendered unconstitutional by the same process of reasoning. It is competent for the Legislature to provide regulations for the protection of children of immature years. The growth of a child is gradual and the age of maturity varies with different children. It is impossible for any person to fix the exact time when a child is capable of protecting itself. The legislative judgment in regard to the age at which such regulations shall become applicable to the child can not be interfered with by the courts.

It is also stated that the law makes an unfair discrimination by allowing the employment of children as singers or musicians in churches, schools, or academies. The ground of this objection is that such employment, so far as the court can see, may be as injurious to the health or morals or as dangerous to the life or limb of the child as those which are prohibited in the law, and that no prohibition is lawful under the constitution unless it extends to all employments which are equally injurious. In matters of this kind the legislature has large discretion. It must determine the degree of injury to health and morals which the different kinds of employment inflict upon the child, and the corresponding necessity for protecting the child from the effects thereof, and unless its decision in

that regard is manifestly unreasonable, there is no ground for judicial interference. We do not think the law in question so unreasonable as to require us to hold it unconstitutional.

SANITATION AND VENTILATION OF FACTORIES AND WORKSHOPS.

An act to provide for the proper sanitary condition of factories and workshops, and the preservation of the health of the employés.

[Approved February 6, 1889.]

The people of the State of California, represented in Senate and Assembly, do enact as follows:

Sanita-
tion.

SECTION 1. Every factory, workshop, mercantile or other establishment, in which five or more persons are employed, shall be kept in a cleanly state and free from the effluvia arising from any drain, privy, or other nuisance, and shall be provided, within reasonable access, with a sufficient number of water-closets or privies for the use of the persons employed therein. Whenever the persons employed as aforesaid are of different sexes, a sufficient number of separate and distinct water-closets or privies shall be provided for the use of each sex, which shall be plainly so designated, and no person shall be allowed to use any water-closet or privy assigned to persons of the other sex.

Ventila-
tion.

SEC. 2. Every factory or workshop in which five or more persons are employed shall be so ventilated while work is carried on therein that the air shall not become so exhausted as to be injurious to the health of the persons employed therein, and shall also be so ventilated as to render harmless, as far as practicable, all the gases, vapors, dust, or other impurities generated in the course of the manufacturing process or handicraft carried on therein, that may be injurious to health.

Use of
cellars.

SEC. 3. No basement, cellar, underground apartment, or other place which the Commissioner of the Bureau of Labor Statistics shall condemn as unhealthy and unsuitable, shall be used as a workshop, factory, or place of business in which any person or persons shall be employed.

Exhaust
fans.

SEC. 4. (As amended, Stats. 1901, p. 571.) In any factory, workshop, or other establishment where a work or process is carried on by which dust, filaments, or injurious gases are generated or produced, that are liable to be inhaled by persons employed therein, the person, firm, or corporation by whose authority the said work or process is carried on shall cause to be provided and used in said factory, workshop, or establishment an exhaust fan or blower, with pipes and hoods extending therefrom to each wheel or other apparatus used to grind, polish, or buff metals. The said fan or blower, and the said

pipes and hoods, all to be properly fitted and adjusted, and of power and dimensions sufficient to effectually prevent the dust and filaments produced by the above said metal-polishing, metal-grinding, or metal-buffing from escaping into the atmosphere of the room or rooms of said factory, workshop, or establishment where persons are employed.

SEC. 5. (As amended, Stats. 1903, p. 14.) Every person, firm, or corporation employing females in any manufacturing, mechanical, or mercantile establishment shall provide suitable seats for the use of the females so employed, and shall provide such seats to the number of at least one third the number of females so employed; and shall permit the use of such seats by them when they are not necessarily engaged in the active duties for which they are employed. Seats for female employes.

SEC. 6. (As amended, Stats. 1901, p. 572.) Any person or corporation violating any of the provisions of this act is guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not less than fifty dollars nor more than three hundred dollars, or by imprisonment in the county jail for not less than thirty days nor more than ninety days, or by both such fine and imprisonment, for each offense. Penalty.

SEC. 7. It shall be the duty of the Commissioner of the Bureau of Labor Statistics to enforce the provisions of this act. Enforcement.

SEC. 8. This act shall take effect and be in force from and after its passage.

EMPLOYMENT AGENCIES.

An act defining the duties and liabilities of employment agents, making the violation thereof a misdemeanor, and fixing the penalties therefor.

[Approved February 12, 1903.]

The people of the State of California, represented in Senate and Assembly, do enact as follows:

Definition. . SECTION 1. Any person, firm, corporation, or association pursuing for profit the business of furnishing, directly or indirectly, to persons seeking employment, information enabling, or tending to enable such persons to secure such employment, or registering for any fee, charge, or commission the names of any persons seeking employment as aforesaid, shall be deemed to be an employment agent within the meaning of this act.

Advance charges.

SEC. 2. It shall be unlawful for an employment agent in the State of California to receive, directly or indirectly, any money or other valuable consideration from any person seeking employment, for any information or assistance furnished or to be furnished by said agent to such person, enabling or tending to enable said person to secure such employment, prior to the time at which said information or assistance is actually thus furnished.

Fees to be returned.

SEC. 3. (As amended, Stats. 1905, p. 143.) It shall be unlawful for any employment agent in the State of California, to induce, influence, persuade, or engage any person to change from one place to another in this State, or to change from any place in any State, territory, or country, to any place in this State to work in any branch of labor, through or by means of any representations whatsoever, whether spoken, written, or advertised in printed form, unless such employment agent shall have assured himself beyond a reasonable doubt that such representations are true and cover all the material facts affecting the employment in question. Whenever any such representation, whereby any person is induced, influenced, persuaded, or engaged to change from one place to another in this State, or from any place in any State, territory, or country, to any place in this State to work in any branch of labor, shall prove to be in any material degree at variance with, or short of the truth, the employment agent responsible for such representations shall immediately return to any person who shall have been influenced by such representations, any and all fees paid

by such person to said employment agent on the strength of such representations, together with an amount of money sufficient to cover all necessary expenses incurred by such person influenced by such representations in going to and returning from any place he shall have been influenced by such representations to visit in the hope of such employment.

SEC. 4. (Repealed, Stats. 1905, p. 143.)

SEC. 5. The tax collector, or license collector of each respective city, county, or city and county of the State of California shall furnish quarterly, to the Commissioner of the Bureau of Labor Statistics of the State of California the name and address of each employment agent doing business in said city, county, or city and county; *provided*, that where the license is not a county license, but is collected by a municipal government, then the municipal collector of said tax shall furnish the names and addresses.

SEC. 6. Each employment agent in the State of California shall keep a written record, which shall show the name of each person making application to said agent for registration, information or assistance, such as is described in section two hereof; the name of each such person to whom such registration or information is furnished; and the amount received in each such case therefor; the name of each person who, having received and paid for, as herein contemplated, registration, information or assistance such as is described in section two hereof, fails to secure the employment regarding which such registration, information or assistance is furnished, together with the reason why said employment was not by said person secured, and the name of each person to whom return is made, in accordance with the provisions of section three hereof, of any money or other consideration such as is in said section named, together with the amount of said money, or the value of said consideration, thus returned.

SEC. 7. Each employment agent in the State of California shall permit the Commissioner of the Bureau of Labor Statistics of said State, by himself, or by his deputies or agents, to have at all times access to, and to inspect, the record in section six hereof named, and upon demand in writing therefor by said Commissioner, shall furnish to such Commissioner a true copy of said record, or of such portion thereof as said demand in writing shall require a copy of to be thus furnished.

SEC. 8. Any employment agent or other person violating, or omitting to comply with, any of the provisions of this act, shall be deemed guilty of a misdemeanor, and upon conviction shall be punished by a fine not exceeding five hundred (500) dollars, or by imprisonment not exceeding six (6) months, or by both such fine and imprisonment in the discretion of the court.

REGULATION OF HOURS AND LABOR OF DRUGGISTS' EMPLOYEES.

An act to amend an act entitled "An act to regulate the work and hours of employes engaged in selling at retail drugs and medicines, and compounding physicians' prescriptions and providing a penalty for the violation thereof," approved February 28, 1905.

[Approved March 15, 1907.]

The people of the State of California, represented in Senate and Assembly, do enact as follows:

Druggist
employes.

SECTION 1. An act entitled "An act to regulate the work and hours of employes engaged in selling retail drugs and medicines, and compounding physicians' prescriptions and providing a penalty for the violation thereof," approved February 28, 1905, is hereby amended by adding thereto a new section to be known and numbered section five.

Hours of
labor.

SEC. 2. As a measure for the protection of public health, no person employed by any person, firm or corporation, shall for more than an average of ten hours a day or sixty hours a week of six consecutive calendar days perform the work of selling drugs or other medicines, or compounding physicians' prescriptions, in any store, establishment or place of business, where and in which drugs or medicines are sold at retail, and where and in which physicians' prescriptions are compounded; *provided*, that the answering of and attending to emergency calls shall not be construed as a violation of this act.

Employers'
liability.

SEC. 3. No person, firm or corporation employing another person to do work which consists wholly or in part of selling, at retail, drugs or medicines, or of compounding physicians' prescriptions, in any store, or establishment or place of business where or in which medicines are sold and where and in which physicians' prescriptions are compounded shall require or permit said employed person to perform such work for more than an average of ten hours a day, or sixty hours a week of six consecutive calendar days.

Penalty.

SEC. 4. Any person, firm or corporation violating any of the provisions of this act shall be deemed guilty of misdemeanor and shall be punished therefor by a fine not less than twenty dollars nor more than fifty dollars, or by imprisonment for not exceeding sixty days, or by both such fine and imprisonment, at the discretion of the court.

SEC. 5. The commissioners of the State Bureau of Labor Statistics are hereby authorized, directed and empowered to enforce the provisions of this act. Enforcement.

SEC. 6. All acts or parts of acts inconsistent with the provisions of this act are hereby repealed.

GATHERING OF SOCIAL STATISTICS.

An act directing the Commissioner of the Bureau of Labor Statistics to collect certain statistics and present them in biennial reports, and making it the duty of certain officers to furnish such statistics in compliance with the provisions of this act.

[Approved March 18, 1905.]

The people of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. The Commissioner of the Bureau of Labor Statistics is hereby directed, in addition to his other duties, to collect and present in his biennial report to the Legislature, statistics relating to marriage, divorce and crime. Commissioner of labor.

SEC. 2. It is hereby declared to be the duty of all officers of each respective county, city, or city and county, in addition to their other duties, whose duty it is to keep a record of marriage, divorce or crime, and they must furnish to the Commissioner of the Bureau of Labor Statistics, upon his request, whatever data it may be necessary for said Commissioner to acquire in complying with the provisions of section one of this act. Duty of county officers mandatory.

SEC. 3. This act shall take effect and be in force immediately upon its passage and approval. Enforcement, date of.

COMPULSORY EDUCATIONAL LAW.

An act to enforce the educational rights of children and providing penalties for violation of the act.

[Approved March 24, 1903.]

The people of the State of California, represented in Senate and Assembly, do enact as follows:

Each child must attend school.

Compul-
sory
attendance
at school.

Excep-
tions.

Sickness.

Certificate
of
physician
taken as
evidence.

Permit to
work.

No school
within
two miles.

Child ex-
cused from
attending
school.

SECTION 1. (As amended, Stats. 1905, pp. 388, 389.) Unless excused, as hereinafter provided, each parent, guardian, or other person, in the State of California, having control or charge of any child between the ages of eight and fourteen years, shall be required to send such child to a public school, during the time in which a public school shall be in session, in the city or city and county or school district in which said child resides; *provided*, that should it be shown to the satisfaction of the board of education of the city or city and county, or of the board of trustees of the school district, in which such child resides, that the child's bodily or mental condition is such as to prevent or render inadvisable attendance at school, or application to study, a certificate from any reputable physician that the child is not able to attend school, or that its attendance is inadvisable, must be taken as satisfactory evidence by any such board, or that such child is being taught in a private school, or by a private tutor, or at home by any person capable of teaching, in such branches as are usually taught in the primary and grammar schools of this State; or that any such child between the age of twelve and fourteen years has been given a permit to work by the proper judicial officer in accordance with section two of "An act regulating the employment and hours of labor of children, prohibiting the employment of minors under certain ages, prohibiting the employment of certain illiterate minors, providing for the enforcement hereof by the Commissioner of the Bureau of Labor Statistics and providing penalties for the violation hereof," approved February 20, 1905; or that no public school is located within two miles, by the nearest traveled road, of the residence of the child; or that the child has completed the prescribed grammar school course; then it shall be the duty of such board of education or board of trustees, upon application of the parent, or guardian, or other person having the control or charge of such child, to excuse such child from attendance at school, during the continuance of such defect or condition upon which such excuse is granted; and *provided further*, that circumstances rendering

attendance impracticable or dangerous to health, owing to unusual storm or other sufficient cause, shall work an exemption from the penalties of this act. If any parent or guardian or other person having control or charge of any such child presents proof to such board of education or board of trustees, by affidavit, that he is unable to compel such child to attend school, said parent, guardian, or other person shall be exempt from the penalties of this act, as regards the subsequent non-attendance at school of such child, and said child may, in the discretion of such board, be deemed a truant and subject to assignment to the parental school.

Truants.

Penalty for failure to send child to school.

SEC. 2. Any parent, guardian, or other person having control or charge of any such child, who shall fail to comply with the provisions of this act, shall, unless excused or exempted therefrom as hereinbefore provided, be deemed guilty of a misdemeanor, and upon conviction, shall be liable, for the first offense, to a fine of not more than ten dollars or to imprisonment for not more than five days, and for each subsequent offense he shall be liable to a fine of not less than ten nor more than fifty dollars, or to imprisonment for not less than five days nor more than twenty-five days, or to both such fine and imprisonment.

Penalty for failure to comply with act.

Investigation provided for.

SEC. 3. (As amended, Stats. of 1907, pp. 95, 96.) The board of education of any city or city and county, or the board of trustees of any school district, shall, on the complaint of any person, make full and impartial investigation of all charges against parents or guardians or other persons having control or charge of any such child, for violation of any of the provisions of this act. If it shall appear upon such investigation that any such parent or guardian or other person has violated any of the provisions of this act, it is hereby made the duty of the secretary of such board of education, except as hereinafter provided, or the clerk of such board of trustees, to make and file in the proper court a criminal complaint against such parent, guardian or other person, charging such violation, and to see that such charge is prosecuted by the proper authorities; *provided*, that in cities, and in cities and counties, and in school districts having an attendance officer or officers, such officer or officers shall, under the direction of the board of education, or the city superintendent of schools, or the board of trustees, make and file such complaint, and see that such charge is prosecuted by the proper authorities.

Investigation of charges against parents.

Criminal complaint.

Attendance officer.

SEC. 4. (As amended, Stats. 1907, p. 96.) The board of education of any city, or city and county, may appoint and remove at pleasure one or more attendance officers of such

Attendance officers.

city, or city and county, or the board of trustees of any school district having at least six hundred census children, may appoint and remove at pleasure one attendance officer, and shall fix his or their compensation, not exceeding one thousand dollars per annum for any such officer, payable from the county or special school fund of such city, city and county, or school district, and shall prescribe their duties, not inconsistent with law, and make rules and regulations for the performance thereof; *provided*, that in any city, or city and county, containing less than twenty thousand school census children, not more than one attendance officer shall be appointed, and in any city, or city and county, containing more than twenty thousand school census children, not more than one attendance officer shall be appointed for each twenty thousand school census children, or fraction greater than one half thereof.

Commitment of truant children to parental schools.

Duty of
attendance
officers.

SEC. 5. (As amended, Stats. 1907, pp. 96, 97.) It shall be the duty of the attendance officer, or of any peace officer or any school officer, to arrest during school hours, without warrant, any child between eight and fourteen years of age, found away from his home, and who has been reported to him by the teacher, the superintendent of schools, or other person connected with the school department or schools as a truant from instruction upon which he is lawfully required to attend within the county, city, or city and county, or school district. Such arresting officer shall forthwith deliver the child so arrested either to the parent, guardian or other person having control or charge of such child, or to the teacher from whom said child is then a truant, or if such child shall have been declared an habitual truant, he shall bring such child before a magistrate for commitment by him to a parental school as provided in this act. The attendance officer or other arresting officer shall report promptly such arrest, and the disposition made by him of such child to the school authorities of such city, or city and county, or school district. Any child may be reported as a truant, in the meaning of this act, who shall have been absent from school without valid excuse more than three days or tardy on more than three days, any absence for a part of a day being regarded as a tardiness. Any child who has once been reported as a truant and who is again absent from school, without valid excuse, one or more days, or tardy on one or more days, may again be reported as a truant. Any child may be deemed an habitual truant who shall have been reported as a truant three or more times. Any child who has once been declared an habitual truant and who, in a succeeding year, is reported as a truant from school one or more days or tardy on one or more days without valid excuse, may be again declared an habitual truant.

What
constitutes
a truant.

Habitual
truant.

Establishment of parental schools.

SEC. 6. (As amended, Stats. 1907, pp. 97, 98.) The board of education of any city, or of any city and county, or the board of trustees of any school district having at least six hundred census children, may establish schools in a manner hereinafter prescribed, or set apart in public school buildings for children between eight and fourteen years of age, who are habitual truants from instruction upon which they are lawfully required to attend, or who are insubordinate or disorderly during their attendance upon such instruction, or irregular in such attendance. Such school or room shall be known as a parental school. A parental school, as herein designated and provided for, shall be one of the primary or grammar schools of the city, or city and county, or school district, and the teachers therein shall have the same qualifications and be employed and paid in the same manner as in other primary and grammar schools; but such parental school shall be established and maintained specially for the instruction therein of such pupils, between the ages of eight and fourteen years, as shall be committed thereto as provided in this act, and no pupil shall be committed to, or required to attend, such school, except as in this act provided. Said board of education or board of trustees may make such special rules and regulations for the government of a parental school as shall be consistent with the provisions and purposes of this act, and not contrary to law. Such board may provide for the detention, maintenance and instruction of such children in such schools; and the county superintendent of schools, or such board, or the city superintendent of schools in any city, or city and county, or board of trustees, may, after reasonable notice to any such child, and an opportunity for the child to be heard, and with the consent of the parent, guardian or other person having control or charge of such child, order such child to attend such school, or to be detained and maintained therein for such period and under such rules and regulations as such board may prescribe, not exceeding the remainder of the school year. If such parent, guardian, or person having control or charge of such child shall not consent to such order, such child may be proceeded against under this act. If any child in any city, or city and county or school district in which a parental school shall be established, shall be an habitual truant, or be irregular in attendance at school, within the meaning of these terms, as defined in this act, or shall be insubordinate or disorderly during attendance at school, it shall be the duty of the attendance officer, or of the secretary of the board of education or clerk of the board of trustees if there be no attendance officer, to make and file a complaint against such child, in the proper court, charging the fact, and to see that such charge is prosecuted by the proper authority; and if the court, upon the hearing of such complaint, shall find that such charge is sustained, the court shall render judgment that such child be committed to, and be detained and maintained in, a parental

school in such city, or city and county or school district for a term not to exceed the remainder of the current school year; *provided*, that if any child in any district of a county where there is not a parental school shall be an habitual truant, or be irregular in attendance at school, within the meaning of those terms as defined in this act, or shall be insubordinate or disorderly during attendance at school, it shall be the duty of the county superintendent of schools to make and file a complaint against such child, in the superior court of such county, charging the facts; and if the court, upon the hearing of said complaint, shall find that such charge is sustained by the evidence, the court shall render judgment that such child shall be detained and maintained in a parental school, if there be one in such county, during the remainder of the school term, and if there be no parental school in such county, the court shall render judgment that the parent, guardian or person having the control or charge of such child shall deliver such child at the beginning of each school day for the remainder of the school term, at the school from which such child is then a truant; *provided*, that if the parent, guardian, or other person having control or charge of such child shall, within three days after the rendition of such judgment, execute a good and sufficient bond to the board of education of the city, or city and county, or board of trustees of the district, with sufficient sureties, in the sum of two hundred dollars, conditioned that such child will, during the remainder of such current school year, regularly attend some public or private school in such city, or city and county, or school district and not be insubordinate or disorderly during such attendance, such bond to be approved by the judge of said court, and be filed with the secretary of the board of education or clerk of the board of trustees, then such court shall make an order suspending the execution of such judgment so long as the condition of such bond shall be complied with. If the condition of such bond be violated, such court, upon receiving satisfactory evidence of the fact in any action brought therefor shall make an order declaring such bond forfeited and directing such judgment to be thenceforth enforced. Such board of education or board of trustees may, at any time within one year after any such bond shall be declared forfeited, have execution issued against any or all of the parties to such bond, to collect the amount thereof; and all moneys paid or collected on such bond shall be paid over to the parental school fund of such city, or city and county, or school district. No fees shall be charged or received by any court or officer in any proceeding under this section. The confinement of any child in a parental school shall be conducted with a view to the improvement of the child and to its restoration, as soon as practicable, to the school which he would, if not so confined, be required to attend. The city superintendent of schools, or, if there be no city superintendent, the board of education of any city, or city and county, or county superintendent of schools, shall have authority, in their discretion, to

parole at any time any child committed to, or ordered to attend, a parental school, except when such commitment shall be by judgment or order of a court; and when such commitment of any child shall be by judgment or order of a court, such court may, on the recommendation of the city superintendent of schools, or the board of education or county superintendent of schools, make an order paroling such child, upon such terms and conditions as shall be specified in the order. The expense incurred by any city, or city and county, or school district in purchasing or renting a school site, erecting or renting a building and equipping the same, for the maintenance of a parental school, shall be paid out of funds other than those collected for the maintenance of schools. The salaries of teachers and the expense for all school supplies in a parental school shall be paid out of the same funds from which similar salaries and expense are paid for primary and grammar schools, but all other expense incurred in the maintenance of such parental schools shall be paid out of the parental school fund.

Expense of
main-
taining
parental
school.

Method of procedure for establishing parental schools.

SEC. 7. Whenever any board of education shall determine that it is necessary or expedient for the city or city and county to establish and maintain a parental school, said board shall furnish to the city council, or other governing body of such city or city and county, all necessary and required information and statistics, and if, after consideration, such city council or other governing body grants its consent for the establishment of such parental school, then the board of education shall furnish to the authorities whose duty it is to levy taxes in such city, or city and county, thirty days before the time specified by law for fixing the annual tax rate, an estimate of the cost of purchasing or renting a suitable site, and also an estimate of the cost of renting or erecting a suitable building and equipping the same for occupancy as a parental school, and the cost to the city or city and county, other than for salaries of teachers and for school supplies, of conducting the school for the remainder of the current school year. When, pursuant to such consent by such governing body, such estimates shall have been so made and furnished by the board of education of any city, or city and county, it is hereby made the duty of the authorities whose duty it shall be to levy taxes in such city, or city and county, at the time of levying the taxes, to levy a special tax upon all taxable property of said city, or city and county, sufficient in its judgment to provide the facilities requested by the board of education, and for which such estimates shall have been so furnished. It shall be the duty of the board of education, yearly, thereafter, to present to the authorities of the city, or city and county, whose duty it is to levy taxes, on or before the first Monday in July, an estimate of the moneys required for conducting the parental school for the school year, other than for the salaries of teachers and for school supplies. When such estimate shall have been so presented, it shall be the

Parental
school
fund.

duty of the said authorities to levy a special tax upon the taxable property of said city, or city and county, sufficient to maintain such school for the year, exclusive of salaries of teachers and expense of school supplies. All taxes in this act provided for shall be computed, entered upon the tax roll and collected, in the same manner as other taxes are computed, entered and collected, and when collected shall be placed in a separate fund, to be known as the "parental school fund," and shall be paid out on the order of the board of education for the purposes set forth in this act; *provided*, that all moneys so collected for the purchase of sites or buildings, or the erection or equipment of buildings for parental school purposes, shall be placed in a separate fund, to be known as the "parental school building fund," and shall be used solely for the purpose or purposes for which collected, except that after such purpose or purposes shall have been fully accomplished, the residue of such fund, if any, may be transferred to said parental school fund.

Any district may establish parental school.

SEC. 71½. (A new section added, Stats. 1907, p. 99.) The board of trustees of any school district wherein a parental school may be established under the provisions of this act, and whenever such board deems it proper, may, for the purpose of raising money for the establishment and maintenance of a parental school for said district, proceed under the provisions of Article XIX, Chapter III, Title III, of Part III, of the Political Code of this State, to raise moneys for such purpose, and the moneys so raised shall be paid into the county treasury, and shall constitute a "parental school fund," for such district. The moneys of such fund shall be used for no other purpose than herein indicated. Money shall be drawn from said fund by the trustees of the district in the same manner as money is drawn from other school funds.

Joint parental schools.

Formation
of joint
parental
schools.

SEC. 8. Two or more school districts or cities may unite in the following manner, to form a joint district for the maintenance of a joint parental school: When any board of education or board of school trustees has secured, in the manner as set forth in section seven of this act, the consent of the legislative body of the city or school district, in which said board of education or board of school trustees holds office, for the union of two or more districts to form a joint parental school district, said board of education or board of trustees shall transmit such information to the board of supervisors of the county of which said city or school district or districts forms a part, setting forth at the same time the cities or districts with which said city or district seeks to unite for the maintenance of a joint parental school. When such information has been received by the board of supervisors from all the cities or school districts seeking to be united, it is hereby made the duty

Duty of
board
of super-
visors.

of the board of supervisors, by resolution, to declare such cities or school districts united for the maintenance of a joint parental school, to be known as the joint parental school district of (give the names of the school districts uniting). When the districts have been so united, the boards of education or boards of trustees of the cities or school districts so uniting shall appoint a board of trustees for the joint parental school district, to consist of five members (unless the number of cities or school districts uniting exceeds five), who shall be appointed from the membership of the boards of the several districts or cities uniting, by the respective boards in approximate proportion to the census children between five and seventeen years of age in the districts uniting; *provided, however*, that each district shall be represented by at least one member on the board of trustees of the joint parental school district. The members so appointed, to serve for the remainder of the term of office for which they were elected on their respective boards of education or boards of trustees, and when vacancies occur on said board of trustees of joint parental school districts, they shall be filled by the board making the original appointment. The superintendent of schools of each of the cities or school districts uniting, shall be ex officio members of the board of trustees of the joint parental school district, without the right to vote. In the management of a parental school within a school district, city, or city and county, the right to transport pupils to and from school at public expense, when, in the judgment of the board of education, or board of school trustees, the interest of the pupil demands it, is hereby conferred upon such boards. All the powers and duties by any section of this act conferred or imposed upon the boards of school trustees or boards of education of any city, or city and county, in the management of, and the securing of funds for, a parental school within a city or school district, are hereby conferred upon and imposed upon the board of trustees of any joint parental school district in the management of and the securing of funds for the support of a joint parental school; *provided, however*, that in estimating the expense of maintenance of a joint parental school the amount of money needed for the payment of teachers' salaries and for the furnishing of school supplies shall be included in the estimate of expenses; *and provided further*, that the estimates shall be transmitted to the board of supervisors of the county of which the joint parental school district forms a part. When such estimates shall have been so transmitted, it is hereby made the duty of the board of supervisors to levy a special tax upon the taxable property within the boundaries of the joint parental school district, sufficient to provide the facilities requested by the board of trustees of the joint parental school district, and for which such estimates shall have been furnished, and yearly thereafter when the estimates of the total expense of the maintenance of the joint parental school and increased facilities shall have been furnished the board of supervisors, it shall be

the duty of said board to levy a special tax sufficient to maintain the school for the year. All taxes in this act provided shall be computed and entered upon the tax roll and collected in the manner prescribed for the collection of taxes in section seven of this act; *provided*, that all moneys so collected shall be collected by the county tax collector and apportioned to the credit of the joint parental school district, and placed in the fund for which they were specially collected. If for sites or buildings, to be placed in a fund known as the joint parental school building fund, to be used exclusively for the purposes for which they were collected, the same as set forth in section seven of this act. The board of trustees of joint parental school districts shall organize, by the election of one of their number as chairman, and by the election of a secretary, who shall be the city superintendent of schools, or the secretary of a board of education or the clerk of one of the boards of education or boards of trustees of the cities, or school districts united, and such secretary shall serve without additional salary. All moneys in a joint parental school fund shall be paid out on the order of the board of trustees of the joint parental school district for the purposes herein set forth, and in the same manner that funds are paid from the ordinary school funds of a school district.

Fines paid to parental school fund.

Disposition
of fines.

SEC. 9. All fines paid as penalties for the violation of any of the provisions of this act shall, when collected or received, be paid over by the justice or officer receiving the same to the treasurer of the city, or city and county, in which the offense was committed, to be placed to the credit of the parental school fund of such city, or city and county, if there be such a fund, otherwise to the credit of the general school fund of such city, or city and county, or to the county treasurer, to be placed to the credit of the school fund of the school district in which the offense was committed.

Parents of deaf or blind children must send them to school.

Compulsory
attendance
of deaf or
blind
children.

SEC. 10. Any parent or guardian of any deaf, dumb, or blind child, legally entitled to admission to said institution, shall send such child to said institution until such child shall have been therein for five years, or shall have reached the age of majority, unless such child shall be excused from such attendance by the board of education or board of trustees of the city, city and county, or school district in which such child resides, for the reason that the child's bodily or mental condition is such as to prevent or render inadvisable attendance at said institution, or for the reason that such child is receiving proper instruction at home or in some public or private school. Any parent or guardian failing to comply with the requirements of this section shall be guilty of a misdemeanor, and be punishable as provided in section two of this act.

Officers having jurisdiction.

SEC. 11. Any justice of the peace, or recorder of the city or city and county, or any justice of the peace of the township in which the school district is located, or in which the offense is committed, shall have jurisdiction of all offenses committed under the provisions of this act. Justice courts, jurisdiction of.

SEC. 12. This act shall take effect and be in force from and after July first, nineteen hundred and three. In effect.

SEC. 13. An act entitled an act to enforce the educational rights of children, approved March twenty-eighth, eighteen hundred and seventy-four, and all acts and parts of acts in conflict with any of the provisions of this act, are hereby repealed. Repeal of act of 1874.

JUVENILE COURT LAW.

An act defining and providing for the control, protection, and treatment of dependent and delinquent children; defining such children; prescribing the powers and duties of courts in respect thereto; providing for the creation and appointment of probation officers, and prescribing their duties, powers, terms of office and compensation; providing for the commitment and confinement of such children; providing for the creation and appointment of boards, to be known as probation committees; to investigate the qualifications of organizations receiving children under this act; and prescribing the powers and duties of such boards, with respect to probation officers and otherwise, and prescribing the terms of office of the members of such boards; providing for the powers of courts and judges with respect to the appointment of probation officers and removal of same, and with respect to probation committees and members thereof; and provided when proceedings under this act shall be admissible in evidence.

[Approved February 26, 1903; approved March 22, 1905;
approved March 21, 1907.]

The people of the State of California, represented in Senate and Assembly, do enact as follows:

Protection
of
dependent
child
defined.

SECTION 1. (As amended, Stats. 1905, p. 806.) This act shall apply only to children under the age of sixteen years not now or hereafter inmates of a State institution. For the purposes of this act the words "dependent child" shall mean any child under the age of sixteen years who is found begging, or receiving or gathering alms (whether actually begging or under the pretext of selling or offering for sale anything), or being in any street, road, or public place for the purpose of so begging, gathering or receiving alms; or who is found wandering and not having any home or settled place of abode, or proper guardianship, or visible means of subsistence; or who is found destitute, or whose home, by reason of neglect, cruelty, or depravity on the part of either of its parents, or of its guardian, or other person in whose care it may be, is an unfit place for such child; or who frequents the company of reputed criminals or prostitutes, or who is found living or being in any houses of prostitution or assignation, or who habitually visits, without parent or guardian, any saloon, or place where any spirituous liquors or wine, or intoxicating or malt liquors are sold, exchanged, or given away, or who is incorrigible, or who

is a persistent truant from school. The words "delinquent child" shall include any child under the age of sixteen years who violates any law of this State, or any ordinance of any town, city, county, or city and county of this State.

Delin-
quent child
defined.

SEC. 2. (As amended, Stats. 1905, p. 807.) In counties having more than one judge of a superior court, the judges of such court may from time to time designate one or more of their number whose duty it shall be to hear all cases coming under this act. In counties of the first class, such designation shall be made by the presiding judge. The orders and findings, if any, of the superior court, in all cases coming under the provisions of this act, shall be entered in a book to be kept for that purpose and known as the "Juvenile Record," and the court acting under this act shall be called the "Juvenile Court." In justices' courts having more than one justice of the peace, and in police courts having more than one judge, the justices of the peace and the judges of the police courts, from time to time may designate one of their respective number whose duty it shall be to hear all cases coming under this act. All cases coming under the provisions of this act shall be heard at a special separate session of the court, and no matter other than cases under this act shall be on the calendar, or shall be heard at such session, nor shall there be permitted to be present at such session any person on trial, or awaiting trial, or under accusation of crime, who does not come under the provisions of this act.

Judges
of superior
court,
duties of.

Juvenile
court and
record.

Justices'
court.

All cases
heard at
special
session.

SEC. 3. (As amended, Stats. 1905, p. 807.) Any citizen of the State may file with the clerk of the superior court a petition showing that there is within the county, or residing within the county, a dependent child, and praying that the superior court deal with such child as provided in this act. Such petition shall be verified, and shall contain a statement of the facts constituting such dependency as provided in section one of this act. There shall be no fee for filing said petition.

Petition
filed.

Petition,
what
to state.

SEC. 4. (As amended, Stats. 1905, pp. 807, 808.) Upon the filing of the petition, provided for in section three hereof, a citation shall issue, requiring the person having custody or control of the child, or with whom the child may be, to appear with the child at a place and time stated in the citation.

Citation
to issue.

Service of such citation must be made at least twenty-four hours before the time stated therein. The parents or guardian of the child, if residing in the county in which the court sits, and if their places of residence be known to the petitioner, or if there be neither parent nor guardian so residing, or if their places of residence be not known to petitioner, then some relative of the child, if there be any residing in said county, and if his residence and relationship to such child be known to petitioner, shall be notified of the proceedings by service of citation requiring them to appear at the time and place to be stated in such citation. In any case, the judge may appoint some suitable person to act in behalf of the child, and may order such further notice of the proceeding to be given as he

Service
of citation.

Parents to
be notified.

may deem proper. If any person cited as herein provided, shall fail, without reasonable cause, to appear and abide by the order of the court, or to bring the child, if so required in the citation, such failure shall constitute a contempt of said court and may be punished as provided for in cases of contempt of court. In case any such citation can not be served, or the party served fails to obey the same, and in any case in which it shall be made to appear to the court that such citation will be ineffectual, a warrant of arrest may issue on the order of the court, either against the parent or guardian, or the person having the custody of the child, or with whom the child may be, or against the child itself, or any of said persons; or if there be no person to be served with citation as above provided, a warrant of arrest may be issued against the child immediately. On the return of the citation or other process, or as soon thereafter as may be, the court shall proceed to hear and dispose of the case in a summary manner. Until the final disposition of any case, the child may be retained in the possession of the person having charge of the same, or may be kept, upon the order of the court, in some suitable place, provided by the county, or city and county, or may be held otherwise, as the court may direct.

Return of
citation.

Pending
final
decision,
child to be
kept
by whom.

Commit-
ment
of child.

SEC. 5. (As amended, Stats. 1905, p. 808.) When any child under the age of sixteen years shall be found by said court or judge or justice to be dependent, within the meaning of this act, the court may make an order committing the child, for such time during its minority as the court may deem fit, to the care of some reputable citizen of good moral character, or to the care of some association, society or corporation willing to receive it, embracing in its objects the purpose of caring for or obtaining homes for dependent or neglected children, or to the care of the probation officers or other person to remain in the home of the child. The court may thereafter set aside, change or modify such order.

Probation
committee,
appoint-
ment of.

SEC. 6. (As amended, Stats. 1905, p. 809.) The judge of the superior court in and for each county or city and county of the State, or where there are more than one judge of said court, a majority of the judges thereof by an order entered in the minutes of such court, shall appoint seven discreet citizens of good moral character, and of either sex, to be known as probation committee, and shall fill all vacancies occurring in such committee. The clerk of said court shall immediately notify each person appointed on said committee and thereupon said persons shall appear before the judge of said juvenile court, if there be one, or otherwise before a judge of said superior court in said county and qualify by taking oath, to be entered in said juvenile record, if any, or in the minutes of said superior court, to faithfully perform the duties of a member of such probation committee.

Oath of
office of
committee.

Term of
office of
committee.

SEC. 7. (As amended, Stats. 1905, p. 809.) The members of such probation committees shall hold office for four years, and until their successors are appointed, *provided* that of those

first appointed, one shall hold office for one year, two for two years, two for three years, and two for four years, the terms for which the respective members first appointed shall hold office to be determined by lot as soon after their appointment as may be. When any vacancy occurs in any probation committee by expiration of the term of office of any member thereof, the successor shall be appointed to hold for the term of four years; when any vacancy occurs for any other reason, the appointee shall hold for the unexpired term of his predecessor.

Vacancy.

SEC. 8. (As amended, Stats. 1905, p. 809.) The members of the probation committee shall serve without compensation.

Committee to examine into management of societies.

SEC. 9. (As amended, Stats. 1905, pp. 809, 810.) The superior court or any judge thereof may at any time require said probation committee or a probation officer to examine into the qualifications and management of any society, association or corporation, other than a State institution, applying to receive any child or children under this act, and to report to the court, *provided* that nothing in this section shall be construed as giving any probation committee or probation officer any power to enter any institution without the consent of such institution. It shall be the duty of each probation committee prior to December first in each year to prepare a report in writing on the qualifications and management of all societies, associations and corporations, except State institutions, applying for or receiving any child under this act from the courts of their respective counties, and in said report said committee may make such suggestions or comments as to them may seem fit; said report to be filed in the office of the clerk of the court appointing such committee, for the information of the judges thereof.

Report of committee.

SEC. 10. (As amended, Stats. 1905, p. 810.) In counties of the first class there shall be one probation officer and not more than five deputy probation officers; in the counties of the second class, one probation officer and not more than one deputy probation officer; in all other counties there shall be one probation officer. In any county or city and county additional deputy probation officers may be appointed and their appointment approved or disapproved as hereinafter provided, from time to time when in the opinion of the court it may be necessary, provided that they serve without salary.

Probation officers.

SEC. 11. (As amended, Stats. 1905, p. 810.) The salaries of the probation officers and deputy probation officers (except as herein otherwise provided) shall be as follows, and shall be paid out of the county treasury of the county for which they are appointed, after being allowed and audited in the same manner as the salaries of other county officers: In counties of the second class the probation officer shall receive \$125 per month, and the deputy probation officer seventy-five dollars per month. In all other counties the probation officer and the deputy probation officers shall serve without compensation, *provided, however*, that the probation officer and

Salaries of probation officers.

deputy probation officers in all the counties of the State shall be allowed such necessary incidental expenses as may be authorized by a judge of the superior court; and the same shall be a charge upon the county in which the court appointing them has jurisdiction, and the said expenses shall be paid out of the county treasury upon a warrant therefor issued by the said court.

Probation officers, by whom and how appointed.

SEC. 12. (As amended, Stats. 1905, p. 810.) The offices of probation officer and deputy probation officer are hereby created. The appointments of probation officers and deputy probation officers to serve hereunder in any county or city and county shall be made by the probation committee of said county or city and county from discreet citizens of good moral character. The appointments by each probation committee shall be made in writing, signed by a majority of the members of such committee, and filed with the county clerk of such county, and shall be subject to and shall take effect upon approval by the judge of the superior court appointing such committee, or by a majority of the judges thereof if there be more than one; such approval to be by order entered in the minutes of said court. The term of office of probation officers and of deputy probation officers shall be two years from the date of the said approval of their several appointments. Such probation officers and deputy probation officers may at any time be removed by the judge approving their appointment in his discretion.

Probation officer is to be notified when child is brought before court.

SEC. 13. (As amended, Stats. 1905, p. 811.) It shall be the duty of the clerk of any court before which a child is brought under the provisions of this act, or if there be no clerk, then it shall be the duty of the judge or justice of said court, before the hearing of said matter, to notify the probation officer of the county thereof; except in cases where the child is brought before the court by a society, association, or corporation which embraces within its objects the care of dependent or delinquent children and which has in the last report thereon by the probation committee of such county been favorably passed upon.

Antecedents of child to be inquired into.

Report of officer.

Special order of judge.

SEC. 14. (As amended, Stats. 1905, pp. 811, 812.) The probation officer or deputy probation officer detailed by him for that purpose, shall inquire into the child's antecedents, character, history, family environment and cause of delinquency or dependency, and shall make his report in writing to the judge or justice in the case of every child to be dealt with under the provisions of this act as a dependent or delinquent child; but only when the judge so specially orders it in the case of a dependent child who is already in the charge of a society, association or corporation which embraces within its objects the care of dependent children and which has in the last report thereon by the probation committee of such county been favorably passed upon. In the event that such a society, association or corporation shall be so in charge, it shall through its agent or superintendent make such report to the

judge in place of the probation officer. It shall be the duty of said probation officer or said deputy probation officer, or said agent or superintendent of such society, association or corporation to be present in the court in order to represent the interests of the child when the case is heard, and to furnish to the court such information and assistance as it may require and to make the said report at such time; and to take such charge of the child before and after the hearing as may be ordered. The probation officer and each deputy probation officer shall have as to any child committed to the care of such probation officer, the powers of a police officer. At any time in his discretion such officer or deputy may bring such child before the court committing such child to his care, for such further or other action as the court may see fit. Any of the duties of the probation officer may be performed by a deputy probation officer, and shall be performed by him whenever detailed to perform the same by the probation officer; and it shall be the duty of the probation officer to see that the deputy probation officer performs his duties.

Child's
interests
to be repre-
sented
by whom.

Powers of
police
officers.

Duties of
probation
officers
performed
by deputy.

SEC. 15. (As amended. Stats. 1905, p. 812.) If any child is arrested and taken before a justice of the peace or police judge, then at any time before the child is found delinquent and a commitment thereunder issues, it may be detained under order of the court in any detention home provided for that purpose by any county or city and county; or it may be otherwise provided for as the court sees fit in any manner provided herein for the care of a child after the finding of its delinquency. If, after a hearing, any child shall be found to be delinquent by such court, the justice of the peace or police judge may continue the further hearing from time to time, and may, at any time commit the child to the care and custody of a probation officer and may allow such to remain in the home of such child, subject to the visitation of a probation officer, and such child shall report to the probation officer as often as may be required and be subject to be returned to the court for further proceedings whenever such action may appear to be necessary or desirable. If the justice of the peace or police judge at any time deems it necessary or to the best interests of the child that he should be committed to a State reform school, or to the care or custody of some association, society or corporation embracing in its objects the care of neglected, dependent, or delinquent children, or should be placed in a suitable family home, or that a guardian should be appointed for such child, the justice of the peace or police judge shall certify the case with a transcript of the docket or other record to the clerk of the superior court of the county or city and county in which the justices' court or police court is held, and the officer having the child in charge shall take the child before the superior court, and thereupon the superior court may proceed to hear and dispose of the case in the same manner as if the child had been brought before the court on petition as herein provided for dependent children.

In such case the court shall require notice to be given and investigation to be made as in other cases under this act, and may adjourn the hearing from time to time for that purpose.

Detention
of
delinquent
child.

SEC. 16. (As amended, Stats. 1905, pp. 812, 813; Stats. 1907, pp. 778, 779.) In the case of a child alleged to be delinquent within the meaning of this act, and brought before the superior court at any time before the child is found delinquent and a commitment thereunder issues, it may be detained under order of the court in any detention home provided for that purpose by any county or city and county; or it may be otherwise provided for as the court sees fit in any manner provided herein for the care of a child after the finding of its delinquency. If the court find the child to be delinquent, said court may continue the hearing from time to time, and may at any time commit the child to the care or custody of the probation officer, and may allow such child to remain in the home of such child, subject to the visitation of a probation officer, and such child shall report to the probation officer as often as may be required, and be subject to be returned to the court for further proceedings whenever such action may appear necessary or desirable, or the court may commit the child to the care or custody of the probation officer, to be placed in a suitable family home, subject to the supervision of such probation officer and the further order of the court, or it may authorize the probation officer to board out the child in some suitable family home, or the court may commit the child for such time during its minority, as the court may deem fit, to the care and custody of some association, society or corporation that will receive it, embracing within its objects the care of dependent or delinquent children; or the court may commit such child to a State reform school, as is now, or may hereafter be provided by law in accordance with the procedure provided by law for such commitment. *Provided, further,* that should the legislative body of the county, or city and county, or of a municipality, provide a suitable place for the detention of said dependent and delinquent children, which they are hereby authorized to do, such children may be committed thereto after the adjudication of dependency or delinquency for a definite period to be specified in such order. The court may thereafter set aside, change or modify such order, and may provide for a further detention in said place. Any order providing for the custody of a dependent or delinquent child may provide that all the expense of maintenance of said child, or part thereof, shall be paid by the parent or parents, or guardian, of said child, and in such case shall determine the amount so to be paid, and shall determine whether or not the parent or parents shall exercise any control over said child and the extent thereof, and any disobedience of such order or interference with the custody of the child as therein determined by a parent or guardian having notice of the proceedings or of the order shall

Child
committed
to care of
probation
officer.

constitute a contempt of court. If it be found, however, that the parent or parents or guardian of a dependent or delinquent child are unable to pay the whole expense of maintenance of such child, the court may, in the order providing for the custody of such child, direct such additional amount as may be necessary to support such child to be paid from the county treasury of the county for the support of such child, the amount so ordered to be paid from the treasury of said county not to exceed, in case of any one child, the sum of eleven dollars per month; *provided, further*, that no order for the payment of all or part of the expense of support and maintenance of a dependent or delinquent child from the county treasury shall be effective for more than six months, unless a new order is secured at the expiration of that period. The court may, thereafter, set aside, change or modify any order herein provided for.

SEC. 17. (A new section added, Stats. 1905, pp. 813, 814.) No court or magistrate shall commit a child under twelve years of age to jail, prison or police station, but if such child is unable to give bail, it may be committed to the care of the sheriff, police officer, constable or probation officer, who shall keep such child in some suitable place provided by the city, county, or city and county, outside of the enclosure of any jail or police station. When any child shall be sentenced to confinement in any institution to which adult convicts or prisoners are sentenced or where adults are confined, it shall be unlawful to confine such child in the same room or yard or enclosure with such adult convicts or prisoners, or to permit such child to come or remain within sight of or meet or come into or remain in the presence of any of such adult convicts or prisoners.

Child under 12 not to be committed to jail.

Child committed, how and where confined.

SEC. 18. (A new section added, Stats. 1905, p. 814.) Nothing in this act shall be construed to repeal any portion of the act entitled "An act to establish a State reform school for juvenile offenders, and to make an appropriation therefor," approved March 11, 1889, or any of the amendments thereto, or the act entitled "An act to establish the California Home for the Care and Training of Feeble-Minded Children, and provide for the maintenance of the same," approved March 18, 1885, or any of the amendments thereto, or the act entitled "An act to establish a school of industry, and provide for the maintenance and management of the same and to make an appropriation therefor," approved March 11, 1889, or any of the amendments thereto; and in all commitments to said institutions the acts in reference to said institutions shall govern the same.

Not to repeal certain acts.

SEC. 19. (A new section added, Stats. 1905, p. 814.) No record of or testimony concerning any proceedings against any child under this act shall be admissible as evidence against such child in any other court or proceeding, except in proceedings under this act, and except in guardianship or adoption proceedings relating to said child.

Testimony admitted as evidence, when.

Act, how
construed.

SEC. 20. (A new section added, Stats. 1905, p. 814.) This act shall be liberally construed, to the end that its purpose may be carried out, to wit—that the care, custody and discipline of a child shall approximate as nearly as may be that which should be given by its parents, and in all cases where it can be properly done, the child be placed in an approved family, with people of the same religious belief and become a member of the family by legal adoption, or otherwise. In this act, words used in any gender shall include all other genders, and the word “county” shall include “city and county.”

Repeal of
conflict-
ing acts.

SEC. 21. (A new section added, Stats. 1905, p. 814.) All acts and parts of acts inconsistent with this act are hereby repealed, except as hereinabove provided in section 19.

EMPLOYERS' LIABILITY ACT.

An act to amend section 1970 of the Civil Code of the State of California, relating to the responsibility of employers for injury to or death of employes.

[Approved March 6, 1907.]

The people of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section 1970 of the Civil Code of the State of California is hereby amended so as to read as follows:

1970. An employer is not bound to indemnify his employé for losses suffered by the latter in consequence of the ordinary risks of the business in which he is employed, nor in consequence of the negligence of another person employed by the same employer in the same general business, unless the negligence causing the injury was committed in the performance of a duty the employer owes by law to the employé, or unless the employer has neglected to use ordinary care in the selection of the culpable employé; *provided, nevertheless*, that the employer shall be liable for such injury when the same results from the wrongful act, neglect or default of any agent or officer of such employer, superior to the employé injured, or of a person employed by such employer having the right to control or direct the services of such employé injured, and also when such injury results from the wrongful act, neglect or default of a co-employé engaged in another department of labor from that of the employé injured, or employed upon a machine, railroad train, switch signal point, locomotive engine, or other appliance than that upon which the employé is injured is employed, or who is charged with dispatching trains, or transmitting telegraphic or telephonic orders upon any railroad, or in the operation of any mine, factory, machine shop, or other industrial establishment.

Knowledge by an employé injured of the defective or unsafe character or condition of any machinery, ways, appliances or structures of such employer shall not be a bar to recovery for any injury or death caused thereby, unless it shall also appear that such employé fully understood, comprehended and appreciated the dangers incident to the use of such defective machinery, ways, appliances or structures, and thereafter consented to use the same, or continued in the use thereof.

When death, whether instantaneous or otherwise, results from an injury to an employé received as aforesaid, the per-

When employer not bound to indemnify employé.

Knowledge by employé.

Right of action for death of employé.

sonal representative of such employé shall have a right of action therefor against such employer, and may recover damages in respect thereof, for and on behalf, and for the benefit of the widow, children, dependent parents, and dependent brothers and sisters, in order of precedence as herein stated, but no more than one action shall be brought for such recovery.

Benefits
of this
section
may not be
waived.

Any contract or agreement, express or implied, made by any such employé to waive the benefits of this section, or any part thereof, shall be null and void, and this section shall not be construed to deprive any such employé or his personal representative, of any right or remedy to which he is now entitled under the laws of this State.

Contribu-
tory negli-
gence.

The rules and principles of law as to contributory negligence which apply to other cases shall apply to cases arising under this section, except in so far as the same are herein modified or changed.

SEC. 2. This act shall take effect and be in force from and after its passage.

HOURS OF LABOR ON PUBLIC WORK.

CONSTITUTION OF CALIFORNIA.

ARTICLE XX.

SEC. 17. The time of service of all laborers or workmen or mechanics employed upon any public works of the State of California, or of any county, city and county, city, town, district, township, or any other political subdivision thereof, whether said work is done by contract or otherwise, shall be limited and restricted to eight hours in any one calendar day, except in cases of extraordinary emergency caused by fire, flood, or danger to life and property, or except to work upon public, military, or naval works or defenses in time of war, and the Legislature shall provide by law that a stipulation to this effect shall be incorporated in all contracts for public work, and prescribe proper penalties for the speedy and efficient enforcement of said law. (*Amendment adopted November 4, 1902.*)

(Original section.) SEC. 17. Eight hours shall constitute a legal day's work on all public work.

An act to add two new sections to the Penal Code, to be numbered six hundred and fifty-three c and six hundred and fifty-three d, both relating to crimes against employes.

[Approved March 21, 1905.]

The people of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. A new section is hereby added to the Penal Code, to be numbered 653c, and to read as follows:

653c. The time of service of any laborer, workman, or mechanic employed upon any of the public works of the State of California, or of any political subdivision thereof, or upon work done for said State, or of any political subdivision thereof, is hereby limited and restricted to eight hours during any one calendar day; and it shall be unlawful for any officer or agent of said State, or of any political subdivision thereof, or for any contractor or subcontractor doing work under contract upon any public works aforesaid, who employs, or who directs or controls, the work of any laborer, workman, or mechanic, employed as herein aforesaid, to require or permit such laborer, workman, or mechanic, to labor more than eight hours during

Eight
hours a
day's work.

Contracts.	<p>any one calendar day, except in cases of extraordinary emergency, caused by fire, flood, or danger to life or property, or except to work upon public, military or naval defenses or works in time of war. Any officer or agent of the State of California, or of any political subdivision thereof, making or awarding, as such officer or agent, any contract, the execution of which involves or may involve the employment of any laborer, workman, or mechanic upon any of the public works, or upon any work, hereinbefore mentioned, shall cause to be inserted therein a stipulation which shall provide that the contractor to whom said contract is awarded shall forfeit, as a penalty, to the State or political subdivision in whose behalf the contract is made and awarded, ten dollars for each laborer, workman, or mechanic employed, in the execution of said contract; by him, or by any subcontractor under him, upon any of the public works, or upon any work, hereinbefore mentioned, for each calendar day during which laborer, workman, or mechanic is required or permitted to labor more than eight hours in violation of the provisions of this act; and it shall be the duty of such officer or agent to take cognizance of all violations of the provisions of said act committed in the course of the execution of said contract, and to report the same to the representative of the State or political subdivision, party to the contract, authorized to pay to said contractor moneys becoming due to him under the said contract, and said representative when making payments of moneys thus due, shall withhold and retain therefrom all sums and amounts which shall have been forfeited pursuant to the herein said stipulation. Any officer, agent, or representative of the State of California, or of any political subdivision thereof, who shall violate any of the provisions of this section, shall be deemed guilty of a misdemeanor, and shall upon conviction be punished by fine not exceeding five hundred dollars, or by imprisonment, not exceeding six months, or by both such fine and imprisonment, in the discretion of the court.</p>
Duty of State officers.	
Penalty.	
Unlawful retention of parts or portions of wages.	
Penalty.	<p>SEC. 2. A new section is hereby added to the Penal Code to be numbered 653<i>d</i>, and to read as follows:</p> <p>653<i>d</i>. Every person who employs laborers upon public works, and who takes, keeps, or receives for his own use any part or portion of the wages due to such laborers from the State or municipal corporation for which such work is done, is guilty of a felony.</p>

CRIMES AGAINST CHILDREN.

SEC. 272. PENAL CODE. Any person, whether as parent, relative, guardian, employer, or otherwise, having the care, custody, or control of any child under the age of sixteen years, who exhibits, uses, or employs, or in any manner, or under any pretense, sells, apprentices, gives away, lets out, or disposes of any such child to any person, under any name, title, or pretense, for or in any business, exhibition, or vocation, injurious to the health or dangerous to the life or limb of such child, or in or for the vocation, occupation, service, or purpose of singing, playing on musical instruments, rope or wire walking, dancing, begging, or peddling, or as a gymnast, acrobat, contortionist, or rider, in any place whatsoever, or for or in any obscene, indecent or immoral purposes, exhibition, or practice whatsoever, or for or in any mendicant or wandering business whatsoever, or who causes, procures or encourages such child to engage therein, is guilty of a misdemeanor, and punishable by a fine of not less than fifty nor more than two hundred and fifty dollars, or by imprisonment in the county jail for a term not exceeding six months, or by both such fine and imprisonment. Nothing in this section contained applies to or affects the employment or use of any such child, as a singer or musician in any church, school, or academy, or the teaching or learning of the science or practice of music; or the employment of any such child as a musician at any concert or other musical entertainment, on the written consent of the mayor of the city or president of the board of trustees of the city or town where such concert or entertainment takes place.

Mendi-
cant, acro-
batic, etc.,
occupa-
tions.

Penalty.

SEC. 273. PENAL CODE. Every person who takes, receives, hires, employs, uses, exhibits, or has in custody, any child under the age, and for any of the purposes mentioned in the preceding section, is guilty of a like offense, and punishable by a like punishment as herein provided.

RELATION OF MASTERS AND APPRENTICES.

An act to repeal Title IV of Part III of Division First of the Civil Code and each and every section of said title, and to substitute a new Title Four to take the place thereof in said Code, relating to masters and apprentices.

[Approved March 21, 1905.]

* * * * *

SEC. 264. Every minor of the age of fourteen years or upwards may be bound by indenture as an apprentice to any mechanical trade or art or occupation of farming to the age of eighteen years, if a female, or to the age of twenty-one years, if a male.

Minors,
binding of.

SEC. 265. A minor, with his consent, may be bound by his father, or, in case of his death or incompetency, or where he has willfully abandoned his family for one year without making suitable provision for their support, or is habitually intemperate in the use of intoxicants, or is a vagrant, then by his mother or legal guardian. An executor, who, by the will of the father, is directed to bring up a child to a trade or calling, has power to bind by indenture in like manner as the father might have done, if living. If such child is illegitimate, the mother alone has power to bind him. If a minor has no parent or guardian competent to act for him, he may bind himself, with the approval of the superior court of the county wherein he resides. If the mother of the minor, whether legitimate or illegitimate, marries after his birth, she can not bind him without the approval of such superior court.

Executors,
powers.

When
minors
may bind
them-
selves.

Inden-
tures,
duplicates.

Court
approval.

When
indenture
becomes
void.

SEC. 266. Every indenture of apprenticeship must be executed in duplicate, must state the age of the minor, and, except as hereinafter provided, must show that he consented thereto, must be signed by him and the person binding and the master, and when made with the approval of the superior court, a certified copy of the order of approval must be attached to the indenture. One copy of the indenture must be delivered to the master and the other kept for the use of the minor by his parent or guardian when executed by him, when made with the approval of the court, it must be filed and deposited with the clerk for safe-keeping for the use of the minor. No indenture binds the minor after the death of the master, but thereafter the minor may be bound anew. Every indenture entered into otherwise than as herein provided is, as against the apprentice, absolutely void.

SEC. 267. Facts of incapacity, desertion, habitual intemperance, and vagrancy must be decided in said court by a jury. before the indenture can take effect, and an endorsement on the indenture, under seal of the court, that the charge or charges are proved, is sufficient evidence of the mother's power to give such consent; but if the jury does not find the charge or charges to be true, the person at whose instance such proceedings may have been had must pay all costs attending the same.

Mother's
power.

SEC. 268. When a minor is poor, homeless, chargeable to the county or State, or an outcast who has no visible means of obtaining an honest livelihood, the superior court may, with his consent, bind him as an apprentice during his minority. Proceedings thereafter may be instituted by any citizen, and no fee must be charged by any officer for any act in connection therewith. In all indentures by the court for binding out an orphan, or homeless minor as an apprentice there must be inserted, among other things, a clause to the following effect: that the master to whom such minor is bound must cause him to be taught to read and write and the ground rules of arithmetic, ratio and proportion, and must give him the requisite instruction in the different branches of his trade or calling, and, at the expiration of his term of service, must give him or her fifty dollars in gold, and two whole new suits of clothes, to be worth in the aggregate at least sixty dollars gold.

When
court may
bind.

Require-
ments
of master.

Wages.

SEC. 269. A master must not remove his apprentice out of the State, and must pay and deliver to him the money, clothes, and other property to which he is entitled under the indenture of apprenticeship, to be held by him as his sole property.

Non-
removal.

SEC. 270. Parents and guardians and such court must, from time to time, inquire into the treatment of children bound by them respectively, or with their approval, and the judges of such courts are responsible for the charge of apprentices bound by a court or with its approval, and must defend them from all cruelty, neglect, breach of contract, or misconduct on the part of their masters.

Super-
vision by
court.

SEC. 271. The superior court must hear the complaints of apprentices who reside within the county against their masters, alleging undeserved or immoderate correction, insufficient allowance of food, raiment, or lodging, want of instruction in the different branches of their trade or calling, or that they are in danger of being removed out of the State, or any violation of the indenture of apprenticeship, and the court must hear and determine such case and make such order therein as will relieve the party in the future.

Com-
plaints.

SEC. 272. The superior court has the power, where circumstances require it, to discharge an apprentice from his apprenticeship, and, in case any money or other thing has been paid or contracted to be paid by either party in relation to the apprenticeship, the court must make such order concerning the same as seems just and reasonable. If the apprentice so

When
court may
discharge
appren-
tice.

discharged was originally bound by the superior court, it must, if found necessary, again bind such minor, if under age.

Liability
of master.

Recovery.

SEC. 273. Every master is liable to an action on the indenture for a breach of any covenant thereof on his part. All damages recovered in such action, after deducting necessary charge in its prosecution, belong to the minor, and must be applied and appropriated to his use by the person recovering it in his behalf, and must be paid to the minor, if a male, at the age of twenty-one years, and if a female, at the age of eighteen years. If no action is brought during the minority of the apprentice, it may be commenced by him in his own name at any time within two years after his coming of age.

Appren-
tice, duty,
liability.

SEC. 274. An apprentice who is guilty of any gross misbehavior, or refusal to do his duty, or willful neglect thereof, is liable to the complaint of his master in the superior court of the county wherein the apprentice resides. Such complaint must set forth the circumstances of the case, and have attached thereto a citation, signed by the clerk of the court, requiring him and all persons who have covenanted in his behalf to appear and answer the complaint within ten days after the service thereof. The complaint and citation must be served in the manner required for serving civil process. When the parties have answered, or when, though they have not answered, the time therefor allowed after the service of the complaint has expired, the court must proceed to hear and determine the cause, and, if the evidence warrants it, may render judgment that the master be discharged from the contract of apprenticeship and for costs of suit. Such costs may be recovered from the parent or guardian of the minor, if there is any who signed the indenture, and execution therefor may issue accordingly. If there is no parent or guardian liable for such cost, execution may be issued therefor against the minor, or the amount thereof may be recovered in an action against him after he arrives at full age. He is also liable to the master in an action on the indenture for the breach of any covenant on the part of the apprentice contained therein, committed before the master was discharged from the indenture.

Com-
plaint.

When
minor may
recover.

Enticing
of minors.

Penalty.

SEC. 275. It is unlawful for any person to entice, counsel, or persuade to run away any apprentice, or to harbor, or conceal him, knowing him to be a runaway. Any party so offending is guilty of a misdemeanor, and may be fined not more than one hundred dollars, to be recovered by the master in any court having jurisdiction.

When
court may
discharge
master.

SEC. 276. Whenever any master wishes to remove out of the State, or to quit his trade or business, he must appear with his apprentice before the superior court of the county in which the latter resides, and if the court is satisfied that the master has done justice to the apprentice for the time he has had charge of him, the court has power to discharge the master from the indenture and to again bind the apprentice, if necessary.
